POSTSTRUCTURAL ANALYSIS. Structuralist studies, which have influenced literary criticism during the last twenty years, represent a rejection of two earlier, time-honored philosophical proposals about how it is that texts communicate their meanings to readers. They reject the view that texts are meaningful because they refer in a straightforward and simple way to the world we all inhabit. Language, it used to be supposed, is, or at least should be, a clear window on the world. Such a view of most language was always recognized as problematic, and a distinction was made between an "ideal" language which would exactly picture the world and other forms, like those of poetry and fiction, which were considered to be merely "emotive." But even in plain discourse, this picture theory of language is unhelpful. If I write that "I am sitting at a desk," the reader may have a picture of a desk, but not because "desk" has come to have a meaning for the reader from his or her observation of desks, but because "desk" is distinguished in the English language from "table," and other furniture, and the reader has learned how to make that distinction. We can easily imagine a language in which the distinction does not exist. Structuralism insists that words have a relational, rather than an essential, meaning. Each word fits into a complex pattern of binary oppositions, contraries, and contradictories, and it is this structure which gives it meaning.

Similarly, in literature, longer units of text are related to one another through binary oppositions like parallelism and inversion. Structuralism has therefore tended to treat languages and literatures as autonomous and has examined their internal structures. It has highlighted the distance between language about the world and the world itself, and has seen languages and literatures as cultural rather than natural phenomena.

Structuralism also rejects a second account of how texts become meaningful for readers. In our Western tradition, it is often assumed that texts convey meanings because the author intends a meaning and readers are able to look through the text into the mind of the author, who is conceived as a transcendent, disembodied, thinking self behind the text. Writing is thus understood as a kind of second-order speech, in which one person directly communicates his or her intention to another. In one-to-one conversation, however, the intention of the speaker is perceived by the recipient not only through the spoken utterance but also through the context. If I say "Please close the door," the listener is likely to understand my command in a context in which the door to the room is open, but to be puzzled if the only door visible is already closed. He or she may also understand my command to suggest that I am intending to go on and say something private, if, for example, I have just broken off my previous remarks. But if I have just shivered, he or she will think my intention is to exclude the draft. Again, if there is a noise in the corridor which makes communication difficult, the listener will suppose I am intending to muffle the noise. Moreover, if the recipient fails to understand, clarification can be requested. Even so, in present one-to-one conversation, misunderstanding is not always avoided. Communication depends on speaker and hearer sharing the same competence, and this cannot invariably be guaranteed. Nor are ambiguities in language and context always sufficiently recognized to ensure against misunderstanding. How much more problematic is the conception of meaning in terms of an author's intention when it is applied to texts, written, published, and read in quite different contexts, with the reader unable to cross-question the author to discover whether the supposed interpretation is the right one? Even when a writer and author share a common culture and language, and live at the same time, the reader can discover different plausible interpretations of the same text, and difficulties are increased when author and reader are separated by

time and language. Structuralism therefore abandons the search for the intentions of the author and acknowledges a text's multiplicity of possible meanings.

The work of the French philosopher Jacques Derrida (b. 1930) has focused and intensified structuralism's questioning of common-sense attitudes to meaning. His books and essays examine philosophical literature in the Western tradition, from Plato to the present day; his method has sometimes occasioned superficial misunderstandings, so it will be useful to begin by clearing these out of the way. Derrida's writings encapsulate a very careful reading of philosophical texts, drawing attention not only to the main lines of argument which they contain, but also to the metaphors in which the argument is expressed, and which, as it transpires, undermine the argument itself. This endeavor has sometimes been characterized as the triumph of literary criticism over philosophy, and has been taken to warrant a completely free interpretive game with texts, irrespective of subject matter, genre, or any rational constraints. That such an understanding is superficial will become clear by examining an example of Derrida's work.

Plato's *Phaedrus* contains a discussion by Socrates about the dangers of writing and the superiority of direct speech (LCL, 275b–78). Commentators on the *Phaedrus* have usually bypassed this section because they have found it peripheral to their main interest. Derrida not only insists on treating the text seriously in the sense of refusing to omit sections from consideration, but also draws out its implications for Plato's philosophy and for the Western philosophical tradition which has been influenced by it. Socrates is depicted as favoring speech over writing because in speech the speaker is present and able to authorize where, how, by whom, and to whom his philosophy is taught. Once philosophy is written down, the text seems to open its wisdom to anyone who has access to a copy at any time. It allows people to repeat what is written without understanding it. The preference for speech, in which the speaker is present, over writing, in which the speaker is absent, is what Derrida calls *logocentrism.* But in reading the *Phaedrus*, Derrida draws attention to two important contradictions (Derrida 1981). The first and most obvious is that Plato has written this account of Socrates' castigation of writing. The second is that when Socrates tries to indicate the superiority of speech, metaphors from writing are used to describe speech. For example, speech is the word written in the mind of the speaker (LCL, 276a) or is writing inscribed on the soul (278b). The binary opposition of speech/writing, which the *Phaedrus* explores, is undermined by this interplay between the two. *Deconstruction* is the name given to this detailed elucidation of a text, which takes account both of explicit oppositions and of the ways in which they dissolve into an exchange which can give precision or preference to neither.

Moreover, the supposed "presence" of the speaker in his or her speech is just as illusory as the writer's "presence" in writing. Speech is no more a spiritual reality than writing is. Speech is not innocent, not an unmediated expression of the self. As soon as sensations are transformed into utterances about human experiences, they become entangled in the web of differential terms and relations. Both speaking and writing are attempts to make the inchoate coherent, but their achievements are only partial, open-ended approximations, which are suggestive rather than definitive.

The same *logocentrism* is present in biblical texts. God's creative and self-authorizing word brings creation into being and inspires the law and the prophets. In Christianity there is a similar mistrust of writing ("the letter kills but the spirit makes alive" [2 Cor 3:6]; cf. 2 John 12) but the same contradiction: the Bible indicates the priority of speech over writing in a written text. And when speech's superiority is described, use is made of a metaphor from writing: "I will put my law within them, and I will write it upon their hearts" (Jer 31:31).

It is just this privileging of speech and presence as somehow more original, a view which is fundamental to Western perceptions, that Derrida calls into question. The relation cannot simply be inverted to make writing privileged, but the interplay of the two must acknowledge the absence of an authoritarian presence prescribing meaning. To capture this sense of the opaqueness of language, Derrida invents a new French word, *différance*, which both expresses the insights of structuralism, that meaning is relational rather than essential, and conveys the further insight that meaning is indefinitely deferred, never completely captured and defined by an utterance.

Not only Derrida, but many modern philosophers have argued that language does not give us a clear picture of the world. Language is rather an expression of cultural and institutional ways of life. Pragmatists have been content to accept that language is useful in affording communication within social systems, without searching for a metalanguage which would allow escape from this relativist prison. Such a stance involves a conservative attitude toward the institutions which give language its sense and significance. In biblical studies, too, we cannot always be unaware of cultural and institutional influences on religious language, even when presented in the form of commentaries on the Bible. Commentaries from the Middle Ages seem alien in their interests and concepts to people living in the 20th century, but even commentaries written by contemporaries in English betray their sectarian bias. Derrida offers no solution to this relativist dilemma, but he is neither content to ignore it, nor accept it.

We may not be able to escape from the limitations that language imposes on thought, but we can at least become aware of the limits and of the ways in which those limits are undermined by the very language which expresses them. *Deconstruction* questions not only the definitive meanings of texts, but the societies and institutions which validate their use.

One feature of Derrida's writings which has given rise to interpretations that take no account of the text's form or genre is the practice of setting one text alongside another so that each is illuminated (for example, texts by Plato and Mallarmé in "The Double Session," Derrida 1981). It is common for interpreters to confine their discussions of literature to a single book, or to the books of a single author, or to books within the same genre. But Derrida's concern encompasses a whole cultural tradition and its intertextual influences. While recognizing that some insights can be gained by restricting the range of examples, Derrida also explores the interrelatedness of texts from quite different genres to gain new insights. Specialization in universities and colleges often serves to obscure links between different areas of discourse. Biblical studies could be enriched by examining some of the connections.

For example, scholarly English commentaries on the NT resurrection narratives could usefully be read alongside John Locke's *Essay Concerning Human Understanding* (1689), chap. 27, to discern their mutual influences and blind spots. A commentary which marginalizes the accounts of the empty tomb by calling them late legends or secondary traditions allows an interpretation of resurrection in terms of the binary opposition of soul and body in John Locke's anthropology. On the other hand, Locke's dualism and individualism owes something to the problematic presentation of the gospels' stories. Moreover, "soul," which is privileged in Locke's account, is distinguished from "body" by regarding it as a kind of body: "one person in two distinct bodies" is like "one man in two distinct clothings." Locke's essay uses metaphors in spite of empiricism's suspicion of metaphorical language.

In one respect at least, biblical texts encourage their own deconstruction. As Schneidau has argued, "the biblical insistence on our understanding ourselves in relation to an historical past, rather than in terms of a static cosmic system, breaks with the tendencies of logocentrism and allows us to align Derrida and the Bible" (1982: 5). He quotes Derrida on the relation of history to writing and Judaism: "The painful folding of itself which permits history to reflect itself as it ciphers itself. This reflection is its beginning. The only thing that begins by reflecting itself is history. And this fold, this furrow, is the Jew. The Jew who elects writing which elects the Jew" (Schneidau 1982: 9). Derrida does not encourage us to ignore history in our readings of texts, but, on the contrary, to take our readings and our history all the more seriously by noticing that we have not arrived at a final meaning.

Since Derrida insists that meaning is always deferred, never finally closed, it is interesting that one of his essays should include readings of the Revelation of John, which concludes the NT. Derrida's essay "Of an Apocalyptic Tone Recently Adopted in Philosophy" (1982) takes its title from Kant's "Of an Overlordly Tone Recently Adopted in Philosophy" to explore both old and new apocalyptic predictions of the imminence of the end of philosophy, of Western culture, and of the world. Kant offered a truce to his opponents, to the mystagogues who predicted the imminent demise of philosophy because they thought they perceived the truth for which it was searching. Derrida seeks to comprehend this apocalyptic tone. He observes that the revelation is precisely a revelation of truth; the tone of apocalyptic is self-assured,

both in its conviction that the end is imminent and in its confidence in its own ability to reveal the truth about the end (Derrida 1982: 84–85).

But the Revelation is not an unmediated perception of the present and the future, nor is its delivery to the seven churches straightforward. There is rather a whole series of speakings, hearings, writings, and readings, as the opening verses of the book (Rev 1:1–3) show. Jesus indeed commands that John "write what you see, what is, and what is to take place hereafter" (1:19), and goes on to dictate letters to the angels of the seven churches. But this form soon gives way to descriptions of heavenly visions of a scroll written on both sides and sealed with seven seals (Rev 5:1); in the shift of images, seeing and hearing merge with reading. There are more confessions, more messages, more envoys to be dispatched, and a scroll to be eaten. The concluding words of Jesus in the book verify the dispatch of a messenger: "I, Jesus, have sent my angel to you with this testimony for the churches" (22:16); warnings are given against altering the words of the prophecy of the book (22:18–19). Derrida observes (1982: 87) that the imagistic structure of the Revelation—"dispatches [that] always refer to other dispatches without decidable destination"—is an image of writing itself.

Kant's essay lampooned mystagogues whose writings failed the criteria of rational philosophy. Derrida discovers that the opposition between philosopher and mystagogue, between rational philosophy and mystification, begins to dissolve on examination (1982: 88–89).

The Revelation has one other important lesson to teach those who suppose that the author owns the book's message or determines its meaning with any finality:

> It is said at the very end (22:10): Do not seal this: "Do not seal the words of the inspiration of this book …" "Do not seal," that is to say, do not close, but also do not sign (Derrida 1982: 95).

POTIPHAR (PERSON) [Heb *pôtîpar* (פּוֹתִיפַר)]. The name of the first master of Joseph (Gen 37:36; 39:1). The name belongs to a common Egyptian type attested from the 10th century B.C. through Roman times (although sporadic examples may be found in the 11th century B.C.), and means "He-whom- (the sun god)-Re-gives." Several examples of this very name occur, ranging from the 7th through the 3d centuries B.C. The similar name of Joseph's father-in-law, Potiphera, is closer to the Egyptian original. The Potiphar of Joseph's first employment in Egypt is described as "a eunuch of Pharaoh and the captain of the butchers (guard)" (Gen 39:1). The former designation is derived from an Assyrian title and only occurs in Egypt during the Persian domination (in the 5th century B.C.); the latter has no obvious Egyptian original.

POTIPHERA (PERSON) [Heb *pôṭî pera‘* (פּוֹטִי פֶרַע)]. The father-in-law of Joseph. His daughter Asenath was given by Pharaoh as a wife to Joseph (Gen 41:45). Out of their marriage two children were born: Manasseh, the firstborn, and Ephraim (Gen 41:50–52; 46:20).

"Potiphera" is a longer version of the name Potiphar, borne by the captain of the guard who bought Joseph as a slave from the Midianites (or according to the Yahwist, from the Ishmaelites, cf. Gen 37:25–28). The name in Egyptian is *p€ - dıÙ-p€ Rʿ*, and it means "He whom Re [the sun god] has given." The LXX treats the two names as identical and transliterates both names as *Petephres.* Potiphera was a priest of On, a city NW of modern Cairo. The city was later renamed Heliopolis by the Greeks. On was the center of sun worship in ancient Egypt, and the temple of Re had become the most important place in the city as early as the 5th Dynasty. When the worship of the sun god came into greater prominence in early Egyptian history, the priests who ministered at the temple gained more power and prestige in Egyptian society (Wilson 1951: 88). The high priest of On was a very influential and important figure in Egyptian religious life. There is no way of knowing if Potiphera was the high priest or only one of the many priests who ministered at On. However, because the narrative presents Joseph as a prominent officer of Pharaoh, answerable only to him, it is highly probable that Potiphera was to be regarded in the story as the high priest of On (Ward 1957: 51). The name does not appear in Egyptian inscriptions until the middle of the 10th century B.C., during the 22d Dynasty. This may provide some indication of the time when the Joseph narratives were written.

POTSHERD GATE (PLACE) [Heb *šaʿar haḥarsît* (שַׁעַר הַחַרְסִית)]. A gate of Jerusalem at the S tip of the City of David (Jer 19:2), adjoining the juncture of the Hinnom and Tyropoeon or Central valleys, which is considered by most (Avi-Yonah 1954: 245) to be identical to the Dung Gate of Neh 2:13; 3:13, 14; and 12:31. An alternate translation is Gate of Earthenware (*BDB,* 360) or Gate of Potters (Simons 1952: 230, n. 1), which is erroneously translated in the AV as the East Gate. The Potsherd Gate should be identified with the wall and gate found by Bliss and Dickie (1894–1897) in the Tyropoeon or Central valley (Bliss and Dickie 1898: 116–26). Jeremiah's illustrated sermon at this gate, where broken pottery was discarded, was situated adjacent to the Hinnom valley where Israelites were participating in pagan liturgies (Jer 19:4–5). The Dung Gate may also be translated "Gate of the Refuse Pile" (*BDB,* 1046), a great deal of which would have been broken and discarded pottery, particularly if (as suggested by Simons 1952: 230) the gate adjoined an installation for the manufacturing of pottery. It has been suggested that this may be related to the name Topheth (another name used for the Hinnom valley, Jer 19:6).

Nehemiah's inspection tour took him S from the Valley Gate past the Jackal's Well to the Dung Gate or the Potsherd Gate (of Jeremiah's time) just before he rounded the S tip of the City of David. This gate was repaired by Malchijah son of Rechab, the ruler of the district of Beth-haccherem, and is the first landmark noted in the dedicatory procession (Neh 12:31) that went S and counterclockwise from the Valley Gate.

DALE C. LIID

POTTER'S WHEEL. Pottery was made and used throughout the ancient world. Special wheels for fashioning pottery came into use at an early period, and were used throughout Palestine and neighboring areas. The Hebrew word designating a potter's wheel, *ʾobnāyim,* occurs only once in the OT (Jer 18:3). The word's literal meaning, "pair of stones," is indicative of the configuration of the device itself.

From the MB I period (ca. 2000 B.C.) onward, pottery in Palestine was generally "thrown" on a fast wheel; i.e., it was made on a wheel spinning fast enough so that the centrifugal force formed the vessel, with the potter merely guiding the clay with his hands to attain the desired shape. Prior to the MB I period, pottery vessels were formed on a simple tournette. The Hebrew name for the potter's wheel may

derive from the fact that the earliest potter's wheel, the tournette, was no doubt comprised of a pair of stone disks.

Stone bearings from "fast" potters' wheels have been found in abundance in excavations in Palestine. Usually made of basalt, but occasionally of limestone, they consist of one or both of two components: a lower whorl with a cavity, or socket, in the center, and an upper whorl with a projection, or tenon, in the center. See Fig. POT.01. The two whorls fit together, with the tenon mating the socket. From the wear marks on such whorls, it is evident that the upper whorl (sometimes called a pivot) rotated on the lower whorl. In reality, these stone whorls are thrust bearings from a more elaborate apparatus made of wood. From archaeological evidence and ethnographic analogy it is possible to reconstruct the "fast" potter's wheel of ancient Palestine. Two types were in use, the single wheel and the double wheel.

In the single or simple wheel (also called a hand wheel), the lower bearing is secured in the ground or on a platform or bench. A wooden disk (called a flywheel, wheel head, table, or platform) is attached to the upper bearing and the assembly is placed on the lower bearing with the tenon inserted in the socket. The wooden disk is then rotated by hand by an assistant while the potter fashions his vessels. The tenon in the upper bearing acts to keep the wooden disk centered and running true. An 18th-Dynasty Egyptian potter is seen using such a single wheel. See Fig. POT.02. The lower portion of the potter's wheel (shown in Fig. POT.02 without the shaft or upper wheel) is, in effect, a single potter's wheel. In a LB IIA (14th century B.C.) potter's workshop at Hazor a platform or workbench made of fieldstones was found (Yadin et al. 1960: 101–3). On top of the platform was a complete thrust-bearing assembly. The bearing assembly undoubtedly belonged to a single-wheel type of potter's wheel since a double wheel would not have been placed on such a bench.

The second type of fast wheel is the double or compound wheel (also called a combined wheel, foot wheel or kick wheel). In this type a wooden disk (the flywheel) is attached to the upper bearing as with the simple wheel, but now a vertical shaft is attached to the center of the wooden disk. See Fig. POT.03. At the end of the shaft is a second, smaller, wooden disk (the wheel head, working platform or table) where the vessel is fashioned. The shaft is steadied by a horizontal wooden bar with a hole in it, through which the shaft passes. Since the potter can now rotate the wheel by kicking the lower disk with his foot, an assistant is no longer needed (Foster 1959: 104; Childe 1965: 201; Nicklin 1971: 35–38; Holthoer 1977: 31). In an early Iron I (12th century B.C.) potters' cave at Lachish, two shallow pits (Pits C and D; Tufnell et al. 1958: 91, 292, pl. 92) appear to be emplacements for double potters' wheels. Similarly, Pit H in Cave 37 at Megiddo (Iron II period, 9th–7th centuries B.C.), with a worn stone socket found *in situ* (Guy 1938: 80, fig. 84), was most likely an installation for a double potter's wheel.

BRYANT G. WOOD

POTTERY. Pottery can be defined as utensils or other artifacts made of clay and hardened by fire. Ever since the 6th millennium B.C. pottery has played an important role in the material culture of the ANE. Palestine was not a country particularly rich in artistic forms of expression or literary accomplishments. Material remains from biblical times are generally common and ordinary during most periods, and even poor and fragmentary at times. But pottery is always found. This entry consists of two

articles pertinent to ancient Palestinian pottery. The first surveys the technology of producing pottery in ancient Palestine. The second surveys the role that pottery artifacts play in helping the archaeologist establish a chronological date for strata and other excavated artifacts.

POTTERY TECHNOLOGY IN ANCIENT PALESTINE

The study of pottery technology of antiquity seeks to find an explanation for the observable features of excavated pottery. It is normal practice in archaeology to describe the shapes and other features of excavated pottery on the basis of visual examination. The aim of technological studies is to add another dimension to these studies. For instance, one can identify Neolithic pottery from the visual descriptions, but how this pottery was invented cannot be deduced; only a technological study can help in solving this problem. But there are also other questions which cannot be solved without the aid of technological research, as will be shown in this article.

One can only speak about the invention of pottery making from the moment the process of manufacture was repeated with success and became a regular feature of Neolithic culture. The fact that pottery making had become a routine demonstrates that the makers understood what was happening, and that the invention was not a chance discovery. The first potters had acquired certain kinds of knowledge before they achieved regular production. They could distinguish between clays and other soils, and they knew how to make clay mixtures which could be shaped into a bowl by exercising pressure on the inside of a clay ball, and counterpressure from the outside. They knew that the shape had to dry, and that during the drying process the bowl shape would shrink and crack unless special care was taken to prevent it. They also knew that during firing the temperature had to be high enough to create a dark red glow in the clay, and that this temperature had to be maintained for some time. They knew how to do this because the technology for lime burning had already been invented. There were even experiments with making "pottery" from lime. In the case of the Neolithic pottery from ancient Jericho, it has been demonstrated that the potters used kilns and not open fires for pot making.

Thus it can be shown that people in Neolithic times experimented with different earths because they were seeking a substitute for the stone bowls which took a great deal of effort to make. However, once they had succeeded in producing fired clay vessels and could repeat this process, they continued with the experiments, some of which are mentioned here. Since the beginning of the Neolithic period people had known that to make sun-dried bricks, one had to mix the clay with chopped straw or similar dry materials. This gave cohesion to the brick and prevented it from flaking during the drying period. Similarly one finds very fine organic matter in pottery, or rather, the holes it left after firing. The potters probably used animal dung, but they also experimented with other materials, and they discovered that it made a difference to the fired product whether one used quartz sand or lime sand, coarse or fine sand. They discovered that calcite would render a vessel more heat-shock resistant, and that "sand" made of fired clay such as pounded potsherds, which can be compared with our chamotte, had some distinct advantages when shaping pottery. They also invented the decoration of vessels with different clays which, after firing, would show up in different colors. Such clays were applied as a thin slip to the surface in certain patterns, and as some of these slips would tend to peel off after drying or firing, the potters would rub them into the surface, which resulted in so-called burnished pottery or pottery with a surface sheen.

It seems that there was not very much left to be discovered in later times, since the Neolithic potters had also experimented with turning the pot in the making. They even knew the advantages of firing pottery in a kiln instead of in open fires. The discoveries made during the Pottery Neolithic period have indeed dominated the world of potting in the Near East, except for some comparatively short periods, until this century. New inventions were, in chronological order: (1) the production of what comes very close to stoneware in the Chalcolithic period; (2) the use of a "kick wheel" in the MB Age (followed by the loss of this device during the LB Age); (3) its reintroduction sometime during the Iron Age; (4) the slow perfection of the use of the wheel in the period after the Exile, culminating in an unrivaled mastery of potting techniques in Roman times; and (5) the introduction of what had been invented long before, but had never been taken into regular production: the application of glazes to pottery, and the many ways of manipulating the effects of glazes and metal oxides to obtain the magnificent effects of Islamic glazed

wares. What could not have been invented was porcelain. Kaolin, which is the basic ingredient in the production of porcelain, is not found in any quantity anywhere in the entire area.

It is necessary to consider an aspect of pot making which is not generally understood. One common impression is that potters can make any shape when asked to do so. This is by no means true. The shapes potters can make depend largely on two aspects: the type of clay which the potter is accustomed to using, and the traditional knowledge accumulating over generations of potters who knew how to work that clay. Clays resemble wood in that different kinds must be used for different purposes. The traditional knowledge is often so attached to the special properties of the clay which the potter knows and uses, that he cannot imagine other shapes being made from it. The Neolithic potters have been depicted here as people who were very busy inventing and experimenting, as one does in a laboratory. The other side of the picture is, however, that traditional potters belong to that group of very conservative people who will not readily accept innovations and rationalizations in their crafts. And as far as they can, they work according to the traditional rules or "laws" passed down through the generations. After the Neolithic Age there were long periods in which little seemed to change in the potters' production. In Chalcolithic times there were some technical developments; one of them may have been that the very large storage jars were no longer fired in kilns but in open fires in which they became buried in hot ashes, preserving the heat for long hours and keeping oxygen out. The effect of this was that the iron and lime present in the local clay acted as fluxes, which caused vitrification or the development of a glassy phase in the clay at a comparatively low temperature. This produced a very hard ware, but this technique was abandoned in later times; the reason may have been that it took too much fuel. By the end of the Chalcolithic period, much of the natural forest had already been consumed by the village cultures.

Although the technical background remained the same during the first few millennia of potting, both in its production and in its means of decoration, different regions developed their own traditions and characteristics. While knowledge of the craft spread over the whole of the Near East and beyond, knowledge of the varied properties of the clays used also expanded, and potters who had to work with "difficult" clays were often forced to experiment anew with the raw materials. The rewards of their struggle can be seen in their results. Bronze Age potters in Cyprus produced beautifully shaped and decorated pottery which points to a far more advanced knowledge of potting than is found among their fellow craftsmen in Palestine. Clearly the reason for this difference is not that potters E of the Mediterranean were backward people, but that they did not have the right soils for making really fine ware, and consequently did not have the chance to develop better understanding and skill. The history of potting in the Bronze Age and Iron Age confirms this explanation.

Near the beginning of the Bronze Age the first walled settlements appeared, and with them probably pottery markets. The villages of the previous age may also have had such markets, but the tradition that families made their own pottery must already have existed. One might speculate that the inhabitants of the first towns were supplied with pottery partly by professional potters and partly by villagers. This is inferred, for instance, from study of the pottery excavated at EB Jericho. Small jugs and bowls were often made by hand, exactly as in the Neolithic. Embellishment often consisted of a dark red slip applied over the entire body, which was sometimes polished. Similarly one finds the use of a slow wheel which was turned by hand, besides the use of little woven mats on which a pot was built up and which could also be turned by hand. There were apparently professional potters working in the neighborhood, since the production of such classes as storage jars of the hole-mouth type required efficient mass production. One striking aspect of the pottery found at such sites is the care which was taken to make pleasant shapes, and to give them a strong and shiny color. Another striking feature is the occurrence of jars which had a whitewash applied to the surface, which was then decorated with red painted bands. This could only be done as long as firing temperatures were kept well below 825° C, the temperature at which lime turns into quicklime. Much of this pottery was fired in kilns with maximum temperatures of between 700° and 900° C. The firing method probably being practiced in this period was to fire quickly and briefly at probably over 900°C, so that the temperature in the lower levels of the kiln would be sufficient to produce fairly hard pottery, whereas in the upper part of the kiln the temperature would be enough to fire the pots but not

enough to make them really hard. Another aspect of kiln firing was that the relation between the influx of oxygen and the escape of hot gases from the kiln was not well balanced. The oxygen flow was often hampered, and as a result the colors of the pottery are often dull or—in technical terms—either neutral or reduced. It was only after the Exile that this aspect of kiln firing was mastered. Pottery in use in small villages was still produced by the families.

In the EB IV, the pottery acquired more uniformity of shape and technique. Much of the pottery had flat bases that were made on flat stone slabs that could be turned, and molds were used to make the walls of jars from two parts that were later fitted together. Due to this device walls could be made very thin. In the E parts of the country these potters did not use a wheel, and even the regularly shaped, flaring rims of storage jars were handmade.

In the MB Age pottery was made on a heavy and rapidly turning wheel. This brought with it other new developments. The fast wheel was in use in Mesopotamia from the 3d millennium B.C. When a fast wheel is used, pottery can be made with elegant profiles, but rather plastic clays must be used which may contain only very fine sand. The wheel creates centrifugal force in the clay on the wheel head by turning at 50 r.p.m. or more. It is rather difficult to attach other parts such as handles to the pots. Finished shapes must dry evenly and slowly to prevent cracking, and firing the pots requires much skill. This complex of new technology was almost certainly introduced from the N. It had some revolutionary results. The use of a fast wheel could speed up production tenfold or more, and slow methods of pot making soon disappeared. A uniformity in shapes developed, and geometrically painted decoration disappeared simultaneously because the production was linked to speed. Light or dark red firing slips were used to cover the entire surface of bowls and dippers, and it is only late in the period that potters again turned to painting decoration on their wares. This new technique of painting (with a red or "black" firing paint made of iron oxides mixed with fine clay slips) was successful because great care was taken that the body of the vessel was well covered with a clay slip that would be nearly white after firing, regardless of the atmosphere in the kiln, which through lack of oxygen could turn a red firing body into a dark gray. The thick slip would also reduce the chance of scum forming on the red paint. In potting in the Near East, scum has always spoiled the potters' attempts to use contrasting surface colors as decoration. Scum forms during kiln firing when there is excessive salt in the clay; it turns the surface color pale greenish yellow, which also affects the painted parts.

An additional problem in the production of painted pottery was that clays containing a large amount of lime (as do most clays in Palestine) will cause iron oxide paints to become volatile at temperatures above 925° C. White firing slips that did not contain iron or lime were ideal as a basis for decoration, but sources for such were probably rare. Some potters applied a white slip first, as a basis for a red slip, in order to create a good surface for a painted decoration.

During the LB there was a slow but distinct decline in every respect. At first production continued with many decorated pieces, but in LB II the problems seem to have begun. Less slip was used to cover the pot surface, which gave scum more chance to influence the decoration. Then the sand used as a filler, which sometimes consisted entirely of lime rock, was no longer sieved, so that coarse particles were introduced in the clay. This tended to break up the surface of the pot after it had been fired. The presence of coarse lime sand indicates that potters returned to the use of slow wheels and less plastic clays. Perhaps the return to simpler production methods was provoked by two aspects of daily life. The mass-produced thin-walled thrown pottery of the MB was fragile, and it became expensive, so it was replaced by pottery with much thicker walls which lasted longer. Since the production process no longer had to be carefully watched, the potters seem to have become careless. In LB IIb a low point was reached. The pots were very heavy and most had cracks in the bases, which the potters had to mend with lime or bitumen before the pots could be used. Decorations fell victim to the same lack of understanding of basic principles in potting, and practically disappeared by the end of the period. By the end of the 13th century the potters had begun to experiment again and find solutions to their problems.

The transition from the 13th to the 12th century B.C., or from the LB Age to the Iron Age, has attracted much attention, because the question is thought to be related to the appearance of the Israelites in Canaan.

When seen in this light, the question is: can pottery be used to indicate the presence of the Israelites? Unrealistically high expectations have been raised by earlier pottery studies. The question of what is exclusively Israelite pottery in the 12th and 11th centuries B.C. cannot be answered satisfactorily. Amiran thought that the Israelites took over the craft of potting from the Canaanites, and very soon developed the craft in their own way. If this were so, then pottery could indicate an Israelite presence. However, the end of the 13th century B.C. marks the absolute nadir of the craft, and there was not much to be learned from it; moreover, why should Israelites not have known how to make pottery? To take the problem out of the realm of pure speculation, we need more evidence about the technical development of the craft, and it is hard to obtain such evidence. What is clear, however, is that early in the 12th century B.C. potting was tackled in a fresh spirit of determination to overcome the problems of production, and this process was crowned with success. Since we know about the problems of decoration we do not expect developments in painted pottery, yet the potters invented a strong red slip which was applied to small items and burnished. Potters made better use of the raw materials, and coarse lime sand was no longer used. Potters from Jerusalem preferred to use fine quartz sand, even though it had to be brought from a considerable distance. Late in the 8th century B.C., after the Assyrians had taken Samaria and many people took refuge in or near Jerusalem, pottery production had to be greatly expanded. Lime sand replaced quartz sand; it was available in abundance locally, but it did not improve the quality of the product. The improvements consisted of the production of pottery that was lightweight in relation to its size; potters again made thin-walled pottery which was nevertheless not so fragile as that of the MB (less elegant but more shock resistant). Problems such as inferior bases to the pots no longer occurred.

What happened in the course of the Iron Age can be characterized as the rationalization of production. It was not a matter of mechanization, but a thoughtful development of means and methods of production, resulting in a useful and fairly cheap product, adapted to changing demands. Potters used a slow wheel which was probably hand operated. Small items such as drinking bowls, lamps, small plates, and small jugs were shaped from a cone of clay, which allowed the potter to make a number of pots one after the other. The upper part of the wall was made to the required thickness, but the lower part and the base were made rather thick because, as long as the clay was wet, a thin lower section could collapse under the weight of the upper part. When the rough shape was finished, the potter cut it loose from the clay cone with a string and put it aside to dry for a while. When the upper part (the thin part) was stiff enough, the unfinished shape was put back on the wheel upside down, and the potter scraped clay from the still-wet area to make the lower part and the base as thin as possible. At the same time he would give the base its required shape, such as a ring to stand on. To make larger pots such as storage kraters and water jars, the potter started by making a base and a small part of the wall. This then had to dry because from then on the potter added clay coils to build up the wall to the required height, while at the same time widening the shape. To prevent the wet shape from collapsing under its own weight, he tied string around the belly of the pot, which was removed when the shape had dried but left impressions in the clay wall. The potter scraped away as much surplus clay as possible from the inside near the base. The potters were aware of the need to give walls and base equal thickness. To make a rim shock-resistant it had to be thicker than the wall. The local clays were not sufficiently plastic to fold the top of the neck of a jar down, either to the inside or the outside, as can be done with plastic clays. Instead it had to be pressed down to the outside while the pot was rotated several times, as too much pressure would spoil the pot.

A fair degree of uniformity was largely due to the customers' behavior. Taking the cooking pot as an example, one can notice that in the beginning every potter had his own way of finishing the rim, making it somewhat longer or more flaring, or bending it down or up, and so forth. The customers noticed that rims with a certain profile resisted being struck by accident much better than rims with other profiles. Thus they became conscious of differences in quality, and when buying pots they began to look for the better-constructed ones. Slowly the potters followed this trend, and all began to give the same sturdy rim to their pots. On the other hand, cooking pots were not in daily use. They were probably only used on the occasion of religious festivals and at large family gatherings.

This can be demonstrated in the following way. A technological study of the pottery from Jerusalem in the 9th–6th centuries B.C. resulted in a fairly clear definition of the various classes of pottery, and a distinction could be made between some of the potters producing them. When production of the various classes was worked out statistically, it was found that cooking pots formed only a small part of total production during the 7th century B.C., roughly 5–8 percent. These were produced to replace broken ones—cooking pots had a short life. They were not only more vulnerable than most other shapes, but the base burnt through after some use. Masses of broken bases are always excavated together with fragments of other parts of the pottery, but bases of cooking pots are rare. They crumble away when burnt. If a cooking pot had been used every day, it would have lasted between four and six months. According to the percentages of broken pottery from the different classes, it appears that over the same period in which three cooking pots were broken in a family's daily life, nine rather strong deep storage bowls, twenty-seven small bowls used for drinking and eating, four storage jars, four plates, one lamp, four cylindrical storage jars, and one small jug were broken. This is far too much, and a more realistic estimate would start with the assumption that one cooking pot would last three years, in which case the average family would replace one deep storage bowl, three small bowls, one water jar, one plate, and one cylindrical jar in a year, but the lamp and the small jug would last for nine years. The cooking pot, the lamp and the (perfume?) jug were not for daily use but for festivals. When the sun went down people sat in the dark or enjoyed the moonlight, and they did not normally cook a meal. They baked their daily bread in a small bread oven, and if they had two meals a day, they ate their bread with thick milk probably prepared in several different ways, with cheese, olives, various fresh or dried herbs, dried fruits, and some honey if they could afford it. People ate and drank from small bowls, which represented more than 50 percent of the pottery in daily use through the Iron Age. Meat could be roasted in the bread oven, but it was certainly not part of the daily diet for the average family. The diet of the Israelite family must have changed during the Iron Age, since in the early days there were no real cooking pots, but only very wide and rather shallow frying pans without handles. When people in the 7th century used pots for cooking during festivals, they were probably boiling lentils or preparing special meals.

After the Exile, pottery production did not change until the country revived economically, and then we find a rationalized production. In Hellenistic and Roman times pottery was turned out in large quantities as a result of the throwing technique. The traditional clays were no longer used, being unsuitable for this technique. Pottery firms used fine plastic clays and mixed clays in order to adapt the properties to the shaping techniques. Mass production had become the only way to survive. Jars were thrown in two halves which were luted together, and the lower half was made upside down on the wheel, as were deep bowls and cooking pots. The percentages of cooking pots are not known for this period, but from finds at the Amman Citadel it can be concluded that people used them every day. The pottery became much lighter than it had been in the Iron Age; it had very thin walls and was seldom decorated. People who could afford to buy a good dinner service used terra sigillata or pottery of comparable quality, which was imported from overseas. There was no large-scale trade in fine pottery, such as that produced in Petra in New Testament times, but the potters at Qumran were very fine craftsmen who made high-quality utility wares, as did other potters in the country. This was the time in which, technically speaking, potters had reached the limits of what could be done with the local clays. Petra clays are of a totally different nature to those found in the mountainous areas of Palestine, and this is clearly shown in the products of the potters' workshop.

H. J. FRANKEN

POTTERY CHRONOLOGY OF PALESTINE

Because pottery is almost always found in excavations from biblical sites in Palestine, and because pottery shapes and forms tended to change and develop over time, the historian, and particularly the archaeologist, turns to pottery remains for cultural and chronological information.

A. Importance of Pottery

Pottery's importance as an artifact of antiquity is due in part to its durability. Once a clay object is fired at a high degree it will harden and although it will break, it will not decay or disappear. Except for those of stone, other ancient artifacts of wood, cloth, reed, or vegetable matter, or even metal, have a limited life span and disintegrate on exposure to air and humidity. Pottery does not disintegrate, but it breaks rather easily on impact and has to be replaced. Once the art of pottery making was mastered, clay vessels were cheap and easy to replace. Clay beds are plentiful in the Near East, and artisans learned to seek out the superior sources of clay. Pottery vessels became the main type of containers in most Near Eastern cultures. Yet the vessels were fragile and their life spans were probably a few years at the most. The broken pieces of pottery, i.e., potsherds, would be discarded, but since they do not disappear they remain as evidence of the ancient peoples who first made them.

A complementary factor has made pottery important as an interpreter of history. Pottery types—their variety in form and texture, style and decoration—developed differently in different places and cultures and changed over time. Standard types were developed according to the needs of a particular people, and there was general conformity in form and design, but over a period of time the needs and styles would change as vessels had to be replaced. Although styles were conservative by today's standards, materials, decorations, and particularly forms changed. For example, Cypriot bilbils and Attic black-figured wares are associated with particular times and places. Wherever they are found they imply manufacture, trade, and cultural exchange during a specific time in history. Neolithic pottery of the Jordan valley indicates contacts with Anatolia, Syria, Egypt, and Mesopotamia. Even the common household wares have become known for their typical forms during a particular period and their changes of style over time. The symmetry and construction techniques of pottery manufacture make it possible to determine the whole form of vessels from "diagnostic" fragments—i.e., parts of vessels that are characteristic of a form such as typical rims, handles, bases, or decorated sherds. The occasional unbroken pot, the restorable vessels, and abundant potsherds found on Palestinian sites are thus invaluable when collected and studied in accordance with advanced archaeological techniques.

B. As Chronological Indicators

Pottery has had a particular historical importance in Palestine because of the lack of written material and rich architectural finds. Thus far the archival collections of tablets and texts known from Mesopotamia, Antolia, and Syria have yet to be found in Palestine and Transjordan. Monumental palaces, pyramids, and tombs have not been uncovered. Many times it has been the lowly potsherd that has revealed a story. The chronological factor reaches beyond dating the pottery for its own sake. Pottery has become the

chronological indicator for other artifacts, architecture, and cultural features. This is possible through two principles which go hand in hand: stratigraphy and typology.

The first to realize the potential of pottery dating in Palestine was Sir Flinders Petrie in his excavations at Tell el-Hesi in 1890. As he isolated individual layers of occupation he noted the distinctive pottery types, their disappearance after a time, and the appearance of new forms. He developed what became known as sequence dating, assigning numbers to types, noting the levels in which they first appeared (lower levels) and then disappeared or became infrequent (at a higher level). His division of pottery into groups, such as bowls, jars, jugs, and cooking pots, was the beginning of pottery typology in Palestine. By relating his typology to the stratigraphy he was able to develop a relative chronology. When he found pottery types he recognized from similar finds in Egyptian tombs which were datable by scarabs and inscriptions, he was able to introduce some absolute dates. Pottery was on the way to becoming Palestine's main chronological indicator.

The latest pottery dates the particular layer of earth or debris in which the pottery was found. Pottery can then be used to date the other finds found with it, artifacts which did not change in style as rapidly or for which typologies are not yet known. It becomes possible to date buildings, fortifications, and other cultural remains.

Petrie used the knowledge he gained at Tell el-Hesi in the following years as he excavated other sites, and his ideas were adopted by other Palestinian explorers. As archaeological methods developed, with emphasis on trained staff, detailed records, plans, photographs, and an understanding of the complex nature of the tell (the Reisner-Fisher method of the early 20th century), pottery took on corresponding significance. Ceramic chronology took a major step forward with the publication of W. F. Albright's excavations at Tell Beit Mirsim (1926–32) and his pottery studies from the EB through the Iron Age. By emphasizing the sorting and dating of the pottery which was found in a room, on a floor, or beside a wall, he distinguished building periods as comparative ceramic groups were assigned a particular stratum. In other words, the evidence of contemporary pottery types determined the stratum. It was the Wheeler-Kenyon method, developed principally in Palestine at Jericho (1952–58), that put emphasis on observable layers of debris and the use of vertical sections to examine, correlate, and record the layers of soil, particularly in relation to walls. Structures and artifacts, including pottery, are recorded in relation to the observed debris. Applications of these methods, along with modifications such as larger horizontal areas of excavation, more elaborate systems for saving and recording pottery, and wider ecological and environmental studies, are now generally used.

Because of comparative studies between sites excavated stratigraphically, it is now possible to date pottery within 50 to 100 years for many periods of Palestinian history. Although pottery dating is still the most helpful method for the Palestinian archaeologist, he must use it in coordination with more recently developed scientific methods. Radiocarbon, thermoluminescence, tree rings, magnetic measurements, must all be used, but as yet none of these are as refined and available as the ordinary potsherd. But the ceramic specialist is always open to new advancements in methods and scientific discovery.

C. In Survey Work

Pottery plays a significant role in archaeological surveys. When one desires to learn the history of a particular area, one unexplored or when more thorough or detailed information is desired about a previously explored area, an archaeological survey may be undertaken. Although methods may differ, the collection of artifacts found on the surface is the primary activity. From these finds, suggestions can be made as to the occupational history of a site or area. The most likely artifacts to be on the surface are stone tools or flints for pre-Chalcolithic sites, and pottery for sites occupied thereafter. Although there is always the possibility that the evidence may be lacking, in most cases sherds from every period of occupation have worked their way to the surface. The ability to date groups of diagnostic sherds means tentative conclusions can be reached concerning historical problems and the desirability of excavation and further study.

The ability to date sherds found on the surface has played a part in site identification ever since Petrie's work at the end of the 19th century. As knowledge and methods have improved, older identifications have

been many times revised. With new surveys, theories such as those of Nelson Glueck after his explorations in Transjordan and the Negeb have had to be reexamined.

D. Other Clay Artifacts

Although the principal efforts of the potter went toward manufacture of vessels, other clay artifacts are also found in excavations. Loom weights, sometimes of unbaked clay, and spindle whorls are common at some sites which seem to be dyeing and weaving centers. Clay figurines are unbaked in the EB. In the LB, they are made in molds. In the Iron Age they are partly formed by hand and partly in the mold. Ceramic animal figures and small pots, which may be toys, also appear.

Even broken pots were often reused in other ways. They were formed into lids or stoppers, or used as scrapers. Occasionally bowls were mended, as holes along broken edges testify. At Bethel a sherd was found with a piece of a drill through it, apparently broken off in attempting to mend the vessel.

Pottery occasionally provides written material. Sometimes vessels were impressed with seals or scratched with letters that marked ownership or destination. *LMLK* ("belonging to the king")–stamped handles are frequently found on Judean sites in Iron II. Rhodian jars were stamped for export. Records and messages were written on potsherds. These are known as ostraca and important historical evidence has been provided by such collections found at Samaria, Lachish, and Arad.

E. As Cultural Artifacts

Pottery's importance as a cultural artifact may first depend upon its date, that is the particular place and people with which it was associated. But along with its chronological value, pottery needs to be studied as a cultural artifact in its own right. Its style and decoration, its technique and care in making, its form and the possible use to which it was put—all can reveal something about its maker and the culture of those who used it. Its distribution over space and sources of manufacture tell something about the trade and economy of the ancient world. Complex economic, political, and social factors contribute to the movements of peoples, and the distribution of pottery is part of the evidence.

Renewed effort has been directed toward technical studies of pottery. See also the preceding article, POTTERY (TECHNOLOGY IN ANCIENT PALESTINE); POTTER'S WHEEL. Research concerning manufacturing methods and the kinds, sources, and qualities of clays indicate levels of skills, knowledge of environment, trade, and intergroup relations. Application of scientific techniques have served to determine clay composition and its sources. X-ray fluorescence spectrometry, neutron activation, and examination of thin sections under a petrologic microscope have helped to understand pottery manufacture and the raw materials.

Observations of modern potters disclose knowledge of clays and tempers, use of the wheel, and firing techniques that can be applied to the understanding of ancient cultures. Ethnological studies reveal information about the social setting of the makers and users. Pots and potters of a society are important vehicles for the understanding of that society.

F. In Excavation, Study, and Publication

It is obvious that the method of handling pottery on an excavation is very important. Every sherd must be collected, and the debris and locus from which it has come must be recorded. The usual method is to place each sherd in a bucket or container that is identified by locus. It is important that those that come from the same floor, room, or fill be kept in relation to each other so that the possibility of reconstructing vessels may be facilitated. As the sherds are brought in from the field they need to be carefully washed or dipped so that wash, paint, or ink is not removed. As soon as possible the ceramic specialist on the excavation will examine the pottery with the field supervisor of the area excavated so that tentative conclusions can be made as to date and the kind of debris being excavated. Incongruous results may send them back to the field to reexamine their work. A decision must be reached as to what sherds will be saved. If there are possibilities of reconstructing vessels everything is kept. Particularly important loci may demand that all pottery be saved. Some recent excavations have attempted to save every sherd, but on a large excavation sheer volume may make it impossible to handle all the material and storage itself may be impossible. In any case diagnostic sherds (rims, handles, bases, and decorated ware) will be labeled in indelible ink so that any individual piece may be identified. The sherds may be bagged or

boxed at this point, but hopefully not long after the conclusion of the fieldwork the field supervisor and ceramist who is responsible for the publication of the material will examine it again. The pottery then serves at least two important purposes. The sherds themselves will be used to date or corroborate the debris, constructions, and other finds from which the material came. This may take much comparative study, depending upon the familiarity of the material. Further, this pottery will also have a contribution to make to further ceramic studies and excavation, as it becomes a part of the total corpus of datable excavated pottery.

The publication of the pottery may include groups published by loci in order to show how particular areas and constructions are dated; it may include publication by type, as the dated pottery makes its contributions to archaeological data. Pottery may be published by photograph, but data is generally best presented visually by drawings in section and in profile. This takes a person skilled in drawing, and consistent methods must be followed in showing form and decoration. Plate layout must be meaningful and attractive. Ware descriptions should accompany each published sherd. The use of the Munsell Soil Color Charts is the usual standard to describe the hue, lightness value, and chroma of the ware. If further technical studies have been undertaken (see above), they will also be fully published.

G. Biblical References

The material remains of the Iron Age demonstrate the importance of pottery and the potter in Israelite society. However, specific biblical references are rather few. In the elaborate descriptions of the temple vessels and offerings, it is evident that the most luxurious and valuable vessels were of metals—bronze, gold, and silver (Exod 27:3; 37:24). However, clay pots were also used (Lev 14:5, 50; Num 5:17), perhaps so they could be destroyed if they became ritually unclean (Lev 6:28). In contrast, the Lord ordered Jeremiah to preserve his land deed in a clay jar (*kĕlî-ḥāreś;* Jer 32:14) a practice well known from Qumran and the caves of the Dead Sea. A piece of pottery, a potsherd *(ḥereś),* was used by Job to scrape his sores (Job 2:8).

Metaphoric use of clay vessels and their makers is the most usual reference to pottery in the Hebrew Bible. An ordinary household item and a necessary and flourishing industry was a natural way to express deeper truths for the biblical writers. The potter *(yôṣēr)* as maker of the pot *(ḥōmer)* is a metaphor for God, the creator of man (Isa 45:9; 64:7 [—Eng 64:8]; Job 10:9). Jeremiah used the figure of the potter *(yôṣēr)* reforming his imperfect objects of clay *(ḥōmer)* into other forms as what the Lord might do to Israel (Jer 18:1–6), and Jeremiah's breaking a clay jar symbolized the breaking up of the kingdom (Jeremiah 19). In Daniel's vision, the wild beast (Dan 2:31–45) had feet which were part iron and part clay (Aramaic *ḥesap*), symbolizing the empire as partly strong and partly weak.

Figurative and vivid uses of clay as a simile appear in the Psalms: "You will shatter them in pieces like a clay pot" (*kĕlî yôsēr,* Ps 2:9); "My throat is as dry as clay" (*ḥereś,* Ps 22:16—Eng22:15). In the poetry of Isaiah, "He tramples over rulers as if they were mud, like a potter *(yôsēr)* tramples clay *(ṭîṭ)"* (Isa 41:25), and in Proverbs (26:23) your fine talk covers what you really are like, "the fine glaze on a cheap clay pot *(ḥereś)."*

In the NT, Paul compares God's control to the potter's *(kerameus)* over the clay (*pelos;* Rom 9:20–21), and our treasure as being in "earthen vessels" *(ostrakinos skeuos),* i.e., power is of God, not our own (2 Cor 4:7).

The metaphoric use of clay in the Bible is perhaps the best commentary on the properties of clay and its use in antiquity: its form is at the mercy of the potter, in its hardened form it breaks easily, and the household pot is simple and ordinary.

H. Characteristics by Period

1. Neolithic (ca. 5500–4300 B.C.) Pottery is first known in Palestine toward the end of the Neolithic period. At Jericho, it was preceded by plastered floors and walls, vats and basins, clay figurines and plastered decorated skulls. Although the intermediate steps are not known, these activities could have led directly to the first use of fired pottery. Immediately new levels of civilization were possible: food could be cooked and preserved as never before. This was a major step toward a food-production economy.

The first pottery probably appeared about 5500 B.C. Handmade methods included forming "pinch pots" from a lump of clay held in one's hand, molding in or around a basket or stone vessel, slabs joined by slip (a more liquid clay), or building up by coils. Technical developments were rapid, as pottery from the Jordan valley shows evidence of firing in kilns to 800° C or higher. Various tempers were used before the end of the Neolithic period, including fine-ground pottery (grog). Decoration includes fine slips, and experiments were made with various methods of turning pottery. The usual forms include cuplike bowls, medium and large bowls with sloping or curved sides, and globular jars with flat bases. Rims are very simple, and handles may be simple loop handles, small pierced lugs, or incipient ledges. There are both fine and coarse wares. The coarse is very crude; it had considerable temper and was fired at a low temperature, making it soft and crumbly. The fine wares are of cleaner clay and considerably better fired. The finish is especially attractive; in cream and red-burnished slips a reserved portion is left in various patterns of zigzags, chevrons, or triangles. There are also decorations with incisions, and sometimes a combination of incisions and slip or paint.

At Jericho the Pottery Neolithic B people improved on the Pottery Neolithic A pottery: it is much better fired, the ware is thinner and contains less straw as temper. The forms include jar rims which are concave on the interior, and the loop handle is common. The red-on-cream slips of the earlier fine wares is succeeded by a deep red slip, sometimes burnished. Characteristic is a band of herringbone incisions, sometimes covered by a cream slip.

2. Chalcolithic (ca. 4300–3200 B.C.). The transition from Neolithic to Chalcolithic is not sudden but gradual, and it is not yet clear whether some cultures are transitional, contemporary, or continuous. The Yarmukian and Jericho Pottery Neolithic B are transitional and may fit best into the early part of the Chalcolithic period. In any case, the Ghassulian–Beer-sheba cultures are widespread by Late Chalcolithic times. Wares are more advanced—harder, thinner, and better fired. Pots are still handmade, but there is some evidence of a slow wheel or tournette. New varied forms include V-shaped bowls, goblets and chalices, churns, and cornets. Ear handles are common, sometimes in such excess that they must be merely decorative. Other forms of decoration include impressing, plastic, and paint. Large coil-made pithoi had elaborate ropelike clay bands, most likely in imitation of the rope which was necessary to hold them together as the pots were made. Holemouth jars (POT.04 (a)), which became so popular in the EB, began to appear. In addition to the household vessels the typical clay ossuaries of the Chalcolithic period should be mentioned; most were shaped like houses or animals, but jars were adapted also for this purpose.

3. Early Bronze (ca. 3200–2200 B.C.). The transition and degree of interruption between the Chalcolithic and EB ages has yet to be settled. Kenyon has called the early period of EB I the Proto-Urban period, beginning EB I with what others call EB IC. It was with the EB that the first correlations with Egypt were made, and the absolute chronology of the Bronze Age depends on correlation with predynastic and dynastic material of Egypt. Canaanite pottery found in Egyptian tombs and Egyptian artifacts found at EB sites in Palestine, along with local stratified Palestinian pottery, serve as the basis for EB chronology.

The periods of the EB Age are best delimited by the introduction of new pottery forms. Typical throughout the age is the ledge handle (POT.04 (h)). It apparently originated in Canaan, and from there spread N as far as Upper Galilee, and Canaanite jars with ledge handles have been found in Egyptian tombs. The plain (or duckbill) handle and indented ledge handles were probably the first. Typical of the N are red- and gray-burnished wares, including various kinds of teapots, small bowls with conical omphali, bowls with molded decorations or projecting knobs below the rim (POT.04 (b)), high loop-handled juglets, amphoriskoi, large jars, and wide-mouthed jars. In the S the typical decoration late in EB I is a painted ware called "line group," usually straight or wavy lines in groups crossed by diagonal lines. Plain bowls often have a row of impressed dots or slashes below the rim. Juglets, amphoriskoi, and bowls are common, but most of the N shapes are present and there was undoubtedly intermingling between the two regions. To these forms, which are best known from tombs, platters and hole-mouth cooking pots found at stratified sites should be added.

Most of these forms of EB I continue to appear in EB II. Platters become plentiful, and amphoriskoi, particularly with the "line group" decoration, are less common. Combing as a finishing makes its appearance. Most typical of EB II are the Abydos wares, called such because they were found in the Egyptian tombs at Abydos and this was the first Palestinian type pegged to Egyptian chronology. The most typical characteristic is a symmetrical oval-shaped jug with a loop handle, red-slipped and hard-baked to a metallic quality. Sometimes they have one or two degenerate loop handles on the side in addition to the regular loop handle, and a form with a stump base develops. There are also jugs with a brown- or red-painted decoration—rows of triangles filled with incisions and separated by bands. The jug forms and types also appear as juglets.

In EB III many of the EB II forms continue. Platters and bowls, some of them deep, continue with more elaborate rims developing. Wavy ledge handles on jars are common (POT.04 (i)). Pattern combing is characteristic on jars and bowls. The unique feature of EB III, however, is the introduction of KHIRBET KERAK WARE. Known first from Khirbet Kerak in Galilee, it seems to be introduced into Palestine from the N. The ware itself is brittle and poor and the pots are entirely handmade, showing no knowledge of the wheel. However, the vessel is covered with a heavy slip which is polished or burnished to a high gloss. The method of firing produces vessels partly black and partly red, witnessing to a sophisticated knowledge of smoke blackening. The usual Palestinian pot sits on a base as wide or almost as wide as its mouth and gently curves up to its rim. Khirbet Kerak vessels have small bases, sometimes appearing top-heavy, and the profile often curves up in an S-form. Most common are bowl forms, but there are also jugs, stands, and lids. New rim and handle types are introduced, and decoration includes incisions and reliefs, unlike any previously known Palestinian pottery.

Unique vessels sometimes found at EB sites are incense stands and kernoi (three or more small bowls or cups on a ring, probably also cultic in use). EB lamps are hardly more than shallow bowls with a slight pinch blackened by a burnt wick.

The next period sometimes is considered the final period of the EB and is known as EB IV (Dever). Others prefer an "Intermediate EB–MB" designation (Kenyon, Kochavi), emphasizing possible relations with the following period as well as the EB. It was formerly known as MB I (Albright), and this is still preferred by some (Amiran). The urban life of EB II–III as known from large sites in Palestine and Transjordan largely disappears, and in some respects the pottery of the final EB phase is similar to that of EB I. As a rule, types of pottery are very localized and attempts have been made to find many migrations or influences coming into the country and to set up chronological frameworks. It is likely, however, that changes are as much due to the breakup of the city-state system as to new peoples coming into the land, and many of the varied groups may be contemporary.

Wide bases and gently curving sides in jars, jugs, and bowls continue. A profiled rim is typical of many large bowls. Teapots are particularly common. Lamps are open bowls with four wide-pinched spouts (POT.06 (a)).

Toward the end of the period or in MB I, "caliciform" ware appears. Probably introduced from Syria, the typical decorations are incised wavy lines between straight lines below the rim of the vessel. The jars usually have handmade bodies with necks and rims finished on a wheel.

4. Middle Bronze (1900–1550 B.C.). In the MB, technical advancements from the widespread use of the potters' wheel resulted in improvements in form and decoration. A heavy and fast-turning wheel required a fine temper in the clays and additional care in drying and firing. There were new possibilities in delicate rim and base forms and pleasing shapes. The pottery and other material finds indicate a prosperous society with time for luxury items. Improvements in technology probably helped bring this about.

The MB is easily distinguished from the earlier periods, although the beginning of the technical improvements were already emerging. Similar types occur throughout the MB, but some distinctions can be made between MB I, II, and III. A deep red burnished slip is common in MB I, and there are also cream-slip burnished vessels. Painted decoration is found. In MB II, burnishing continues but many vessels are plain, and painted decoration is less often found. However, Tell el-Yahudiyeh ware, dark-burnished with white-filled punctured holes, is characteristic.

Open, rounded bowls had gently curved sides in MB I. The bases were flat or low disk, and a shallow ring base was beginning to appear (POT.04 (c)). In MB II the bowl walls are less rounded and sometimes almost straight. Platters or large shallow bowls with a plain, slightly inverted rim are common. Bases are higher, often with a ring, but a concave disk base is also characteristic. The carinated bowls (POT.04 (d)) are small and closed in MB I with both sharp and rounded carinations. In MB II–III, they are much more varied; they are often flared and vary the place and angle of the carination. The base is better formed and the trumpet base and chalice (POT.04 (f)) have made their appearance. White or pale-colored thin wares are popular. Occasionally attractive bowls with three handles as bases appear.

Cooking pots are of two types. The flat-based, straight-sided pot has a molded band with thumb impressions and a row of punctures or holes below the rim. In MB II–III, the predominant type is round-based with carinated sides, usually handleless, with the rim rolled or folded outward.

Jugs and juglets take many forms and MB II–III types are generally a continuation of the MB I. Dipper, pyriform, and cylindrical jugs and juglets begin in MB I and branch out into many variations. The double and triple handles are common. Narrow necks with small mouths and outturned rims are typical of both pyriform and cylindrical juglets. The button base on pyriform juglets appears in MB II. Variations with flat, concave, or pointed bases may be MB III variations of the typical form. Tell el-Yahudiyeh juglets with their dark clay and slip, and punctured design filled with white chalk, follow the development of the common pyriform juglets. Cylindrical juglets appear as early as MB I in the coastal region and Jezreel plain, but they appear infrequently in more central regions until late in MB II and then largely replace the pyriform juglet in MB III.

The classic MB II jar is ovoid in shape, tapering to a small flat base (POT.04 (j)). Two handles are smoothly attached on opposite sides at its widest girth, hardly interfering with the contour of the vessel. The neck is relatively short. Rims may be plain or profiled externally, internally, or both, with rounded, flattened, or tapered edges. Elaborate profiles seem to be more popular as the MB progresses. Bases may be slightly convex and also rounded. Four handles are found as well as two. Combed incised decoration and brownish-red-painted alternating wavy and straight lines over a white slip are also found.

Cypriot imports, so typical of the next period, began to be imported into Palestine in the MB. White-painted and white-slipped wares are found.

5. Late Bronze (ca. 1550–1200 B.C.). The LB is largely contemporary with the New Kingdom of Egypt, and during most of this period Canaan was dominated by Egypt. It is generally divided into LB I, II A, and II B. Most pottery forms are a direct development or degeneration of MB forms. There are many Mediterranean imports and local painted wares, but especially toward the end of the period the local ware becomes cruder and heavier. Analysis at Deir Alla in Jordan has shown that there was a return to the slow wheel and coil-made pottery. The area of this decline and its duration needs to be further tested.

Carinated bowls continued to be made, but by LB II the carination had become not much more than a ridge (POT.04 (e)). Concave disk bases are more usual than the ring base. By LB II the more usual open bowl has rounded or straight sides (POT.04 (k)). Chalices and decorated goblets are characteristic throughout LB.

Kraters are also characteristic LB forms. There are two handles, either vertical or horizontal. In LB II they are usually painted, and the metope style is the most popular. The rounded-body cooking pot continues the MB tradition, and the everted rounded rim continues into LB I. A triangular rim also develops and became the most common type in LB II. Late in the period (LB II B) an elongated triangle is typical.

A distinction can be made between the “Canaanite” jars (POT.04 (g)), used for export in the flourishing international exchange of the LB, and the decorated store jars for domestic consumption. The jar for export was heavier, with thicker walls, slanting from a pronounced shoulder, and a botton or stub base. The domestic jars were usually decorated (a custom begun in the MB) and had thinner walls, an oviod body and a round base (POT.05 (a)). Large pithoi are also known from N Canaan.

Jugs and juglets continue the ceramic tradition of the MB. Zones of painted metopes are common decorations. Biconical jugs, where the upper part of the vessel is about equal in height to the lower, have a

shoulder handle and the metope design on the upper part. Biconical craters are similar but have two shoulder handles. Juglets tend to lose their shoulders and their necks become shorter and wider. Dipper juglets are not as elongated as MB forms.

A new form in the LB is the pilgrim flask (POT.05 (f)). It differs from other closed vessels in that its lentoid form cannot be thrown on the wheel all at once, but must be thrown as two plates and molded together. Development is seen in the handle attachments, and by the Iron Age they are smaller.

At the beginning of the LB, lamps are not too different from those of the MB, which had slight single spouts (POT.06 (b)). In LB II they become larger with a pinch that almost meets, and a rim develops (POT.06 (c)). As sometimes in the MB, and later in the Iron Age, full-body female figurines, known commonly as "Astarte" plaques, are found with varying frequency at LB Palestinian sites. Their varied arm postures, hairstyles, and decoration show some affinities with curvaceous female representations of deities on Egyptian wall reliefs.

An important and characteristic part of the LB repertoire is the amount of painted and imported ware, found more often at this time than in any other period of antiquity in Palestine. Perhaps this accounts for the crudeness of much of the ordinary household pottery. Luxury items were made by specialists or imported.

The bichrome ware seems to be the result of a school of artisans working in the coastal area of Canaan. The wheel-made pottery is of high quality, of fine light-colored clay and well burnished before painting. The decoration is on the shoulder zone of the vessel in a frieze divided into patterned metopes enclosing ibex, birds, and fish. Vessel forms are those of the plain ware as well as some unique bichrome types. The "chocolate on white" ware is distinctive particularly because of its finish—a creamy-white-burnished slip on which the thick chocolate or reddish brown paint has been applied. The patterns are largely geometric. Both these wares appear at the end of MB III and flourish during LB I. In addition to these two wares, the palm tree and ibex motifs in a frieze, typically in metopes between triglyphs, occur on all kinds of closed vessels throughout the LB. Sometimes it appears to have disintegrated in LB II B specimens.

The typical imported wares, present in almost any LB Palestinian site or tomb, include Cypriot, Mycenaean, and some Egyptian wares. Well known of the Cypriot wares are the white-slipped "milk bowls" with "wishbone" handles and brown or reddish-brown ladder-painted designs (POT.05 (b)). The delicate patterns become more schematic in LB II. The other common Cypriot imports are jugs and juglets in Base Ring ware, known as "bilbils" (POT.05 (c, d)). They are of a well-fired clay, with a dark burnished slip, and are thin, hard metallic ware in appearance and resonance. Handmade, they may appear skewed in stance. Base Ring I is characterized by plastic decoration around its neck. Base Ring II is usually white-painted, and often more squat and considerably larger than Base Ring I. These vessels were imitated locally, and the local vessels can be easily recognized because they were wheel-made of poorer ware.

Mycenaean vessels of excellent workmanship are imported all over the E Mediterranean. They are wheel-made, and the glossy black paint of the design was also largely done by wheel. Typical forms are the pyxis, stirrup jar, and kylix. These were imported throughout the LB; they were also imitated locally, but lesser skill in craftmanship is evident.

6. Iron Age I (ca. 1200–918 B.C.). This is the time when the Israelites came into the land of Palestine and formed an independent kingdom under Saul, David, and Solomon. Iron Age II begins with the division into the N and S kingdoms and lasts until the fall of Jerusalem in 587 B.C. However, the assumed distinctions between Canaanite and Israelite pottery beginning around 1200 B.C. can no longer be made with the assurance once assumed, since the Israelites slowly took over the land and pockets of Canaanite culture remained.

Another element, the Philistines and Sea Peoples, also settled in the land during Iron I. Their pottery is more distinctive, and where it is found gives some indication of their settlement, influence, or trade. But again, conclusions must be drawn carefully.

Albright made his first division of Iron I on the appearance of this "Philistine" ware at Tell Beit Mirsim in the second period, about 1150 B.C., but pottery of the Sea Peoples is now known earlier at other sites.

Although the pottery was made locally, connections with the Aegean are obvious in the decorated Philistine ware. The black and red paint appears usually over a white slip, covering the upper and central zone of the vessel. The central zone is divided into metopes containing geometric patterns such as spirals or circles with crosses, or more characteristically, large-feathered birds. Some of the forms are also Mycenaean: kraters with tilted handles, stirrup jars, and pyxides. However, local forms are also introduced, most typically the "beer jug" (POT.05 (g)), as well as various jugs, juglets, and pilgrim flasks.

Local painted wares continued to some extent into Iron I, but often in a debased LB style. A bichrome style is introduced which may be of local Phoenician-Palestinian origin. The decoration is typically red and black with concentric circles on the sides of jugs or inside bowls.

No sharp division occurs between the pottery forms of the Iron and LB ages. Carinated bowls, decorated rounded bowls, and small bar handles develop from LB forms. In addition, irregular hand burnishing has its beginning in this period. The chalice (POT.05 (h)) reaches the height of its popularity in Iron I, whereas a low-footed vase or goblet is dying out. The krater continues earlier traditions in form and painted decoration. There are sometimes four or more handles, as well as the horizontal handles known from the earlier period. A typical Iron Age thickened rim develops.

The cooking pot continues the LB shape: relatively shallow and carinated body with rounded base, usually without handles. The triangular rim is elongated in various forms.

The first pithoi are largely transitional from the LB, but the body becomes more elliptical and the neck narrower and shorter. A ridge develops at the base of the neck, and Albright was first to recognize the "collar rim" store jar (POT.05 (e)). He identified this jar with the early Israelite settlers, but the history is probably much more complicated. Other Iron I store jars have ovoid bodies, and a painted jar with a spout appears. Amphoriskoi continue their Canaanite form. Typical jugs have globular bodies and trefoil mouths. Painted jugs and jugs with strainer spouts also appear. The popular juglet types are those with an ovoid body, trefoil mouth, and a slightly pointed base, and the small black-burnished juglet, more graceful and with a longer neck than in Iron II. In Iron I the upper handle attachment is below the rim. A "Cypro-Phoenician" imported juglet appears in the 11th century in black-on-red wares.

The lamps are relatively small with a flat base or larger with a rounded base (POT.06 (d)). Distinctive cultic vessels are frequently found in Iron I contexts, particularly incense burners and kernoi. Figurines and spouted animal bases also appear.

7. Iron Age II (ca. 918–587 B.C.). Iron II begins with the division into the N and S kingdoms and lasts until the fall of Jerusalem in 587 B.C. The pottery at present can generally be divided into an early and late phase. Tell Beit Mirsim A should now be recognized as belonging mainly to the early phase along with Lachish III, Beer-sheba II, Samaria, and other N sites. To the later period ending in the fall of the kingdom belong Lachish II, Ramet Rahel V, most of the Tell el-Ful and Beth-zur Iron II occupations, and En-gedi V. Also important during Iron II are the regional differences between the N and S, more apparent than earlier in the Iron Age. This probably reflects the political situation, the division of Solomon's kingdom into N (Israel) and S (Judah) entities.

The technical advances should also be recognized. Most pottery is wheel-made, and it is well fired. Many different forms and types are found, but large quantities of similar forms, often in varied sizes, indicate mass production. Every clan and family unit must have had their ceramic wares. Imported and painted pottery is not so common. Much of the local ware is slipped, often in red but in other colors also, and then burnished. This finish seems to be preferred over, or perhaps easier produced than, painted wares.

Improved workmanship is easily recognized in the bowls. Many are red-burnished. Irregular hand burnishing came in at the end of Iron I. By the latter part of Iron II the typical bowl has a thickened rim, is slightly carinated, and has a wheel-burnished reddish-brown slip on the interior and rim. It is made in a variety of sizes. There are also rounded, slightly flaring, and shallow platelike bowls, some plain-rimmed and some with different patterns of burnishing, but similar features are repeated over and over. A type of bowl found at many N sites with a high-quality red slip and burnish has been called Samaria ware.

The shallow Iron I cooking pot continues into Iron II, usually with a lower carination and a shorter triangular section in the rim. Later in Iron II the pot becomes more squat and rounded and has two handles, and the rim becomes ridged and appears in many variations. In the S a deep type appears with a rather high, narrow neck, often rilled, and two handles from the rim to the shoulder.

Storage jars with pronounced shoulders are typical. Ovoid jars with ridged necks and "sausage jars" (POT.06 (h)) are popular in the N. The ovoid jar with a wide rounded shoulder, tapering neck, and four handles is the type on which the *lmlk* ("belonging to the king") seal impressions have been found in the S. See STAMPS, ROYAL JAR HANDLE. Jar handles with personal stamps, a few with names found in the Bible, are found fairly frequently. A popular S form was the hole-mouth jar of two types: a rather small cylindrical and a large heavy, sometimes more rounded or barrel-shaped with sloping shoulders. Jars with three handles and a spout are found in both the N and the S. Amphoriskoi appear in both large and smaller variants, and a particular type with painted bands has been found in Jordan and suggests Assyrian influence.

Wide-mouthed jugs often with pinched lips continue Iron I types. Variants of jugs with strainer spouts also continue. The characteristic new form of Iron II is the well-made and often beautiful decanter (POT.05 (i)). There are some variations between the N and S forms. The dipper juglet is typically cylindrical with a plain rim and appears in a range of sizes. Likewise the black-burnished juglet is found, some very tiny in size, others up to ten cm or more in height. Its handle is now attached to the rim. The pilgrim flask continues to appear to the end of the Iron Age. The pyxis has almost completely disappeared. Imported Cypro-Phoenician ware is found in small quantities to the end of Iron II. Lamps have rounded or flat bases, sometimes with a wider lip and pronounced rim. Late in the Iron Age in the S a high-based lamp appears and continues into the next period (POT.06 (e)). Figurines with molded heads and handmade bodies are frequently found on Judean sites.

8. Exilic and Persian (ca. 587–332 B.C.). Iron II ends with the fall of Jerusalem in 587 B.C. and is followed by what is usually called the Persian period. Before the Persian occupation, though, there is the period of the Babylonian Exile, ca. 587–532 B.C., and at some sites, particularly in Judah, pottery types have been distinguished that belong to this period. Apparently small colonies of Israelites continued to live in towns outside Jerusalem.

Typical of this exilic period are heavy high-based lamps, rather deep round cooking pots with ridged rims which first appeared late in Iron II and are a development of Iron II shallow pots, elongated juglets, wide-mouthed jugs, and large bowls, still sometimes irregularly burnished but more often not. An impressed chevron design sometimes appears on the shoulders of high straight-rim kraters.

During the Persian period, 532–331 B.C., some differences have been distinguished between the pottery in the highlands and that of the coastal plain and Galilee. The coastal regions were more influenced by the E Mediterranean—Cyprus, the Aegean, Anatolia, and Egypt. However, most of the influences also reached inland as seen in the rich imported wares which have been found at Shechem, Samaria, and Jerusalem.

It is the imported Greek wares which were the first and the most easily recognized and often the determining chronological factor for this period. Though often fragmentary, imported black-figured ware of the late 6th century and early 5th, red-figured ware of the 5th, lecythoi of the 4th, and the black-glazed wares of the 4th have assisted in giving absolute dates to strata and in developing typologies for local wares.

Local wares are sometimes developments of Iron Age types and other times are influenced from the W. The shallow mortaria with wide thickened rims, sometimes with ribbed sides, and with flat, ring, or high-footed bases are characteristic. Typical particularly of coastal areas, as it was used for international trade in the Mediterranean world, is the flat-shouldered jar with cylindrical body tapering to a pointed base. Sometimes the handle is twisted and ugly or the rim and handles have thick black-painted lines. An amphora with "basket handles" (two loop handles attached horizontally and extending high above the rim) is characteristic in both Cyprus and Palestine (POT.06 (j)).

Rounded and elongated juglets have characteristic forms. Cooking pots tend to be deep with necks developing, predecessors of Hellenistic deep cooking pots. Lamps take a very characteristic form, with a wide rim and more flattened profile than in any other period. Molded and glazed imported lamps are also found and will soon be copied locally.

9. Hellenistic (ca. 332–63 B.C.). During the Hellenistic period, 332–63 B.C., influence from the E Mediterranean and the Greek world continues, but in many cases local attempts at imitation take the place of actual imports. Increased trade and contact point to similar pottery forms throughout the Hellenistic world. In Palestine Attic bowls are copied in form, and a poor paint or wash imitate the glazed wares. In time even the paint is omitted and round bowls with incurved rims and flat straight-sided bowls, descendants of "fish plates," are characteristic. The Attic fish plate (POT.06 (i)) had a depression in the center, sometimes stamped with a fish impression, and the oil could run down in the bottom of the dish. The pottery as a whole is hard-fired, but sometimes quite carelessly, and disfigured forms result.

Storage jars are elongated to bag-shaped with sloppily attached handles. Rims with undercuts develop into typical rounded rims, then are more flattened until an elongated flattened rim is typically late Hellenistic. Imported Rhodian jar fragments are easily recognized by their finely levigated orange or buff ware, high necks with rounded rims, stump bases, and angular handles with stamps. The inscriptions have been thoroughly studied and can be accurately dated. On one handle the name of the potter will be given and on the other, the priest in whose tenure of office the vessel was manufactured.

Wide-mouthed globular jugs with smoothly concave bases are characteristic. Flasks are varied and develop longer necks and become smaller as the Hellenistic period progresses. Cooking pots are deep with rather long necks and two strap handles from the rim to the shoulders. The ware is often quite thin. Late in the Hellenistic period there is also a shallow type with a ridge to accept a lid.

Except for a small folded lamp whose sides are folded over to meet (POT.06 (f)), lamps are now made in molds (POT.06 (g)). They are imitations of Greek forms, but the local ones are generally rather plain with a ridge or incised circle around the small oil hole and sometimes a small knob or vestigial handle. Ray, floral, and other motifs become common in the 1st century B.C.

A unique and characteristic Hellenistic form is the unguentarium. The early ones, sometimes known as "spindle bottles," are elongated at both ends and rather long and heavy. They become lighter and more delicate in the 1st century B.C. Later a pyriform juglet replaces them and this lives on into the Roman period.

Nabatean pottery first appears in the Hellenistic period and its typical forms and ware continue well into the Roman period. It is mainly found in S Transjordan, with its center at Petra, but there are also Nabatean sites in the Negeb and evidence of trade as far N as Damascus. This is the finest and most attractive pottery in the history of Palestine and Transjordan. It is red- or orange-colored, thin, hard-fired, and often beautifully decorated. The finest of clays and excellent firing techniques were used. Most forms are small compared with other Palestinian pottery: small bowls and plates, small jugs and cooking pots, juglets and unguentaria. Fine bowls and painted decorations developed sometime after 100 B.C. and for the next two centuries the painted ware is common. Initially the decoration is of a flowing, naturalistic style, executed in bright orange or light red paint with a delicate brush technique. Late in the 1st century B.C. another style appears—heavier and more formal, in a solid purplish-red pigment. This type seems to span the 1st century A.D. Other vessels are impressed, usually with rouletted designs. Jugs, juglets, and cooking pots are sometimes ribbed.

10. Roman (63 B.C.–324 A.D.). Terra sigillata, a red-glazed ware, is one of the best recognized wares of the Early Roman period. Besides the red glaze, rouletting on the interior or rim is common. Roman red wares of various kinds are imported from the W Mediterranean throughout the Roman period. Large amphorae with stamps in Greek and Latin continue to be found in Palestine as the containers for imports.

Local Early Roman forms are direct developments from Hellenistic wares. Rims on storage jars become long collars with a characteristic ridge below. A cylinder-type jar is known from Qumran. The concave base on Hellenistic jugs becomes sharper. Narrow-necked jugs are common. Pyriform juglets replace the fusiform unguentaria. Asymmetrical pot-bellied flasks develop exaggerated, twisted handles. Cooking

pots have shorter necks and flat, ribbonlike handles. Ribbing becomes more common and extensive ribbing is typical of the following Byzantine period. Small incurved rim bowls continue for some time. In Jerusalem thin-walled bowls with red, brown, or black stylized floral patterns have been found in recent excavations. At first they were called "Pseudo-Nabatean," but they are different in motif and ware.

The "Herodian" lamp is typified by its bow spout and plain body, made in a mold as all lamps are by this time. Many elaborately designed lamps are imported from Italy and other places to the W by the 2d century A.D. Besides floral designs, some have mythological scenes.

11. Byzantine (A.D. 324–630). The Byzantine period is beyond the scope of biblical times, but archaeology of this period, as well as of later Islamic and Crusader times, is receiving more attention in Palestine and Transjordan in relation to early Christianity as well as the history and culture of the land.

Pottery characteristics include pronounced ribbing on jugs, juglets, jars, and cooking pots. Decoration includes straight and wavy incised lines on jugs and bowls. "Frying pans" are shallow cooking pots sometimes with hollow handles. There are slipper and channel nozzle lamps, and "candlestick" lamps with six, seven, or eight branches around the spout and occasionally a cross or Greek inscription.

POWER, NT CONCEPT OF. The message of salvation in the NT is a message of power: God raised Jesus from the dead. The cross-resurrection event not only demonstrated God's power over death, but also marked the defeat of the opposing sphere of power and its forces (Satan and his demons). Just as God delivered his people from bondage in Egypt "by his mighty right hand," the NT proclaims that he has now delivered his people from the bondage of death, the dominion of Satan, and the compelling influences of "sin" and "the flesh."

The most common word for power in the NT is *dynamis* (and its cognates), occurring some 375 times and used by every NT writer. Less common are the terms *ischus* and *kratos,* which are probably not to be distinguished sharply in meaning from *dynamis.* All three terms denote the inherent or derived ability to

accomplish a given end. The plural form of *dynamis* is used frequently in the NT to describe powerful supernatural acts such as healings or exorcisms, and is normally translated "miracle." The effectual exercise of power is indicated by the term *energeia* and its forms. It is only used of supernatural beings in the NT and is often used to describe God's manifestation of power in raising Christ from the dead. The term *exousia,* usually translated "authority," has primary reference to one's right to exercise power but implies an ability to exercise that right. The concept of power is also conveyed in many other terms and units of thought (grace, light, fullness, glory, word, spirit).

In the Judaism of the NT era, the OT idea of a powerful personal God involved in history was prominent. A future direct intervention of God in history to exercise judgment, overthrow evil, and bring salvation was integral to the Jewish hope. Just as God powerfully wrought deliverance in the past, the Qumran community envisioned a future triumph over "the children of darkness" (1QM 1:14; 6:6; 11:4, 9; 13:13–14). This victory would take place not only on the physical battlefield but, more importantly, in the heavens against the supernatural forces of evil. Throughout the Qumran documents, the manifestation of divine power is conceived of primarily in a salvation-historical sense (1QH 1:34; 4:28–29; 13:9; 14:13). Future deliverance was also expected to come through a divinely empowered Messiah as seen most clearly in the *Psalms of Solomon* (17:21–44): "Undergird him with strength to destroy the unrighteous rulers … and he will not weaken in his days, relying upon his God, for God made him powerful in the Holy Spirit" (vv 22, 37). God's saving events of the past, particularly the deliverance from Egypt, also become the basis for an expectation for military victory in the Maccabean wars (1 Macc 4:9–11; 3 Macc 2:6). Josephus' use of power terminology is almost exclusively tied to military activity. For Josephus, the Greek term *dynamis* has become a technical term for an "army" (e.g. *JW* 7 §252, 275).

In the 2 centuries leading up to the time of Christ, Judaism shows an increasing interest in supernatural power, especially the invisible realm of the angelic and demonic (see, for example, *Jubilees, 1–2 Enoch,* and *Testament of Solomon*). This appears to correspond to the heightened interest in divine power in the Greco-Roman religions. In Hellenistic religion, the gods were seen less as personalities and more as powerful beings needing propitiation or capable of manipulation. People sought divine power through invoking a deity (or a series of gods), by participating in the bloodbaths of a god (e.g. the *Taurabolium* of Cybele and Mithras), through being initiated into the mystery of a god, or by employing magical arts, which were well known to the masses of the Roman world. Asklepios could be praised because "every place has been penetrated by the saving power of the god" (*POxy.* 1381.215), especially for physical healing and rescue from dangers at sea. The moon god Mên received adulation for his power: "There is one great god in heaven, the heavenly Men, the great power *(dynamis)* of the invisible god" (see Moulton and Milligan 1930: 172). The magical texts of this period are filled with recipes for the attainment of supernatural power. *PGM* 4.1024–25 is representative of the request for power: "You who break apart rocks and change the names of gods, enter in, appear to me, lord, you who have in fire your power and strength." William Ramsay observed that "power" *(dynamis)* was one of the most common and characteristic terms in the language of pagan devotion (Moulton and Milligan 1930: 172).

In the Jewish writings of the Hellenistic era, the primary Greek term for power *(dynamis)* came to be used as a technical expression for angelic and demonic forces—perhaps due to the LXX expression "Lord of Hosts." These beings are seen as having widespread control over human existence and over all aspects of nature (*Jub.* 2:2). Philo comments: "The air He allotted to winged visible beings, and to other forces *(dynameis)* which cannot be perceived at all; these are the host of incorporeal spirits ordered according to differences in rank … We are told that some enter into mortal bodies … while others, endowed with a diviner constitution, have no regard for any earthly quarter, but exist on high next to the ethereal region itself" (*Plant.* 14). The Jewish literature of this period frequently depicts human existence as the battlefield between angels and demons, between God and Satan (*TDNT* 2:296).

When we approach the NT, the person of Christ surfaces as decisive in understanding the NT concept of power. According to the Synoptic Gospels, Jesus conducted his ministry on the basis of the divine power imparted to him through the Holy Spirit (Luke 4:14). After resisting the temptations of the devil (Luke 4:1–13), Jesus waged a powerful confrontation with the realm of Satan. The exorcism in the synagogue at

Capernaum led many to recognize the authority of Jesus over the dominion of Satan (Mark 1:21–28; Luke 4:31–36). It was necessary for Jesus to wage a powerful assault on the dominion of the "strong man" (Satan) in order for salvation to be procured (Mark 3:27; Luke 11:21–22). In the incident with the Gerasene demoniac, Mark indicates that no one had been strong enough to bind the man (Mark 5:4), yet Jesus displayed his power by driving out the entire legion of demons. Jesus' manifestation of divine power in exorcisms signifies that the salvation of God has finally come in the person of Jesus (Luke 11:20; Matt 12:28).

The miracles of Jesus, or his "works of power" *(dynameis),* are seen by the evangelists as an indication that God himself was at work (Acts 2:22). Mark, for instance, records that the healing of the paralytic demonstrates that Jesus is the Son of Man and, as such, has authority to forgive sins (Mark 2:1–12). These works of power should produce repentance and incite faith (Matt 11:20–23; 13:54, 58; Luke 10:13; Mark 6:2, 5).

The power of God was manifest in the life of the historical Jesus in the context of the weakness and limitation of his human flesh. As such, the example of his dependence upon the power of God through the spirit becomes paradigmatic for the Church. For Jesus, his access to divine power did not circumvent his need to suffer and die. The evangelists agree that Jesus was aware of his need to experience the passion in order for God's plan of salvation to be consummated. Jesus indicates that his followers could also expect to suffer, particularly as a result of their witness for him (Mark 13:9). At the same time, Jesus bestowed his power and authority on his followers (first on the Twelve: Mark 3:15; 6:7; Luke 9:1; Matt 10:1; then on the seventy-[two]: Luke 10:17–20, esp. v 19, probably prefiguring the mission of the Church in this context). This access to the power of God would assist Jesus' followers in their mission and in gaining victory over the influence of the realm of evil. Jesus realized that his earthly ministry was not the time for a glorious display of divine omnipotence, but he did anticipate exaltation (Luke 22:69) and a glorious and powerful return (Matt 24:30; 26:64; Mark 13:26; 14:62; Luke 21:27).

In comparison to the Synoptics, John emphasizes the world as under the authority of Satan, who is described as "the prince *(archon)* of this world" (John 12:31; 14:30; 16:11). Unbelievers belong to his realm; the devil is their "father" (8:42–47). Jesus, however, drives out the devil and condemns him (12:31; 16:11). The strongly dualistic flavor of John's gospel (above versus below; light versus darkness) highlights the human isolation from God's realm and thus an inability to enter the kingdom of God (8:21–24; cf. also 7:34, 36; 14:17); the Father, however, extends the power and authority for one to come to Christ (6:44, 65). Those who would enter the kingdom must exercise faith (1:12; 8:24). The Nicodemus account illustrates the powerful divine work enabling a person to enter the kingdom, a process summarized by the metaphor of rebirth (3:1–16; note the usage of the six occurrences of *dynamai*). In John's gospel, it is the Father who comes into prominence as the immediate source of Jesus' power (5:19, 27; 10:18; 17:2).

In the programmatic statement of the book of Acts, divine power through the agency of the spirit is promised to the disciples to enable them to give effective witness throughout the world about Christ (Acts 1:8). Luke summarizes the early manner of the apostles' preaching by stating, "With great power the apostles gave their testimony to the resurrection of the Lord Jesus" (Acts 4:33). He then further illustrates the fulfillment of this promise by giving an account of the establishment of the church throughout Palestine and the Mediterranean region. Throughout the book of Acts, Luke clearly interprets the rise of the church as a powerful work of the Holy Spirit (note the usage of the 70 occurrences of "spirit" in Acts).

For Paul, the apostle to the gentiles, the message of the gospel was the power of God (Rom 1:16; 1 Cor 1:18). The gospel encapsulated the message of the crucified Christ who was raised from the dead by the power of God (1 Cor 6:14; 15:43). This was a message of deliverance and salvation. God had acted through Christ to destroy the influence of the realm of Satan (Col 2:15) and the bondage of death, sin, flesh, and the law (Rom 5:12–8:39).

Paul conducted his ministry by the enabling power of God (Eph 3:7; Col 1:29). In spite of the fact that he was painfully aware of his inherent weaknesses by virtue of his humanity, his preaching was a demonstration of the power of the spirit (1 Cor 2:3–5; 1 Thess 1:5). Paul thus endeavored to insure that

the faith of his converts was based on the power of God rather than on human wisdom and rhetorical prowess. Paul believed that the limitations of human flesh provided an opportunity to display the enabling power of God (2 Cor 4:7). To the Corinthians, who entertained inflated notions about their access to the power of God, Paul stressed his own weakness and suffering in the carrying out of his ministry. In fact, he claimed that the Lord allowed a messenger of Satan to harass him in order that he might be even more cognizant of his weakness (2 Cor 12:7). Paul concludes, "I am content with weaknesses … for when I am weak, then I am strong" (2 Cor 12:10; 13:4). Nevertheless, Paul believed that by virtue of his union with the resurrected and exalted Lord, he was capable of doing great things (Phil 4:13). In doxological praise, he exclaims, "Now to him who by the power at work within us is able to do far more than all that we ask or think, to him be the glory …" (Eph 3:20).

Paul sought to gain an increasingly deeper awareness of the power of God (Phil 3:10). He also prayed earnestly that his converts might grow in their knowledge of God's power (Eph 1:15–23) and that they would be divinely strengthened in their innermost beings (Eph 3:14–19) for the purpose of resisting the "powers" of the devil (see PRINCIPALITIES AND POWERS) and for manifesting love in the life of the early Christian communities. Paul highlights the role of God's power as the ethical enablement for the Christian. Life by the spirit enables the Christian to eradicate vices and appropriate virtues, the foremost of which is love (Gal 5:13–26; Rom 8:13). Furthermore, Paul also stresses the need for dependence on the power of God for the fulfillment of the mission of the Church in the spread of the gospel (Rom 15:19; Eph 6:15–20).

Faith is the necessary human response to God in order for his power to be manifest. The writer of Hebrews, for example, stresses the pattern of the saints of the past who appropriated the power of God in difficult circumstances by exercising faith (Heb 11:11, 34; Rom 4:18–25). Faith is commonly expressed by God's people in the context of prayer. Paul models this to his congregations (Eph 3:14–19; cf. Eph 6:18–20).

The Apocalypse anticipates the coming of one like a son of man endued with power (Rev 1:16). Through him, God Almighty *(pantokrator)* will vanquish evil and reign by his power (Rev. 11:15–17; 12:10). This end-time triumph will entail the ultimate defeat of the dragon, Satan, and his powers (Rev 12:7–9). Both God and "the lamb" will receive eternal praise, with continual ascriptions of power and glory to their names (Rev 1:5–6; 4:11; 5:12–13; 7:12; 19:1).

PRAETOR. See CITY AUTHORITIES.

PRAETORIAN GUARD. This is the name regularly applied to the substantial bodyguard maintained at Rome by the emperors. Under the Roman Republic a magistrate on campaign often formed a *cohors praetoria* ("headquarters" or "household" cohort) which was his combined staff and bodyguard. During the civil wars which brought the Republic to a close, various generals each formed more than a single cohort as the threats to their security became more severe. After the defeat of Antony and Cleopatra (31 B.C.), Octavian (soon to be the emperor Augustus) retained his own cohorts as a peacetime bodyguard. This was a force of nine cohorts, each probably 480 men strong. At first they had no single camp at Rome, but were billeted in private homes in small groups; some cohorts were outstationed in nearby towns. It is evident that Augustus wished to avoid flaunting republican tradition, which frowned on the presence of troops in the capital. No separate commander or commanders were appointed until 2 B.C.

when Augustus chose two prefects of equestrian status, with the title *praefectus praetorio* ("prefects for the headquarters").

The influence of the Praetorian Cohorts (or Praetorian Guard as they are generally known in English) grew under Tiberius, when their number was increased to 12, and they were concentrated in a newly built fortress on the eastern outskirts of Rome, named the *castra Praetoria.* Both developments can be ascribed to the initiative of L. Aelius Sejanus, sole prefect from 14 to 31 A.D. Sejanus' influence became even more preeminent after Tiberius went into virtual retirement on the island of Capri from A.D. 26 onward; the prefect controlled the flow of information to the emperor and access to him. The influence of some later prefects also (Afranius Burrus [A.D. 51–62] and Ofonius Tigellinus [A.D. 62–68]) was considerable.

During the civil wars of the Late Republic praetorian cohorts were recruited from among serving legionaries; they were thus a corps of elite, experienced troops. But Augustus and subsequent emperors drew recruits directly from the civil population. They served 16 years, in contrast to the 25 years expected of legionaries. Their splendid uniforms, much higher pay, and pampered lifestyle made them the envy of the legions, and while the latter came to be recruited increasingly from provincials, the Praetorians remained predominantly Italians. The guard thus provided an outlet for the military aspirations of Italians unwilling to contemplate long service far from home. Each cohort was commanded by a tribune, normally an ex–chief centurion of a legion; the cohort was divided into six centuries led by a centurion who was normally promoted from the ranks. The guard contained numerous specialists in artillery, surveying, and engineering who could be seconded to the armies on the frontiers.

During the Julio-Claudian age the Praetorians saw little active service, though several cohorts are likely to have accompanied Claudius to Britain in A.D. 43. Their chief duties were ceremonial: a guard for the emperor at his palace in Rome, and on state occasions. The Praetorians retained for ceremonial wear the military equipment of the Late Republic (e.g., the oval shield), which was no longer used by the legions.

In A.D. 69 Vitellius, briefly victorious in a period of civil war, added many of his own legionaries to the guard by way of reward, boosting its numbers to 16 cohorts of 1,000 men. But his successor, Vespasian, who made his son Titus prefect of the Guard to keep it under tight control, reduced the total of cohorts to nine. Some time later Domitian increased the strength to 10 cohorts, which became the standard total. The guard thus constituted a military force of some 10,000 men in Rome, a sort of "household division" equivalent in size to two legions. From the Flavian period of the later 1st century the cohorts frequently went on campaign with the emperor, as the latter was compelled actively to defend the empire's frontiers.

In the 2d century the guard had a lower profile in the face of strong political leadership. Often the prefect functioned as a senior military adviser to the emperors; at other times, by virtue of the prefect's increasingly important judicial role in the hearing of court cases, prominent lawyers were appointed.

In A.D. 193 the guard was bribed by the senator Didius Julianus, in a notorious auction for power, to support his brief tenure of the purple. Soon after, Septimius Severus disbanded the existing guard, which he replaced with legionaries from his own victorious armies. The guard continued thereafter to be recruited chiefly from serving legionaries so that it became again a *corps d'elite* to which ordinary soldiers could aspire. In October 312, after the battle of the Milvian Bridge, in which the Praetorians had fought for the emperor Maxentius, the guard was abolished by the victor, Constantine.

In about A.D. 65, when the apostle Paul, having appealed directly to Caesar, was brought to Rome, he was placed under house arrest, with a soldier to watch him (Acts 28:16). Often the Praetorians were entrusted with the guarding of such prisoners and the prefect might sit in judgment on them. Paul wrote to the Philippians, apparently from Rome, that he had made the gospel known not only in the praetorium but to the population at large (Phil 1:13). "Praetorium" was the term used at Rome to describe the emperor's military headquarters, to which the Praetorians were attached.

LAWRENCE KEPPIE

PRAETORIUM [Gk *praitōrion* (πραιτωριον)]. The name given to the headquarters of the *praefectus praetorii*, a Roman official who resided as the supreme administrator and judge of a region. The praetorium was usually, but not necessarily, also the living quarters (Gk *oikia*) of the prefect or governor.

Several praetoriums are mentioned in the NT. Acts 23:25 refers to a praetorium in Caesarea Maritima, built by Herod the Great (37–4 B.C.), in which Paul was kept prisoner. No remains of this building have yet been discovered. If one dates Paul's letter to the Philippians to the time of this imprisonment, then this praetorium is also referred to in Phil 1:13. The Gospels refer to a praetorium in Jerusalem where Jesus was tried by Pontius Pilate (Matt 27:27; Mark 15:16; John 18:28, 33; 19:9). In Mark 15:16 it is also called a "palace" (Gk *aule*), suggesting an identification with an Herodian royal residence. Opinions about the location of this praetorium/royal residence differ, and several possible candidates have been considered.

One possible candidate has been the fortress Antonia, which stood on a rock escarpment in the NW corner of the Temple Mount. For a long time this was the most popular candidate for the Jerusalem praetorium (Vincent 1954; Finegan 1969: 156–62; van Elderen *ISBE* 3: 929; Mare 1987: 189) The current Via Dolorosa (the route along which Jesus is supposed to have carried the cross to Golgotha) begins at this site. Some earlier scholars (Vincent and Stéve 1954: 193–221; de Sion 1956) believed that the Antonia was a large fortress including in its inner court the pavement (thought to be the *Lithostroton* of John 19:13) found in the Ecce Homo Convent of Notre Dame de Sion. However, this position is no longer tenable (Benoit 1971): the pavement in question was evidently built over the Strouthion Pool, which had been kept open until the destruction of Jerusalem in A.D. 70 (*JW* 5 §467). After the 1985–86 excavations even the Sisters of Zion (proprietors of the site) abandoned the identification of this pavement with the *Lithostroton* of John's gospel. Furthermore, the historical sources, especially Josephus (*Ant* 15 §292), prove decisively that the Antonia was never used as a royal residence either by Herod or by his successors. Indeed, the traditions of the Antonia as Pilate's praetorium started only with the Crusaders late in the 12th century (see below; Baldi 1982: 588ff).

Another possible candidate is Herod's Upper Palace. In the year 23 B.C., around the middle of his reign, Herod the Great built a luxurious palace in the area of today's Citadel (near the Jaffa Gate) and the area to the S of it (Armenian Garden). He resided there with his many wives and children (*JW* 5 §§161–83; *Ant* 15 §318). Most modern scholars have so far held this site to be the most probable candidate for Pilate's praetorium (Mommert 1903; Dalman 1924: 355–63; Benoit 1952; Blinzler 1959: 173–76; Maier 1968: 215–40; Vanel *DBSup* 8: 513–54; Murphy-O'Connor 1986: 23). The main argument which speaks against this possibility is the complete lack of any Christian tradition regarding such a location (Bagatti 1973).

Earliest Christian tradition held that the praetorium of the Gospels stood somewhere on the W slope of the Tyropoeon valley, just opposite the SW corner of the temple enclosure (Pixner 1979: 57–72). The oldest pilgrim report, the Anonymous of Bordeaux in A.D. 333 (Baldi 1982: 583), described the remaining walls of the praetorium as situated somewhere toward the valley (i.e., facing the Tyropoeon). The ruins of the judgment house of Pilate were known to Bishop Cyrill of Jerusalem in A.D. 348 (Baldi 1982: 583), and in the first part of the 5th century it was (according to the old Armenian Lectionary) used as a station during the Good Friday procession (Renoux 1969–71).

Around A.D. 450 a church was built on the site (Wilkinson 1977: 58), which later was called Hagia Sophia, i.e., "Holy Wisdom," because Jesus as God's Wisdom stood there before a human judge (Baldi 1982: 585). This church is always mentioned in close proximity to the Nea (New) Church, the large Marian shrine built by Emperor Justinian (A.D. 483–565). Recent archaeology has identified the remains of this magnificent church in the S section of today's Jewish Quarter (Avigad 1983: 229–46). Following the itinerary described by an anonymous pilgrim of Piacenza in A.D. 580 (Baldi 1982: 584f) and the representation of the contemporary Mosaic Map of Madaba (Avi–Yonah 1954: 55; Donner and Cüppers 1977: 112f.) showing another church NE of the Nea, the approximate location of the Sophia Church can be established. This is the region where today stand both the ruins of the Crusader Church St. Mary of the Teutonic Knights and the Jewish Yeshiva Porat Joseph, next to the steps leading from the "Wailing Wall" to the Jewish Quarter. Indeed the ruins of an important Byzantine church were discovered beneath this

modern yeshiva (Vincent 1914: 429–36). All the vestiges of this church, however, were destroyed, but there is now a general agreement that the Byzantine praetorium must have been in this vicinity (Otto 1980: 152f.; Benoit 1984).

If early Christian tradition had remembered the correct site of Pilate's praetorium, the only palace that could have stood in this vicinity was the ancient royal palace built by the Hasmoneans. According to Josephus, the Hasmonean Palace was located "at the very edge of the Upper City" (*JW* 2 §344) and gave one a rooftop view of the sacrificial altar in the temple compound (*Ant* 20 §189ff.). This seems generally to fit the area where ancient Christian tradition located Pilate's praetorium (Pixner 1979: 78–85). Some scholars (Jaroś 1980; Riesner 1986; Pixner 1987; Kroll 1988: 335–49) believe that the magnificent ruins called "the Herodian Palatial Mansion," with its splendid mosaics similar to those in Masada (Avigad 1983: 95–120), could very well have been a part of the Hasmonean Palace that was rebuilt by Herod and renovated by Agrippa II (cf. *Ant* 20 §222). Unfortunately, its E wing (with the Sophia Church) and N section have completely disappeared.

From 37 to 23 B.C. Herod the Great used the Hasmonean Palace for administrative and judicial purposes (*JW* 1 §443; *Ant* 15 §229, 247f., 286). It probably continued to serve the same purpose after he moved (for safety reasons) to the new Upper Palace (see above), which was fortified by three mighty towers. In A.D. 6, when his son Archelaus was banished by imperial decree, the Roman prefects took over all the Herodian palaces and the Antonia fortress (cf. *JW* 2 §111; *Ant* 17 §344). After the untimely death of Agrippa I in A.D. 44, the Hasmonean Palace was not handed back to the subsequent Roman governors (*Ant* 20 §189f) but remained in the hands of the Hasmonean-Herodian family (Herod of Chalcis; Agrippa II), who from then on were put in charge of temple affairs (*Ant* 20 §16).

Closely related to the question of Pilate's praetorium is the itinerary of the Way of the Cross, whose end point has always remained the Golgotha rock (inside today's Church of the Holy Sepulchre). However, the starting point (the praetorium) has undergone curious alterations throughout the centuries. This can be seen from the different routes followed by the Good Friday processions of the Jerusalem Church recorded in the ancient liturgical lectionaries (Pixner 1979–80). From earliest times, this procession visited the different sites of the passion of Jesus, beginning at the Mount of Olives, passing through Gethsemane, and crossing the Kidron valley to the "House of the High Priest" (i.e., Caiaphas) on the E slope of Mt. Zion. It then continued by passing through a city gate to the "Palace of the Judge" (Praetorium of Pilate, later Church of Sophia), finally winding its way to Golgotha (Church of the Holy Sepulchre). On this last leg of the route (the original Via Dolorosa), Luke's gospel account of the carrying of the cross (23:26ff.v A.ff.) was read.

The Sophia Church and the neighboring Nea Church were destroyed during the Persian invasion in A.D. 614. After the subsequent Muslim conquest, permission to rebuild these churches was withheld; consequently a surrogate station for the Good Friday procession had to be found. A small church with its pavement just N of Mt. Zion's Hagia Sion Basilica temporarily served as a *Lithostroton* (Baldi 1982: 586f.). For some reason even the station of Caiaphas' house moved to this locale in the 9th century, according to Epiphanius Hagiopolita (Baldi 1982: 586). The Crusaders inherited this tradition, but since they felt uncomfortable with so many stations of the passion being situated on such an unlikely spot, they relocated Pilate's judgment house to the ruins of the Antonia (Baldi 1982: 588ff). Thus began the tradition of equating Pilate's praetorium with the Antonia Fortress, an idea that was adopted by the Franciscan friars and developed over the following centuries into the modern Via Dolorosa with its traditional fourteen stations.

BARGIL (VIRGIL) PIXNER

PRAYER IN EARLY JUDAISM. The great hymnbook of the Second Temple was the Davidic Psalter, although it was not closed and defined before 70 C.E. Prior to that, the Psalter often contained additions, growing in some circles to 151 psalms, 153 psalms, and even 155 psalms, and with psalms later categorized as apocryphal within it (see 11QPsAp). It was not so much rivaled as complemented by other psalmbooks, like the Hodayoth (the Qumran Thanksgiving Hymns) in the late 2d century B.C.E. and the *Psalms of Solomon* in the late 1st century B.C.E., and by the hundreds of psalms and prayers used to illustrate the narratives in early Jewish literatures—the apocalypses, testaments, and expansions of the Hebrew Bible or Old Testament—and especially by the earliest statutory prayers used in the places of worship, notably the synagogue (Heinemann 1977).

The beginning and end of the day were celebrated by special prayers (see in addition to the old rabbinic liturgies the Qumran Daily Prayers = 4Q503). The end of the week was heralded by Sabbath services in the home, synagogue, temple, and other religious gatherings (e.g., the Qumran Angelic Liturgy). The year began, at Rosh Hashanah and Yom Kippur (see the rabbinic prayers and the Qumran Prayer for the Day of the Atonement Fragment = 1Q35b), with special prayers and psalms, and was divided by the great festivals—notably Passover *(Pesaḥ),* the Feast of Weeks (Pentecost), and the Feast of Booths (Sukkoth)—and their liturgies (which were often transferred from the temple to the synagogue [Safrai]). Jewish time was hence liturgical time; it is easy to understand such specific clarifications as "at the hour of prayer" (Acts 3:1). Foundational for Jewish prayer were the daily prayers in the home (esp. grace after meals) and the frequent spontaneous prayers of the individual.

During the Second Temple period the Hebrew Bible or OT evolved through a refined script—and an authoritative order, content, and form for each book—to a closed canon of books. See CANON. At the same time an equally important development was taking place: the basic themes in Jewish liturgy were being normalized (Hoffman 1979). While spontaneous prayers were preferred by some rabbis, set prayers with varying wording appeared in Judaism before the destruction of 70 C.E. (Heinemann 1977; Talmon 1978; Reif 1982).

Jewish prayers were not, like in many of the cultures contiguous with Palestine, pleas for material possessions or rewards, or magical manipulations of a deity who could be controlled by special deeds or words. The author of Daniel has Shadrach, Meshach, and Abednego confess that even if God would not deliver them, he was their God (Dan 3:16–18). As is well known, Palestinian Jews resisted the Romans,

notably Pilate, and offered their lives in the refusal to compromise their law and liturgical customs (see Jos. *JW*). Even in the apocalypses, which tend to describe God's abode as far removed from the earth, the accent falls heavily on the claim that the angels, who link humans with God, receive the prayers of the faithful ones:

> And there was a great sound like thunder, and I said, "Lord, what is this sound?" And he said to me, "The Commander-in-Chief Michael is descending to receive the prayers of humans."

(*3 Bar.* 11:3–4; all translations are those of the author)

Jews lived out the conviction, expressed throughout early Jewish literature, that God does hear and answer prayers (*4 Ezra* 8:40). Note the 15th Blessing in the *Amidah* or *Tefilah (18 Benedictions)* according to the Palestinian (Cairo Geniza) Version:

> Hear, O Lord our God, the voice of our prayers,
> For you are a gracious and compassionate God.
> Blessed are you, O Lord, who hears prayer.

The author of *1 Enoch* 83–90, long before the destruction, prays to God, asking him "to sustain" the righteous and upright. This book of *Enoch* concludes with a dream in which the prayer is answered and fulfilled: "All the sheep were invited to that house (= the temple) but it could not contain all of them … I noticed that the house was large, wide, and exceedingly full" (*1 En.* 90:34–36). Paradigmatic for this constant theme is the Psalter itself, especially Psalm 116:

> I love the Lord
> for he hears my voice, my pleas;
> for he inclines his ear to me whenever I call.

(Ps 116:1)

Today the sources for the study of Jewish prayers before the cessation of sacrifices in the temple are abundant. Many of the Dead Sea Scrolls are hymns and prayers. The Apocrypha and pseudepigrapha are replete with prayers, both as collections, individual works, and poetic compositions to illustrate apocalypes, testaments, and narrative expansions of biblical stories (see MANASSEH, PRAYER OF, also *Pr. Jac.*, Pr. Jos., Pr. Mos.). The present state of research is preoccupied with textual and analytical studies; it is not possible yet to attempt a synthesis of the hundreds of early Jewish prayers. When that time comes sensitivity must be given to the variations among groups within early Judaism (ca. 250 B.C.E. to 200 C.E.). It can be said, however, that no other period in the history of Jewish liturgy is so important as the first two centuries C.E. See also FORGIVENESS (EARLY JUDAISM).

PRAYER OF AZARIAH. See DANIEL, ADDITIONS TO.

PRAYER, LORD'S. See LORD'S PRAYER.

PRAYERS, HELLENISTIC SYNAGOGAL. The title "Hellenistic Synagogal Prayers" *(Hel. Syn. Pr.)* summarizes what scholars such as K. Kohler, W. Bousset, and E. R. Goodenough have concluded regarding certain prayers in the Greek language scattered throughout the Christian Apostolic Constitutions (*Apos. Con.*). Historians had for a long while known that the eight volumes of the *Apos. Con.* were a 4th-century compilation from a multitude of sources, including the 3d-century *Didascalia* (*Apos. Con.* volumes 1–6), the 2d-century *Didache* (*Apos. Con.* 7.1–32), the 3d-century *Apostolic Tradition* (dispersed throughout vol. 8), and the Clementine Liturgy of uncertain date (*Apos. Con.* 8.5–15). Kohler (1924), Bousset (1915), and Goodenough (1935) suggested that a prayer collection from the Greek synagogues of the Diaspora was a fifth source and stood behind the following prayers in the *Apos. Con.*:

Kohler's List	Bousset's List	Goodenough's List
7.26.3		7.26.1–3
7.33	7.33	7.33
7.34	7.34	7.34
7.35	7.35	7.35
7.36	7.36	7.36
7.37	7.37	7.37
7.38	7.38	7.38
	7.39.2–4	7.39.2–4
	8.5.1–4	8.5.1–4
	8.6.5	8.6.5–8
	8.9.8f	8.9.8f
	8.12.6–27	8.12.6–27
	8.15.7–9	8.15.7–9
		8.16.3
	8.37.1–4	8.37.1–4
	8.37.5–7	8.37.5–7
	8.38.4f	8.38.4f
	8.38.3f	8.38.3f
		8.40.2–4
	8.41.4f	8.41.2–5

A host of liturgical scholars, Church historians, and specialists in Talmudic-era Judaism have accepted this conclusion with only a few raising voices of dissent.

Such a conclusion yielded important results when applied to the study of Judaism and Christian origins. If the prayers are a good example of the liturgy of the Diaspora synagogues, then writers such as Philo are not isolated phenomena in Judaism and do not express an aberrational theology. Rather, Philo is a true representative of the theology and piety of non-Palestinian Jews generally, for the religious concepts of the prayers are virtually identical with Philo. The prayers then, it was believed, give us a glimpse into the typical Greek synagogue. Goodenough (1935) went so far as to divide all Judaism into normative and

mystic (i.e. Hellenistic) segments and to claim that the Jewish prayers embedded in the *Apos. Con.* were the "mystic liturgy."

A more probable view of the prayers, however, is that only some of them originate from a Jewish substratum and that even those bear the theological imprint of the 4th-century compiler/redactor of the *Apos. Con.* This compiler—who may or may not have been the semi-Arian Pseudo-Ignatius who interpolated the writings of Ignatius—was certainly profoundly influenced by "Alexandrian theology." A redactional analysis based on a comparison of the *Apos. Con.* with the existing sources reveals certain linguistic traits and theological tendencies with unmistakable similarities to Philo and Origen. Such traits and tendencies abound in the prayers of books 7–8.

The redactional analysis of the prayers leads to the conclusion that the methodology of many of the scholars working on these "Jewish" prayers was flawed. They based their identification of the prayers as Jewish on Jewish-sounding phrases or concepts found in the prayers. But many of these expressions appear to be redactional. One must then reject not only the theological analysis of the prayers since the analysis does not take note of redactional elements, but also the argument that the prayers are Jewish at all.

Only the argument of Kohler (1924) with respect to *Apos. Con.* 7.33–38 is valid. Kohler discovered that these six prayers correspond exactly to the first six of the Hebrew Seven Benedictions for Sabbaths and holidays. The prayers (minus the redactional elements) have many of the same themes as the Seven Benedictions and even some of the same wording. What is even more important is that the prayers are in the same order as the Seven Benedictions.

The first prayer (7.33) praises the God of the patriarchs, as does the first benediction. The second prayer (7.34) extols God's power and ends with a reference to God as the "reviver of the dead," as does the second benediction. The third prayer (7.35) concerns the hallowing of the name and the fourth (7.36) the hallowing of the Sabbath day, both of which correspond to the third and fourth benedictions. The fifth prayer (7.37) corresponds to the fifth benediction on temple service and the sixth prayer (7.38) is quite similar to the thanksgiving prayer of the sixth benediction. In addition, some of the prayers contain other portions of the Hebrew prayer book such as the *Kedûšâ* (7.35) and the *Nišmat* (7.38). Nothing in *Apos. Con.* 7.33–38 or following is reminiscent of the seventh benediction, the priests' blessing. Perhaps this omission is because the prayer was supposed to be recited only in the Hebrew language (*M. Soṭa* 7.2), and the prayers in the *Apos. Con.* are in Greek.

The Jewish prayers of *Apos. Con.* 7.33–38 are evidently the product of the Syrian synagogues. The *Apos. Con.* itself was compiled in Syria and most of its other sources originated in Syria. Also, Syrian Christianity always maintained close contacts with Judaism, which would facilitate the inclusion of a Jewish prayer collection into the *Apos. Con.*

The date of the form of the Seven Benedictions as found in the *Apos. Con.* 7.33–38 is probably between 150 C.E. and 300 C.E. The earliest possible date is when the form of the *Kedûšâ* as found in Apos. Con. 7.35 (a combination of Isa 6:30 and Ezek 3:12) first appeared. The latest date is a few years before the compilation of the *Apos. Con.*

No particular Jewish milieu is evident for the prayers except perhaps post-Jamnia Pharisaism. The prayers certainly betray no origin in mysticism, Samaritanism, or Essenism, contrary to what has been suggested. The prayers in the *Apos. Con.* without the redactional elements are very similar theologically to the Hebrew benedictions. For text see *OTP* 2:671–97.

PREEXISTENCE OF SOULS. See SOULS, PREEXISTENCE OF.

PREACHER, THE. See ECCLESIASTES, BOOK OF.

PREACHING. To preach is to proclaim, to announce, to declare a word from God, to present publicly the good news, to deliver a religious discourse related directly or indirectly to a text of Scripture. Apart from a specific context, preaching is difficult to define. Even though preaching has long been significantly linked to the life and activity of both Jewish and Christian communities, it is so varied in content, mode, audience, and purpose that it resists the constraints of a dictionary, even a Bible dictionary.

2. Terminology in the NT
B. Preaching as Content
1. John the Baptist
2. Jesus
3. The Early Church
C. Preaching as Distinguished from Teaching

———

A. Preaching as Mode

In the histories of both synagogue and church, preaching as a mode of communication has ranged from an informal discussion called homily (from *homilein,* translated in the RSV as "talking," Luke 24:14, 15, and as "conversing," Acts 20:11) to a carefully constructed speech following the instructions of ancient rhetoric. The words which can be translated "preaching" in the biblical texts, however, do not yield much clear information on the mode or modes of communication.

1. Terminology in Hebrew Scriptures. The Hebrew Scriptures contain few clear references to that which we term "preaching." However, two activities seem clearly to fall in this category: prophetic proclamation and the teaching of Torah. The word *bašēr,* containing "joy" in its stem, refers to bringing or announcing good news or a message of joy, as in 2 Sam 4:10; Ps 40:9; Isa 40:9; 61:1. The other term meaning "to proclaim or to call," *qĕrā᾽* (Jer 11:6; Mic 3:5; Jonah 1:2; 3:2), can also be translated "to read aloud," as in the public reading of the Torah in Neh 8:8–9. In the Greek translation of the Hebrew Bible these two words were rendered most often by *euangelizō* and *kērussō,* the two most common terms for preaching in the NT. See below. And finally, the NT refers to certain persons in the Hebrew Scriptures as preachers: Jonah (Luke 11:32), Noah (2 Pet 2:5), and Enoch (Jude 14, 15).

2. Terminology in the NT. In the NT, terms which refer to preaching are basically of two types.

a. Terms Which by Definition Refer to Preaching. These are primarily *kērussō,* meaning, first of all, "to announce or to proclaim publicly," a word used approximately sixty times (Mark 1:14; 1 Cor 1:23; Acts 10:42), and *euangelizō,* meaning "to announce good news" (Acts 5:42). The stem word *angellō,* from which we get "angel" or "messenger," appears in the NT with a variety of prefixes and in the RSV is variously translated: "to proclaim" (Acts 17:23); "to declare" (1 Pet 2:9); "to command" (Acts 17:30); "to preach" (Acts 5:42).

b. Terms Which by Context Refer to Preaching. These are words which do not intrinsically specify such activity but which by reason of context clearly indicate a public telling of the Christian message. There are many such terms. The more common among them are: "to cry out" (Acts 23:6; Rom 9:7); "to speak" (Rom 15:19; 2 Cor 2:12); "to talk" (Mark 2:2); "to make known" (Eph 6:19); "to prophesy" (1 Cor

14:1–4; 1 Pet 1:10); "to speak boldly" (Acts 13:46; 18:26); "to exhort" (Acts 2:40; 15:32); "to bear witness, to testify" (Acts 2:40; 20:24; John 1:15).

B. Preaching as Content

The NT employs a number of nouns to designate that which is preached. The most commonly used are *kērygma* (that which is proclaimed), Matt 12:41; Rom 16:25; 1 Cor 1:21; Titus 1:3; *euangelion* (the good news, the gospel), Matt 4:23; Mark 14:9; Acts 15:7; Rom 15:19; *logos* (the word), Acts 6:2; 1 Tim 5:17; *akoē* (report; that which is heard), John 12:38; Gal 3:2, 5; Rom 10:16. In each case, specificity as to content must be supplied by context.

1. John the Baptist. According to the Synoptics, John preached "a baptism of repentance for the forgiveness of sins" (Mark 1:4; Luke 3:3). He called upon his listeners to prepare for the advent of one stronger than he who would come baptizing with the Holy Spirit (Mark 1:8) and with fire (Matt 3:11; Luke 3:16). Luke says John gave specific ethical instructions to those who came (3:10–14). None of the Synoptics indicate that John publicly pointed specifically to Jesus as the one who was to come. In John, however, that Jesus was the Son of God was divinely revealed to the Baptist (1:33–34), and therefore, his entire message was one of bearing witness to Jesus as the Christ (1:7, 15, 19, 30, 34).

2. Jesus. That which Jesus preached is variously called the gospel of God (Mark 1:14), the gospel of the kingdom (Matt 4:23) and the gospel of the kingdom of God (Luke 4:43). Mark summarizes Jesus' preaching as threefold: "The time is fulfilled, and the kingdom of God is at hand; repent, and believe in the gospel" (1:15). Luke's summary draws on Isa 61:1–2: good news to the poor, release to the captives, sight to the blind, liberty to the oppressed, and for all the year of God's favor (4:18–19). Although the continuities between the preaching of John and of Jesus are evident, it is also clear that in the person, work, and words of Jesus a new era begins. The reign of God has broken in and continues to do so. Scholars continue to debate Jesus' own expectations concerning the kingdom's coming: how soon, how completely, how radically. The debate is sustained by the fact that in the records of Jesus' preaching the kingdom of God is both present and future.

3. The Early Church. The tradition of preaching from the prophets, John the Baptist, and Jesus continued with the apostles (Acts 5:42). In addition, other persons shared in gospel proclamation (Acts 21:8; Eph 4:11); in fact, the whole Church at times became involved in forms of preaching (Acts 8:4). In its preaching the Church understood itself as continuing the message of Jesus, but there was one major difference: Jesus the messenger of the kingdom was now the central feature of the message itself. From the beginning, preaching seems to have been varied in both mode and content. The Epistle to the Hebrews, for example, is a sermon (13:22), representing a style of preaching (citing, interpreting, and applying a text) which later became popular and widespread. But it does not stand alone in the NT. Most investigators of early Christian preaching look to Acts and the epistles of Paul.

Acts contains a number of sermons and portions of sermons (2:14–36; 3:12–26; 13:16–41; 17:22–31), most of them delivered by Peter and Paul. One should keep in mind that all the preaching reported in Acts comes to us from Luke, whose own fingerprints are on the reports. In fact, Luke had earlier stated the content of the proclamation as "repentance and forgiveness of sins" (Luke 24:47), and the sermons in Acts convey those two themes regularly. While it may remain an open question as to how broadly representative of the whole Church Luke's sermon reports are, it has long been the practice of historians to draw upon Acts to provide summary sketches of early Christian preaching. The most influential of these digests is that of C. H. Dodd (1937), whose reading of Acts (and Paul, but sermons are fragmentary in the letters) rendered the following: prophecies are fulfilled and the new age is launched by the coming of Christ; Christ was born of the seed of David, died according to the Scriptures to deliver us from this present evil age, was buried, and rose on the third day according to the Scriptures; Christ is exalted at the right hand of God as Son of God and Lord of all; Christ will come again as Judge and Savior. In short, God has in Jesus Christ done the promised work of salvation and all persons are now invited to turn from their former ways and believe the good news. In the above summary, the expression "according to the Scriptures" should alert the reader of Acts to the clear differences in the preaching of the Church to those who knew and believed the Hebrew Scriptures (2:16–36; 3:12–26; 13:16–41) and the messages to

audiences totally unfamiliar with the Scriptures (14:8–17; 17:22–31). The points of contact with the listeners are quite different. Before moving to preaching as reflected in Paul's letters, it should be remembered that quite a number of NT scholars believe that the four Gospels are our primary sources for getting at the content of early Christian preaching. That these narratives represent Christian preaching is not a position in direct conflict with the preaching reflected in Acts. There is a difference in form, to be sure, but it is hardly reasonable to suppose that the Church's preaching would be silent about "all that Jesus began to do and teach until the day when he was taken up" (Acts 1:1–2).

That Paul understood his mission to be that of a preacher is quite clear from Paul himself: "For Christ did not send me to baptize but to preach the gospel" (1 Cor 1:17); "Woe to me if I do not preach the gospel!" (1 Cor 9:16). However, his letters, usually occupied with issues within the young congregations, do not offer the reader samples of his preaching. Instead there are reminders to the churches of what he preached when he was present with them. "Now I would remind you, brethren, in what terms I preached to you the gospel" (1 Cor 15:1). This statement is followed by a summary: Jesus died for our sins according to the Scriptures, was buried, was raised on the third day according to the Scriptures, and has appeared to his followers, including Paul (1 Cor 15: 3–8). Sometimes Paul was more brief: he preached Christ crucified (Gal 3:1). What is of special importance, however, is that Paul says his message was what he received, the tradition which had been given to him and which he passed along to the churches (1 Cor 15:3; 11:23). This says not only that Paul had predecessors but that there was strong continuity between his preaching and that done by others. Whatever the distances he experienced, and at other times helped create between himself and other apostles, Paul did not preach a new or different gospel. So strongly did Paul feel about his message that he called it a revelation of Jesus Christ (Gal 1:12) and pronounced anathema upon anyone offering a different gospel (Gal 1:8–9).

Much has been made of the scarcity of stories about and sayings of Jesus (such as we have in the Gospels) in the letters of Paul. Did he not know them? Did he not regard them as ingredient to the *kērygma?* Or is it simply the case that his letters, in form, purpose, and focus, did not provide the vehicle for such recitals? Whatever one's conclusion, the evidence is clear that the governing center of Paul's preaching was the death and resurrection of Christ. This was the basic paradigm both for his message and his lifestyle (Gal 6:14–17; 2 Cor 4:10–11). The Roman letter, Paul's most complete statement of his preaching, focuses not on Jesus' life or preaching but on his death and resurrection as the demonstration of God's righteous grace.

In those Christian communities in which Paul is the canon for preaching, there has been a tendency to treat the Gospel stories of Jesus as background to the passion, as prolegomena to the gospel, functioning homiletically as illustrative material for elaborating on the meaning of the death and resurrection. In the Roman Catholic Church and associated traditions, the gospel readings have provided the center for interpreting all other texts in the proclamation of the gospel. As one can see readily, this treatment of Paul's letters and the Gospels as distinctly different raises not only the question of content (what is the *kērygma?*) but also the question of the mode of preaching. This is to say, is preaching most properly narrative or direct address, recital or confrontation? The canon of the NT affirms both.

C. Preaching as Distinguished from Teaching

Given the difficulties in arriving at a specific and complete definition of preaching, both as mode and as content, some have sought clarity by distinguishing between preaching and teaching. C. H. Dodd (1937) again has been most influential in separating *kērygma* and *didache* (teaching). He argued his case from the NT, and there is to be found there textual support for his thesis. Matthew describes Jesus' ministry as threefold: teaching, preaching, and healing (9:35). Paul lists separately the gifts of prophecy and teaching (Rom 12:6–7; Eph 4:11). And in Acts 2, following the preaching which resulted in a large ingathering of converts, Luke says the new Christians attended to the apostles' teaching (2:42). There is a clear good sense to the arrangement that those who respond to the proclamation of the gospel be taught what it means to be a disciple among other disciples and in the world. Much of the NT consists of such instruction.

However, such a sharp distinction cannot be maintained on the basis of either biblical texts or careful thought. For example, the Sermon on the Mount (Matthew 5–7) is a body of teaching (5:2; 7:29) about

life and relationships in the kingdom, and yet the audience consisted not only of Jesus' disciples but also "the crowds" (5:1; 7:28). Documents describing synagogue activity of the period refer to preaching and teaching interchangeably. Israel gathered on occasions to be renewed and reconstituted by the recital of the Exodus, the narrative which created the community. It seems unreasonable to suppose that the early Christian Church, created by the proclamation of the gospel, did not gather again and again to be renewed and reconstituted by the preaching which first called it into being. In fact, many of the words cited above which in some contexts clearly refer to preaching are the same words ("speak," "say," "exhort," "state boldly," etc.) which elsewhere indicate instruction to Christians. Modes of communication do not always distinguish preaching and teaching, and neither does audience. As to content, preaching without instruction lacks substance; teaching without *kērygma* lacks identity.

PRIESTLY ("P") SOURCE. The composite material of two schools of redactors, which reformulates the message of the Pentateuch according to a theology of monotheistic holiness and the importance of the cult. The Priestly Source, or "P," is distinguished by its use of particular terms and its theological perspective(s), both of which reflect a preexilic provenience.

A. The Text

Scholarly consensus holds that the Priestly Source prevails throughout the Pentateuch and Joshua (see Driver 1913). The modifications which have subsequently been proposed have proven slight (see below). A greater challenge has been generated by the proposition that the P narrative (in Genesis, Exodus, and Numbers) is not an independent source but a redaction (e.g., Cross *CMHE* 293–325). The recognition that the purity texts are the products of two distinct schools, designated by the sigla P and H, helps to resolve this problem.

B. P and H: Distinctions in Terminology and Style

The vocabulary of the priestly writings is so markedly different from the other pentateuchal sources (JED) that introductions to the Bible or Pentateuch take pains to supply lists of their distinctive words and idioms (e.g., Driver 1913: 131–35). The problem with these lists is that they do not distinguish between P and H. The best way to gauge the differences between P and H is to identify words or idioms in one source that are consistently altered or synonymized in the other. This is precisely what I. Knohl has done in his study of the priestly texts. He enumerates 44 priestly terms, nine of which are worded differently in P and H (Knohl 1988: 97–99). This list can be supplemented by employing another criterion: terms carrying a precise meaning in P lose their precision in H. The study of the priestly style has also been immeasurably advanced by the finely honed investigation of M. Paran (1983), though—like his predecessor and probable pioneer (McEvenue 1971)—he unfortunately fails to distinguish between P and H. Paran singles out the following priestly literary devices: circular inclusions, poetic elements, refrains, and closing deviations (1983: 28–173). All these, however, are commonly shared by P and H. There exists another literary artifice that holds better promise of yielding a distinction between P and H—structure, in particular, the chiastic form, alternately called introversion (Kikawada 1974) or palistrophe (McEvenue 1971: 29, n. 18).

C. The Priestly Theology

1. Polemic against Paganism and the Evisceration of the Demonic. When it comes to theology, P and H mostly form a single continuum; H articulates and develops what is incipient and even latent in P.

The basic premises of pagan religion are (1) that its deities are themselves dependent on and influenced by a metadivine realm, (2) that this realm spawns a multitude of malevolent and benevolent entities, and (3) that if humans can tap into this realm they can acquire the magical power to coerce the gods to do their will (Kaufmann 1937–47 1: 297–350; 1960: 21–59). The priestly theology negates these premises. It posits the existence of one supreme God who contends neither with a higher realm nor with competing peers. The world of demons is abolished; there is no struggle with autonomous foes because there are none. With the demise of the demons, only one creature remains with "demonic" power—the human being. Endowed with free will, his power is greater than any attributed to him by pagan society. Not only can he defy God but, in priestly imagery, he can drive God out of his sanctuary. In this respect, humans have replaced the demons.

a. Sanctuary Pollution and Purification. The pagans secured the perpetual aid of a benevolent deity by building a temple residence in which the god was housed, fed, and worshiped in exchange for his protective care. Above all, his temple had to be inoculated by apotropaic rites—utilizing magic drawn from the metadivine realm—against incursions by malevolent forces from the supernal and infernal world. The priestly theologians make use of the same imagery, except that the demons are replaced by humans. Humans can drive God out of the sanctuary by polluting it with their moral and ritual sins. All that the priests can do is periodically purge the sanctuary of its impurities and influence the people to atone for their wrongs.

b. Nondemonic Conception of Impurity. This thoroughgoing evisceration of the demonic also transformed the concept of impurity. In Israel, impurity is harmless, retaining potency only with regard to sanctums. Laypersons—but not priests—may contract impurity with impunity; they must not, however,

delay their purificatory rites lest their impurity affect the sanctuary. The retention of impurity's dynamic (but not demonic) power in regard to sanctums serves a theological function. The sanctuary symbolizes the presence of God; impurity represents the wrongdoing of persons. If persons unremittingly pollute the sanctuary, they force God out of his sanctuary and out of their lives.

The priestly texts on scale disease (Leviticus 13–14) and chronic genital flows (Leviticus 15) give ample witness to the priestly polemic against the idea that physical impurity arises from the activity of demons who must be either exorcised or appeased. Purification is neither healing nor theurgy. The afflicted person undergoes purification only after being cured. Ablutions are wordless rites; they are unaccompanied by incantation or gesticulation—the quintessential ingredients in pagan healing rites. The Heb adjective used in Leviticus 13–15 (*ṭāhēr*) means "purified" not "cured," whereas the verb *rāpā᾽*, "cure," never appears in the ritual. A moldy garment or a fungous house (Lev 13:47–58; 14:33–53) does not reflect on the character of its owner, for he brings no sacrifice and performs no rite that might indicate his culpability. Even though the scale-diseased person does bring sacrifices for possible wrongdoing, the only determinable "wrong" is that his impurity has polluted the sanctuary. Especially noteworthy is the bird rite at the beginning of his purification process (Lev 14:4–7) which, in spite of its clear exorcistic origins, carries only a symbolic function in Israel. Above all, it seems likely that most, if not all, of the varieties of scale disease described in Leviticus 13 are not even contagious, supporting the conclusion that scale disease is only a part of a larger symbolic system (explained below).

Another example of how the priestly legists excised the demonic from impurity is the case of the person afflicted with chronic genital flux (Lev 15:1–15, 25–30). It is the discharge that contaminates, not the person. Hence, objects that are underneath him: bed, seat, saddle—but no other—are considered impure. In Mesopotamia, however, his table and cup transmit impurity. The difference is that in Israel the afflicted person does not contaminate by touch as long as he washes his hands. Consequently, he was not banished or isolated but allowed to remain at home. The same concessions were extended to the menstruant, who was otherwise universally ostracized. She, too, defiled only that which was beneath her. Touching such objects, however, incurred greater impurity than touching her directly (Lev 15:19b, 21–22). As illogical as it seems, it makes perfect sense when viewed from the larger perspective of the primary priestly objective to root out the prevalent notion that the menstruant is possessed by demonic powers.

c. The Cult. The parade example of the evisceration of the demonic from Israel's cult is provided by Azazel (Lev 16:10). Though Azazel seems to have been the name of a demon, the goat sent to him is not a sacrifice requiring slaughter and blood manipulation; nor does it have the effect of a sacrifice in providing purification, expiation, etc. The goat is simply the symbolic vehicle for dispatching Israel's sins to the wilderness (Lev 16:21–22). The analogous elimination rites in the pagan world stand in sharp contrast. The purification of the corpse-contaminated person with the lustral ashes of the red cow (Numbers 19) can also claim pride of place among Israel's victories over pagan beliefs. The hitherto demonic impurity of the corpse has been devitalized, first by denying its autonomous power to pollute the sanctuary and then by denying that the corpse-contaminated person must be banished from his community during his purificatory period (Milgrom 1976).

2. A Gradual "Revolution." Israel's battle against demonic beliefs was not won in one stroke. Scripture indicates that it was a gradual process. The cultic sphere attests a progressive reduction of contagious impurity in all three primary human sources: scale disease, pathological flux, and corpse contamination. The earliest priestly tradition calls for their banishment (Num 5:2–4) because the presence of God is coextensive with the entire camp, but later strata show that banishment is prescribed only for scale disease (Lev 13:46). The fact that genital flux and corpse contamination permit their bearers to remain at home indicates that the divine presence is now viewed as confined to the sanctuary. Henceforth in P, the only fear evoked by impurity is its potential impact on the sanctuary. The driving force behind this impurity reduction is Israel's monotheism. The baneful still inheres in things but it spreads only under special conditions, for example, carrion when consumed and genital discharges when contacted. But note that impurity springs to life resuming its virulent character only in regard to the sphere of the sacred, and that these impurities are not to be confused with evils.

3. Holiness Contagion. A similar gradation in the contagion of holiness is also exhibited in Scripture, but for different reasons. In the earliest traditions of the Bible, the sanctums communicate holiness to persons, the sanctuary's inner sanctums more powerfully so—directly by sight (if uncovered) and indirectly by touch (if covered), even when the contact is accidental. According to the early narratives this power can be deadly; note the stories about the ark (1 Sam 6:19; 2 Sam 6:6–7), Mt. Sinai (Exod 19:12–13), and the divine fire (Lev 10:1–2). In P a major change has occurred. This fatal power is restricted to the rare moment when the tabernacle is dismantled (Num 4:15, 20), but otherwise the sanctums can no longer infect persons, even by touch (Milgrom 1981). Clearly, this drastic reduction in the contagious power of the sanctums was not accepted by all priestly schools. Ezekiel holds out for the older view that sanctums (in his example, the priestly clothing, 44:19; 46:20) are contagious to persons (contrary to P).

The texts are silent concerning the motivation behind this priestly reform. Undoubtedly, the priests were disturbed by the superstitious fears of the fatal power of the sanctums that might keep the masses from the sanctuary (cf. Num 17:27–28). To the contrary, they taught the people that God's holiness stood for the forces of life, and only when approached in an unauthorized way (e.g., Lev 10:1–2) would it bring death. Contact with the sanctums would be fatal to the nonpriest who dared officiate with the sanctums (e.g., Num 16:35; 18:3) but not to the Israelites who worshipped God in their midst. There is also a more realistic, historically grounded reason that would have moved the priests in this direction—the anarchic institution of altar asylum. Precisely because the altar sanctified those who touched it, it thereby automatically gave them asylum regardless of whether they were murderers, bandits, or other assorted criminals. By taking the radical step of declaring that the sanctums, in particular the altar, were no longer contagious to persons, the priests ended, once and for all, the institution of altar asylum. In this matter they were undoubtedly abetted by the king and his bureaucracy, who earnestly wanted to terminate the veto power of the sanctuary over their jurisdiction (details in Milgrom 1981).

4. A Symbolic System: Life verses Death. Obviously, the ritual complexes of Leviticus 1–16 make sense only as aspects of a symbolic system. As noted, only a few types of scale disease (many clearly noncontagious) were declared impure. Yet, to judge by the plethora of Mesopotamian texts dealing with the diagnosis and treatment of virulent diseases, it is fair to assume that Israel knew them as well (see *Leviticus 1–16* AB, Introduction) but did not classify them as impure. The same situation obtains with genital discharges. Why are secretions from other orifices of the body not impure: mucus, perspiration, and, above all, urine and feces? This leads to a larger question: why are there only these three sources of impurity—corpse/carcass, scale disease, and genital discharges? There must be a comprehensive theory that can explain all of the cases. Moreover, since the phenomena declared impure are the precipitates of a filtering process initiated by the priests, the "filter" must be their invention. In other words, the impurity laws form a system governed by a priestly rationale.

This rationale comes to light once it is perceived that there is a common denominator to the three above-mentioned sources of impurity—death. Genital discharge from the male is semen; from the female, blood. They represent the life force and their loss represents death. The case of scale disease also becomes comprehensible with the realization that the priestly legists have not focused on disease per se but only upon the *appearance* of disease. Moldy fabrics and fungous houses (Lev 13:47–58; 14:35–53) are singled out not because they are struck with scale disease but because they give that appearance. So too the few varieties of scale disease afflicting the human body: their appearance is that of approaching death. When Miriam is stricken with scale disease, Moses prays: "Let her not be like a corpse" (Num 12:12; cf. also Job 16:13). The wasting of the body, the common characteristic of the highly visible, biblically impure scale disease, symbolizes the death process as much as the loss of blood and semen.

It is of no small significance that the dietary laws (Leviticus 11), which are contiguous to and form a continuum with the bodily impurities (chaps. 12–15), are also governed by criteria, such as cud chewing and split hooves, which are equally arbitrary and meaningless in themselves, but serve a larger, extrinsic purpose. This purpose can be deduced both from the explicit rationale of holiness (Lev 11:43–45) and the implicit assumption of relevant texts (Gen 9:4; Lev 17:3–5, 10–14), to wit: animal life is inviolable except for a few edible animals provided they are slaughtered properly (i.e., painlessly) and their blood (i.e., their

life) is drained and thereby returned to God (Milgrom 1963). To be sure, the rationale of holiness and the equation of blood and life are first fully articulated in H (Lev 11:43–45; 17:10–14), but they are already adumbrated in P (e.g., Gen 9:4).

Since impurity and holiness are antonyms, the identification of impurity with death must then mean that holiness stands for life. No wonder that reddish substances, the surrogates of blood, are among the ingredients of the purificatory rites for scale-diseased and corpse-contaminated persons (Lev 14:4; Num 19:6). They symbolize the victory of the forces of life over death. A further example: the blood of the purification offering symbolically purges the sanctuary by symbolically absorbing its impurities (see below)—another victory of life over death. Moreover, the priest is commanded to eat the flesh of the purification offering (Lev 6:19, 22; 10:17; Milgrom 1976), and the high priest dispatches the sanctuary's impurities together with the people's sins (Lev 16:21). In neither case is the priest affected. Again, holiness-life has triumphed over impurity-death. Impurity does not pollute the priest *as long as he serves God in His sanctuary.* Israel, too, as long as it serves God by obeying His commandments can overcome the forces of impurity-death.

Since the quintessential source of holiness resides with God, Israel is enjoined to control the occurrence of impurity lest it impinge on His realm (see below). The forces pitted against each other in a cosmic struggle are no longer the benevolent and the demonic deities who populate the mythologies of Israel's neighbors but the forces of life and death set loose by man himself through his obedience to or defiance of God's commandments. Despite all the changes that are manifested in the evolution of Israel's impurity laws, the objective remains the same: to sever impurity from the demonic and to reinterpret it as a symbolic system reminding Israel of the divine imperative to reject death and choose life.

5. The Universal Blood Prohibition. It would be well to point out that the blood prohibition is an index of P's concern for the welfare of humanity. In Leviticus, to be sure, all of P is directed to Israel. But one need only turn to the P stratum in Genesis to realize that it has not neglected the rest of humankind. P's blood prohibition in Genesis appears in the bipartite Noachian law which states that human society is viable only if it desists from the shedding of human blood and the ingestion of animal blood (Gen 9:4–6). Thus it declares its fundamental premise that human beings can curb their violent nature through ritual means, specifically, a dietary discipline that will necessarily drive home the point that all life (Heb *nepeš*), including animals, is inviolable, except—in the case of meat—when conceded by God (Milgrom 1963).

The P strand in Genesis also indicts the human race for its Heb *ḥāmās* ("violence," Gen 6:11). Since the Noachian law of Genesis 9 is the legal remedy for *ḥāmās* (Frymer-Kensky 1977), it probably denotes murder (as in Ezek 7:23), though in subsequent usage, especially under prophetic influence, it takes on a wide range of ethical violations (Haag *TDOT* 4: 478–86). Thus, the blood prohibition proves that P is of the opinion that a universal God imposed a basic ritual code upon humanity. Israel, on the other hand, bound by its covenantal relationship with the deity, is enjoined to follow a stricter code of conduct.

6. Theological Distinctions between P and H. One would expect a sharp cleavage separating the theology of P from the nonpriestly strands of the Pentateuch. However, it may come as a shock to realize that even the two priestly sources, P and H, sharply diverge on many theological fundamentals. The most important ideological distinction between P and H rests in their contrasting concepts of holiness. For P, spatial holiness is limited to the sanctuary; for H, it is coextensive with the promised land. Holiness of persons is restricted in P to priests and Nazirites (Num 6:5–8); H extends it to all Israel. This expansion follows logically from H's doctrine of spatial holiness: since the land is holy, all who reside in it are to keep it that way. Every adult Israelite is enjoined to attain holiness by observing the Lord's commandments, and even the Heb *gēr,* "resident alien," must heed the prohibitive commandments, for their violation pollutes the land (e.g., Lev 18:26).

P's doctrine of holiness is static; H's is dynamic. On the one hand, P constricts holiness to the sanctuary and its priests. P assiduously avoids the Heb term *qādôš,* "holy," even in describing the Levites (compare their induction rites, Num 8:5–22, with the priestly consecration, Leviticus 8). On the other hand, though H concedes that only priests are innately holy (Lev 21:7), it repeatedly calls upon Israel to strive for holiness. The dynamic quality of H's concept is highlighted by its resort to the same participial

construction Heb *měqaddēš,* "sanctifying," in describing the holiness of both the laity and the priesthood. Sanctification is an ongoing process for priests (Lev 21:8, 15, 23; 22:9, 16) as well as for all Israelites (Lev 21:8; 22:32). No different from the Israelites, the priests bear a holiness that expands or contracts in proportion to their adherence to God's commandments.

The converse doctrine of pollution also varies sharply: P holds that the sanctuary is polluted by Israel's moral and ritual violations (Lev 4:2) committed anywhere in the camp (but not outside), and that this pollution can and must be effaced by the violator's purification offering and, if committed deliberately, by the high priest's sacrifice and confession (Lev 16:3–22). H, however, concentrates on the polluting force of Israel's violation of the covenant (Lev 26:15), for example, incest (Lev 18; 20:11–24), idolatry (Lev 2:1–6), or depriving the land of its sabbatical rest (Lev 26:34–35). Pollution for H is nonritualistic, as shown by the metaphoric use of Heb *ṭāmēʾ* (e.g., Lev 18:21, 24; 19:31) and by the fact that the polluted land cannot be expiated by ritual, and, hence, the expulsion of its inhabitants is inexorable (Lev 18:24–29; 20:2).

7. The Theology of Sacrifice. The sacrificial system is intimately connected with the impurity system. Nonetheless, it possesses a distinctive theology (rather, theologies) of its own. No single theory embraces the entire complex of sacrifices (Milgrom 1976). All that can be said by way of generalization is that the sacrifices cover the gamut of the psychological, emotional, and religious needs of the people. We therefore seek the specific rationale that underlies *each* kind of sacrifice. Even with this limited aim in mind, the texts are not always helpful. However, hints gleaned from the terminology and the descriptions of the rites themselves will occasionally illumine our path. The comprehensive rationales for two sacrifices, the burnt and cereal offerings, remain unclear, whereas the three remaining sacrifices, the well-being, purification, and reparation offerings, can be satisfactorily explained.

a. The Well-Being Offering. The well-being offering is associated with the blood prohibition, although this connection was not present from the beginning. In the P stratum, the well-being offering is brought solely out of joyous motivations: thanksgiving, vow fulfillment, or spontaneous free will (Lev 7:11–17). The meat of the offering is shared by the offerer with his family and invited guests (1 Sam 1:4; 9:21–24). The development of H brought another dimension to this sacrifice. H's ban on nonsacrificial slaughter meant that all meat for the table had initially to be sanctified on the altar as a well-being offering (Lev 17:3–7). To be sure, the prohibition to ingest blood had existed before (Gen 9:4; cf. 1 Sam 14:32–35), implying that though man was conceded meat, its blood, which belongs to God, had to be drained. Now that the blood had to be dashed on the altar (Lev 3:2, 8, 13) it served an additional function—to ransom the life of the offerer for taking the life of the animal (17:11; Milgrom 1971). Thus the principle of the inviolability of life was sharpened by this new provision: killing an animal was equivalent to murder (Lev 17:3–4) unless expiated by the well-being offering.

b. The Purification Offering. The rationale for the purification offering has been alluded to above. The violation of a prohibitive commandment generates impurity and, if severe enough, pollutes the sanctuary from afar. This imagery portrays the priestly theodicy. It declares that while sin may not scar the face of the sinner it does scar the face of the sanctuary (Milgrom 1976). This image graphically illustrates the priestly version of the old doctrine of collective responsibility: when the evildoers are punished they bring down the righteous with them. However, those who perish with the wicked are not entirely blameless. They are inadvertent sinners, who by having allowed the wicked to flourish have also contributed to the pollution of the sanctuary. In particular, the high priest and the tribal chieftain, the leaders of the people, bring special sacrifices (Lev 4:9, 23) since their errors cause harm to their people. Thus, in the priestly scheme, the sanctuary is polluted (read: society is corrupted) by brazen sins (read: the rapacity of the leaders) and also by inadvertent sins (read: the acquiescence of the "silent majority"), with the result that God is driven out of his sanctuary (read: the nation is destroyed). In the theology of the purification offering, Israel is close to the beliefs of its neighbors and yet so far from them. Both hold that the sanctuary stands in need of constant purification lest it be abandoned by its resident god. But whereas the pagans hold that the source of impurity is demonic, Israel, having expunged the demonic, attributes impurity to the rebellious and inadvertent sins of man instead (details in Milgrom 1976).

c. The Reparation Offering. The reparation offering (Lev 5:14–26) seems at first glance to be restricted to offenses against the property of God, either his sanctums or name. It reflects, however, wider theological implications. The Heb noun *ʾāšām,* "reparation, reparation offering," is related to the Heb verb *ʾāšam,* "feel guilt," which predominates in this offering (Lev 5:17, 23, 28) and in the purification offering as well (Lev 4:13, 22, 27; 5:4, 5). This fact bears ethical consequences. Expiation by sacrifice depends on two factors: the remorse of the worshipper (verb *ʾāšam*) and the reparation (noun *ʾāšām*) he brings to both man and God to rectify his wrong. This sacrifice strikes even deeper ethical roots. If someone falsely denies under oath having defrauded his fellow, subsequently feels guilt and restores the embezzled property and pays a twenty percent fine, he is then eligible to request of his deity that his reparation offering serve to expiate his false oath (Lev 5:20–26). Here we see the priestly legists in action, bending the sacrificial rules in order to foster the growth of individual conscience. They permit sacrificial expiation for a deliberate crime against God (knowingly taking a false oath) provided the person repents before he is apprehended. Thus, they ordain that repentance converts an intentional sin into an unintentional one, thereby making it eligible for sacrificial expiation (details in Milgrom 1976).

8. The Ethical Basis of the Priestly Theology. It should already be clear that the priestly polemic against pagan practice was also informed by ethical postulates. The impurity system pits the forces of life against the forces of death, reaching an ethical summit in the blood prohibition. Not only is blood identified with life but it is also declared inviolable. If the unauthorized taking of animal life is equated to murder, how much more so is the illegal taking of human life. And if the long list of prohibited animals has as its aim the restriction of meat to three domestic quadrupeds, whose blood (according to H) must be offered up on the altar of the central sanctuary, what else could the compliant Israelite derive from this arduous discipline except that all life must be treated with reverence?

The reduction of sanctum contagion may have been motivated by the desire to wean Israel from the universally attested morbid fear of approaching the sanctums. But as indicated above, there coexisted the more practical goal of breaking the equally current belief that the sanctuary gave asylum even to the criminal. As noted above, the ethical current ran strong also in the rationale for the sacrifices. The purification offering taught the ecology of morality, that the sins of the individual adversely affect his society, even when committed inadvertently, and the reparation offering became the vehicle for an incipient doctrine of repentance. The ethical thrust of these two expiatory sacrifices can be shown to be evident in other respects as well. The priestly legists did not prescribe the purification offering just for cultic violations but extended the meaning of the term *miṣwâ* (Lev 4:2) to embrace the broader area of ethical violations. And the texts on the reparation offering make it absolutely clear that in matters of expiation man takes precedence over God; only after rectification has been made with man can it be sought with God (Lev 5:24b–25).

A leitmotiv of the sacrificial texts is their concern for the poor: everyone, regardless of means, should be able to bring an acceptable offering to the Lord. Thus, birds were added to the roster of burnt offerings (Lev 1:14–17), and the pericope on the cereal offering (Leviticus 2) was deliberately inserted after the burnt offering, implying that if a person could not afford birds he could bring a cereal offering. Indeed, this compassion for the poor is responsible for the prescribed sequence of the graduated purification offering: flock animal, bird, cereal (Lev 5:6–13). This concession of a cereal offering, however, was not allowed for severe impurity cases (Lev 12:8; 14:21–32; 15:14) because of the need for sacrificial blood to purge the contaminated altar.

The ethical impulse attains its zenith in the great Day of Purgation, Yom Kippur. What originally was only a rite to purge the sanctuary has been expanded to include a rite to purge the people. As mentioned above, the pagan notion of demonic impurity was eviscerated by insisting that the accumulated pollution of the sanctuary was caused by human sin. Moreover, another dimension was introduced that represented a more radical alteration. The scapegoat which initially eliminated the sanctuary's impurities now became the vehicle of purging their source—the human heart. Provided that the people purged themselves through rites of penitence (Lev 16:29; 23:27, 29; Num 29:7), the high priest would confess their released sins upon the head of the scapegoat and then dispatch it and its load of sins into the wilderness. Thus, an initial

widely attested purgation rite of the temple was broadened and transformed into an annual day for the collective catharsis of Israel. God would continue to reside with Israel because his temple and people were once again pure.

D. Preexilic Provenience of the Priestly Source: Terminological Testimony

1. The Evidence. This priestly work can be dated. There is ample evidence that its terminology is preexilic. Thus far the chief investigator of priestly terminology has been A. Hurvitz (1981; 1982; 1988). Using the book of Ezekiel as a standard against which to measure the life span of priestly terms, Hurvitz finds ten such terms that are absent from Ezekiel in contexts where one should expect to find them. Moreover, he and Paran (1983) adduce 22 P terms that are replaced by synonyms in Ezekiel and in postexilic books. Hurvitz's examples can be supplemented by the key terms of Israel's sociopolitical structure. This area is more decisive because these terms describe living institutions (details in Milgrom 1978; 1989). The terminology for the doctrine of repentance also exhibits this diachronic transformation. P clearly posits repentance not by the prophetic (and postbiblical) root *šwb* but by its unique verb *ʾāšam* (Milgrom 1976: 3–12).

2. Refutation of Archaizing. Only one argument carries some weight: P is guilty of archaizing. So writes Wellhausen, "It (P) tries hard to imitate the costume of the Mosaic period … to disguise its own" (*WPHI,* 9). In our day F. M. Cross echoes a similar view (*CMHE,* 322–23; cf. also Hoffman 1986). Hurvitz counters this argument by maintaining that archaizing is discernible only if "one can furnish positive evidence proving the existence of *late* linguistic elements in the same work" (1982: 163). That is, an author, particularly one represented by such an extensive corpus as the priestly writings, would surely betray himself by some anachronistic slip. Nonetheless, the possibility must be granted that the priestly redaction may have succeeded in concealing its true (late) period. Another control, however, is at hand that can vitiate the charge of anachronism. What if a term undergoes a change of meaning and there are ample attestations of this term in the early and late biblical literature so that the change can be accurately charted? Moreover, what if the new meaning is incompatible with, and even contradictory to, its predecessor so that it is inconceivable that both meanings could have existed simultaneously? The term *mišmeret* exemplifies the first case and *ʿăbōdâ* the second.

a. The Evidence from *mišmeret*. The Heb term *mišmeret* occurs 76 times in Scripture, chiefly in P. In connection with the tabernacle it means "guard duty" *and nothing else,* as observed by the medieval Jewish exegete Abrabanel (ca. 1437–1508) in his commentary on Num 3:5. When *mišmeret* is in construct with Yahweh, the context involves proscriptions and taboos so that "guarding" against the violation of the Lord's commandments is always meant (details in Milgrom 1970: 8–12). The evolution of *mišmeret* from "guard duty" to postbiblical "service unit" is barely detectable in Scripture. This later meaning is found only in Nehemiah (Neh 12:9, 24; 13:30; correcting Milgrom 1970: 12, n. 41) and Chronicles (1 Chr 25:8; Paran 1983: 205, n. 42). But it is not even adumbrated in any of P's 43 attestations (details in Milgrom 1970: 12–16).

b. The Evidence from *ʿăbōdâ*. The second Heb term, *ʿăbōdâ,* is of weightier import. In P it occurs some 70 times and it always denotes "physical labor" (Milgrom 1970: 60–82). However, in postexilic cultic texts (even when they cite pentateuchal passages) it means "cultic service" (Milgrom 1970: 82–87). These two meanings clearly contradict each other and therefore cannot coexist. Levites, on pain of death, are forbidden to officiate in the cult (Num 18:3b), and hence their *ʿăbōdâ* is confined to the job of physically removing the tabernacle. But in postexilic texts the contrary is true. Priests alone may perform *ʿăbōdâ* because this term now means "cultic service."

3. Summary. In sum, the terminological study of Ezekiel 44, supplemented by the studies of Hurvitz and Paran of the 22 Ezekielian passages adduced above, demonstrates that Ezekiel is the chronological watershed of Israel's cultic terminology. His book confirms the conclusions derived from P's central vocabulary in the area of cult (*mišmeret; ʿăbōdâ*), theology (absence of *šwb*), and sociopolitical institutions (Heb *ʿēdâ; maṭṭeh; ʾelep; nāśîʾ*) that P is a product of the preexilic age (cf. also Grintz 1974–75; Polzin 1976; Guenther 1977; Rendsburg 1980). Furthermore, not a single priestly term has been shown to be of postexilic coinage. Finally, the allegation that P is archaizing has proven baseless. No

postexilic writer could have used *ʿăbōdâ* in its earlier sense of "physical labor" when it flatly contradicted the meaning it had in his own time. His readers would have been confused, nay, shocked, to learn that "cultic service," exclusively the prerogative of priests and fatal to nonpriests, had been assigned to the Levites.

E. Relative Proveniences of P and H

H probably arose out of the socioeconomic crisis at the end of the 8th century (Knohl 1988: 179–93). Following a suggestion of M. Haran (*EncMiqr* 5: 1098; 1981) that H's interdiction of the Molech and the *ʾōb* and *yiddĕʿōnî* corresponds with the proliferation of these cults into the royal court during the second half of the 8th century, Knohl postulates that H must be a product of that period (1988: 178, 263, n. 19, 264, n. 22). Here Knohl has been anticipated by Eerdmans (1912: 101), who added to the Molech factor the occurrence of *ʾĕlîlim* both in H (Lev 19:4; 26:1) and profusely in First Isaiah (9 out of a total of 16 times: 2:8, 18, 21; 10:10, 11; 19:11; 31:7; see also Elliott-Binns 1955: 38; Feucht 1964: 166–67). Knohl differs from all of them in that he alone postulates the priority of P, whereas the others hold with the consensus that H is earlier than and is absorbed by P. According to Knohl, the new issues that concern H are idolatry, social injustice, the gap between ethics and the cult, and the *gēr* (1988: 176–77, 188–89). "HS's (the Holiness School) writings become clear against the background of the socio-economic polarization and the religious crisis that developed in that period. The crisis that led to the attacks by classical prophecy on the ritual and Temple institutions … HS expresses the attempt by priestly circles in Jerusalem to contend with the prophet's criticism. In reaction … HS created the broader concept of holiness that integrates morality and cult and drew up a comprehensive program for social rehabilitation formulated in social terms" (1988: x; cf. 178–87). The priestly answer to this crisis eventuated in the composition of the Holiness Code (1988: 173–76).

Since H also includes the redaction of P, this can only mean that P—not just its teachings but its very texts—was composed not later than the middle of the 8th century (ca. 750 B.C.E.). As for determining the provenience, the veritable Sitz im Leben of P, it is likely that P presumes the existence and the legitimacy of common slaughter. More accurately, P espouses a modified form of common slaughter, one evidenced in Saul's battle against the Philistines (1 Sam 14:31–35; details in *Leviticus 1–16* AB, Introduction).

Thus H is not the innovator of centralization; it has inherited P's explicit demand that all sacrifice take place at the tabernacle. H is after something else—the banning of common slaughter. It claims that "all suet is the Lord's" and therefore demands that all animal flesh should first be offered as a well-being offering. If H is to be associated with Hezekiah's reform (see above) which was operative solely in the land of Judah, then the edict of Leviticus 17, though idealistic, is still feasible. D's centralization, however, takes place under different historical circumstances. The expanded borders of Josiah's kingdom had made common slaughter an absolute necessity (Deut 12:15–16, 21–25). Even at the risk of chthonic worship, D ordains that "[the blood] shall be spilled on the ground like water" (Deut 12:16, 23). This prescription may reflect D's fear that the example of Saul's stone ultimately turning into an altar (1 Sam 14:35) might subvert D's centralization imperative by leading to the consecration of other slaughtering stones as altars.

1. P and the Sanctuary at Shilo. It is clear that P as well as H speaks of the tent of meeting as the only legitimate sanctuary. H clearly has the Jerusalem temple in mind, but for P, there are only two possibilities. Being anterior to H, P's reference could be the pre-Hezekian temple (Knohl 1988: 189–91). Or P may advert to an anterior institution—the sanctuary at Shiloh (Haran 1962; 1978: 175–204).

The intensive excavations at the site of Shiloh and the survey explorations thoroughout the central hill country have yielded valuable information concerning Shiloh's regional role during Iron Age I of the premonarchic period (Finkelstein 1985: 164–74; 1988). The pertinent results can be summarized as follows: At the beginning of Iron Age I (end of 12th century B.C.E.) there was a dramatic increase in the number of permanent settlements in the central hill country. In the tribal territories of Ephraim and Manasseh, 27 sites during the Late Bronze Age grew to 211 sites, nearly an eightfold increase. Most of the growth was registered in Ephraim (23 times, to 4.4 times in Manasseh), especially around Shiloh (22 sites within a 5 or 6 km radius). The Shiloh temple located in the heart of this population must have

served as the regional center for the entire area before it was destroyed in the middle of the 11th century. Expansion southward took place later, after the destruction of Shiloh. This meant that Shiloh probably was the first and only interregional, transtribal religious center before the Jerusalem temple. Other important sanctuaries, such as Benjaminite Bethel and Gilgal (of Samuel and Saul) could not have borne regional significance while the Shiloh sanctuary existed.

2. The Shiloh Tradition Reworked. The basic presuppositions of P fit the archaeological data of Shiloh to perfection. P prescribes a central sanctuary containing the tabernacle with its ark and other cultic paraphernalia. It also presupposes common slaughter at home (see above), so that households would journey to Shiloh only for the annual pilgrimage (1 Sam 1:3; 2:19) or festival (Judg 21:19). On the other hand, P does not claim that the tabernacle is the only legitimate sanctuary. There is neither admonition nor ban against worshiping at other altars—unlike H (Leviticus 19) and D (Deuteronomy 12). Though biblical scholarship registers other opinions regarding the provenience of P's tabernacle, the absence of any prohibition against multiple sanctuaries limits P's tabernacle to either the temple of Shiloh or that of Jerusalem before Hezekiah's edict of centralization (2 Kgs 18:4).

Both locations are possible. The sacrificial procedures attested in P probably had their origin at Shiloh. Some texts, like the thanksgiving offering pericope, were reworked by the Jerusalem priesthood so thoroughly that even where the seams are visible it is no longer possible to recover the original text. Others, like the cereal and well-being offerings, received interpolations or supplementary verses which when removed reveal the original text (details in *Leviticus 1–16* AB, Introduction). These additions are the work of subsequent generations of Jerusalem priests, but still from the time prior to Hezekiah. In substance these additions are not significant; they probably reflect the "in-house" adjustments of the priests regarding their sacrificial income as the one-family sanctuary gave way to the multifamily temple. It would take the momentous events at the end of the 8th century, which led to an infusion of refugees from north Israel and the prophetic rebuke concerning the social and economic injustices gripping the land, to provoke a major priestly response resulting in the creation of the radically new vistas and ideology of H (see Knohl 1988: 146–93).

A. Definitions

When a child asks, "Mommy, where did I come from?" the awareness of historical thought begins. When society asks us, "Who are you, anyway?" we begin to formulate history. We start to form a list of credentials, of memorable and significant events, including the definite point at which our historical accounting begins. One could start one's own history at this point, but ANE society seems to have demanded that history, whether personal or national, should begin rather with the very beginning of the world.

The problem with this requirement is that there were no human observers at the beginning of the world. But the people of the ANE knew that there must have been a more distant past lying behind the knowable past. To account for this, ancient historians had to posit the beginning of history, speculative both factually and philosophically. From that point on, going forward in time, they speculated about how the world in its fullness, including their untenable past and unknowable ancestors, came to be.

This speculative, often mythological history between the creation of the world up to the point when one's historical memory begins became well patterned and traditional in the ANE. This patterned portion of history is here termed "primeval history."

The primeval history is a long and well-established literary convention (Kikawada 1974) in the ancient world, first detected in the Sumerian literature of the 21st century B.C. and continuing through the Semitic literature in Akkadian and Hebrew down to classical and later Indo-European literature. One may consider it as an indication of the ANE people's awareness of what the modern geologist calls "deep time."

Accordingly, Genesis 1–11 is the primeval history of the Bible on the cosmological and world-historical levels. There are also many passages on the level of biography in the Bible, such as Exodus 1–2 and Matthew 1–3, that must be included in the literary category of primeval history (Kikawada and Quinn 1985).

B. Patterns of Primeval History

Since the "patterns of primeval history" are common to biblical and other literature, for convenience and clarity the two distinct patterns are described in terms of the Mesopotamian cuneiform literature. The first pattern is the *narrative pattern* of primeval history and it is derived from the Akkadian Epic of Atrahasis, the so-called Babylonian Flood Story (Lambert and Millard 1969). The second is the *genealogical pattern*, derived from the Sumerian genealogical material known as the Sumerian King List (Jacobsen 1939) and other Mesopotamian genealogical material. The common characteristic of the two is the great Flood standing at the end of the mythological or quasi-mythological epoch and ushering in the new, and more or less "factual," epoch. The great Flood is the epoch divider, signaling the end of the primeval history and anticipating the beginning of a new age.

1. Narrative Pattern. The Atrahasis Epic furnishes us with the basic narrative pattern of the primeval history (Laessøe 1956) in a five-story outline. The epic starts with the beginning of the world, when only the gods existed. The story tells us the reason why and the process by which the gods created human

beings. The next three stories are concerned with the very successful procreation and multiplication of the human population and the gods' attempt to exterminate the ever-increasing population in three stages. But the human beings are saved from extinction at each of the three attempts. The second stage has two steps; somehow the gods had to intensify the extermination effort, for the plan was not working well. In the third stage we find the great Flood story. The last story relates the postflood compromise among the gods concerning population control (Kilmer 1972). Thus, the topical outline of the primeval history narrative may be articulated as follows:

A. Creation: God's Work and Creation of mankind
B. First threat to Mankind: Overpopulation and Control by Plague
C. Second Threat: Overpopulation and Control by Drought
C'. Threat Intensified—Severer Means
D. Third Threat: Over population and Control by Flood
E. Resolution: Population Control

The historical time covered is from before the creation of mankind through the great Flood, to the post-Flood resolution regarding the increasing population. Note that there are only three narrative generations of expansion and diminution of the population, although these generations are of 1,200 years each. The predominant theme is how to deal with the ever-increasing population which even the great Flood could not resolve. The Atrahasis Epic resolves the problem by instituting "birth control" by means of the gods creating barrenness among women, demons to cause crib death, and three types of nuns to put some women out of procreation. The greatest variation among the specimens of primeval history discussed in this article is in the means of resolution to the problem of overpopulation.

The Sumerian forerunner to the Atrahasis pattern of primeval history may be obtained from the Sumerian Deluge story, but extreme caution must be applied since only 20 percent of the story is preserved. There is also a view that the Enki and Ninmah story plus the Sumerian Deluge may give us a more nearly complete pattern (Kilmer 1976). The Akkadian story of the Worm and Toothache intriguingly gives us the genealogical narrative of a worm that claims as its ancestry none other than the retired chief of the Mesopotamian pantheon, Anu himself, but this story lacks the great Flood. This may indicate either that the entire story is in the primeval historical context, or that it is from a separate tradition.

2. Genealogical Pattern. The Sumerian King List furnishes the basic genealogical pattern with seven to ten generations from the beginning to the great Flood, depending on how one counts them. The main characteristic of these antediluvian kings is their extreme longevity, such as King Alulim reigning for 280,000 years. This makes the antediluvian period, though consisting only of seven or ten generations, much longer than the postdiluvian period, comprised of many generations. The postdiluvian King Zambia, for instance, reigned only three years. The great Flood (Sum *AMARU,* Akk *abūbu*) thus bisects ancient world history, establishing a historiographic time axis with such expressions as "before the Flood" (Akk *lām abūbi,* cf. *lammabbûl,* Ps 29:10) and "after the Flood" (Akk *arki abūbi,* cf. Gen 9:28; 10:1, 32; 11:10), analogous to our convention of B.C. and A.D. divisions in world history and "antebellum" and "postbellum" in American history.

Although the Sumerian King List establishes the basic genealogical pattern of primeval history, perhaps more relevant to biblical studies is the Akkadian synchronic "List of Sages" (van Dijk 1962). The kings and sages (Akk *apkallu* for antediluvian and Akk *ummannu* for postdiluvian "sage") are listed side by side in this genealogy before the Flood as "[in the] time of Aialu the king, U'an was the sage *(apkallu)*" and after the Flood as "[during the reign of Gilgam]sh, Sinligunninni was the sage *(ummannu).*" In this list, the antediluvian period is accounted for in two genealogical lines, one line of kings and the other of sages. Also note that the kings are associated with cities according to the Sumerian King List, whereas the sages are linked to clever cultural inventions such as music, metallurgy, and the religious cult, and to "walking with god," especially in the light of the "List of Sages" and another list of sages known as "The Etiological Myth of the 'Seven Sages' " (Reiner 1961).

C. Purpose

The main purpose of the primeval history, be it in the form of narrative or genealogy, appears to be establishing one's first section of credentials, tracing back to the very beginning of the world. The primeval history, in a small neat package, is a formal introduction to a history or to a biography, adding to it the notion of "deep time." Once the primeval history became concisely patterned in both the narrative and genealogical tradition, it became a literary convention easily prefixed to any memory-based history, whether national or personal.

The great Flood became the primeval historical device to separate the two major epochs; it is the ANE epoch divider par excellence, lying between speculative history and memory-based history. Conversely, it may be considered as a bridge to fill in the gap between the two epochs. The great Flood is a very convenient literary device for the ancient historians; they need not claim any factual knowledge of earlier things, since symbolically the flood washed away all records. Thus, the great Flood signaled to the ancient reader that anything that had happened before it was speculative and mythological rather than factual and concrete.

D. Genesis 1–11

In the first eleven chapters of Genesis we have an example of a full primeval history, where the five-point-outline narrative and the double-line genealogical traditions (Wilson *GHBW*) are fused together into a single literary unit. The primeval history in turn constitutes the first and introductory cycle of the five cycles of the book of Genesis. Then, on a still larger scale, the book of Genesis constitutes the literary unit that introduces a five-book Torah (for a brief discussion, see below). Observe also that all three of the succeedingly larger units—the primeval history, the book of Genesis, and the Pentateuch—conclude with exactly the same motifs, among them the references to Abraham, to someone (Terah, Joseph, Moses) dying, and to the promised land still unreached.

1. Narrative Pattern. There are five major stories told in Genesis 1–11:

A. Creation, God's Work and Rest (1:1–2:3)
B. Adam and Eve, First Threat to Mankind (2:5–3:24)
C. Cain and Abel, Second Threat to Mankind (4:1–16)
C´. Threat Intensified—Lamech's Taunt (4:23–24)
D. The Great Flood, Third Threat, and Noah's Ark (6:1–9:29)
E. Tower of Babel, Population Control by Dispersion (11:1–9)

The narrative structure of Genesis 1–11 conforms to the five-point outline of the primeval history narrative of the Atrahasis Epic (cf. Millard 1967). The creation story is the cosmic introduction, majestically telling the story of divine work and rest in the uniquely Hebrew seven-day week. Then, three stories of the near extinction of newly created mankind follow. Adam is almost killed, but is allowed to live on and even to have children. Fifty percent of the following generation is eliminated when Abel is killed, but Cain lives on. Virtually everyone of Noah's generation is wiped off the earth, but the remaining ones repopulate the earth. Note that the sevenfold revenge instituted for Cain is echoed in Lamech's taunt but is intensified seventy times (C and C´). The story of dispersion as a resolution to the population problem concludes the primeval history.

While the form and themes of the Genesis 1–11 narrative parallel those of the Mesopotamian forerunners, the resolution of the population problem is diametrically opposed. The book of Genesis insists that the multiplication of people is a divine blessing and tries to accommodate it by dispersion of the population upon the face of the whole earth, whereas in the Babylonian epic, birth control measures are divinely instituted. This theological opposition may be accounted for by assuming two sociologically different communities; the Babylonian society was urban, confined to a limited space, and menaced by overpopulation, while the Hebrew society was more rural, welcoming population expansion. For the Hebrews, there was the whole earth to expand into, while the Babylonians locked themselves in the limited space of the walled city.

Certainly the themes of the biblical narrative are more complex than just the compounding stages of population expansion and diminution, although they are highlighted as the predominant theme of the primeval historical narrative. The biblical author, for instance, overlaid the narrative with the ethical

structure that makes it a complementary part of the larger scheme of the whole Torah. In the first story ethical perfection is declared: all things God created were "very good." From the following story on, people degenerate ethically, but God repeatedly tries to set them right by forgiving them. Despite repeated disobedience and rebellion in the three narrative generations (namely Adam, Cain, and Noah), mankind is allowed to exist and continues to propagate, as commanded in the blessing of the creation story, "Be fruitful and multiply and fill the earth" (Gen 1:28). As though to implement this blessing, the fifth and last story (Gen 11:1–9) accommodates the expanding population in a distinctively Hebrew way. Note that this dispersion produces Abram in the genealogy that follows, and that Abram is the key link between the antediluvian primeval history and the postdiluvian patriarchal narrative (contra von Rad, *Genesis* OTL). Thus, the primeval history of the Bible concludes with the introduction of the first hero of the next epoch, Abram.

2. Genealogical Pattern. The genealogy (*tōlĕdôt*) links the five stories of Genesis 1–11 together and binds them to the rest of the book (contra Westermann, *Genesis* BKAT). Thus, there is a genealogy line corresponding to the story line described in the previous section. See Fig. PRI.01. The genealogy from Adam to Noah is either seven or ten generations deep (Wilson *GHBW*), but the narrative represents only three generations. Significantly, Genesis 4–5 preserves the antediluvian genealogy in double lines, briefly interrupted by Lamech's taunt. Note that Cain is associated with a city as in the Mesopotamian genealogy of kings, while Jabal, Jubal, Tubal-cain, and Enoch are attributed with cultural inventions and "walking with God," just as are the Mesopotamian sages. The preservation of both the king-type figure and the sage-type figure in Genesis 4–5 may reflect the ancient Mesopotamian synchronic list of sages and kings, and this may perhaps help explain the existence of two genealogies linking Adam to Noah (cf. Indian double genealogies of Manu).

Also note that the historiographic expression "after the Flood" is preserved in Gen 9:28; 10:1, 32; 11:10, indicating that the Flood is the epoch divider in the biblical tradition as it is in the Mesopotamian. In this context, *lammabbûl* of Psalm 29:10 may be seen contextually as an equivalent to "before the Flood," since this expression is paralleled to the cosmic time expression, "forever."

E. Other "Primeval History" Patterns in the Bible

Although there are many manifestations of the patterns of the primeval history in both the OT and NT, either directly conforming to them or obliquely alluding to them, the intent and purpose of these passages must be evaluated according to the position of each passage in its larger literary context. First, let us look at other biblical examples of the primeval history that preface the biography of Moses (Exodus 1–2) and Jesus (Matthew 1–3). Second, let us examine a few sample passages that make oblique reference to the primeval history.

1. Exodus 1–2. A type of primeval history is prefaced to the biography of Moses. The narrative outline of Exodus 1–3 is identical to Genesis 1–11:

A. Creation by Procreation—Genealogy Linking to Genesis
B. First Threat to Hebrew Population—Affliction with Heavy burdens
C. Second Threat—Tale of two Midwives
C´. Threat Intensified—Drowning of Children
D. Third Threat—"the Flood" and Moses' Ark
E. Resolution—"Exodus" into Midian

The predominant theme of population expansion and diminution is clearly present and the solution to the population problem here is identical to the nomadic solution of Genesis 11, that is, "dispersion" or a little "exodus," wherein Moses goes away from the center of activity into the wilderness of Midian, just as Abram leaves an urban center. Moses' murder of an Egyptian and relocation of himself to the wilderness may be analogous to the motif sequence of the Cain and Abel story.

Note some verbal allusions to the Genesis narrative, such as Moses' mother making for him the "ark" (Heb *tēbâ*) of bulrushes pitched with pitch and mortar (Exod 2:3; cf. Gen 6:14); Moses' mother "saw that he was good" (Exod 2:2; cf. Gen 1:4, etc.); the children of Israel became "fruitful" and abundant, and "multiplied" and became strong, and "the earth was filled with them" (Exod 1:7, 12, 20; cf. Gen 1:28).

Note also the rhetorical features such as those seen in the speech of Pharaoh, "Come, let us deal wisely with them, lest they multiply …" (Exod 1:10), echoing the speech of YHWH in Gen 11:7 ("Come, let us go down …, lest they may not …"); and the way in which the two midwives are named, "the name of the one is Shiphrah and the name of the other is Puah" (Exod 1:15), echoes the way Lamech's wives are named in Gen 4:19.

While Exodus 1–2 parallels the Genesis 1–11 narrative, perhaps more striking parallels are found between it and the Atrahasis Epic, especially in regard to the two opposing divine forces working to destroy and to save the Hebrew population in Egypt. The primeval historical section of Moses' biography, however, upholds the blessing of Genesis 1:28, symbolically removing Moses from the urban center to the wilderness, anticipating the forthcoming event of the massive Exodus from Egypt. This, as well as the dispersion story of Gen 11:1–9, may be considered an example of anti-Babylonian, antiurban rhetoric from the extraurban point of view.

The genealogical element of the primeval history is concentrated in the beginning of the narrative and constitutes a story unit (A. Creation by Procreation). "Joseph was already in Egypt" (Exod 1:5) links this story unit to the book of Genesis; genealogically, Moses becomes linked to Adam. This genealogical line then is punctuated by Moses' own miniature Flood (D. Third Threat—"the Flood"). Thus, complete history from the beginning on is told on a biographical scale; one may state this as "biography recapitulates historiography."

2. Matthew 1–3. The same phenomenon is observable in Matthew's primeval history. "The book of 'Genesis' [Gk *Genesis*] of Jesus Christ" is how Matthew begins his gospel (1:1) and as such one may expect allusion to the book of Genesis. Matthew 1–3 certainly parallels not only Genesis 1–11 but also Exodus 1–2; thus, it is also a primeval historical biography. The following is the basic five-point outline:

A. "Creation" by Genealogy—Abraham to Jesus
B. Birth of Jesus
C. Three Wise Men
C′. Slaughter of the Innocents
D. Flight to Egypt and Return—a Little "Exodus"
E. Baptism and Dove—a Little "Flood"

The story of three wise men is consigned here as a foil story to the slaughter-of-the-innocents story, yielding C and C′ in the outline, primarily because (1) the principal character of the birth, slaughter, and flight stories is the divine agent who commands Joseph, whereas in the wise men story Herod is the one who commands and whose command was not heeded by the wise men, and (2) there are almost verbatim threefold repetitions of the introduction to the angelic speeches in the birth, slaughter, and flight stories, while the angel does not speak in the wise men story but compromises Herod's plan.

The birth story here fills B, and the story of the extermination of the undesirable population is now concentrated in C′. The "flood" and "exodus" now switch places; the flight into Egypt and return to Israel occupy D, while the miniature "flood" (reminiscent of Exodus 2) occupies E in the form of the baptism, the salvation out of water with the presence of a dove. Nonetheless, at the end of Matthew 3 Jesus is placed in the wilderness just as was Moses in Exodus 2.

The structure of the narrative as a whole thus places Jesus formally in the antediluvian primeval history like Noah and Moses, while the genealogy of A links Jesus to the first Hebrew of the postdiluvian history. Thereby, Matthew has recast the time span from creation to Jesus in the primeval historical form of narrative.

3. Other Biblical Books. Both the OT and NT are full of allusions to and reflections of the primeval historical outline and motifs. The following are some examples, and one might be reminded that this is still a fruitful field of future study. Aside from the basic organization of the Torah and of Genesis, which is similar to that of Genesis 1–11, the court history of David and Solomon is considered to parallel the narrative progression of the primeval history of Genesis as originally suggested by Walter Brueggemann (1968). The five-point outline of the parallel accounts is shown in Table 1.

	Genesis 1–11	*2 Samuel–1 Kings*

A.	Creation—God saw everything very good: *ṭôb mĕ›ōd*	David saw Vathsheba very good *ṭôb mĕ›ōd*
B.	Adam and Eve—death threat and curse	David and Bathsheba—death threat and curse
C.	Cain and Abel—anger, murder exile	Amnon and Absalom—hate, murder, exile
D.	Noah and the Flood—new beginning for Noah	Rebellion of Absalom—new beginning for David
E.	Dispersion—Tower of Babel, name, city building, scattered people	Solomon—Dispersion, name, city building, scattered realm

Hesse and Kikawada (1984) have shown that the book of Jonah reverses the topical progression of Genesis 1–11. That is, the book of Jonah ironically reverses the primeval history, ending up with the creation motif in order to interpret the Mosaic covenant in a new light. It begins with the "dispersion" story of Jonah, who is unwilling to go to Nineveh and so journeys away from Mesopotamia. The miniature "flood" story follows with many verbal echoes of the Noah story, then comes the "Cain and Abel" story of angry dialogue between YHWH and Jonah in which YHWH asks, "Does it do any good (*hêṭēb,* 4:4; cf. Gen 4:6–7) to be angry?" Also, the name Abel (*hablê šāw›*) is hidden in the conclusion of the hymn of thanksgiving (Jonah 2:8). A little "Adam and Eve" story is told next in the episode of the worm and the gourd tree under which a life-and-death conversation takes place. The sixth day of the "creation" story in which man and cattle were created is again alluded to at the very end of the Jonah book in the phrase "and much cattle." Note that the entire Jonah book is set in seven narrative days; three days in the fish's stomach, three days to go across the great city, and the seventh day just to sit and talk with God. In fact, the allusions to creation are abundant, not only in that Jonah "fears YHWH, the God of Heaven, who created the sea and the dry land," but all through the book when God creates, destroys, and manipulates natural phenomena at will as the creator.

F. Indo-European Literature

A trace of the ANE convention of the primeval history can be felt in the Old Iranian and Indian literature to the east and in the classical material to the west.

1. Iranian Tradition. The second book of the Vendidad (*Vidēvdāt*) includes a Zoroastrian version of the great Flood story, featuring Yima as the hero in a five-point outline with the predominant theme of overpopulation:

A. Introduction and Institution of First King Yima
B. Overpopulation and the First Expansion of Earth
C. Overpopulation and the Second Expansion of Earth
D. Overpopulation and the Third Expansion of Earth
E. Overpopulation and the Preparation for the Flood

Note that while retaining the basic five-point outline of the primeval history, this account makes the Flood story occupy the last position. However, Yima, the first man and the first king (Christensen 1943), lives through all the generations of overpopulation, interceding for his people as did Atrahasis. In the end, to save mankind and preserve the best of the creatures from the impending flood, Yima is instructed to build an elaborate structure for salvation. But it is not clear whether the Flood is something that happened in the past or that is going to happen in an eschatological future (cf. Gunkel 1895).

2. Indian Tradition. From India we can recover both the narrative and genealogical traditions that featured Manu Vaivasvata as the Flood hero. He is the seventh Manu according to the *Viṣṇu Purāna* genealogy (Thapar 1976) and the Flood hero according to the 9th-century-B.C. story of Manu and a Fish (O'Flaherty 1975). In the story of Manu and a Fish we have a one-man or one-fish "overpopulation" and Flood story. One day Manu saves a fish that rapidly grows big. He tries to accommodate it in succeedingly larger containers but finally he has to release it in the ocean. Some time later, the fish reappears to Manu, instructing him to tie a boat onto the horn growing on its head so that Manu can be towed to the highest mountain to save himself from the impending Flood.

The Indian genealogical material is more pertinent to the OT tradition than to Mesopotamian, for it preserves a compound pattern similar to the OT genealogy rather than to the simple linear genealogies of Mesopotamia. The genealogical material of the Purāna as summarized by Thapar and compared to a summary of the OT genealogy is depicted in Fig. PRI.02.

Observe the tripartite genealogical scheme: *A* is the primeval historical section in double lines of sages/kings; *B* is the branched genealogy section; and *C* returns to the linear genealogy. In both the Indian and the OT genealogies, *A* and *B* are demarcated by the great Flood and *B* and *C* are separated by the war—i.e., the Mahabharata War for the former and the war between YHWH and Pharaoh (cf. Exod 15:1–22) for the latter.

3. Classical Tradition. Beside Berossus' account of Babylonian history, we have the story of Deucalion and the flood, from which we can recover many elements of primeval history. The Latin tradition also preserves it in the story told by Ovid. The most striking example, however, is a brief scholiastic commentary on "the will of Zeus" (*Iliad* 1.5). In it we find a summary of a long-lost story whose outline is as follows:

A. Problem—burdened earth, overpopulation
B. First Threat—Zeus sends Theban War, many destroyed
C. Second Threat—Zeus plans to destroy people by thunderbolts or flood. Momos dissuades Zeus from this plan
D. Third Threat—Momos suggests that Thetis marry a mortal to create Achilles and that Zeus seduce Leda to create Helen of Troy. This results in the Trojan War
E. Resolution—many destroyed: earth's burden lightened

Although we may never know where and when the concept of the primeval history was conceived and developed, we find it earliest in Mesopotamian cuneiform literature, and traces of it in the OT and in the literature of India as well as Europe. Many other examples of this literary tradition may be hidden in other unexpected places.

PRINCIPALITIES AND POWERS. A common translation of the NT terms *archai* and *dynameis*, which are used primarily by Paul to designate angelic beings, both good and evil, but most commonly in reference to the realm of Satan. Several other terms are used in conjunction with these to denote supernatural beings: *exousiai* ("authorities"), *archōntes* ("rulers"), *thronoi* ("thrones"), *kyriotētes* ("lordships"), *kosmokratores* ("world rulers"), and *stoicheia* ("elemental spirits").

This collection of terms was not coined by the early Christians, but was probably taken from the reservoir of terminology in 1st-century-C.E. Jewish and pagan belief in reference to the angelic realm. The terms appear in the OT pseudepigrapha, particularly the apocalyptic writings (e.g., *2 En.* 20:1; *1 En.* 41:9; 61:10; cf. also *Testament of Levi* 3:8; *Testament of Solomon* 8:2; 18:2; 20:15). Many of the terms are also used in the syncretistic Greek Magical Papyri (PGM) to denote various supernatural beings (e.g., PGM I. 215; III. 35; IV. 1193, 1275, 1599, 2198–99; XXIIb. 2, 4, 7 [= the *Prayer of Jacob*]).

In Ephesians, where there are more references to the principalities and powers than any other epistle, they are regarded as evil and under the authority of the devil (Eph 6:12; 2:2). Consequently, believers are called to resist their influence by appropriating the power of God. The compelling influence of these evil powers has been broken by the Christ event. Christ has been exalted to the right hand of God, a position of authority far above every conceivable evil angelic being (Eph 1:20; cf. also 1 Pet 3:22). By virtue of their union with him, believers share in the authority of Christ over the powers (cf. Eph 2:6) and may thereby break the power of their control and influence (see Arnold 1989: chap. 3).

The powers are seen by Paul as a fundamental factor in the heretical teaching threatening the health of the Colossian church. Paul therefore stresses a cosmic christology (Col 1:15–20) affirming the superior position of Christ in relation to the powers. Christ is also asserted as the ruling "head" over the principalities and powers (Col 2:10). The cross is seen as the point of decisive defeat: "on that cross he discarded [or, disarmed] the cosmic powers and authorities like a garment; he made a public spectacle of them and led them as captives in his triumphal procession" (Col 2:15; NEB). The Colossian believers should therefore not submit themselves to the tenets of the heretical teaching, which were ultimately inspired by the "elemental spirits" (Col 2:8). In their solidarity with Christ's death, they should consider themselves immune to the influences of these evil spirits (Col 2:20).

Deeply aware of the influence of "the god of this age" (1 Cor 4:4), Paul sees demonic rulers (*archontes*) as ultimately responsible for the death of Christ (1 Cor 2:8; see Eph 2:2 for a similar use of *archon* as an evil spirit being). These powers did not understand the wisdom of God, who would use Christ's death for the actual defeat of the realm of evil and thereby procure salvation for his people. Divine deliverance was necessary since humanity was in bondage to the realm of Satan and his minions (Eph 2:2; Gal 4:3, 8). The resultant emergence of the Church, the body of Christ, testifies to the evil powers of the vast wisdom of God (1 Cor 2:6–7; Eph 3:10). Although defeated by the cross-resurrection event, the powers are still active (Eph 6:12; Gal 4:9). They are in the process of being abolished (1 Cor 2:6) and will finally be destroyed at the consummation (1 Cor 15:24). Because of the work of Christ and his superior power, Paul can comfort the Church by assuring its members that no evil angelic power can separate them from the love of God in Christ Jesus the Lord (Rom 8:38).

CLINTON E. ARNOLD

PRISCA (PERSON) [Gk *Priska* (Πρισκα)]. Var. PRISCILLA. An important Christian missionary in the mid-1st century C.E., mentioned in 1 Cor 16:19, Rom 16:3–5, and 2 Tim 4:19. She is called by the diminutive "Priscilla" in Acts 18:2–3 (historically reliable traditions; Lüdemann 1987: 206, 209–10); and 18:18, 26.

Prisca was probably freeborn; epigraphical material indicates that ordinarily her name was not a slave name (Lampe *StadtrChr,* 151–52). She married Aquila, a tentmaker of Jewish origin. The couple were

among the first Christians in Rome who also belonged to the synagogues of the city. Together with her husband and others, Prisca spoke of Christianity in at least one of the Roman synagogues. This Christian proclamation led to tumultuous controversies among the Roman Jews, so that the administration of the emperor Claudius in 49 C.E. expelled from Rome the main quarrelers, including Prisca and Aquila.

The couple moved on to Corinth, where Paul first met and lodged with them and worked in Aquila's workshop (Acts 18:2–3). After more than a year and a half (Acts 18:11, 2; cf. Lüdemann 1987: 207; Lampe *StadtrChr,* 7–8), they moved to Ephesus, where they again were active as missionary co-workers of Paul and formed a church in their home (1 Cor 16:19; cf. 2 Tim 4:19; Acts 18:18). The couple "risked their necks" for Paul's life (Rom 16:4), probably during this stay in Ephesus, where Paul was exposed to serious dangers (1 Cor 15:32; 2 Cor 1:8–9). The historicity of the Ephesian episode about Apollos told in Acts 18:26 is very doubtful (Lüdemann 1987: 215–16); *parrēsiazesthai* is a Lukan word; and there is a tension between v 25 and v 26: Apollos already taught "accurately" about Jesus (v 25) *before* he was instructed "more accurately" by Prisca and Aquila (v 26). Luke, the advocate of the apostle Paul, suggests in v 26 that Prisca and Aquila turned Apollos into a staunch supporter of Pauline Christianity. Pre-Lukan tradition (cf. vv 24–25), however, knew only that Apollos once worked in Ephesus at the same time as Paul, Prisca, and Aquila (cf. also 1 Cor 16:12, 19) and that Apollos was a Christian pneumatic (cf. also the Apollos party in Corinth, 1 Cor 1:12, in the context of the Corinthian pneumatics and enthusiasts, e.g., 1 Corinthians 12–14). As such, Apollos was more likely a competitor of Paul (1 Cor 1:12; cf. 3:10b, 12–15) on whom the apostle could not at all impose his plans while he stayed in Ephesus (1 Cor 16:12). We do not know whether Prisca and Aquila at least housed Apollos in Ephesus (Acts 18:26; Weiser 1985: 508).

The couple has often been depicted as wealthy, with Prisca of even higher social status than Aquila since her name in most cases is placed before his (Rom 16:3; 2 Tim 4:19; Acts 18:18, 26; e.g., McNicol *HBD,* 823–24). But evidence points against the couple's wealth. For a discussion, see AQUILA. References to Prisca before Aquila more likely indicate that she was even more active in church life than her craftsman husband. The context, Rom 16:21–23, shows that socially respected persons were not necessarily named first (Gaius with his spacious dwelling and Erastus, the city treasurer, appear last). Paul esteemed a person's work for the church (Rom 16:3b, 4, 5a, 21), not the person's status in the pagan society (cf. Gal 3:28). Luke, on the other hand, mentioning Prisca first in Acts 18:18, 26, would probably have liked to report her elevated social status if he had known about it; he frequently pointed out the participation of distinguished women in Christianity (e.g., Luke 8:3; Acts 17:4, 12; cf. 17:34; 16:14).

Around 55 or 56 C.E. (after Claudius' death in 54 C.E. and between the writing of 1 Corinthians and Romans), the couple returned to Rome (Rom 16:3–5). This last move may have been strategically motivated: Prisca and Aquila were possibly sent as Paul's vanguard to Rome, where he wanted to establish a firm footing for his gospel before continuing to Spain. In Rome Prisca and Aquila again hosted a house-church. They were the first to receive greetings from Paul in Romans 16, where Paul praised them. Their prominence as Paul's co-workers was remembered by the later church; 2 Timothy used their names for its fictitious historical frame, at the beginning of a list of greetings (4:19). Church tradition of the 6th century claimed that the house-church of Prisca and Aquila was the basis of the later Roman "title"-church, "Prisca," on the Aventine. There is no proof for this connection or for any relation to the Roman catacomb "Priscilla" (Lampe *StadtrChr,* 11, 24–25).

PRISON. In ancient Israel, mere imprisonment was not recognized as a formal punishment. When a convict was sentenced to prison (Ezra 7:26), he was to make good his offense by carrying out dull and heavy labor. The modern idea of a prison as a penitentiary, where criminals are to be reformed into decent

citizens, was foreign to ANE conceptions. For various other reasons, however, prisons played an important role in the penal system of the ancients.

Pending his case, a suspect could be held in temporary confinement. Thus, the Israelite woman's son guilty of blasphemy was put in custody (Heb *mišmār*), until a divine verdict was reached (Lev 24:10–12). A similar treatment was given to a violator of the Sabbath, until his death sentence was pronounced (Num 15:32–36). It should be noted that, in these two instances, final judication was reached through the consultation of the Lord. In this respect, the custody pending trial can be compared to the Mesopotamian practice of detaining convicts in a temple prison prior to the river ordeal, attested in the so-called Nungal Hymn. Not all cases of temporary detention were concluded by a divine verdict. Micaiah, the son of Imlah, was put in prison (*bêt hakkele*ʾ) to allow the authorities to verify his prophecy (1 Kgs 22:27; 2 Chr 18:26); and Joseph's objective in putting his brothers in custody (*mišmār*) was to pressure them to comply with his demand (Gen 42:17). In Old Babylonian letters from Mari, reference is sometimes made to a period of detention during which the king can make up his mind what to do with the wrongdoer (e.g., ARM VI 42: 8–10). Examples of temporary detention pending clarification of a case are also found in the NT (Acts 5:17–25; 16:23–24).

The need for cheap labor forces often led the authorities to create compounds where prisoners of war and political adversaries were put to work. These places are sometimes designated as "prisons," though the Latin term *ergastula* (i.e., places of enforced labor) might be more correct. The practice is exemplified in the treatment Samson received at the hands of the Philistines: they gouged out his eyes, bound him with bronze fetters (Heb *nĕḥuštayim*), and forced him to grind (*wayĕhî ṭōḥēn*) in "the house of the prisoners" (*bêt hāʾăsîrîm,* Judg 16:21). Jer 52:11 offers a parallel in the description of Zedekiah's fate: Nebuchadnezzar punished his rebellious vassal by blinding him, binding him with bronze fetters, and putting him into "the house of the mill" (LXX). The more fragmentary indications concerning the measures taken against Hoshea (2 Kgs 17:4), Manasseh (2 Chr 33:11), and Jehoiachin (2 Kgs 25:27; cf. Jer 52:31) do not exclude the possibility that they were submitted to analogous humiliations (cf. 2 Kgs 25:7 and Jer 39:7 with Jer 52:11; for the blinding of enslaved prisoners—a preventive against attempts to escape—see also 1 Sam 11:2; Isa 42:7; and Hdt. 4.2). The designation "house of the mill," preserved by the LXX in Jer 52:11, reflects the Akkadian term *bīt ararri,* "house of the miller, mill," mentioned in a number of cuneiform texts as a place of detention for either distrainees or persons under arrest pending their case. In fact, many of the Akkadian terms rendered somewhat indifferently as "prison," such as *ṣibittum* and *nupārum,* refer to "workshops" where forced labor was performed. According to Ps 107:10–16 the deported Israelites ended up in such a place; they had "hard labor" (ʿ*āmāl*) imposed on them, while they were bound with iron and locked behind doors of bronze with metal bars (see also Isa 42:7; Ps 105:17–18; Lam 5:13).

In some cases imprisonment was resorted to less for economic than for political reasons. The Aramaic Sefire inscriptions suggest that a high-ranking political rival was more likely to be imprisoned (ʾ*sr*) than to be killed (*KAI* 224.18). The treatment of several Israelite and Judean kings referred to above corroborates this impression (see also 1 Macc 14:2–3 for similar measures taken by Arsaces against Demetrius). Such a solution was not adopted on humanitarian grounds but because of fear of an outburst of popular indignation. That is why Herod preferred to send John the Baptist to jail instead of executing him (Matt 14:3–5). Similar considerations may have underlain the decision to incarcerate Jeremiah (Jer 37:15–16) and the seer Hanani (2 Chr 16:10). Conditions in the prison were such, however, that many a prisoner died of disease or malnutrition, as Mesopotamian ration lists show. Since food rations were meager (1 Kgs 22:27) and the treatment harsh, a prisoner (ʾ*āsîr*) might appropriately be counted among "those doomed to die" (Pss 79:11; 102:21). Considering these circumstances, imprisonment could be a convenient way of disposing of opponents; without incurring apparent bloodguilt, one simply made one's adversary "disappear" (cf. Gen 37:22–24; Jer 38:6–9).

Defaulting debtors were a specific category of prisoners, constrained to forced labor until their debt had been paid (Matt 18:28–30; Luke 12:58–59). The tasks imposed on them were similar to those performed by prisoners of war; judging from the cuneiform records, grinding and weaving were their main activities.

Oftentimes it was not the debtor himself, but his wife or children, who were taken by the creditor (2 Kgs 4:1; Isa 50:1; Neh 5:5). Isa 40:2 refers to this practice, using it as a metaphor for the situation of the deported Israelites: the Exile has been their involuntary service by which they had to pay off (*rṣh*) their guilt (*ʿāwôn*). Study of the Mesopotamian evidence makes it likely that the debtors and/or their families were not simply toiling in the home of their creditor, but in constructions that are called "prisons" (Akk *bīt kīli*) or "houses of servitude" (Akk *bīt kiššātim;* cf. Heb *bêt ʿăbādim*). Reduced to (temporary) slavery, they probably found themselves in the company of prisoners of war, together with whom they formed the group of people referred to as *ʾăsîrîm,* "detained persons" (cf. Akk *asīrū*).

Closely related to imprisonment because of guilt was the practice of forcing a debtor to pay by taking a distrainee. B. Porten and J. C. Greenfield see this custom reflected in pleas such as Isa 38:14, which they translate, "Oh Lord, I am being distrained; be Thou my guarantor" (cf. Ps 119:122). The distrainee served in fact as a hostage. Such a hostage could be kept in a "house of custody" (*bêt mišmār*) for other reasons as well (Gen 42:18–20).

In its simplest form the prison was a cave (Josh 10:16–18) or—more frequently—a "pit" (*bôr*), a usage reminiscent of a nomadic lifestyle (Gen 37:22–24; Jer 38:6–13; Zech 9:11; cf. ARM III 36:17–20, where an evildoer risks being thrown into a "pit" [*ḫirītum*]). This ancient form of imprisonment has survived in the Hebrew term *bêt habbôr* (or simply *bôr,* Gen 40:15; 41:14), designating various types of prisons (Exod 12:29; Jer 37:16). In Gen 40:15 the term *bôr* refers to the *bêt hassōhar,* "house of the enclosure" (LXX *ochyrōma,* "fortress") in which the *ʾăsîrîm* (Ketib: *ʾăsûrim*) of the pharaoh were kept. The biblical description corresponds to Egyptian practice as we know it from the hieroglyphic records: those who were condemned to detention and forced labor were relegated to a fortified building (often called *pr šnʿ*), supervised by one of pharaoh's officials. How general a term *bêt habbôr* came to be is apparent from Jer 37:15–16, where the four terms *bêt hāʾēsûr,* "house of the fetters," *bêt hakkeleʾ,* "house of detention," *bêt habbôr,* and *haḥănuyôt,* "the storerooms," are applied to one and the same place, viz., an ordinary dwelling house which had been turned into a prison.

The multiplicity of nonspecific terms suggests that in ancient Israel no special constructions were designed in which prisoners could be lodged. This situation compares well with the data furnished by Mesopotamian texts, according to which persons under arrest were occasionally confined for work in rather harmless places like the *nakkamtum,* "granary," or the *kalakkum,* "silo" (cf. the reference in Isa 42:22 to *ḥûrîm,* LXX *tamieia,* "storerooms," as a Babylonian place of detention). People could be detained in a palace "court of the guard" (*ḥăṣar hammaṭṭārâ,* Jer 32:2) equipped with a dungeon (*bôr,* Jer 38:6), in an annex of the temple (Jer 20:2) or in a private house. Other Hebrew terms, such as *masgēr* (cf. Aram *msgrt* in *KAI* 215.4, 8), "place of imprisonment," (*bêt*) *mišmār,* " (house of) custody," *bêt happĕquddōt* (Jer 52:11), *bêt hammahpeket,* "house of the stocks" (2 Chr 16:10), *kĕlûʾ,* and *kĕlîʾ,* remain too general for identification with specific buildings. More is known of the prisons mentioned in the NT (called *phylakē* or *desmōtērion*). They sometimes consisted of several cells (called *oikēmata,* Acts 12:7), the central one of which was considered the most secure and unpleasant (Acts 16:24).

PRISON, SPIRITS IN. See SPIRITS IN PRISON.

PROCESSIONS. Ancient cultures throughout the world performed processions for any number of reasons: to avert disaster, to ensure the fertility of crops, to enthrone a king, to welcome a conquering ruler, to accompany a wedding or funeral, or to honor a deity. Religious processions, for the most part, fell into one of three categories: (1) the magic procession, a ritual meant to ensure a beneficial or prevent a harmful effect, (2) the offering procession, a presentation of gifts to the gods, and (3) the epiphany

procession, which featured the manifestation of a particular deity through the symbols or the image of that god, and which sometimes also included ritually reenacted myths of the deity.

Processions, a significant part of the cultus of ancient Israel, are depicted throughout the OT. The NT also has a few accounts of processions. In addition, the NT includes some passages where processional language is used figuratively. The processions portrayed in the Bible grew out of the ritual practices of the ANE culture and the Hellenized culture of the E Roman Empire. The present study will investigate the processions of the above-mentioned cultures insofar as they provide a context for understanding the processions in the Bible. (See Nussbaum *RAC*, 9: 908–1049; Bömer PW, 21: 1878–1974; Cross *CMHE*.)

A. Processions in the ANE and Greco-Roman World

1. Processions in the ANE. The majority of the processions in the ANE were epiphany processions which symbolically repeated and so reactualized the mythic actions of the gods. These epiphany processions usually occurred in the context of a religious festival. In fact, they represented the high point of the religious festivals in the ANE. One such procession, often compared to the Feast of Tabernacles procession and other rituals in the Hebrew Bible, was the procession which took place at the climax of the Babylonian *akîtu* festival. See AKITU; NEBO (DEITY).

The *akîtu* festival was a New Year Festival which reenacted the myth of creation. As such, it ritually reestablished the order of nature and society. The procession took place at the climax of the festival, featuring the king leading the statue of the god Marduk and the other major deities of the empire through Babylon to the *bit akîti* ("the temple of the *akîtu* festival"), which lay outside the city. The procession symbolized the victorious army of the gods who, together with Marduk, destroyed the forces of chaos prior to creation.

2. Greek and Hellenistic Processions. While epiphany processions dominated ANE cultic practices, offering processions were prominent in the classical Greek world. In Greece, as in the ANE, processions usually occurred in a larger ritual context as demonstrated by the fact that all of the great Greek processions were connected with festivals and, conversely, nearly every important festival contained a procession as part of its celebration. The close ties between the festivals and processions can be seen by the frequent use of the suffix *-phoria* in the festival names (e.g., Thesmophoria, Arrephoria, Oschophoria, Daphnephoria). This suffix is derived from the verb *pherein* ("to carry") signifying the bearing of specific offerings or cult objects in procession.

One of the most important processions in Athens was connected with the great Panathenaea, a festival held every four years. During this festival, a *peplos*, or robe, was paraded through the streets of Athens which the people of Athens presented, along with many other offerings, to Athena, the city's patroness. The Parthenon frieze, now in the British Museum, depicts this procession.

In the later Hellenistic culture and the Hellenized culture of the E portion of the Roman Empire, there was an increasing flexibility in the structure of religious processions. Although most of these processions were modeled after the processions of the classical Greek polis, there were, nevertheless, significant changes which resulted from various factors, such as the cultural influence of the East, the prosperity of the age, and the separation of the procession from the specific ritual function it had in the Greek city. Among the more important changes were: (1) processions coming into the hands of private cults or individuals who used them primarily for propagandistic purposes, (2) epiphany processions becoming the

dominant type of procession, and (3) processions often becoming more extravagant at the expense of their underlying religious meaning.

3. The Roman Triumphal Procession. Probably the most famous procession in Roman times was the Roman triumphal procession celebrated at Rome on the occasion of a victory over enemies of state. The Roman procession, the offspring of an ancient Etruscan ritual, was originally an epiphany procession, with the triumphant general appearing as the living image of Jupiter Optimus Maximus. By the time of the empire, however, the triumph was celebrated as an offering procession held to honor the gods in thanksgiving for the victory. The procession consisted of the entrance into the city of the Roman magistrates, the Senate, people carrying booty from the campaign, sacrificial bulls, and enemy captives (who were executed at the end of the ceremony), followed by the victorious general on a chariot leading his army.

4. The Procession as a Literary Motif. Given the importance of religious processions in Greco-Roman times, it is not surprising that the procession came to be used as a common literary motif. For example, the popular philosophers of the time condemned the procession for its extravagance and frivolity, and as a result, it became the metaphorical equivalent of the ostentatious ceremony devoid of content. Likewise, the triumphal procession was used figuratively in Latin literature and poetry. Seneca compares his dependence on his benefactor to the humiliating experience of being "led in triumph" (*Ben.* 2.11.1), whereas Ovid writes of love having vanquished and led him in a triumphal procession (*Am.* 1.2.27–30). On the other hand, religious writers, both Christian and non-Christian, used the image of the epiphany procession as a metaphor to compare the fact that the human person bears the image of God in the same way that the epiphany procession carries around the deity (*Ign. Eph.* 9.2; Clem. Al. *Protr.* 4.59.2; *Midr. Ps* 17:8).

B. Processions in the Bible

1. OT. a. Elements of OT Processions. The elements of the ancient Israelite procession can be culled from various places in the OT. 2 Samuel 6 and 1 Kings 8 give specific accounts of cultic processions. The Psalms also contain numerous allusions to processions (Psalms 68; 47; 118). In addition to these passages, several etiological accounts of cultic processions from early OT times appear in Joshua 3–6. These passages demonstrate some of the most important elements of Israelite processions.

The focus of the Israelite procession was the ark. This is clearly evident in 2 Samuel 6, the most detailed processional account in the OT. Music also figured prominently in these processions. 2 Samuel 6 depicts musicians playing lyres (*knrwt*), harps (*nblym*), tambourines (*tpym*), systrums (*mnʿnʿym*), and cymbals (*ṣlṣlym*); whereas the procession in Ps 68:25–27 is accompanied by singers (*šrym*), musicians (*ngnym*), and young women playing tambourines (*twppwt*). 2 Sam 6:15 and Ps 47:6 also mention a "cry of homage" (*trwʿh*) performed by the people and the sounding of the ram's horn (*šwpr*).

Processions in Jerusalem entered the temple court through the Eastern gate, possibly on a highway (*mslwt*, Ps 84:6) built especially for these events. At the gate of the courtyard, prior to the entrance of the procession, an entrance liturgy was intoned. The liturgy consisted of a litany of questions and answers performed by those inside the courtyard and those in the procession (Psalms 15; 24; cf. Ps 118:19–20; Isa 26:1; 33:14–16).

As the above survey shows, certain details about processions in ancient Israel can be extracted from the biblical texts. Nevertheless, the origin, frequency, and significance of Israelite processions are disputed, primarily because of the uncertainty of the origin and significance of Israelite cultic practices. Two schools of thought, the Myth and Ritual school and the History of Redemption school, dominate the discussion.

The Myth and Ritual school traces its origin to Sigmund Mowinckel (1884–1965). From his analysis of the Psalms, Mowinckel speculated that the rituals of Israel dramatically reenacted a common ANE cosmogonic myth. Subsequent studies by students of the Myth and Ritual school have further developed Mowinckel's theory, filling out details by investigating similar festivals from surrounding cultures. They have emphasized the central role played by the Israelite king, positing him as Yahweh's representative who performed in the ritual and in history what Yahweh accomplished in the mythical and cosmic realm.

The History of Redemption school based its theory on form-critical investigation of early historical and covenant traditions. This school has interpreted the ritual practices of Israel as dramatically reenacting the significant events of Israel's history: the Exodus and Conquest.

Cross has attempted to synthesize these two viewpoints. In his studies on the background and function of Israelite ritual, Cross (1966; *CMHE*, 79–111) argues that "the apparently opposed views of the history of Israel's cultus prove to be complementary" (1966: 27). He contends that the cosmogonic elements in the cultus were from the earliest strata of Israelite history and experienced a revival in the cultus of the Monarchy, whereas the historical elements in the cultus originated at the time of the Israelite league.

b. 2 Samuel 6. Scholars have generally regarded the procession described in 2 Samuel 6 as part of the yearly celebration of the Feast of Tabernacles in ancient Israel despite the fact that they have disputed whether that festival was a celebration of cosmogonic events, of Israelite history, or of a combination of the two. Mowinckel (1962: 106–92) has claimed that the ancient autumn Feast of Tabernacles was originally a New Year Festival, a finding which would suggest that the Feast of Tabernacles shared many characteristics with the Canaanite and Babylonian New Year Festivals. Mowinckel further postulated that, as a New Year Festival, the Feast of Tabernacles featured as its primary event the enthronement of Yahweh. As in the Babylonian *akîtu* festival, one of the central elements of the autumnal Feast of Tabernacles was the procession. The Israelite procession featured the carrying of the ark, the symbol of Yahweh, to the temple, where Yahweh, having previously defeated the forces of chaos, was proclaimed king. Although Mowinckel saw this annual festal procession reflected in the description of the consecration festival of 2 Samuel 6, he also suggested that Psalm 132 is the "text" of this ritual procession (1962: 174).

Kraus (1965: 183–88) has agreed that an important Israelite ritual, culminating in a procession to the temple, occurred during the Feast of Tabernacles. Kraus has also connected this procession with that described in 2 Samuel 6 and, like Mowinckel, understood Psalm 132 to be "a selection of the ritual" (1965: 185). However, Kraus maintains that the procession to the temple was strictly a reenactment of historical events, specifically the arrival of the ark in the city chosen by Yahweh and the covenant with the Davidic dynasty.

Porter's work (1954) provides a compromise to these seemingly contrary positions. Porter suggests that the description of the procession and festival found in 2 Samuel 6 is the account of the festival which was celebrated at the enthronement of David in Jerusalem, while Psalm 132 reflects the cultic commemoration of that event in Israelite worship. According to Porter, the procession and festival depicted in 2 Samuel 6 were part of a Canaanite coronation rite introduced by David on the occasion of his accession to the throne in Jerusalem. As such, 2 Samuel 6 depicts the earthly exaltation of David which, in turn, reflects the cosmic exaltation of Yahweh. This coronation rite was later celebrated in the cultus, and it is the later celebration which is reflected in Psalm 132. The psalm recalls the historical hope of the perpetuation of the Davidic dynasty promised by Yahweh.

Miller and Roberts (1977) have challenged the assumption that 2 Samuel 6 is connected to the annual Feast of Tabernacles. Instead they have described 2 Samuel 6 as the account of a singular event, a procession celebrating the return of an exiled god to his city. They have cited as evidence parallels from Babylonian annals which describe Marduk's return, in procession, to the city of Babylon after an exile of eleven years.

More recently, McCarter (*2 Samuel* AB, 180–82) has suggested that 2 Samuel 6 is neither the account of a procession of the Feast of Tabernacles nor a depiction of the return of an exiled deity. Instead, he has proposed that this passage reflects a ceremony introducing a god into a new royal city.

c. Processions of the Gilgal Sanctuary. The acts of worship at the sanctuary of Gilgal, one of the most important sanctuaries in early OT times, apparently included several processions of the ark. The cultic legend of the crossing of the Jordan and of the entry into Canaan preserved in Joshua 3–4 bears all the marks of a ritual procession reenacting a significant event from Israelite history. In this account the ark led the procession (Josh 3:3) while the Israelite people followed at a specified distance (Josh 3:4). Kraus (1965: 159) has suggested that Psalm 114 is a hymn based on the cultic tradition of this passage.

Joshua 6 contains a report of the circumambulation of the ark with priests and trumpets (*šprwt*) around the city of Jericho. Since this passage reads more like an account of a cultic procession than a record of a military maneuver, it seems to be an etiological justification for the ritual practices of a later time, most likely a procession which ritually repeated Israel's conquest of the Canaanites.

d. Processions in the Apocrypha. There are several places in the Apocrypha which mention Hasmonean processions (1 Macc 13:5; 2 Macc 10:7). Additionally, 2 Macc 6:7 describes a Dionysus procession in which Antiochus Epiphanes forced the Jews to participate.

1 Macc 13:51 reports the triumphal entry of Simeon and the Jewish people into Jerusalem after enemy troops had been expelled from the Akra, the fortified citadel within the city. This procession featured musicians playing harps (*kinyrai*), cymbals (*kymbala*), and stringed instruments (*nablai*), while the people carried palm branches and sang hymns. 2 Macc 10:7 portrays a procession celebrating the purification of the temple. The latter procession is particularly interesting because it reflects both Jewish and Greek cultic practice, clearly demonstrating the flexibility of processions in the Hellenistic period. In this procession, the Jews carried branches, palm fronds, and *thyrsoi* or ivy-wreathed staffs. On the one hand, the Mishna reports that branches were carried in the Feast of Tabernacles procession (*Sukk.* 4:5). On the other hand, *thyrsoi* were well-known implements from the cult of Dionysus, ivy being sacred to that deity.

2. NT. a. The Entry of Jesus into Jerusalem. The most significant of the few processions depicted in the NT are the accounts of Jesus' entry into Jerusalem (Matt 21:1–9; Mark 11:1–10; Luke 19:28–40; John 12:12–19). The Synoptic accounts portray an impromptu procession of Jesus and his followers entering the holy city, while John describes a large crowd of people from the city who have come out to meet Jesus and escort him into Jerusalem. All four evangelists portray Jesus as a royal figure. The mention of David in Matt 21:9 and Mark 11:10, Luke's insertion of *ho basileus* ("the king") into the quotation of Psalm 118, and John's addition of *ho basileus tou Israel* ("the king of Israel") to the quotation of the same psalm demonstrate that the procession represents the victorious entry of a king into his city. The leafy branches (*stibades*) in the Markan account and the palm branches (*ta baia ton phoinikon*) in the Johannine report are reminiscent of the foliage carried in the procession of the Feast of Tabernacles and the palm branches carried in the procession of Simeon into Jerusalem after Israel's enemies had been expelled from the Akra (1 Macc 13:51). See also HOSANNA. In the latter account, the Jews enter Jerusalem in procession in order to reclaim their city. Likewise, the evangelists portray Jesus as the messianic king who enters Jerusalem in the manner of a royal figure come to claim his city. The spreading of garments before Jesus in the Synoptic accounts calls to mind a similar incident reported in the OT at the acclamation of Jehu as king (2 Kgs 9:13). John's depiction of people coming out of Jerusalem to meet Jesus corresponds to Hellenistic convention. Rulers claiming sovereignty over a city were sometimes met outside the gates of that city by its citizens and escorted inside in procession.

b. The Procession as a Literary Motif in the Pauline Literature. While there are not many actual processions portrayed in the NT, there are several passages where the procession is employed figuratively. One passage, Col 2:15, uses the verb *thriambeuein*, a term associated with the Roman triumphal procession, to portray Christ leading the "principalities" (*archai*) and "powers" (*exousiai*) in procession. The verse shows Christ in the position of the triumphant general parading his defeated prisoners.

Language from Greco-Roman processions also appears in 2 Cor 2:14–6:13; 7:2–4 (Duff 1988). Throughout this section, Paul uses the motif of the procession to describe his apostolic ministry. The section begins in 2:14: "Thanks be to God, who in Christ always leads us in triumph (*thriambeuein*)." 2 Cor 2:14, like Col 2:15, allludes to the triumphal procession, as the use of *thriambeuein* clearly shows. However, Paul's meaning in 2 Cor 2:14 is disputed. Paul obviously describes himself as a participant in God's triumphal procession, but what exactly is his role? Some scholars would interpret 2 Cor 2:14 in the manner of Colossians. In this case Paul would be describing himself as a prisoner of war, defeated by God. Other scholars insist that this image is too harsh, and they would read the passage as comparing Paul to the soldiers in the victorious general's triumphant army. In 2 Cor 2:14b–16 Paul further describes himself as the "aroma" (*osme*) and "incense" (*euodia*) of Christ. This description recalls the fragrant substances that frequently accompanied epiphany processions in the ancient world. Paul depicts his

apostolic role in 2 Cor 4:10 with the verb *peripherein* ("to carry around"), a term often used to depict the bearing of cult objects or offering gifts in procession. He describes himself as "always carrying around (*peripherein*) the dying of Jesus" in his body. The self-description figuratively portrays Paul's missionary journeys as a cultic procession. Paul recognizes that his attempts to spread the gospel were not unlike the proselytizing efforts of the epiphany processions of the time. His self-characterization as "carrying around the dying of Jesus" calls to mind the display of cult objects or even the portrayal of scenes from the life of a deity in the epiphany processions of the Greco-Roman world. At the close of the section, in 2 Cor 6:13 and 7:2, Paul addresses the Corinthians directly: "Be wide open for us … Make room for us" (*platunthete kai hymeis … choresate hemas*). This language is reminiscent of the cry of the herald, the cultic official responsible for leading the procession. Apuleius, in his account of the Isis procession, illustrates the role of this official (Apul. *Met.* 273.13–14): "And there were many whose job it was to cry out, 'make the road clear for the sacred objects' " (*et pleriqui qui facilem sacris viam dari praedicarent*).

PAUL BROOKS DUFF

PROCHORUS (PERSON) [Gk *Prochoros* (Προχορος)]. The name Prochorus, a rather uncommon Greek name at the time (Foakes Jackson and Lake 1933: 4, 66), occurs only in Acts 6:5, where Prochorus is one of seven gifted leaders "of good repute, full of the spirit and of wisdom" (Acts 6:3) who were chosen to look after the needs of the Hellenistic Jewish Christian widows who had been neglected in the "daily distribution" (Acts 6:1). Since all seven had Greek names and only one of them, Nicolaus, is explicitly called a proselyte, it is probable that the other six, including Parmenas, were either Jews born in the Diaspora or Palestinian Jews with Greek names (as would be the case with Jesus' disciples Andrew and Philip). The work of two of them, Stephen (Acts 6:8–8:2) and Philip (Acts 8:5–40; 21:8), makes it clear that the seven did not limit themselves to "serving tables" (Acts 6:2) but functioned for the Hellenists in the way that the Twelve did for the Hebrew Christians (see Simon 1958: 7).

While Prochorus is otherwise unknown in the Bible, tradition suggests that he was one of the Seventy (Luke 10:1; cf. Schermann 1907: 302–3), was the scribe to whom the Apostle John dictated the Fourth Gospel, became bishop of Nicomedia, and died a martyr at Antioch. A 5th-century work, the *Acts of John* (an orthodox work not to be confused with the earlier work of the same name by the gnostic Lucius) was written in his name (see Bruce *Acts* NICNT, 121). See JOHN, ACTS OF (BY PROCHORUS).

JON PAULIEN

PROCONSUL. See PALESTINE, ADMINISTRATION OF (ROMAN).

PROCURATOR. The title of a governor of equestrian rank for one of the lesser provinces of the Roman Empire, such as Judea, or a personal agent of the emperor. The Latin word *procurator* derives from the preposition *pro,* "on behalf of," and the verb *curo,* "to care for." A procurator is, then, one who acts to care for something on behalf of someone else. The only usage of the word in the 500-year period of the Roman Republic was as a technical juridical term signifying the legally authorized agent of an

individual charged with the conduct of business or the supervision of property on behalf of that individual. The term continued to have the same meaning throughout the imperial era and was generally so used. When applied to personal agents of the emperor, however, *procurator* could either indicate anyone acting on the emperor's business or signify a specific government officer whose service for the emperor warranted the official title of procurator (Jones 1960: 117–18).

Under the empire minor Roman provinces such as Judea, Thrace, Rhaetia, Noricum, and Mauretania were governed by officials designated procurators. These governors had risen through the military and civil service career ladder habituated by ambitious equestrians and, if successful in their procuratorial post, could anticipate advancement to one of the several prefectures which comprised the ultimate office for men of equestrian rank. The establishment of equestrian procuratorships has traditionally been linked to the inception of the principate with Augustus' division of the empire for administrative purposes into imperial and senatorial provinces (Pflaum 1950: 1–56, passim; Salmon 1968: 74–94). In light of recently discovered epigraphic evidence, that view is no longer tenable. A variety of inscriptions indicate that during the reigns of Augustus and Tiberius, the later procuratorial provinces were in fact administered by equestrians with the title of *praefectus.* Jones (1960: 117–25) not only calls attention to this information, but rightly notes the inconsistency of believing two emperors so meticulous in their observation of constitutional formalities to have bestowed on government officials titles which grew out of private administrative or household functions. Accordingly, prefect must be assumed to have been the proper title of equestrian provincial governors, at least until the reign of Claudius, when inscriptional evidence attests the usage in this context of the title procurator.

This is particularly significant in respect to Pontius Pilate and the governorship of Judea. Pilate has frequently been identified as procurator because of Tacitus' (*Ann.* 15.44) anachronistic use of the term when writing a century later, and because Josephus (*JW* 2.8.1; 9.2 §§117, 169) describes him as *epitropos,* the normal Greek rendering of the Latin *procurator.* Of course, Josephus is prone to identify the governors of Judea in a rather careless and imprecise fashion, sometimes designating the same individual by several different titles (Jones 1960: 119). Greater attention should be devoted to the more contemporary record of Philo (*Gaium*), who properly identifies Pilate as *praefectus Iudaeae,* and to the telling evidence of a recently unearthed inscription (*AE* 1963 no. 104) which demonstrates Pilate's official title to have been *praefectus Iudaeae.*

In addition to procuratorial governors possessing within their provinces full civil and criminal jurisdictional powers, there were other imperial officials as well as private agents of the emperor who bore the designation of procurator. In large and important provinces of the emperor, governed in his stead by imperial legates (*legati Augusti pro praetore*), procurators were assigned as the chief financial officer of the province, paralleling the role of quaestors in senatorial provinces and having similar authority to collect taxes and tribute and to pay troops (Dio Cass. 53.15.3; Strab. 3.167). Procurators sometimes were also found in provinces administered by the Senate, but their role in such instances was without public authority and served only to administer and oversee imperial properties in the capacity of personal agents of the emperor. Finally, the term *procurator* was applied to other personal representatives of the emperor, who were often commoners or even freedmen, with responsibility for directing business enterprises or managing an emperor's personal holdings in Italy or the provinces (Millar 1964: 180–87). The activities of specific individuals in any level imperial procuratorial post are the subject of a detailed three-volume study by H. G. Pflaum (1960). See also PRAETORIUM.

PRONOUNCEMENT STORY. See APOPHTHEGM.

PROPAGANDA. Propaganda, i.e., the deliberate (albeit mostly dissimulated) spreading of ideas, information, rumors, etc. in order to support one's own political (or religious) cause, to acquire more proselytes, and in the last analysis to gain more power, has become a common practice in the modern world as a consequence of the availability of mass media (press, radio, television). It is being studied therefore especially with reference to the modern world (Katz 1954; Lasswell and Leites 1965; Gordon 1971; Domenach 1973) and in the frame of contemporary political language (Dovring 1959; Faye 1972; Klaus 1971; Robin 1973). Even though the common meaning as "forgery," "falsehood," or the like is certainly inaccurate, it is true that propaganda is more interested in effectiveness than in correctness, and its informations are biased as a result of unfair selection, cunning deformation, and subtle connotation. The "rate of truth" necessary for an effective propaganda (a patently false statement would be almost useless) is a function of the free circulation of ideas and information in the society. The most coarse propaganda is produced by totalitarian governments (and is mostly studied in the Nazi, Fascist, Communist cases); in capitalist societies, commercial propaganda (advertising) is most widespread (also in "hidden" forms).

———

A. Propaganda in the Ancient World
B. Propaganda in the ANE
C. Propaganda in the OT

———

A. Propaganda in the Ancient World

Propaganda is not limited to the contemporary world, however (Ellul 1976; Thomson 1977; Lasswell, Lerner, and Speier 1979). Since the constitution of complex political entities (based on a differentiation of socio-economic roles and rewards), the ruling elites have always pursued political consent and social cohesion by adding the instruments of persuasion to those of repression: in general, in order to confirm the actual rule, or in particular, in order to help the acceptance of new (possibly unpopular) legal or administrative measures or of irregular personal positions. Later on, since religions of universalistic extent have come into being (endowed with spreading power beyond their original communities), also a religious propaganda has become common practice (proselytism). Ancient propaganda is best studied with reference to the Roman world (Sordi 1974, 1975, 1976).

B. Propaganda in the ANE

The "despotic" states of the ANE (especially Egypt and Assyria) are a fertile field for political propaganda (Posener 1956; Williams 1964; Liverani 1973a; Finkelstein 1979; Oppenheim 1979). Sometimes propaganda is addressed to foreign states: cf. the explicit case of a letter sent by a middle-Assyrian king to the vassals of the Hittites after a victory over the Hittite king (Lackenbacher 1982); or the largely biased reconstruction of past relationships in the historical introduction to the Hittite treaties (Liverani 1973b); or the clear apologetic tone in the war declarations; or the pro-Babylonian reconstruction of events in the "Chronicle P" as contrasted to the pro-Assyrian one in the "Synchronistic History" (TCS 5: 50–59); or finally the elaborate piece of political propaganda that is the "Tukulti-Ninurta Epic" (Ebeling 1938; Machinist 1976, 1978).

More often the propaganda is directed to the inner subjects of the state. Usurpers are obviously in need of propagating apologetic texts in which they underscore their heroic behavior, or their justice, or their divine support—so counterbalancing the negative effect of an illegitimate seizure of power (Telipinu: Liverani 1977; Idrimi: Liverani 1974; Ḫattusilis: Archi 1971; Hoffner 1975; Assyrian kings: Tadmor 1983). But, more in general, the royal inscriptions can be viewed as pieces of propaganda and are in fact effective in spreading the political ideologies of the respective kingdoms, a task which becomes more necessary with kingdoms engaged in "imperialistic" expansion, like Egypt in the New Kingdom (Bleiberg

1985–86; Grimal 1986) and especially Assyria (Liverani 1979; Fales 1981; Garelli 1982). In their celebrative effort, the royal inscriptions reveal all the biased deformations typical of propaganda in all times: only the successes are reported, and never the losses or the defeats; "our" reasons are always good, while those of the enemies are wicked; the king who is author of the text constitutes the apex (in glory, bravery, power, justice, and the gods' favor) in the course of history for his own country and for the entire world. In Egypt the literary genre of the *Königsnovelle* becomes the stereotyped form of the royal self-celebration (Herrmann 1938; lastly Spalinger 1982; and see Herrmann 1953–54; Whybray 1968: 96–105 on its influence in the OT). The royal inscriptions displayed on the monumental buildings are not the only ones to convey messages of propaganda: royal hymns have the same purpose yet a different audience; prayers to the gods can contain pieces of political propaganda; and quite a number of "literary" or "historiographic" texts have the purpose of celebrating and propagating the ruling ideology.

Of course the written documents as such can be read only by a small minority in the populace—even though this is the minority engaged in public activities (scribes, administration and cult officials, members of the court). The texts keep in any case the most detailed formulations of the political ideology. More generic, but more widespread pieces of propaganda are also available: the royal titulary is a privileged carrier for propagandistic values; the periodic amnesties or debt remissions have the clear intent of captivating the popular favor; the public parades of troops or of foreign booty have a celebrative effect (cf. Aldred 1970); and the same holds true for the public reading of "letters to the god" reporting the king's victories (Oppenheim 1960). Even the names given to newly established settlements have generally a celebrative flavor; and the royal genealogies have in some cases been forged to attribute legitimacy and nobility to kings of doubtful origin. Besides the written, oral, and ceremonial propaganda, art and architecture can also convey similar effects. The monumental buildings (temple and royal palaces) in the capital city celebrate the king's power and his good relations with the divine sphere; in some cases the sculptured (or painted) decoration is such to underscore the power of the sovereign or to discourage the enemies' resistance (Egypt: Tefnin 1981; Assyria: Reade 1979; Winter 1981; Persia: Root 1979); even the different building materials, coming from distant regions, celebrate the worldwide spread of the king's fame.

C. Propaganda in the OT

If compared to the propagandistic apparatus of the Near Eastern empires, ancient Israel is noteworthy for the lack of an explicit propaganda. This is obvious for the nonmonarchic periods, especially when the society was ordered according to a "tribal" pattern and the political consent was based on a network of kinship relations. But this seems true also for the kingdoms of Israel and Judah (and especially for the most glorious reigns of David and Solomon): no royal inscriptions are extant from those kingdoms (in contrast to the contemporary Aramaic, Phoenician, and Neo-Hittite states in the same area; cf., e.g., Fales 1979); no iconic representations of the Israelite kingship are known (and the iconic representation is generally a depressed topic in ancient Israel); even the public buildings so far excavated are not conspicuous for their monumental features. It has been recently suggested that the lack of royal inscriptions (the most obvious channel for propaganda) is a result of their intentional destruction, connected with a (periodical?) rewriting of former history by the ruling political circles (Garbini 1986). This seems practically impossible. A more acceptable explanation should take into account the following elements: (1) no royal palaces have been archaeologically recovered so far (in Jerusalem or elsewhere); (2) Israel and Judah were relatively small (in wealth and power) in comparison to other Near Eastern kingdoms; (3) a peculiar "tribal" legacy survived all along their history; (4) an especially strong relation of dependence on the national god was established in the course of time.

Whereas no pieces of propaganda are extant from the archaeological record of ancient Israel, it cannot be denied that the OT as a whole can be considered as a huge propagandistic work and that many texts or passages constitutive of the OT (or embedded in it) display a more or less clear propagandistic purpose, both in the political and the religious field. The study of OT passages as "pieces of propaganda" has generally won a scarce success, however. This is understandable, since a negative connotation is always applied to the term, and we are as prompt to find out the elements of forgery or distortion in the others'

propaganda as we are unable to recognize similar features in the formulation of our own ideology. Even more, the appreciation of the OT as "divine word" (necessarily built up of "true" statements) has discouraged a similar approach, both in the Jewish and Christian circles and in the scientific world largely belonging to such religious environments. Yet the kind of literary and ideological analysis elaborated for the study of propaganda (and of political language in general) could also be applied to the study of some literary forms or specific passages in the OT, in order to point out the procedures employed in expressing the political and religious ideologies of the time (see esp. Whitelam 1984, with further bibliography).

The most obvious field of application is the prophetic corpus. An old proposal (Winckler 1903) to consider the prophets as political activists was generally criticized and discarded (e.g., Elliger 1935). In more recent times, even though the term "propaganda" is seldom used in its explicit form, some studies on the political aspects of the prophetic books do in fact contain pertinent observations (e.g., Kraus 1952; Gottwald 1964; Dietrich 1976). In particular the oracles "against the Nations" (and in general the "weal" and "woe" oracles) are obvious pieces of political propaganda, certainly composed in the frame of a multidirectional network of charges and countercharges, apologies, and celebrations, in the Syro-Palestinian world threatened by the Assyrian, Babylonian, and Egyptian empires but still engaged in internal struggles. The same holds true for the inner political debate in Israel and in Judah, especially facing the problem of the political strategy to be chosen toward Assyria and Babylon: the prophecies are clearly the form of the local political debate of the time. On the other side the famous case of the *rab-šāqēh* (2 Kgs 18:17–37) shows how the Assyrian propaganda was received by the Israelites (Cohen 1979; Machinist 1983; cf. more in general Cogan 1974; Childs 1967).

The royal propaganda toward the inner population may have left some trace in the "royal" Psalms: these have been mostly studied in their obvious religious relevance (as expression of "divine kingship"), yet an appreciation of them as political messages cannot simply be discarded. This focus applies even better to the prophecies intended to legitimize the king, like the Nathan prophecy (2 Samuel 7). Also some remains of "royal inscriptions" (or more properly of "royal apologies") are to be found in the historical books: the story of the rise and enthronization of David (1 Samuel 16–2 Samuel 4) contains obvious apologetic features (as expected in the case of a usurper) that can go back to materials propagated by the king himself or by his circle in order to support his legitimacy (Weiser 1966; McCarter 1980; Whitelam 1984). This is true also of the "Succession Narrative" (2 Samuel 9–20; 1 Kings 1–2) since Solomon's legitimacy was in need of some justification too (Whybray 1968: 50–55; Würthwein 1979). Another case has been studied from this point of view: the story of Joash (2 Kings 11–12) clearly goes back to an autobiographical inscription of the kind well known from the Idrimi statue and from related Hittite texts (Liverani 1974). Finally, a clear case of propagandistic forgery is to be seen in the episode of the old manuscript of the "Law" discovered in the temple in Josiah's times (2 Kgs 22:3–23:3): a stratagem commonly used in order to bestow the authoritativeness of time on a newly composed normative text. More cases could be singled out; and the large units in the historical texts can also be studied from the point of view of the propagandistic procedures employed in order to support the respective political or religious ideologies (a vein best represented by Smith 1971).

MARIO LIVERANI

PROPHECY. This article consists of four entries. The first is a discussion of prophecy and related phenomena in the ANE, with particular attention to the "prophetic" letters from the Mesopotamian site of Mari. The second is a survey of prophecy in Israel before the Exile. The third examines postexilic prophecy, and the fourth entry treats prophecy in the NT and early Christianity.

ANCIENT NEAR EASTERN PROPHECY

The label "prophetic" has been applied to various texts and roles known from the ANE. The texts so described involve predictions, or apparent predictions, eschatology or apocalyptic, social or religious criticism, and commissioned messages from deities. The roles include those of ordinary priests (Egypt), technical diviners (Western Asia), and those who speak directly under orders from a deity. The comparative discussion of prophecy is guided by whichever particular definition of prophecy is used. For some, the prophet is the critic of society; for others, the prophet is the announcer of the future; for yet others, the prophet is the charismatically authorized messenger. Although necessarily referring to materials reflecting this wider range of definitions, this entry focuses on prophecy understood as inspired speech at the initiative of a divine power, speech which is clear in itself and commonly directed to a third party.

———

A. Syria-Palestine

1. North Syria: Ebla and Emar. The Ebla texts, dating to the middle of the 3d millennium B.C., have been cited as evidence of prophecy, but those claims have yet to be substantiated. From Emar (Meskene), on the Middle Euphrates, texts from ca. 1300 B.C. indicate an office with the Akkadian designations *anabbiʾātu* and *munabbiʾātu* associated with the goddess Išhara. The editor (Arnaud 1986: 118, 360, 375, 377, 403; cf. 386) translates this title of office "prophetesses," but nothing is indicated of the role; cf. Akk *munambû,* "wailer."

2. Ugarit. Among the Ugaritic texts there are announcements of future blessing that have been labeled "prophetic" (van Selms 1971) as well as references to technical divination that have been referred to as "prophecy," but there is no evidence as yet for a divinely commissioned messenger.

3. Phoenicia. The Bible has many references to prophets of the Phoenician god Baal (and even of Asherah), using for them the same Hebrew term, *nābîʾ,* used for Israelite prophets. The Baal prophets share ecstatic behavior with the Israelite prophets, but they are not identified as giving oracles. However, the Egyptian report of Wen-Amun (*ANET,* 25–29; *AEL* 2: 224–30) states that while Wen-Amun was in Byblos (ca. 1090 B.C.), one of the Phoenician prince's young attendants became ecstatic and delivered an oracle authenticating Wen-Amun's mission from the god Amun (*ANET* 26; *AEL* 2: 225). Primarily because of these references it was at one time argued that biblical prophecy derived from Canaanite (Phoenician) prophecy.

4. Aram. Noteworthy among the small corpus of Old Aramaic inscriptions is that of Zakkur, king of Hamath and Luash (ca. 800 B.C.). While besieged in one of his cities, Zakkur records that "I lifted up my hands to Baal-Sha[may]n and Baal-Shamay[n] answered me [and spoke] to me by means of visionaries *(ḥzyn)* and … *(ʿddn).* Baal-Shamayn [said] to me, 'Fear not, for I have made [you kin]g [and I will st]ay with you and rescue you'." The text does not indicate how the speakers received their message. Presumably this classic salvation oracle in response to the king's petition derived from prophetic inspiration; note the title *ḥzyn,* as with the Balaam text (below), parallel with *ḥôzeh,* "visionary," frequently used of biblical prophets.

5. Ammon. The plaster inscription from ca. 700 B.C., found at Tell Deir ʿAlla in 1967 refers to Balaam, son of Beor, a "visionary of the gods" *(ḥāzēh ʾilāhīn)* who saw a vision during the night and obtained a somewhat enigmatic revelation from a group of numinous beings *(šdyn).* This is reinforced by Num 24:4–5, in which Balaam, son of Beor, "hears the words of God, sees a vision of the Almighty *(maḥăzê šadday).*"

B. Anatolia

In 14th-century B.C. texts of King Mursilis II and of his uncle (?) Kantuzilis, who seek relief from plagues or more personal sufferings, there are inventories of means of divine communication. It is in these inventories—cf. 1 Sam 28:6 (dreams, lots, and prophets)—that references to inspired speakers occur. In addition to direct communication to the petitioner through a dream, the deity might use indirect communication through incubation, liver divination, an "inquirer-sibyl" (ENSI), or a so-called "Old Woman" (ŠU.GI); or—in the case of Mursilis II—a "man of god" *(šiuniyanza)* might " (come and) declare" the cause of suffering (Lebrun 1980: 113, 160, 209; Kammenhuber 1976: 16–17, 19–23). Although there is no further significant information about this "man of god," the Hittite texts are important as an attestation of the dispersion of such phenomena and as evidence for such activity in the latter part of the mid-2d millennium B.C.

C. Mesopotamia

A rich variety of texts comes from Mesopotamia, including Babylonia, Assyria, and the domain of the Mari texts, even though the Mari texts relate to an area reaching into NW Syria. Among the texts, a number have been published under the label " (Akkadian) prophecies" (Grayson 1975: 13–37; Hunger and Kaufman 1975), one of them being the "Uruk prophecy." These texts, though not of a uniform nature, essentially contain prophecies *ex eventu,* i.e., cast as predictions (e.g., "a king will arise …"), and are allied with the omen literature. The prophecies may even take the form of first person speeches of a deity (Marduk) or a divinized king (Shulgi). In some texts the wide-reaching time perspective is more reminiscent of apocalyptic (Hallo 1966; Kaufman 1977). Revelatory intermediaries are not involved.

1. Uruk (Southern Babylonia). A text from ca. 1850 B.C., distinct from the "Uruk prophecy" (above), reports a visit to an unnamed person by a deity who speaks directly to him concerning the future of Uruk and its ruler, whom the deity will appoint. The person responds to the deity and reports to the king "the words which Ishtar spoke to me" (*ANET,* 604). The text is not well enough preserved to indicate whether or not it is an example of inspired speaking.

2. Mari (Middle Euphrates). From the several thousand texts now published from Mari and dating to the first half of the 18th century B.C., there are many references to prophetic activity, using a variety of titles (*ANET,* 623–32; Huffmon 1970). Over a dozen deities are involved; and some eighteen prophets are named, apart from many others who are unnamed. Both male and female prophets are cited. For those with cultic titles, about four-fifths are male. Those without such titles are about evenly divided between men and women.

The small size of the corpus does not allow differentiation among the various titles in terms of specific roles, although there are some suggestive contrasts between those prophets with titles and those without them. This prophetic activity, regarded as marginal from the viewpoint of Mari court circles, doubtless to some extent reflects the Amorite cultural substratum. In keeping with that, the geographical range of references extends from Mari and nearby Terqa along the Euphrates (note Emar, above) to Aleppo in the west. The reference to Shamash of Sippar suggests activity even in Babylonia, although the reference may

be to the cult of Shamash of Sippar within the Mari region. With the 1988 publication of the first two parts of *Archives Royales de Mari, XXVI,* the corpus of Mari Letters expanded by almost 500 new letters, and the number of "prophetic" letters increased by more than 20 (to a total of about 50, depending on the criteria for selection). Additionally, almost all of the previously published "prophetic" texts were reedited, frequently with important new readings. (One of the reports was formerly interpreted as a metallurgical text!) With the greatly enlarged corpus of letters, not to mention possible integration with data from the thousands of economic and administrative texts, the picture of prophecy in the Mari archives is in the process of considerable adjustment. The editor's introductory discussion offers an important new beginning (Durand 1988: 377–412, 455–63).

a. Prophets with Titles. These persons are associated with particular deities, though at times they communicate requests from other deities as well. The frequent bestowal on them of garments and other items from the royal stores—and at times their requests for such items—point to their regularized, significant status, analogous to that of typical letter couriers.

(1) *Āpilu/āpiltu*, "answerer." An ordinary Akkadian form, this title for both men and women seems restricted to the Mari texts and lexical compilations. The title implies that the person provides an answer to an explicit or implicit inquiry, although the texts do not exemplify the process. The "answerer" is normally associated with a specific deity, though a unique letter from the *āpilu* of Shamash of Sippar conveys requests for Shamash, Addu of Aleppo, and Nergal of Hubshalum, while mentioning also Dagan of Terqa (Charpin and Durand 1985: 332–33). Two texts mention the receipt of royal rations, suggesting that the "answerer" had an official standing. One of the most important letters, sent from Aleppo, concerns the "answerer" of Addu, lord of Kallassu, who "reclaims the territory of Alahtum as property" (Lafont 1984; the passage was previously translated "is standing guard over the tent-shrine of Alahtum to [be] an estate" [Malamat 1980], illustrating the problems of translation). This same letter refers to "what the 'answerers' (pl.) have said." The writer adds that when he had been in Mari itself, he had sent on to the king "whatever word the 'answerer' (male) or the 'answerer' (female) would say." The "answerer" is thus someone who "came and spoke" or "got up (in the temple) and spoke," addressing a court official with a message for the king.

The new texts include even an *āpilu* of Marduk, in Babylon—presumably a Mari designation for a different Babylonian title or a Mari functionary acting for the god of Babylon—and such initiatives as demanding a skillful scribe to write down the news which the deity had sent for the king. (That letter itself is now published in full [Durand 1988: 417–19].) The "answerer" can travel about in the king's realm and apparently can provoke oracles.

(2) *Assinnu*, "cult functionary." Although in later texts this title refers to a member of the cultic staff of Ishtar, connected especially with singing—perhaps even a eunuch—the Mari occurrences are much earlier and their meaning is uncertain. The two *assinnu* attested are affiliated with Annunitum, a form of Ishtar. One of them speaks in a state of ecstasy. Another *assinnu* apparently resides in an abandoned and partly ruined sanctuary.

(3) *Muḫḫû/muḫḫūtu*, "ecstatic." Deriving from the Akkadian root meaning "to become ecstatic," this is the most common prophetic title at Mari. The range of behavior may involve self-wounding, as suggested by a text from Ugarit ("my brothers bathe with their own blood, like *maḫḫû* [pl.]"). "Ecstatics" are associated with the deities Nergal, Itur-Mer, Ninhursaga, Annunitum, and especially Dagan. One Mari text detailing the cult of Ishtar mentions that a *muḫḫû* "is not […] to become ecstatic" and hints at a connection of the *muḫḫû* with watered-down beer. Otherwise the Mari texts do not explicitly point to ecstatic behavior. Rather, the "ecstatic" "gets up/comes and speaks," sometimes in association with sacrifice. Also, it is an "ecstatic" who says "I will continue to answer *(atanappal),*" using a verb related to the title *āpilu.* Like the "answerer," the "ecstatic" occasionally receives garments from the royal stores (in five texts). One Mari "ecstatic," Irra-gamil, associated with Nergal, may even be the same person as Irra-gamil, servant of Nergal, known from a contemporary cylinder seal (Anbar 1976: 63). From Larsa in S Babylonia there are references to the female slave of the *maḫḫû.*

One report (partly restored) involves a person who becomes ecstatic, a person whose name is identified elsewhere as that of an "ecstatic" (Durand 1988: 398, 451–52). Such behavior for an "ecstatic" is otherwise specified only in the Ishtar Ritual Text from Mari. Also, a strikingly assertive "ecstatic" requests a lamb from the king, which he proceeds to eat raw—possibly reflecting an oath ceremony. He then assembles the elders at a city gate to hear his message and ends by requesting a garment, which he is provided (Durand 1988: 434–35).

(4) *Nabû,* "diviner (?)." This appears for the first time as a "prophetic" title in the Mari texts (Durand 1988: 444–45). A Mari functionary advises the king that he went to meet with a Hanaean leader. He then assembled the *nabû* (pl.) of the Hanaeans and had an omen taken on the king's behalf, putting a binary question to them and obtaining, apparently, a favorable answer. The new Mari title parallels the Hebrew *nābî,* but little is known of the function. It may be a question of conventional divination.

(5) *Qam (m)ātum,* unclear title. The reading *qabbātu (?),* "speaker (fem.)," an attractive interpretation confidently accepted by the major dictionaries in correction of the original editor's reading, *qamātum,* is no longer tenable. The reading *qam (m)ātum* is confirmed by collation and a further example—possibly two. Durand (1988: 396) suggests that the term refers to a prophetess with a characteristic hairstyle.

b. Prophets without Titles. Those without titles include a slight majority of women, one of whom was a high official at Mari. Also, a majority of the revelations derive from dreams—a means not yet attested for those prophets with titles; one revelation involves ecstasy. The locus of revelation is commonly a temple.

Also associated with untitled persons are some letters concerning divine revelations of unclear derivation (*ANET,* 629–30, 631). A divine word is sought through "a man and a woman," or Dagan speaks in some unspecified fashion. These texts may conceal prophetic activity, or forms of technical divination may be involved.

Dreams predominate among untitled prophets. In a well-known text the dreamer heard an administrative priest *(šangû)* speaking; in one of the new texts the dreamer reports the speech of two "ecstatics," apparently deceased. But generally the private persons report more directly.

c. The Context of the Oracles. A number of the texts provide information about the context of the message. The typical locus of revelation is a temple, either in reality or by dream visit. In some texts, the revelation by an "answerer" or an "ecstatic" seems to be a response to a sacrifice, whether favorable or unfavorable, but there is no clear example of a revelation in response to a petition of despair. One correspondent advises the king that " (when) I offered a sacrifice to Dagan for the life of my lord, the 'answerer' [masc.] of Dagan of Tuttul got up and spoke as follows, saying, 'O Babylon, … (here follows an oracle against Babylon).' " Another correspondent advises that the king's sacrifice has arrived and has been presented, apparently successfully, yet "the 'ecstatic' [masc.] got up before Dagan and spoke as follows: 'I (Dagan) am not given pure water to drink. Write to your lord so that he may give me pure water to drink.' " Most such oracles, however, do not specify cultic prompting.

Another text, referring to a female "ecstatic," suggests a sequence of messages: "O Zimri-Lim, do not go on a campaign. Stay in Mari and I will continue to answer."

The message is usually communicated to a royal official, but in two cases a temple administrator *(šangû),* who is not a cultic priest, serves as intermediary with the royal official. The *šangû* presumably had some jurisdiction over such temple activity. One letter even reports that a *šangû* himself had a revelatory dream.

A number of the oracles are public, even in the presence of the assembly of the elders. The connection of the oracles with times of political and personal (royal) crisis is even clearer with the publication of the additional texts. Also, the initiatives that the prophets can take—especially the "official" speakers—are striking.

d. The Content of the Oracles. Because of the nature of the Mari archives, the oracles deal almost exclusively with the king's affairs. Commonly the prophet communicates a message from a deity speaking in the first person, often referring to being "sent" by the deity. The message may begin with a formula such as "thus says [the deity X]." The content is generally an assurance to the king or a warning

to the king of dangers (and an assurance of divine assistance); but a number of messages deviate from this pattern.

A unique letter from an *āpilu* contains cultic requests from several deities and promises support for the king. In other cases the king is chided for not meeting the cultic expectations of the deity—failing to provide "pure water" or neglecting the funerary offering for a predecessor or ancestor. More serious charges come from Addu of Aleppo and Addu of Kallassu: the king, who owes his throne to the deity, has been inattentive in offerings and in recognition of the deity's claims—what Addu has given, Addu can take away. Moreover, the deity does not speak in terms of self-interest, for the king has a fundamental obligation to deal justly in his realm with all who appeal to him. An obedient king will be richly rewarded (Lafont 1984).

At least one oracle is directed to a different audience. The citizens of Terqa are warned through a young man's dream revelation from Dagan that they should not (re)build a certain house (temple?).

There is some sense of community among the "prophets." The proverb "Under the straw, water flows" is now attested in two messages by a *qam (m)ātum* and one by an "ecstatic." The oracles center on the king's person and his political affairs, but include some rather personal elements, such as the notice to the king that his newly born (?) daughter has died, just as predicted by an "ecstatic" while in a trance state. Cultic requests are prominent. A deity advises the king, through a woman (as summarized; title perhaps lost), that "I have been safeguarding you since your youth; and I have continually led you in good ways," so send me what I ask for.

e. The Status of the Oracles. The marginal character of these prophetic revelations is underscored by the frequency with which the king's correspondents either report on means of confirmation which they employed, including technical divination, or encourage the king to examine the matter by means of technical divination. Several letters specify that a portion of the prophet's hair and a piece from the fringe of the prophet's garment are being sent on to the king. These items surely were intended for use in a confirmation process involving technical divination, as confirmed by a contemporary text from Karana (Dalley, Walker, and Hawkins 1976: 64–65, pl. 19).

The new texts show the prophets as rather assertive at times; together with administrative texts, new texts indicate a significant personal status for the titled prophets. Yet the prophets continue to be one channel of divine communication among others, and their messages continue to be sent on either with supportive statements or with the recommendation to seek a means for confirmation.

3. Ishchali (East Tigris). A number of OB texts from Babylonia proper evidence the title *muḫḫûm/muḫḫūtum,* at times associated with specific deities, although there is no explicit indication of oracular activity. Recently published texts from Ishchali, however, may indicate prophetic practice. Two letters are addressed directly to the king by the goddess Kititum, a manifestation of Ishtar. The best-preserved letter contains a message with similarities to some of the Mari prophecies (Ellis 1987). Unfortunately, the means of transmission are not indicated. The text may report a message from an individual intermediary, as at Mari, or a message obtained in response to a technical divination process.

4. Assyria. Especially characteristic of the reigns of Esarhaddon (680–669 B.C.) and Ashurbanipal (668–627 B.C.) is their special interest in a wide variety of modes of communication with the divine powers, including prophetic-type speakers. Esarhaddon adjures vassals not to conceal anything they hear that is derogatory to the crown prince, including any word from "a proclaimer" *(raggimu),* "an ecstatic" *(maḫḫû),* or "a dream interpreter." The existence of prophetic revelations in particular may reflect the influence of Aramean culture (Tadmor 1982: 458), though none of the titles is Aramean in origin. Unlike the Mari texts, the NA texts do not point to a marginal status for the prophetic speakers. Again, the focus of activity is the royal court. Many of the prophets, at least, seem to be attached to the court.

Many of the texts, some of which have been known for almost a century, present special linguistic problems and have been inadequately published. Careful study must await new publication of these important texts.

a. Prophets with Titles. (1) *Maḫḫû/maḫḫūtu*, "ecstatic." This title, in this spelling, is known from the OAkk period on, and as a variant of Mari *muḫḫû/muḫḫūtu* (above) provides the only continuity with the

older titles. Esarhaddon and Ashurbanipal make frequent reference to messages from "ecstatics." Though these messages are at times associated with dreams sent by Ishtar, no verbatim messages are reported. The "ecstatic," predominantly male in the NA period, has a role in some rituals. The character of the oracular activity of "ecstatics" remains basically unknown.

(2) ***Raggimu/raggimtu,*** **"proclaimer."** This title, which also occurs as a divine epithet, is first attested in a MA text—without specification of function. In the 7th century B.C. the "proclaimer" delivers prophetic messages—one text contains two series of three oracles each addressed to Esarhaddon, one series from Asshur, and one from Ishtar; another contains an oracle from Ninlil/Mullissu for Ashurbanipal (Strong 1894). Also, the "proclaimer" plays a role, whether by agreement or by presumption, in connection with the substitute king ritual. Another reference suggests that "proclaimers" might be active as a group. Presumably the "proclaimer" had status within the cult, though there is no specific information concerning this.

(3) ***Šabrû,*** **"revealer."** One lexical text identifies this title with that of the "proclaimer." To be separated from the homonym referring to an administrative officer, this title derives from Akk *barû,* "to see." The "revealer" has a message dream—apparently through incubation—from Ishtar and reports it to Ashurbanipal. The LÚ.KAL, who has a message dream from Sin intended for Ashurbanipal, closely parallels the "revealer" (*ANET,* 606; Oppenheim 1956: 249–50).

(4) ***Šēlūtu,*** **" (female) votary."** Literally "someone sent up (for a deity)," this title identifies one of the speakers in a long collection of individual oracles for Esarhaddon (*ANET,* 605), a woman presumably devoted by the king to the deity. The title is known from contemporary contracts recording dedications to Ninlil/Mullissu. As a "votary" given by the queen, one contract notes, no creditor or legal adversary can seize her, though she is married.

b. Prophets without Titles. Two major collections of individual oracles for Esarhaddon are identified as being from the mouth of so-and-so, from such and such a city—apart from the one oracle from a "votary." One speaker even appears in both collections (and, for that matter, uses some identical terminology, otherwise unknown). The absence of a title for all speakers but one in these two collections suggests the lack of an official position in the cult. These speakers, male and female in roughly equal proportion, are especially—but not exclusively—associated with Ishtar of Arbela.

c. The Context of the Oracles. Virtually all of the oracles can fit within the pattern indicated in the fullest record of the context of an oracle. A crisis situation—minor or major—prompts a complaint to or an inquiry of a deity, who responds with a message of reassurance. Communication of the oracle to the king (or queen mother) may be oral or written down, deposited in the temple, and presented to the king in connection with ritual acts. The fullest report says, "Now these rebels have incited against you, they have made you come out, they have surrounded you. You (Esarhaddon) opened your mouth. Now I, Ashur, have heard your distress cry. From the gate of heaven I soar down (?) … I will surely have fire consume them … I slaughtered your enemies. I filled the river with their blood. Let them see, let them praise me, for I am Ashur, lord of the gods. This is the greeting which is (placed?) before the (divine) statue. This is the sworn tablet of Ashur. It comes in before the king upon a … They sprinkle special oil, they make sacrifices, the incense burns, (and) they read out (the tablet) before the king" (Strong 1894: 637–39). At times the oracle is clearly received in a temple, sometimes specifically associated with sacrifices. On another occasion the setting is a political assembly.

One of the oracles seems to concern the occasion of a treaty ceremony: "Should you (pl.) go to your cities and your districts, eat food and forget these oaths, (then) when you drink from this water you will remember me (Ishtar) and keep this sworn agreement which I made concerning (your obligations to) Esarhaddon" (Strong 1894: 639–41).

Some of the oracles seem to be unsolicited, but there are many indications of a response to an inquiry. Those oracles by "proclaimers" (female) in connection with the substitute king ritual may reflect divine initiative. There is no reference to the speaker's being "sent" with the message, but a commissioning is at times implied.

d. The Content of the Oracles. The oracles are typically oracles of assurance for the political and succession concerns of the king, communicated directly, as it were, from the deity. "Fear not" is a common phrase, as in other ANE oracles of assurance. The oracles also emphasize the deity's power and reliability. The speakers rarely admonish the king; and if so, they use a mild form, such as saying that former utterances by the deity have been ignored.

The principal association of the prophets is with Ishtar or Arbela (and allied deities), though a number of other deities provide oracles.

e. The Status of the Oracles. The oracles are reported individually to the king, noted in the official annals, and collected into cumulative records. Sometimes the oracles are grouped by the deity involved. One collection appears to be oracles—perhaps even from two different deities—from a particular "proclaimer," but the concluding section is poorly preserved. There is also some evidence for the copying and transmission of oracle collections.

The (occasional) formality of the process of presentation and the attention to preservation point to the normalization of prophetic communication in the circles of Esarhaddon and Ashurbanipal.

D. Egypt

The problem of definition is especially well illustrated by the Egyptian materials. "The Admonitions of Ipu-wer," a critique of the sociopolitical order, is labeled by some as prophetic in a biblical sense. Texts such as "The Prophecy of Neferti" are cast as foretelling a future deliverance for a country in a time of trouble, though written *ex eventu.* This sequence has been taken as a forerunner to the biblical prophets and their sense of a time of crisis that will give way to a messianic age. But these texts illustrate more a relationship with wisdom, drawing on the past to anticipate the future; Neferti is a lector priest and a "wise man of the East," not a charismatic prophet. A major order of priests, the *ḥmw nṯr* (literally, "servants of god"), were described by Hellenistic Greek commentators with the term *prophētēs* because of their role in reporting oracles. Accordingly, the scholarly literature abounds with references to these priests under the rendering prophets—even in the hierarchy of the "first prophet" (high priest) through "fourth prophet" of Amun in Karnak. In actuality there is very little known from Egypt that illustrates the prophet as an inspired speaker of divine oracles. Plutarch reports that Pamyle—foster parent of Osiris—heard a voice from the temple of Zeus (Amun) instructing Pamyle to announce that Osiris had been born (Ray 1981: 174). Generally, however, Egyptian oracles result from a form of manipulate divination, such as movements of a deity during a public procession.

A. Vocabulary for Prophets

The word "prophet" most frequently translates the Heb word *nābîʾ*. This word is probably not of Hebrew origin; the Akk *nabītu* seems the closest cognate, although the title *nabû,* "diviner" (?), is now attested at Mari. This probable loanword in Hebrew suggests that prophecy in Israel was not a phenomenon unrelated to ideas and practices outside Israel. Israelite prophecy can rather be understood as a concept and an activity that Israel shared with other cultures and peoples among whom the Israelites lived and experienced God.

Other words are also used by the biblical tradition to describe persons who acted in the way that Israel saw its prophets behave. One passage claims that in former times the prophet *(nābîʾ)* was known as a seer *(rōʾeh)* (1 Sam 9:9). Two other terms also are occasionally used for the role: man of God *(ʾîš [hā]ʾĕlōhîm)* and visionary *(hōzeh).*

B. General Ideas and Description of Prophets

There seems to have been no standard prerequisite for a person to become a prophet in Israel. Divine inspiration was what made a person a prophet, and what caused the prophet to speak out, and what made others listen to the prophet as a legitimate spokesperson for the divine. For the early period, a favored conception is that "the spirit of the Lord" speaks through the individual (e.g., 1 Sam 10:10; 1 Kgs 22:24).

Later terminology preferred "the word of the Lord came to" the person (e.g., Jer 1:2, 4; Ezek 1:3). The general idea remains: the prophet is the one who can speak in the name of God.

Prophets came from all walks of life. Indeed, some seem to have had a wide variety of experience and a deep acquaintance with various aspects of life and work in Israel. They claim or are given backgrounds as varied as sheepherder, priest, agriculturalist, scribe. They spoke where and when they thought they would be effective. They spoke frequently, no doubt, in places where people most readily gathered—the marketplace, the temple, the city gates (cf. Jer 7:2). They may have spoken less formally in other places as well.

A distinction has sometimes been made that, for some interpreters, marks a dramatic development in the history of Israelite prophecy. Many of the early prophets speak only to individuals, especially kings or other officials, while other, later prophets address large groups of people—rhetorically, the whole nation or an entire city. No doubt this variation depends on who the prophet thinks is the appropriate recipient of a particular utterance, whether that message is a threat or something else.

C. Prophets in the Biblical Books

1. Narrative Books: Torah. Some biblical personages of the early periods are called prophets long before prophecy in the usual biblical sense appears in ancient Israel. Thus, Torah contains no prophets in the technical sense of the term, even though the term is given to some individuals anachronistically.

The first four books of the Bible do not offer the reader any figure that resembles a prophet such as Isaiah. Although Abraham is identified as a prophet by the source usually called E, Abraham does not function as the other prophets do. He does not address people in the name of God. In Exodus, Aaron, the brother of Moses, will act as a "prophet" in relation to Moses (Exod 7:1). But he never actually says "Thus says the Lord." Miriam, the sister of Moses, gets the title "prophetess," but she performs actions that exhibit a character that is more cultic than prophetic (Exod 15:20; Num 12:1–15). A passage deals with competition among those who would claim exclusive right to prophetic activity (Num 11:26–30), and Num 12:6 mentions the possibility of a prophet in Israel whose vision of and insight into the divine would be less than Moses'.

Deuteronomy (a purported address of Moses within the narrative) presupposes the existence of prophets in an institutional setting. Grounds are given for withholding belief in a given prophet, i.e., if the prophet tries to lead people away from Yahweh (Deut 13:2–6—Eng13: 1–5) and if what the prophet says does not come true (Deut 18:20–22). The text must have originated in a time when people wanted to hear the word of God but were troubled by the existence of numerous prophets, some of whom were in reality not sent from God. Moreover, it is Deuteronomy that identifies Moses as the great prophet sent from God, the model of one who is to come (Deut 18:15–19; 34:10).

Torah, then, gives the terms "prophet" and "prophetess" to individuals in the first four books by retrojection. The second section of the Hebrew canon, "Prophets," is divided into the Former Prophets and the Latter Prophets. The Former Prophets are the narrative books (Joshua through Kings) that follow the outlook of Deuteronomy (together called by modern scholars the Deuteronomistic History). The Latter Prophets comprise four books: Isaiah, Jeremiah, Ezekiel, and the book of the Twelve.

2. Narrative Books: Former Prophets. The first book of the Former Prophets (Joshua) does not use the term *nābîʾ*, but the second book (Judges) uses the feminine form, *nĕbîʾâ*. Deborah is called "prophetess" once in Judg 4:4. Just how the writer means the word in that setting is somewhat unclear. In that scene her work is described as that of a judge or ruler. In chap. 5, however, she is implored to "utter a song" (Judg 5:12).

Some scholars stress that Samuel is the beginning of the prophetic development in ancient Israel (Albright). The figure of Samuel certainly does present a prophetic facet of his being. He speaks in the name of God to oppose the idea of monarchy (1 Sam 8:7, 10) and then to proclaim Saul the divinely chosen king (1 Sam 10:24). But that figure also has several other facets as well. He is judge, priest, and leader of the group called "the sons of the prophets."

Nathan was a court prophet of David. He appears in the narrative only after David takes the city of Jerusalem (2 Sam 5:9). He may have been a native of this city, and hence have some non-Israelite prophetic heritage. Through him David is promised an eternal dynasty (2 Sam 7:13).

The prophetic groups, "the sons of the prophets," led lives of asceticism and probably partial seclusion. They function somewhat as intermediaries with the divine, and seem to use physical means, as the slashing of oneself and the chanting of songs, to produce an ecstatic trance (1 Kgs 20:35). They were sought out by individuals in special need.

Also connected with the sons of the prophets are the memorable figures of Elijah and Elisha. Elijah is called, on the one hand, to challenge the infidelity of the people and, on the other hand, to foment revolution both within and outside Israel (1 Kgs 19:15–16). Elisha, his successor, functions as a dramatic miracle worker (2 Kings 4–7).

The depictions of prophets within the Deuteronomistic History naturally are constructed according to the designs and purposes of the writers and for their purposes. Prophets in the narrative function in specific roles. They give legitimacy to a new dynasty (e.g., Nathan, 2 Sam 7:12; Elijah, 1 Kgs 19:16; and Ahijah, 1 Kgs 11:31). Moreover, they are sent successively by God to warn the people. Although for the Deuteronomists the kings are, in a special way, responsible for the infidelity of the people, nevertheless, the people themselves should heed the call of the prophets to repent. The disaster is announced, and the call is made, but there is no heeding. The prophets preach repentance in vain, and the two kingdoms fall.

This idea that the prophet's basic role is to preach repentance is a conception that often influences the interpretation of prophecy in general. Just how much this understanding of prophecy as the preaching of repentance should apply to the classical prophets has been a topic of debate.

Important too for the Deuteronomistic History is the efficacy of the predictions that prophets make in the name of God. Explicit emphasis on prediction of specific events and the fulfillment of those predictions recurs frequently in these books. On the general point of the future, the anthologies of prophetic sayings agree with these narrative books.

3. Prophetic Anthologies: Latter Prophets. The Hebrew canon places the anthologies of the prophets immediately after this extended narrative about the monarchy in Israel. The Latter Prophets are called "latter" simply because they are placed after the Former Prophets (the Deuteronomistic History). Other terms used for these books (and the prophets after whom they are named) are the "classical" or "canonical" prophets, and even, inappropriately, the "writing" prophets. The term "writing" is inappropriate because the preexilic prophets themselves did not write down the words they spoke. Prophets are speakers. (Perhaps Second Isaiah, in the Exile, is the prophet who began to use the written word as a prophetic medium.)

Because the preexilic prophets did not commit to writing what they had to say, the books of these prophets come to the reader today from many hands. It could have been that the first written collection of a prophet's words was made during the prophet's lifetime, but that is not the emphasis or the claim of the books themselves. Perhaps the death of the prophet was the stimulus for the first collections to be made (with the exception of Jer 36:2, 32). Then the process of editing, clarification, explanation, and expansion began. The process of the formation of the prophetic books was a long and complicated one. Much of that process remains unclear, even after much analysis.

In the most frequent terminology, the sequence of classical prophets begins with Amos, followed soon by Hosea, both of whom spoke in the northern kingdom in the 8th century. They are succeeded (with some overlap) by Micah and Isaiah, who both preached in Judah in the same century. The late 7th century claims Zephaniah, Jeremiah, Nahum, Habakkuk, and Ezekiel.

D. Language of the Prophets

The language of the prophets is probably what most strikes a reader today. They spoke in poetry, and some of the poetry that the prophets created is virtually unmatched in world literature. On the other hand, some of the sayings are cryptic, or crabbed, or too tied to a particular setting for them to offer a clear meaning today. But sometimes even these passages contain striking images that can haunt the reader.

The prophets understand themselves to be inspired by God and to speak the word of God. The most common evidence of this conviction is the ever recurring "Thus says the Lord." This kind of messenger formula is found elsewhere in the ancient Near East on the lips of an emissary from one monarch to the court of another. This form and formula are examples in which the language that the prophets use often contained oral forms or speech patterns from daily or routine life.

There are abundant examples of other borrowings from varied kinds of activities with specific speech patterns. The judge's court is one area which offered many such forms that prophets used to convey their own message: the summons of the judge, the charge of the prosecutor, the claim of the defendant, or the lament of those who were denied justice. Songs and parables were also imitated by various prophets. Even the funeral service seems to have contributed a frequent form used by the prophets, the "Woe" oracle. It is sometimes claimed that no area of Israelite life was untouched by this borrowing of forms that appear in the prophetic books.

The preexilic prophets who preach a coming catastrophe sometimes can be found using a form, or parts of it, that has become standard in many analyses of prophetic speech, the "reproach and threat." The ideal form is "Because you have done this evil, therefore, thus says the Lord, disaster will come upon you." One finds many other terms to describe the two parts of the form: "invective," "reason," "accusation" for the "reproach," and "judgment," "sentence," "verdict" for the "threat." The analysis of this form shows that, regardless of the way in which the prophet receives the word of God, the prophet does contribute personal reflections and reasoning, which the prophet speaks before giving the divine decision of judgment.

E. Psychological Considerations

The actual state of a prophet when receiving the divine word has been the subject of much investigation and debate. Many scholars have found helpful comparisons with somewhat comparable phenomena from various other societies. Indeed, the choice of the society and the kind of comparison one makes will influence the outcome. Comparisons with the mystics of various traditions (Lindblom 1962), with the visionaries among the Native Americans (Overholt 1989), with intermediaries, ecstatic or possessed, of various cultures (Wilson 1980), and with many others have been made and have also been critiqued. All of these studies shed some light on the prophetic experience, but the reader is left to decide which are most appropriate and satisfying.

One remarkable thing is clear regarding the language and psychology of the prophets. The prophets share in the long literary tradition of Canaan, for the poetry that the prophets speak borrows much from the literary tradition found also in the Ugaritic poetry of half a millennium before the biblical prophets and only a few hundred miles to the north.

Not only did the Israelite prophets speak their words in the form of poetic parallelism, but they also used the same kind of word pairs that their Ugaritic predecessors had used. It is not clear how much a prophet would simply have "picked up" this tradition or how much the prophet actively set out to acquire it. The reality of the participation in the tradition is clear. A fairly recent proposal suggests that the poetry in the prophetic books is primary and the religious interpretation of it secondary (Auld 1980).

F. Themes of the Preexilic Prophets

1. God. The God whom the preexilic prophets experience is a God who demands certain actions from human beings. The 8th-century prophets appear with a disturbing message: Israel has not lived up to its calling. The prophets see basic moral laws broken or ignored. The prophets proclaim that the God who stands behind those laws will come to uphold those demands.

The first demand of the prophets was that the people worship only Yahweh. Although the preexilic prophets did not make theoretical statements about the existence or (non)existence of other gods, they did require the Israelites to worship only the God of Israel. The reality of God demands that Israel worship Yahweh. Moreover, the right worship of God requires of a person the right treatment of one's fellow human beings. The prophets do not tolerate worship of God that is not linked to proper behavior toward one's neighbor.

Rarely do the prophets identify the basis of God's claim of sole worship and just treatment of one's neighbor. Whether it was the election and protection of Israel or, as some say, a universal law within God's creation that the prophets relied on for their evaluations, God does demand proper actions. The universality of the moral claim is almost surprising. God judges Israel severely, but the prophets also view God as judging other nations as well (Amos 1–2). The moral sovereignty of God parallels the sovereign majesty of God. All humanity stands judged before God.

God has, however, revealed a special way of life to Israel. And that revelation must not be ignored. It is clear that God's position cannot be compromised. Although the prophets make no explicit claim that God was revealed to Israel, a moral revelation is the implicit presupposition in much of what the prophets said (Amos 3:7). The prophets do claim that God reveals the divine plans to the prophets. And the prophets invoke the traditions that were understood to have been revealed in the past about how humans are to behave.

In addition to the demands that God puts on human beings, the prophets also point to the love that God has for humanity and for Israel in particular. God's love extends to humans even in the face of unfaithfulness and of backsliding. The images that the prophets use for the love of God are themselves revealing. Parent, teacher, healer, counselor—these are some of the roles that the prophets give to God, roles that reveal the concern and passion God has for people.

A facile contrast is sometimes made between God's love and divine justice (often erroneously restricting the former to the NT and the latter to the OT). One might better say that God's justice is responsive, that is, that God's justice is an act of love rather than of vengeance. When things begin to get out of hand, when people's negligence goes so far that there is no expectation that things will improve, then God must step in to take action. God's delay in bringing the results of infidelity on the people cannot be extended indefinitely. The preexilic prophets are distinctive in speaking about a coming disaster for Israel, but there are also statements of God's regret about this future. For the prophets God could no longer delay the end.

One can ask whether the prophets took their own images for God in a literal sense. When they spoke of God as an unmoved judge, as a raging parent, as a plotting monarch, did the prophets think that God was completely and adequately represented by these images? We cannot know. But the Bible reader of today must realize the danger of taking literally these descriptions of the indescribable. The prophets used whatever images they thought appropriate for their society. Their statements remain part of the theology of 8th- and 7th-century Israel.

2. Israel. The unfaithfulness of the people is what struck and disturbed the classical prophets. The time of infidelity in which the prophets lived seems to some readers to be an expected development in Israel's history. The rise and history of prophecy in Israel virtually coincide with the history of the monarchy. It was the monarchy that allowed, perhaps encouraged, the so-called Canaanization of Israelite culture, both socially and religiously. The development of social and economic ranks or classes in Israel led to the oppression of the poor and the needy. The rich grew more wealthy, profiting from the labors and losses of the lower classes. The prophets decry this deterioration of Israel's soul.

The prophets feel the urge and conviction to speak out against this situation. When the prophets charge their audience with this infidelity, their speech is quite varied. They addressed various people on different occasions, so one expects variety in their collected sayings. The classical prophets usually addressed their words to people at large. It is noteworthy that they sometimes address or speak of the people in various linguistic forms. Sometimes they speak of the people in the grammatical form one would most expect, masculine plural. But Israel is also addressed as masculine singular. (Israel was the alternate name of the ancestor Jacob; and the name retained its masculine gender, not just because Jacob was male, but also because the names of people are masculine in biblical Hebrew.) Recent studies claim that the addressee or subject in the feminine singular is not Israel as such, but rather a city. When the people are addressed in the imagery proper to cities, images occur such as mother, wife, virgin, widow, sister, and harlot. When Israel as a people is addressed, those feminine images do not occur.

The message of the prophets varied also according to the time and the place of the speech, and the people involved. Preexilic prophecy can generally be depicted as prophecy of judgment. The prophets are the conscience of Israel, alerting it to the injustice and infidelity that each of the prophets sees.

On both accounts, the rights of God and the rights of their fellow human beings, Israel has to be judged as having failed in the eyes of God. Israel is seen by the preexilic prophets as unfaithful to the God who called them.

3. The Relation between God and Israel. As already stated, the preexilic prophets for the most part saw a deterioration in the relation between God and Israel. Israel no longer keeps the original faith they had in their God. (Alternatively, Ezekiel believes that Israel was wrongheaded from the start.) The relationship is coming to an end. The very end was in sight for some of the prophets. No more can God put up with the careless and faithless behavior of the people.

There is variation in the images that the prophets use for the end of this relationship. Amos speaks quite directly: "the end has come upon my people Israel" (Amos 8:2). Other images for the relation are used. God is called the parent of Israel (Hos 11:1), the shepherd (Ezek 34:1), the king (Isa 6:5). When the prophets speak of the relation between God and Jerusalem (and Samaria), the image is marital, and the act of separation is divorce (Jer 3:2; Ezek 16:8; Hos 2:4—Eng2:2).

One image for the relation between God and Israel that has caused continued controversy regarding its age is the metaphor of covenant. This image, taken from the political realm, has been claimed by some scholars as the major and defining image for the God-human relation in ancient Israel. Other scholars point out that the 8th-century prophets do not employ it. They claim that it is an image that gained popularity in later times. One must admit that covenant is sometimes lost in the vast sweep of images that the prophets use.

Whatever the image used, the preexilic prophets say that there is something gone wrong with the relationship. Israel has become a wayward son, a sinful people, a man who needs to flee, a society that is corrupted. Some later prophetic writers speak of the broken covenant, the field of dry bones, the relationship that cannot endure.

Along with all the images of punishment and finality, there are some statements of God's enduring love and of the chance that God might not carry out the threat. There are even images of hope and restoration. The son will be taken back, the sins will be forgiven, the man can stop running, the society will be cleansed. Are these too from the same prophets? This question, of course, deals with the formation of the prophetic books.

4. The Future. Critical scholars ask the question whether to understand the promises that the books of the preexilic prophets contain as actually coming from those prophets or from later speakers and writers. The question that is inevitable for some critical thinkers is whether promises of restoration actually belong side by side with threats. Can the same person see total disaster coming and see beyond it a bright future?

Amos says that the end has come for Israel, the capital is virtually fallen. Jeremiah is just as definitive about the end of his city and the hopelessness of the situation. Can these men turn around and predict a time of fulfillment for their audience?

Often scholars point out that the prophetic word differs from day to day and from time to time. Indeed, times do change the message. For example, Isaiah may have held the idea of Zion's inviolability; but Jeremiah, about a century later, flatly contradicts the concept. For some scholars, the promises and hopes were given in the time of the prophet for a different generation, and these sayings were preserved for them and understood only later.

Around the turn of the 20th century, there was a proposal that the alternation of woe and weal, of threat and promise, was part of the standard way of prophetic speech (Gressmann 1905). Certain scholars, especially those who stressed the oral transmission of the prophetic sayings, repeated this solution to the phenomenon of seeming contradictions.

For many scholars, newness is the salient reality of the prophetic vision. The prophets see that Israel has reached a new stage in its relation to God. A turning point, a critical one, is near at hand. The way that Israel had lived to the time of the prophet has led to a particular crisis. For the most part, the preexilic

prophets focus more on the immediate problems and the immediate future that Israel's infidelity would bring on. The hope that lay beyond that crisis has to be argued very carefully and forcefully to be persuasive.

G. The Prophets' Relation to the Institutions of Israel

1. Monarchy. Prophecy throughout the ANE was often connected with the kings and rulers. In Israel, the classical period of prophecy coincides with the time of the monarchy. There are court prophets in Israel at the very beginning of the monarchy, that is, with Saul and David. And after the secession of the North, one finds prophets of the kings of the independent kingdoms (1 Kgs 22:8; cf. 2 Kgs 20:1). Although prophecy continues after the demise of the active monarchy, nevertheless, the last large book of one prophet, namely Ezekiel, is named from a prophet who had lived under kings in Jerusalem.

The view of the monarchy that individual prophets took was, no doubt, influenced by a wide variety of things, many of which we cannot know. In general, however, Amos, Hosea, and Micah all take a dim view of the monarchy. Hosea even says that kingship was not something from God (Hos 8:4). Isaiah, the only 8th-century prophet who was a native of Jerusalem, does not speak against the kings. Indeed, it may be Isaiah, in his book, who depicts a bright future under a majestic monarch (Isa 9:5–6—Eng9:6–7; 11:1–9). The editors of the book of Amos speak of the restored tent of David (Amos 9:11).

In both Isaiah and Jeremiah, there are passages that suggest that these prophets were advisers to the kings in their times (Isa 7:1–17; Jer 21:10; 37:16–21). To see such passages as actual records of historical facts is, to the critical reader, not the most obvious way to read these passages. Actually in both cases these prophets oppose the king or his plans. By and large the prophets who worked for the kings of Israel and Judah were not the prophets whose words survive in our prophetic books.

Nevertheless, the prophetic tradition one finds in the edited books of the Bible continues to use the imagery of the book of Isaiah. The future king is part of the developing hope for the future. The Heb word *mašiaḥ* (Eng "Messiah") is never used for the future king. (The word is used for the reigning king and others who are actually anointed.) Nevertheless, the monarchy clearly furnishes ideas that messianic expectation in later times expanded and developed.

2. Cultus. There are passages in the preexilic prophets which suggest to some readers that the prophets advocated a religion that did away with the traditional religious practice, specifically Israel's festivals, sacrifices, and offerings. The prophets speak about the seeking of God in purity of heart. The prophets clearly have God say that none of what the people offer is pleasing or required (Amos 5:21–23; Isa 1:12–15). Indeed, 19th-century scholarship understood these statements as a total rejection of the sacrificial system and of any material things involved in worship.

The immediate response to this view would have to be that in the ancient world and in Israel in particular, no person could conceive of worship without external expression, that is, without the rituals and actions that traditionally accompany the worship of a community or that of an individual. No one, especially before the Exile, could say that God did not require the worship in the temple as that worship had been offered from Solomon on.

Many of the charges that the prophets in their times raise against the cultus denounce worship that has been influenced by Canaanite practice and belief. The Canaanite "high places" were things that the reforming kings found virtually indestructible. The remnants of foreign worship survive even the Exile. These popular forms of infidelity, both in worship and in unjust social practices, were the object of the prophets' indignation.

The prophets, when they have a moment of hope, look forward to a purified cultus, one which truly manifests a commitment and a continued faithfulness to the God who called Israel. The prophets condemn the worship offered by certain individuals and groups only because it is the worship of other gods and the worship of the Lord without relation to one's treatment of one's fellow human beings.

Occasional words of the prophets are directed against the priests (e.g., Hos 4:4–10). They charge the priests with negligence and insincerity (Ezek 22:26). The prophets suggest that the priests are leading the people astray, away from God, rather than toward God (Mic 3:11). This criticism of the cultic personnel

may be a different route to critiquing the cultus itself. But here again the words of the prophets are directed toward those priests who did stray from the path of priestly devotion and purity of life.

Moreover, these attacks on the priests are often accompanied by critiques of "the prophets." The prophets describe a society they see as corrupt, and they speak out against all forms of injustice and infidelity. The classical prophets often speak of priests and prophets in the same breath. The famous passage in Jer 18:18 speaks of the priest, the wise, and the prophet. All had their own roles to play in the society; all had their burdens to bear if the society failed.

3. Wisdom. In the past few decades, a most interesting development in the study of the prophets has been a focus on the relation of the prophets to the realm of wisdom. Israel's search for wisdom and the writing of its Wisdom Literature may have begun as early as the time of Solomon. If this is the case, prophecy and wisdom are parallel phenomena for the monarchic period. It would be unlikely if these parallel phenomena would not have some interrelation and interaction.

Isa 5:19–24 lashes out against those who have a pretended wisdom. Later, Isa 30:1–5 attacks those who plan things without consulting the wisdom of God. Isaiah seems to be attacking those whose profession is to treat and apply the traditional political wisdom.

There are indeed other passages in the prophets which manifest a more positive relationship. One finds some sayings that suggest a real wisdom background or origin (Isa 14:24–27; Jer 19:7–15). Although the prophets sometimes do seem to speak against the professional class of the wise, nevertheless, they share in their excellent use of language, an ability that normally requires training and practice. Often the same vocabulary is shared by the two groups.

Some scholars have proposed that the basis for the prophets' judgment against unjust practices was the teaching of the wise men, formulated and passed on from earlier generations. On the other hand, there is a proposal that there was no class of "the wise" in Israel. The people referred to by that term were simply the educated, the intellectually alert individuals. If this claim is true, the prophet's training would have been from and with such a group of educated people.

The difference between the wise man and the prophet remains, of course: the prophets speak the word of God, and wise men pass on the word they have received from their predecessors. The difference between the prophet and the wise man enriched life in the society of ancient Israel and our reading of the biblical books.

H. Reception of the Prophets

None of the canonical prophets seems comfortable with being called a *nābîʾ* (cf. Amos 7:14). None of the canonical prophets seems to have been a popular success in the sense of having a large following. All the preexilic prophets have rather harsh things to say, and it is not surprising that they did not immediately win the hearts of all.

That they do not call themselves *nābîʾ* or let others apply this term to them suggests that the term had connotations with which each of the prophets did not want to identify. Much scholarship claims that the word *nābîʾ* implies induced ecstacy, manic bizarreness, and irrational activity in general. Other studies have suggested that the professional aspect of prophecy is what Amos rejects in Amos 7:14. Yet another proposal is that the difference in terminology is mainly regional, Amos being from the South.

It is in the narratives about the prophets that a prophet is called *nābîʾ* without any hesitation. A recent scholarly tendency has been to say that the narratives come from a time after the historical prophet. In this view, the narratives are better understood as legends about the person for the purpose of enhancing or clarifying the figure rather than as manifestations of the personality of the prophet. Many scholars today are far more reluctant than those of a generation or two ago to write a biography or even a personality assessment of a given prophet.

There are indeed passages in which a prophet seems to express poetically the difficulty he has in speaking to the people and being heard by them. Isaiah is one example (Isa 8:16–18). But Jeremiah has a whole sequence of "laments" which have been interpreted as his inner soul emerging (Jer 12:1–6; 15:10–21; 17:14–18; 18:18–23; 20:7–13, 14–18). Yet even here, some scholarship attempts to read these as liturgical pieces or as evidence of inner-community strife. These interpretations suppose that the prophet

wanted to reveal the divine word rather than individual feeling, and that the prophet's tradition continued to grow after the life of the prophet.

A claim that appears in the NT, which seems perhaps odd to the reader of the OT, is that Jerusalem killed the prophets sent to it (Luke 13:34). The Deuteronomistic History does emphasize the stream of prophets who were sent to warn the people of Israel, and in response the people and their kings would not listen. But there is no biblical scene to which the author of Luke could be referring.

A report of the killing of prophets appears only once in the OT. In 1 Kgs 18:4, 13, Queen Jezebel, who had been acquired by King Ahab from outside Israel, kills the prophets of Yahweh. Although in the next chapter, Elijah attributes the slaughter to "the people of Israel" (1 Kgs 19:10, 14), the killing neither occurs in nor is done by Jerusalem. The killing of the prophets is a postbiblical tradition that develops for different reasons both within Judaism and within Christianity (Amaru 1983).

I. The Study of the Prophets

Although over the centuries certain readers of the Bible had noticed that particular sayings within the books of the prophets did not seem to come from the people to whom they were ascribed, it was mainly in the 19th century that certain scholars vigorously attempted to sort out the authentic from the inauthentic sayings within the books of the prophets. The position, popularized especially by Julius Wellhausen, regarding the relation of the prophets to the Pentateuch encouraged this particular kind of study of the prophets. The insight that the law came after the prophets allowed certain scholars to set out in new directions in the study of the prophets. This newfound approach analyzes the prophetic books on their own rather than as precursors of a new revelation or as the commentaries and expansions on the Pentateuch.

Since the study of the Pentateuch had shown that many hands had contributed to those books, similar methods could be applied to the prophets. The approach that tries to determine whether all the words attributed to a prophet actually come from that prophet utilizes the many different clues within the text itself and raises other considerations from outside as well. It could be pointed out that the question of authenticity of the sayings is not asked in order to "challenge" the Bible or the believer, but simply to determine the real theology, the real thinking, of a given prophet. To seek to establish that original prophetic content is not to deny or to reject the Bible as normative.

The effort to determine what were the authentic words of the prophet has engaged a great number of scholars. Various methods are used to decide whether a particular saying can rank as authentic. Whether it be on the bases of the language and vocabulary used, of the ideas expressed, or of the historical events alluded to, the critic pares away certain words, verses, and passages to arrive at the substance of the prophet's preaching or writing. German scholarship has excelled in seeking to identify the authentic words of the prophets. Mainly as a result of this kind of analysis of the prophetic books, one concludes that the preexilic prophets were truly prophets of doom. Careful analysis of the books allows one to see and appreciate the original thoughts and words of the prophets.

A reaction to this approach of dissecting the texts to find the original meaning inevitably arises. Such a critique underlines the difficulty in deciding objectively what are the words and sections that have to be judged as additions. One's own presuppositions can intrude and influence the judgment. A modern conception of how books come into being can impede one's understanding of the development of the biblical text. Moreover, one might better stress the oral origins of prophecy and the oral transmission of the prophet's words to show the reliability of the text. Certain scholars pointed out that our current prophetic books differ in their origin and contents. Two kinds of prophetic material exist: the *diwan*, a collection of diverse sayings of a single prophet, passed on without much variation, and the *liturgy*, a unified piece which originated in the cultic performance of a prophet. The liturgy is the more unified of the two, weaving a pattern of themes and developing, in its own style, a complex work. This approach was fostered among Scandinavian scholars (Engnell 1969). It has stressed the impossibility of really sorting out the authentic sayings from the additions.

A different approach to the prophets is to take the prophetic book basically as the tradition has given it to us. Only those passages which are obviously not from the prophet need be cut away from the authentic

words. The critic's task is to see how the words of the prophet reflect the situation in which the prophet existed. Archaeological research can be very helpful in understanding the message and even the style of the prophets in their own time and setting. This approach to the prophetic books, by and large, is pursued especially in the United States (King 1988).

More specific and distinctive approaches to the study of the prophets have arisen. The question of a prophet's relation to previous tradition returns in various ways. Gerhard von Rad's response is to show that each of the prophets speaks within one of the three election traditions of ancient Israel: those of Exodus, Zion, or David. The prophets see that Israel is entering a new stage of its history. Israel is encountering God on a new level. Yet that level always relates to the past. The prophet reinterprets the old election tradition and applies it (or them) to the new situation. The prophet's formulation of both judgment and promise depends on the specific tradition that prophet knows. Naturally the prophet's place of origin influences the election tradition out of which he speaks. Isaiah, e.g., was from Jerusalem and operated with the Zion and David traditions; Hosea, from the North, used the Exodus tradition.

Another approach which utilizes the places from which the prophet came and the particular ways of thought proper to that locality is the study of Wilson (1980). The Ephraimite prophetic tradition of the North differs from the Judean tradition of the South in matters of the vocabulary used for the prophet and his pronouncement, the manner of viewing the prophet, and the process of intermediation. Isaiah and Micah are the classical preexilic prophets in the Judean tradition (although Isaiah gets a Deuteronomic/Ephraimite depiction in the Deuteronomistic History); Hosea, of course, is Ephraimite. This sociological study underscores the importance of each prophet's support group, the specific segment of the society which encourages and sustains the prophet.

Sociology also offers David L. Petersen (1981) a particular approach to the prophets. Prophets come to a society that has certain kinds of expectations regarding the manner in which prophets should act and behave. Prophets can vary in the degree of involvement with which they play these roles. Their acceptance by the various segments of the society is indeed crucial. Some prophets operate with the support of the political or religious authorities and thus become central prophets, while other prophets receive the support only of the less powerful and outcast in the society, thus becoming peripheral prophets. The social dimension of Israelite prophecy continues to be one of the most lively areas of contemporary study on the prophets.

With regard to the prophetic writings, great emphasis has been given to the formation of the books of the prophets. Because the prophets themselves did not write, one must understand the words of the prophet as having been selected, edited, probably reinterpreted, and then expanded. The editorial remarks and expansions, once ignored by some scholars as inauthentic, are now analyzed to order to see the history of the book's growth. This growth of the prophetic books offers insights into the history of biblical religion from a new and different perspective.

Along with this interest in the formation of the books goes the attempt to analyze larger sections of the books as units rather than the smaller passages and individual sayings that had been passed on orally at some early stage. The editors of the books are increasingly given credit for intelligence, understanding, and organization in their work. The growth of the books is generally not seen as haphazard or unthinking.

The emphasis on the books as canonical sacred writings to be interpreted with the entire canon of the Bible has received a fresh proposal (Childs 1979). The only reasons these books have been preserved by the generations are the meanings that the whole books offer within the canon of the Bible. Critics of this approach suggest that this kind of analysis ignores all the advances of the historical-critical study of the prophetic books. The proponents of this method insist, however, that the approach does not deny any of those advances but simply puts them in the proper perspective. The debate on this approach has not yet concluded.

POSTEXILIC HEBREW PROPHECY

The Babylonian Exile of the 6th century B.C.E. caused a sharp break in many of the traditions and institutions of ancient Israel. Its effect on the character of prophecy, however, was less marked than its social and political consequences; and there is a clear line of continuity linking Amos and Isaiah of Jerusalem with Ezekiel, Deutero-Isaiah, and Zechariah. Nevertheless, in time prophecy did gradually evolve into something very different from what had been known in preexilic Israel; and by the NT period the designation "prophet" applied to people in whom few of the characteristic features of the preexilic prophets are discernible. This change in turn had an effect on the way people in the Greco-Roman period perceived the preexilic prophets. At some point in the postexilic age, the idea began to develop that prophecy in the strict sense of the word had ceased from Israel, though certain groups, notably the Qumran community and the early Christians, held that it had recently revived. The interpretation of postexilic prophecy has many disputed areas, and in general it has not received as much scholarly attention as its preexilic counterpart. We shall examine five questions: the message of the postexilic prophets, their role and status in the community, the nature of prophetic experience after the Exile, the forms of prophetic literature, and the editing of prophetic books.

———

A. The Message of the Postexilic Prophets

1. From Doom to Hope. The most obvious shift in the message of the prophets which begins with the Exile is the gradual loss of the sense that God was about to bring disaster on Israel and Judah. Scholars continue to disagree about the extent to which the preexilic prophets had seen hope beyond judgment, or had even thought that the judgment they predicted could be averted; but whether or not the preexilic message of judgment was total, there can be no doubt that it was an important part of the prophets'

teaching. Amos had said "The end has come upon my people Israel" (Amos 8:2); Hosea, "Compassion is hid from my eyes" (Hos 13:14); Isaiah, "His anger is not turned away, and his hand is stretched out still" (Isa 9:12, 17, 21). In Jeremiah, and in the early oracles of Ezekiel, we hear the same message of impending doom, foretelling the disaster of the Exile. But once the Babylonian invasion had happened and all false hopes of averting it had come to nothing, prophets began to look beyond disaster to more favorable divine purposes for Israel, "plans for welfare and not for evil, to give you a future and a hope" (Jer 29:11). This is already clear in some of the oracles collected in Jeremiah 30–33 (although many scholars believe these to be additions to the words of Jeremiah, they cannot be much later than the work of the prophet himself), in Ezekiel 36–39 and the early postexilic appendix to Ezekiel (Ezekiel 40–48), and above all in the oracles of Deutero-Isaiah (Isaiah 40–55).

But exilic and postexilic prophecy of blessing is continuous with the preexilic judgment prophecy that it gradually displaced; it does not represent the triumph of the facile, optimistic prophets condemned by Jeremiah, who said "Peace, peace" when there was no peace (Jer 6:14). The stories of Jeremiah's activities during the early years of the exile of Jehoiachin make it clear that Yahweh has not in any sense changed his mind about the fate of Judah; no speedy return of the exiles or simple restoration of the preexilic kingdom is to be looked for. In Jeremiah 28 we read how Jeremiah disputed with a prophet, Hananiah, who had said "Within two years I will bring back to this place all the vessels of the Lord's house" (28:3). Jeremiah rejected such optimism as a failure to see that the Babylonian conquest was not a temporary setback, but part of a consistent divine plan, and that far worse was to come before there could be any thought of a change in Judah's fortunes. As late as Deutero-Isaiah, who prophesied just before the return of the first people back to the land of Israel, there is no suggestion that the disaster of Exile had been against the will of Yahweh, or that the better times which were now coming marked a change of heart by Yahweh or invalidated the judgment prophecy that had gone before. On the contrary, the Exile was a vindication of the prophets who had predicted doom: "Your first fathers sinned, and your mediators transgressed against me; therefore I profaned the princes of the sanctuary, I delivered Jacob to utter destruction and Israel to reviling" (Isa 43:27–28). The possibility of a better future results from the fact that Yahweh has now exacted the punishment which earlier prophets had correctly maintained that he would insist on. There is thus, in postexilic prophecy, a strong sense of identity with the teaching of previous prophets.

Nevertheless, the belief that Yahweh's judgment had now been fully exacted and so had come to an end did gradually change the prophetic message into something substantially different from what it had been before. Already in Deutero-Isaiah we find the idea that the punishment imposed on Judah was measured and could in principle be paid in full, so that a time would come (and had now come, according to the prophet) when the nation would owe Yahweh no more suffering by way of payment: "her time of service is ended … for she has received from the Lord's hand double for all her sins" (Isa 40:2). This could easily lead to a belief that the Babylonians, Yahweh's instruments of punishment, had afflicted the Israelites *more* than they deserved and so stood under imminent judgment themselves. Such seems to be the perception both of Deutero-Isaiah (Isaiah 46–47) and of the early postexilic prophet Zechariah (see Zech 1:15: "while I was angry but a little they furthered the disaster").

Soon the notion took root that Yahweh had vented his full anger on his people in the past, in the Exile which was now over, and that there was no danger that he would ever have cause to do so again. After the Exile, oracles predicting judgment on Israel still appear fitfully, in Haggai's warnings that sin leads to drought and famine (Hag 1:6–11), in Malachi's insistence that blemished offerings lead to divine displeasure (Mal 1:6–2:9), or in Trito-Isaiah's condemnation of social injustices and pagan practices which lead God to blight social relations and bring national calamity (Isaiah 59). But increasingly divine judgment was thought to fall selectively on those elements in Israel which continued to deserve it, and the overwhelming sense of impending *national* calamity which had been so marked a feature in the preexilic prophets was lost. Eventually even the theme of selective judgment died away, and the role of the prophets came to be understood as one of comfort and consolation for Israel, and of judgment only on her enemies.

2. Calls to Repentance. The question of whether the preexilic prophets preached "repentance" (i.e., a change in social and political attitudes and actions) is a vexed one, and the answer to it affects our assessment of how far the postexilic prophetic message is novel. There is no doubt that Jeremiah urged his contemporaries to "repent," that is, to alter their attitude toward the Babylonian threat by capitulating rather than resisting, and that he urged them to reform the religious customs of the day—to move away from the syncretistic practices that had replaced a purer Yahwism. It is clear, however, that he did not expect such repentance to lead to a simple change in Yahweh's plans for Israel. There was no question of averting the disaster of the Exile, whatever the people did; and the course of action he most urgently wished the leaders of Judah to adopt was to come to terms with this reality, not to resist it. Their "repentance" would thus consist more in recognizing the justice and inevitability of the Babylonian invasion and victory, and in adjusting to the new state of affairs this would imply, than in reforming the national life so as to persuade Yahweh to alter the course of international events—the time when that might have been possible was already past. Similarly, after the major deportations of 597 and 586 his advice to the exiles (according to the account in Jeremiah 29) is to settle down and come to terms with the reality of life in the land of Exile and not to act as if it were merely a temporary aberration in Yahweh's designs for his people.

Jeremiah's calls to repent are thus in practice calls to embrace realism and to abandon false hopes. Much the same may be said of the early oracles of Ezekiel, whose aim seems to have been chiefly to dissuade his contemporaries in Exile from believing that there would be a speedy restoration, and to accept that they were responsible for the fate that had befallen them and for the disasters which were still in store for the city of Jerusalem (Ezekiel 18). In this early exilic period attention shifts from the earlier prophetic concern with social justice and religious purity to the question of how the community will react to the conditions of life under Babylonian domination. Calls to reform the national life, even if these had once been typical of prophets, cease to be appropriate, in view of the total lack of self-determination possible for a nation in Exile or living in the ruins of its land.

In the period of postexilic reconstruction, however, prophets appear much more as teachers whose role is to induce a change of heart and of conduct in the community now striving to repair its national and social life. Haggai in particular quite clearly sees his task as being to persuade the people to make an effort to rebuild the temple (1:4, 9), while Zechariah seems to combine a similar concern for restoring the nation's cultic life with an interest in questions of social justice that reminds us of Amos or Isaiah (see, for example, Zech 8:16–17). It is possible, of course, that passages of moral exhortation in the postexilic prophets owe something to the work of editors, but these passages are in keeping with the much more positive and constructive role of these later prophets as compared with the doom-laden words of their preexilic predecessors.

By NT times it was widely held that all the prophets had been essentially moral teachers, whose function had been to exhort rather than to foretell disaster. This idea seems to owe much to the early years after the Exile, when prophets such as Haggai and Zechariah had directed their efforts to improving the moral condition of the nation, at a time when it was no longer believed that national disaster was impending. Whereas preexilic prophets had been concerned to discern God's hand in contemporary international affairs, and to show Israel the signs of the times, postexilic prophets became directly involved in social and political questions, as respected, official teachers of morality. The tenor of the preexilic prophets' message (continued by Jeremiah and Ezekiel) is that the people should accept the justice of Yahweh's impending punishment for their sins; that of the postexilic prophets is that Yahweh seeks moral reformation and renewal, and will reward them with his favor.

3. The Prophets and the Cult. Anyone who comes to the postexilic prophets after reading their preexilic predecessors is immediately struck by how differently they react to the place of the cult in Israel's national life. Amos had condemned the religion of the sanctuaries (4:4–5; 5:4–5), and Jeremiah had dismissed the temple as a false focus of security for the nation (7:1–4). But Haggai and Zechariah regard rebuilding the temple as crucial to national reconstruction (Hag 1:4; Zech 4:8–10); the appendix to Ezekiel places cultic institutions at the center of national life (Ezekiel 40–44); Malachi rebukes the priests

for neglecting the detail of ritual ordinances (Mal 1:6–10); and in the work of the Chronicler prophets are consistently represented as concerned with the cultic life of the nation (cf. 2 Chr 13:8–11; 15:1–7). The reason for this may be that there had been a change in the prophetic message—perhaps a necessary change in view of the different conditions of life for the postexilic Jewish community, deprived of its political institutions and obliged to embrace distinctive ritual and cultic ordinances as an alternative focus for national life. Alternatively, it may simply mean that the postexilic prophets who are represented in the OT happen to be those who came from a cultic milieu, though in this respect they were not necessarily typical of postexilic prophecy in general. (This point will be discussed again below in relation to the question of the role of the prophet in postexilic society.) Only in Trito-Isaiah (Isa 66:1) do we find hints that not all postexilic prophets were enthusiastic supporters of the renewed temple cult.

Connections between prophets and cult may be reflected not only in the content of the prophetic message but also in the form of prophetic books, for it is after the Exile that these begin to show influence from literary forms whose natural home is public worship. Deutero-Isaiah makes extensive use of hymns, royal oracles probably taken from coronation or enthronement rituals, and cultic exhortations; indeed, it has sometimes been suggested that the whole collection is liturgical in origin, or at least that the prophet was a temple singer or poet by profession. If we follow the division of prophetic collections into *diwan* (collected oracles) and liturgy types (as proposed by Engnell 1969), it is noteworthy that the postexilic period contributes by far the most examples of the liturgy type to the prophetic corpus of the OT. Postexilic prophecy almost wholly lacks the antipathy to national cultic life which is so marked a feature of the teaching of Amos, Hosea, and Isaiah. Perhaps this is because the cult had ceased to be a cause for complacent self-satisfaction, preventing the people from hearing the prophetic warning that sacrifices would not save a nation steeped in social injustice. Instead it had become the essential rallying point for renewal and reconstruction.

4. Oracles about Foreign Nations. Israelite prophets had probably uttered oracles about foreign nations from the earliest times, since prophets seem to have been retained by kings to foretell the downfall of their enemies—and perhaps to help bring it about, through what we might call magic. Amos (in chaps. 1–2) seems to presuppose that his audience was familiar with the custom of uttering oracles predicting the fall of Israel's enemies. However, one of the most radical changes effected by the preexilic classical prophets was to replace such prophecies, which foretold disaster for the nation's enemies, with condemnation of Israel itself. Thus by the time of Jeremiah, there was a strong tradition among the prophets of seeing Israel itself as the enemy whom Yahweh had cursed. But in either case, down to the early exilic period prophets evince little interest in the fate of foreign nations except as this bears on the fate of Israel. Other nations may be doomed because they are Israel's enemies, or they may be Yahweh's instruments to punish his sinful people. Sometimes both themes may appear: Isaiah 10 contains a number of oracles in which the eventual downfall of the Assyrians is prophesied after they have carried out their commission to punish Israel.

From Jeremiah onward, however, the interest of Israel's prophets widens to include the fate of foreign nations as a theme in its own right. In Ezekiel, Deutero-Isaiah, Haggai, and Zechariah the downfall of Babylon is the prelude to the eventual restoration of Israel to its land; and the old tradition of cursing the enemies of Israel reemerges in the form of oracles against Babylon: Isaiah 46–47 is the most extended example. The Babylonians are denounced for their arrogance (cf. Isaiah 10 on the Assyrians), and their speedy collapse is promised by Yahweh. Probably from the same period are the oracles in Jeremiah 50–51 against Babylon. The logical implication of this is that Yahweh has appointed the Persian king, Cyrus, as his agent of judgment on Babylon and hence of salvation for the Jews, and this results in one of the earliest examples of an oracle's promising divine blessing to a foreign king (Isa 45:1–7). Here Cyrus is actually described as Yahweh's "anointed one"—a title previously used only for the Davidic king. The generally favorable view of the Persians continues to be characteristic of postexilic prophecy, which contains no explicitly anti-Persian oracles.

But alongside the specific oracles of doom on Babylon and of blessing on Persia, the prophetic tradition from Deutero-Isaiah onward comes to contain vaguer oracles about "the nations," in which virulently

xenophobic sentiments alternate with an attitude which seems incipiently universalistic. Most of the prophetic books now contain a cycle of "oracles against the nations," in which (sometimes named, sometimes anonymous) nations are threatened with Yahweh's wrath. These oracles are notoriously difficult to date, but must in most cases derive from the Persian or Hellenistic age. At the same time, many prophetic books include oracles foretelling the "gathering in" of the nations to Jerusalem, and seem to envisage a future in which the barriers between Jew and gentile will break down and all mankind will come to acknowledge Yahweh as the one God. There is dispute about whether this is how we should understand passages in Ezekiel and Deutero-Isaiah which say that Yahweh will become known to the nations. They may rather be a promise that the nations (who have derided fallen Israel) will come to acknowledge the reality of Yahweh's power when he punishes them and restores his own people. But in Zechariah and Trito-Isaiah there can be little doubt that foreigners are regarded positively (cf. Zech 8:20–23; Isa 56:3–8), while Malachi seems to contrast the worship offered by gentiles favorably with the blemished offerings of Israelite priests (Mal 1:11–14). The book of Jonah—a legend about a prophet rather than a collection of prophetic oracles—seems designed to teach a similar message, perhaps in reaction against the exclusivism of some Judaism of the Second Temple period. Isaiah 19 concludes with five oracles of a strikingly universalistic tone, including the remarkable prophecy, "In that day Israel will be the third with Egypt and Assyria, a blessing in the midst of the earth, whom the Lord of hosts has blessed, saying, 'Blessed be Egypt my people, and Assyria the work of my hands, and Israel my heritage' " (Isa 19:24–25).

5. Eschatology. It is sometimes said that postexilic prophecy became more "eschatological" than prophecy had been in the preexilic period. This may mean one of several things.

First, sometimes this is a convenient way of expressing the idea that the time scale of prophetic predictions became longer after the Exile. Instead of foretelling the immediate consequences of national sin, prophets now came to be interested in a longer sweep of history; and, in particular, they started to think that God has a detailed plan for the history of all the nations which he was working out in a more or less predetermined manner. The preexilic prophets give the impression that Yahweh reacts sharply and immediately to human conduct, but not that he has a grand design coming to fruition in preplanned stages. But already in Ezekiel and Deutero-Isaiah, and to an increasing extent in the thought of Trito-Isaiah, Zechariah, and the forerunners of apocalyptic—such as the authors of Isaiah 24–27 or Zechariah 9–14—history seems to form an orderly progression, with human volition playing a role clearly subordinate to the divine plan. When the prophets after the Exile are said to have "an eschatology," this is the aspect of their message that is often being referred to. Of course they also had an interest in what the immediate future held for Israel, but (as noted in the preceding section) the scope of their concern was perceptibly wider. It should be noted, however, that it is not until a few of the apocalyptic works of the NT period that the events foretold can be called "eschatological" in the full technical sense the term has in traditional Christian theology, where it implies an end to the whole world order and also refers to the fate of the individual after death.

Second, "eschatology" may also be used (as it frequently is by NT scholars) to point not so much to the long-term plan found in the thinking of postexilic prophecy as to the transcendent character of the divine action in history. This is another aspect of the tendency to determinism just noted: the prophets stress that what happens in human history is *divine* action, the coming to fruition of a divine purpose, accomplished through more than human means. God breaks into the progression of human history and takes control of it in a direct and uncompromising way, leaving little to human agents. This is certainly the impression created, for example, by Zechariah 14, where God stands in person on the Mount of Olives and causes it to be split in two, or in Isaiah 34, where he himself wields the sword that first destroys the heavenly hosts and then descends in judgment on Edom. The expectation of God's personal, decisive intervention in human history seems to be a feature of prophecy as it develops toward what we call apocalyptic. There are few parallels to this way of thinking in the preexilic prophets, for whom divine involvement in human affairs is more often expressed through the mediation of human agency.

Third, some scholars hold that the failure of prophetic predictions to materialize led to their being projected into the remote ("eschatological") future as a way of retaining their authority, when a simpler reaction would have been simply to conclude that they had been proved wrong. On this view, the postexilic prophets themselves did not hold any longer-term view of history than their predecessors; it was their disciples who, faced with the apparent failure of the prophets' predictions, reworked their oracles so as to make them refer to the very remote future. Thus they made it impossible that the prophecies would ever be falsified by events. On this interpretation, "eschatology" is thus not a development within the prophetic tradition, but an interpretative category applied to prophetic oracles by those who edited and reused them in later generations.

B. The Role of Prophecy in the Postexilic Age

We noted above that alongside collections of oracles, the postexilic prophetic books also contain many works which are closer to the "liturgy" type. This observation, combined with the evidence of the books of Chronicles, where "prophets" often appear in a liturgical role, may suggest that there was a significant shift after the Exile toward a closer alignment of the prophetic tradition with the institutions of the cult. Haggai and Zechariah might already be examples of this, with their concern for the reestablishment of temple worship among the returned exiles. Even Ezekiel, during the exilic period itself, shows many more points of contact with priestly circles than is the case with the preexilic prophets: the sins listed in chap. 18, for example, include a number of "cultic" offenses such as we do not find in Amos or Isaiah. Even if Ezekiel 40–48 is a postexilic addition, the perception of Ezekiel as a prophet deeply concerned with the ordering of worship may well be the reason why it was to his oracles that this appendix was added.

Late 19th-century scholarship was inclined to regard almost all postexilic prophecy as the product of cultic circles. This was thought to mark a decline in the institution of prophecy, from the high ethical concerns of the 8th and 7th centuries into an incipient "legalism" and obsession with ritual matters. On this view, prophecy in the sense the term has when applied to Amos, Hosea, or Isaiah more or less ceased to exist after the Exile; the term "prophet" *(nābîʾ)* came to be used as the title of one among the many different types of temple officials. Other terms certainly underwent similar shifts—"Levite," for example, ceased to mean any sort of priest and became the name for a temple singer.

In recent years, however, a more nuanced interpretation of these postexilic developments has been proposed by Hanson (1975), building on the work of Plöger (1968). Hanson argues that there are two distinct strands within postexilic prophetic writings. The first is indeed a drift toward the institutionalization of prophets as temple officials, whose function was to produce liturgical texts. Their "oracles" consisted only of exhortations to keep the Torah and be regular in worship, or of promises that God would bless the cultic community around the temple. Hanson sees this trend as beginning with Ezekiel, continuing in Haggai and Zechariah, and passing on into the Chronicler's understanding of prophets.

But in tension with this shift toward the cult, there was also a second, minority tradition which kept alive "authentic" prophecy, the inheritance of Amos and Isaiah. This prophetic movement had as its task to protest against the increasingly static and complacent institutions of Second Temple Judaism. Its best representative is Trito-Isaiah (Isaiah 56–66). Trito-Isaiah's opposition to rebuilding the temple (66:1) stands in continuity with the preexilic prophetic protest against the centrality of the temple, expressed most clearly by Jeremiah (see, for example, Jer 7:4, "Do not trust in these deceptive words: This is the temple of the Lord, the temple of the Lord, the temple of the Lord"). According to Hanson, prophets such as Trito-Isaiah were not officials appointed by the Second Temple state but outsiders, just as the great preexilic prophets had been, denouncing the society of their day and attacking its cultic life as an empty show. This Isaiah 58 attacks solemn fasts in terms very similar to those used by the preexilic prophets to condemn feasts. The message here is that Yahweh hates fasting unaccompanied by social justice, and (by implication) will punish those who use such pentitential practices as a cover for an unreformed life. It contrasts with Zechariah's cheerful optimism that fasts will cease merely because (in the newly restored and forgiven Jerusalem, which is to enjoy God's blessing) they will no longer be appropriate (Zech 8:18–19). Trito-Isaiah is full of sharp condemnations of the corruption of cultic life (56:9–12; 57:1–13; 59:1–8;

65:1–12). It is hard to see him (or them, if the work is a collection of oracles by many hands) as any kind of temple official paid to maintain the institutional stability of the restored nation.

Hanson suggests that it is in this prophetic protest movement that the roots of apocalyptic are to be found, and that Trito-Isaiah represents "the dawn of apocalyptic." The insights of this movement continue in the works commonly called "proto-apocalyptic"—Isaiah 24–27, Joel, and Zechariah 9–14. Thus the "liturgy" type of prophecy by no means succeeded in completely displacing the old independent prophetic spirit, which continued to exist and to resist the tendency toward "establishment" attitudes in the Second Temple period. These independent prophets believed that Yahweh's hands were not tied by the institutional structures that had been established. Yahweh was still free to intervene dramatically in human affairs and, if he saw the need, to punish Israel as of old. To use the terms proposed by Plöger (1968), the postexilic *theocracy* succeeded in taming most prophets and reducing them to mere state officials—not unlike the "institutional prophets" whom Elijah, Micah, and Jeremiah had opposed; but there remained a loyal band of prophets who insisted that Yahweh's word to Israel included an *eschatology*—a message of doom on a disobedient people.

Hanson's theories have been widely accepted in OT scholarship, with the result that the picture of prophecy in postexilic times has become more subtle than it was at the end of the last century. There is no single model that will account for the role and function of "prophets" in the Second Temple period, as though all prophets were the same. Rather, we seem to have at least two radically different types. Some have asked whether there is really such a sharp distinction to be drawn between, for example, Trito-Isaiah and Zechariah; for Zechariah seems also to envisage the need for moral (not merely cultic) reform—Zech 7:1-7 criticizes fasting in much the same terms as Isaiah 58. Conversely, Isaiah 56–66 contain some oracles that seem perfectly well-disposed toward the restoration of Jerusalem and its cultus (the whole of Isaiah 60–62 belongs to this tradition). It has also been noted that the apocalyptic movement is by no means homogeneous and that not all apocalypses can be regarded as anti-"theocratic"; some indeed are entirely noneschatological. However, Hanson's work has been important in establishing that something akin to the preexilic tradition of noninstitutional, independent prophets did continue after the Exile. We should not be misled by the fact that many of those responsible for our finished OT tried to erase the traces of this movement by preserving rather few of its works, and by hijacking the term "prophet" for use as a technical term in describing the personnel of the temple. Enough remains in the OT to show that there were prophets who had no official role even after the Exile, and that these persisted in denouncing the hierarchy of temple and nation when they saw fit.

C. Prophetic Experience

The question of prophetic experience is an obscure one in every period of OT history. In the postexilic age the most noticeable development is a greater emphasis on the *spirit* of God as the motive force behind prophetic utterance. Ezekiel speaks of the spirit of Yahweh transporting him from place to place, and this seems intended to imply an "out-of-the-body" experience or perhaps even literal levitation (at one point he is picked up by a lock of his hair: see 3:12; 8:3; 11:1, 24). Trito-Isaiah contains a famous reference to the spirit of Yahweh as the inspiration behind his prophecy (Isa 61:1); and throughout Haggai and Zechariah there are repeated references to the spirit (Hag 1:14; 2:5; Zech 4:6; 7:12), though some scholars think that these are additions by the editors of the books, for whom it was important to stress the activity of the spirit in the restored community. Joel 3:1–2—Eng2:28–29 explicitly refers to the gift of prophecy as resulting from the pouring out of God's spirit, predicting that a time will come when this gift will be extended to all humankind.

As is well known, references to the spirit are very rare in the preexilic prophets, so that we have clear evidence here of a shift in understanding of the prophetic experience. It is not clear, however, whether this reflects any change in the experiences prophets actually had—whether, for example, the postexilic experience was more dramatic, or "ecstatic," or was in some sense a return to the uncontrolled, frenzied activity of the preclassical prophets whom we meet in the books of Samuel and Kings and upon whom the spirit of Yahweh "came mightily" (cf. 1 Sam 10:10), driving them to act in uncontrollable, dervishlike frenzy. While this is possible, it may be simply that the post-exilic community spoke more of the spirit as

the motive force behind prophecy as a way of emphasizing its divine origin, without meaning to imply that the psychological experience involved had changed significantly from preexilic times. It may be better to ask why the great classical preexilic prophets seem to *avoid* reference to the spirit of Yahweh, when both their predecessors and their successors seem to take it for granted that this is the best language to use in explanation of prophetic gifts.

A more significant shift may lie behind the greatly increased interest in visions and dreams in postexilic prophetic books. The passage from Joel just cited glosses the extension of prophetic gifts to all by saying, "Your sons and your daughters shall prophesy, your old men shall *dream dreams,* and your young men shall *see visions.*" If it is right to see significance in the insistence by preexilic prophets on hearing the word of Yahweh rather than on seeing visions or dreams, this change may well indicate an important new departure. Jeremiah once explicitly distinguishes true prophecy from seeing visions: "Let the prophet who has a dream tell the dream, but let him who has my word speak my word faithfully. What has straw in common with wheat? says the Lord" (Jer 23:28). This appears to imply that true revelations from Yahweh do not come in visions or dreams, though it is not clear what experience is concretely implied by "him who has my word." Does this refer to "audition," a supernatural but literal hearing of voices, or to some more subtle inner conviction that Yahweh has spoken in the heart? In any case, preexilic prophets are not uniformly opposed to visions: both Amos (7:1, 4, 7; 8:1; 9:1) and Isaiah (6:1) report visions which enshrine the word Yahweh is speaking to his people, and they show no embarrassment about this mode of revelation—unless these reports are the work of postexilic redactors.

At all events postexilic prophets and the collectors of the oracles seem to have regarded visions as the normal method by which God communicates with his messengers; and sometimes the visions in question are detailed and full of symbolism, a kind of pageant played out in front of the prophet's eyes, each incident within which has allegorical significance (see, for example, the vision reports in Zechariah 1–6). Amos' visions already contain a symbolic component. In that a commonplace object (a basket of summer fruit, a plumb line) is given a deeper meaning, often through wordplay (cf. also Jer 1:11–12). But in the postexilic period the visions become lengthier, and sometimes a whole drama is acted out in symbolic form, requiring interpretation (often by an angel) before its significance can be grasped by the prophet and communicated to his hearers. The earliest example of this is Ezekiel's vision of the coming fall of Jerusalem, recorded in Ezekiel 9. In later apocalyptic works such visions become deliberately obscure and riddling, so that it is quite impossible to understand them without the appended explanation. Such is the case, for instance, with the visions of Daniel, or (outside the Bible) of Enoch in the various books attributed to him.

A question which this often raises in the minds of students of apocalyptic, but one which is equally useful in studying the prophets, is whether in some cases the vision is not a "genuine" vision at all, but a literary convention deliberately and consciously adopted by the prophet. If so, then the "prophet" or apocalyptist is to be seen more as a writer than as a speaker. This question arises already with Ezekiel and Zechariah, for their allegorical visions seem to lack the immediacy and directness of the brief vision reports in Amos or Isaiah. There is no reason to rule out the possibility that some postexilic prophecy may have been communicated in writing, by the production of fly sheets which could be passed around among a literate religious group, rather than by the kind of public declamation that we associate with prophets like Isaiah or Jeremiah. In the case of apocalyptic works, it is virtually certain that this is how the works were appropriated by their intended audience. Of course the suggestion that some prophecy may have been literary from the beginning does not in itself detract from its inspiration; but it does imply that the prophet was a learned writer rather than a simple and perhaps illiterate spokesman for Yahweh. Since Hebrew culture seems to have lacked any conventional ways of describing literary inspiration, it may have seemed natural to account for such prophecies by attributing them to an origin in dreams and visions which had afterward to be written down—by contrast with the directness of the "word" of Yahweh which passed immediately through the prophet's mouth as he spoke to the people.

D. The Forms of Prophetic Literature

The postexilic period witnessed a breaking down of some of the distinctive forms of prophetic utterance. Oracles beginning "Thus says the Lord" or ending "oracle of Yahweh" continue to appear, but are less characteristic than they were in the books of the preexilic prophets. Sometimes these formulas seem to be scattered almost at random as a guarantee of prophetic authenticity, and have lost their original character of marking the beginnings and ends of distinct oracles. This is particularly marked in Haggai and Zechariah, where the phrase "says the Lord of hosts" appears more or less as a refrain (e.g., Hag 2:4–9; Zech 1:2–6, 14–17). Furthermore, what is introduced by such formulas is often not what we would recognize as an "oracle" in earlier prophetic writings. In Deutero- and Trito-Isaiah many of the oracles use liturgical forms, and this is part of a general drift toward the use of cultic forms by the prophets (as discussed above).

On the other hand, the postexilic prophets do not seem to follow their preexilic predecessors in using forms borrowed from other spheres of Israel's life with deliberately ironic or sarcastic effect. There is nothing like Amos' parodying of priestly *tôrôt* (e.g., 4:4–5) or his use of lament forms to suggest that Israel is already spiritually dead (e.g., 5:2). One has the impression that the forms of prophetic oracles are not taken directly from this or that everyday use, but are imitated from what is by now perceived to be "normal" prophetic style, without any awareness that originally each prophetic oracle had a distinct origin. It is as though postexilic prophets are producing imitations or pastiches of the existing prophetic collections, and whereas these are often jumbled because of the vagaries of transmission and editing, the imitations are jumbled because postexilic writers felt that this is how a prophetic book should look.

At the same time, some forms that scarcely occur at all in the preexilic prophets now come into prominence, notably the allegory, and the extended vision report (with its interpretation by an interpreting angel), which eventually becomes the form known as the apocalypse. There is also a profusion of oracles beginning "in that day" or "in the end of the days," which perhaps reflect the increasingly eschatological interest of these prophets. In general the developments are all consistent with the suggestion made in the preceding section, that prophecy gradually turned from a spoken into a written phenomenon, so that the forms used came increasingly to reflect leisurely literary composition rather than the needs of oral delivery, memorability, and immediate impact.

E. The Editing of Prophetic Books

This leads naturally into the next question: the editing of the prophetic books. A marked feature of the postexilic age is the growth of official or semiofficial versions of older writings, which gradually moved in the direction of becoming "Holy Scripture." Just as the Persian period saw the codification of the pentateuchal books to form the Torah, so at about the same time collections of prophetic oracles began to take on the character of sacred writings. At first perhaps these were revered by particular groups, but in due course they became part of the shared heritage of all Jews.

It is usually thought that the Exile itself provided the initial impetus toward the collection and codification of prophetic writings. For one thing, the event itself had vindicated the predictions of the preexilic prophets and so turned them from objects of scorn into venerable figures whom God himself had shown to be in the right; for another, the separation of so many Jews from their homeland made the preservation of the national literature imperative if Jewish culture and religion were to survive.

The process by which the prophetic books were compiled was almost infinitely complex, but it involved at least three separate elements. First, the authentic utterances of the prophets were arranged in order, sometimes chronologically (so far as the editors could guess at what this might be), sometimes thematically or on a catchword principle. Secondly, narratives about the prophet, which might or might not be of any historical value, were added. In the case of some prophets, such as Amos, very little such material was available, but with others, notably Jeremiah, it was very extensive. And thirdly, further oracles which had no original connection with the prophet in question were appended or worked into the earlier collection, until the ordinary reader could no longer discern the difference. With a book such as Isaiah this third stage probably contributed the greater part of the book. Indeed, from chap. 40 onward we have at least two collections which had probably existed in a semifinished form under who knows what name before they were added to Isaiah 1–39. Whether the editors intended to assert that the prophet

named in the book's superscription had in fact delivered all these oracles himself remains wholly uncertain. Later generations certainly took this to be implied. Some of the additional oracles may very well be genuinely prophetic, in the sense that they were originally delivered by people who would have claimed for themselves the same kind of inspiration as those in whose names the present books appear. But others may have always been essentially the work of scribes, composing what they took to be plausible "prophetic" utterances in an endeavor to update or revise existing oracles. And it seems clear that the same sort of process operated with all the prophetic books; the words of late postexilic prophets, once uttered and remembered, became subject to just the same procedures of redaction, addition, and embellishment that had by then already produced something like the present form of older books, such as Amos or Hosea. Only the beginnings of a distinct "canon" of Scripture eventually set limits to this kind of editorial work, and ensured that from then on comment and interpretation would have to take the form of acknowledged commentary rather than changes to the text of the prophetic books themselves.

How far the work of editors should itself be regarded as "prophetic" is largely a matter of our definitions. No doubt there were some for whom the work of interpretation entailed in the work of editing constituted a sharing in the inspiration of the prophet himself. Some people may have believed that Isaiah or Jeremiah himself continued to speak through the disciples who revised and collected his oracles—much as in later times the disciples of rabbis would give their own teaching but claim (and believe) that it was given "in the name" of their teacher, and of his teacher, and of the whole line of teachers in whose succession they stood.

Matters are complicated further when one remembers that, by the NT period, it was widely believed that the gift of authentic prophecy had died out in Israel—though its restoration, promised (it was felt) in Joel 3—Eng chap. 2, was eagerly hoped for. This belief could make claims to have received a *direct* divine revelation automatically suspect. The strange prediction in Zech 13:2–6, which regards "prophets," like idols and "unclean spirits," as a blight which Yahweh will remove from the land, may belong to a movement of thought in which any claim to be a prophet branded the claimant as an impostor. In such circumstances anyone who believed that God had spoken to him was obliged to dress his message up as the utterance of some ancient prophets, speaking in the time before "the spirit departed from Israel," as the Talmud expresses it. This is undoubtedly part of the reason for the pseudonymity of apocalyptic works; and it no doubt also explains some of the more improbable additions to the prophetic books, such as those which imply that Isaiah addressed the problems of the Babylonian or Persian periods, or that Zechariah was interested in the Greeks. There is, however, little evidence that prophecy did in fact die out, if by "prophecy" we mean the phenomenon of inspiration such as existed in the 8th century. Indeed, theories such as those of Hanson (discussed above) have made it seem probable that the postexilic age saw just as active a prophetic movement as the preexilic. But the forms of expression did change significantly, and postexilic prophets often expressed their oracles as additions to existing collections, or even as whole new works falsely attributed to figures from the past, rather than speaking in their own persons as earlier prophets had done.

EARLY CHRISTIAN PROPHECY

The phenomenon in early Christianity of inspired speech in the name of God, the risen Jesus, or the Spirit. Prophecy and its effects are evident in the books of the NT and in other early Christian writings.

A. Terminology and Definitions

A glance at the entry on "prophecy" in the standard dictionary of ancient Greek (Liddell and Scott) will reveal that in the world into which Christianity was born the terms *prophet, prophecy, prophesy,* and *prophetic* did not function univocally, but were used with reference to a variety of figures and functions (cf. Fascher 1927). *Prophētēs* in Greek was a synonym for *hypophētēs.* Originally, both meant simply "spokesperson" or "announcer," but both were used in derivative and metaphorical senses. "Prophet" was used not only to mean "one who speaks for a god and interprets his will" to human beings, but also for the cultic official keepers of the oracle (at Branchidae), for members of the highest order of the priesthood (in Egypt), for herbalists and quack doctors, for the interpreters of the oracles of the *mantis* (Plato, *Ti.* 72a), and hence derivatively for poets as such (cf. Titus 1:12, of Epimenides), and then metaphorically for proclaimers in general, including the announcer at the games. On the other hand, "prophet" and related words represented only one set of terms used for the claim to communicate messages from the gods, with other designations such as "seer," *mantis,* and "sibyl" being used in related and overlapping ways.

In the light of this state of affairs, the 1973 Seminar on Early Christian Prophecy of the Society of Biblical Literature adopted a definition based on the common features of the use of the "prophet" word group in a number of early Christian sources. This definition has been widely received. The following adaptation of it expresses the understanding of prophecy assumed in this article: "The early Christian

prophet was an immediately-inspired spokesperson for God, the risen Jesus, or the Spirit who received intelligible oracles that he or she felt impelled to deliver to the Christian community or, representing the community, to the general public." Since the term "inspiration" is used in a variety of senses, "immediately-inspired" is used here to express the prophetic claim that what he or she says represents the present, immediate voice of the deity. This does not exclude the use of sources, traditions, or the prophet's own reflections, all of which may be involved in the delivery of what the prophet perceives as directly revealed from the deity. This article investigates the phenomenon of prophecy so defined, whether or not it is labeled as prophecy. Conversely, other uses of the "prophet" word group are not explored.

B. Prophecy in the Hellenistic World

1. Gentile. The Judeo-Christian tradition did not introduce prophecy into the Hellenistic world. The inspired spokesperson for the gods, the oracle giver, the ecstatic mouthpiece for the deity, frequently called "prophet," was a familiar figure to the Greco-Roman populace. Many gods could speak through their prophets, of whom Apollo was only one of the more active. There were many shrines where he could be consulted by means of the oracle, of which Delphi was only the most famous.

Prophecy was located within the broad spectrum of devices by which information from the world of the gods was transmitted. There was a tradition at least as old as Plato of distinguishing *artificiosa divinatio* and *naturalis divinatio.* The former refers to divination by technical means such as the interpretation of dreams and reading the will of the gods from the flight of the birds and the livers of sacrificed animals, while the latter refers to communication of a message from the gods by inspired speech received in trance, ecstasy, or vision (Aune 1983: 24, 349 n 9). Greek prophecy was not always ecstatic. The spectrum of prophetic experiences ranged from raging loss of consciousness to sober declaration of the message from the god. Plutarch describes (*De def. or.* 431d–438e) the Pythia at Delphi as inhaling the vapors from a fissure in the earth, becoming "inspired," and delivering unintelligible utterances that were then translated by the "prophets." In other descriptions, the Pythia became inspired by drinking from the sacred spring, and delivered oracles that were quite intelligible. Probably different practices occurred at different times and places, even in the history of one oracle center such as Delphi. Plato's description (*Ti.* 71–72) of the mantic behavior of the agents of revelation, and the translation of their utterances into intelligible speech by the prophets, has perhaps been too influential in the scholarly assessment of Greek prophecy. Generalizations about prophecy in the Greco-Roman world should be avoided, but in a context where early Christian prophecy is being explored, some features that were usually characteristic of Hellenistic prophecy should be noted: (1) Hellenistic prophecy could be the result of the spontaneous inspiration by the deity, but it was normally a response to inquiries in which human beings took the initiative and was subject to manipulation. (2) Prophecy was not a function of a particular religious group and was not directed to a group of insiders, but was a part of the general public cultural scene, available to any interested person. (3) Prophecy was generally directed to the needs and inquiries of individuals, revealing the will of the deity or future information concerning the personal lives of individuals. (4) Oracles were generally ambiguous. Heraclitus' remark with reference to the Delphic oracle is characteristic: *oute legei, oute kruptei, alla sēmainei* ("she neither reveals nor conceals, but signifies"). (5) Oracles were generally brief and expressed in metrical form. (6) Collections of oracles were made, and later generations interpreted them with reference to their own situation. While Christian prophecy resembled pagan prophecy on points #5 and #6, prophecy in the Church was in contrast to its pagan counterpart on points #1–#4.

2. Jewish. Some streams of rabbinic Jewish tradition held the view that prophecy had ceased in the time of Ezra and would not return until the eschatological age (e.g., *Song of Songs Rab.* 8.9–10; *Num. Rab.* 15.10; *b. Yoma* 9b, 21b; *t. Sota* 13.2; *ʾAbot* 1). This view was reinforced by the widespread influence of the later Protestant canon of Scripture, in which there was presumed to be a gap of 400 years from Malachi to John the Baptist. Hence the popular tradition of the "four-hundred silent years." Except for the case of John the Baptist, who was incorporated into the Christian stream of history, the NT presents only minimal and indirect evidence for contemporary Jewish prophecy (cf. John 11:51; Acts 13:6). There is massive evidence for 1st-century Jewish prophecy, however, from the Jewish sources themselves.

a. Philo. If Philo was aware of the tradition of the cessation of prophecy, he ignored it. Prophecy had been available to every good Israelite and was still available to "every worthy man" (*Heres* 259). Like other Hellenistic Jews (e.g., Wis Sol 7:27), Philo understood all the religious leaders in Israel's history in prophetic terms, and understood prophecy in Hellenistic terms, using the complete range of the vocabulary of Greek ecstatic experience to portray biblical prophets. Moses and Abraham were prophets, and the Pentateuch was a collection of oracles. Like Josephus, Philo never explicitly calls himself a prophet, but his extraordinarily frequent discussions and detailed descriptions of the prophetic experience strongly suggest that he was describing a contemporary phenomenon he had observed in the synagogue, indeed that he himself experienced a kind of inspiration akin to the prophetic (cf. e.g., *De mig. Abr.* 35; *De Cher.* 27; esp. *Heres* 259–60).

b. Rabbis. The rabbis, too, testify to the fact that the prophetic spirit was alive and well in the Judaism from which Christianity was born. The heavenly voice *(Bath Qol)* was heard even by those rabbis who believed that it could not take precedence over traditional Halakah. Though by no means a major element in rabbinic religious experience, a significant number of prophetic phenomena may be documented even among those rabbis where the dogma of the end of prophecy might be expected to have been most influential. We should not, therefore, be surprised to find an abundance of evidence for prophets and prophecy in those circles where the rabbinic dogma was less influential, namely among the Zealots, Essenes, and other apocalyptically oriented groups (though conspicuously absent among the Sadducees).

c. Josephus. Josephus claimed that during the 66–70 war he presented himself to the conquering Vespasian as a messenger sent from God to announce that Vespasian would be the new Roman emperor (*JW* 3.400–402). Without using the word, he thus claimed to be a prophet himself. The term "prophet" is used in several senses by Josephus, who used it to describe Zealot prophets and Essene seers, as well as folk prophets among the people, especially during the critical period of the war and siege of Jerusalem (66–70 C.E.). The result is that it is not always clear that he refers to persons characterized by the claim to be inspired spokespersons for God, as in the definition used here. It is equally clear, however, that he does describe such people, though for his own political purposes he often describes them as "false prophets." That the prophetic phenomenon was alive in 1st-century Judaism is illustrated in Josephus' account of Joshua (Jesus) ben Ananiah, an unlettered peasant who began in 62 constantly to repeat an oracle of doom against the city, and continued despite insults and torture to repeat his oracle until the last days of Jerusalem in 70, when he was killed by a Roman projectile (*JW* 6.300–309).

d. Qumran. Qumran illustrates the presence of prophecy in one Jewish fringe group, which believed that it lived in the last days, within which the gift of prophecy had been renewed. The Teacher of Righteousness did not use the word "prophet" of himself, but functioned as a prophet, speaking from the mouth of God (1QpHab 2:2–3), taught by God himself, who has poured out his spirit upon him (7:4–7). As in early Christianity, prophecy was related to the interpretation of Scripture and to the eschatological theology of the community.

e. John the Baptist. The first prophet described in the New Testament is John the Baptist, whose career was contemporary with, and in some respects like, that of Jesus: he was a popular charismatic figure who created eschatological excitement, was alienated from conventional culture, was critical of the established authorities and suffered death at their hands, and had a community of disciples that continued to revere him after his death, Matt 3:1–12 (= Mark 1:4–8; Luke 3:2–18); 11:2–19 (= Luke 7:18–35); 14:5 (= Mark 6:17–29; Luke 3:19–20); 17:10–13 (= Mark 9:11–13); John 1:19–36; Luke 1:5–80; Acts 19:1–7. As a result, the Christian tradition, which could not ignore him, was at pains to fit him into a Christian understanding of the founding events and to show his subordination to Jesus. This means that the portrait of the historical John cannot be read off the surface of the NT text, but must be disentangled from the later layers of Christian interpretation. One way some, but not all, early Christians came to terms with John was by interpreting him as Elijah, understood as the forerunner of the Messiah (Matt 17:9–13; but contrast John 1:21). It is thus difficult to determine, for example, if John's strange dress is historical reminiscence or the later effort to describe him as Elijah (compare Mark 1:6 and 2 Kgs 1:8). Luke in particular is intent on describing John as belonging to the prophets of Israel described in the Hebrew Bible (3:10–14,

peculiar to Luke). Still, it is clear that John was a prophet conscious of a direct call by God, who called for repentance on the basis of the eschatological judgment in the near future (Matt 3:7–12 = Luke 3:7–9). John's baptism could well be understood in the category of the symbolic actions of the prophets. He expected an eschatological "mighty one" who would execute the fiery baptism of God's judgment on those who had not received his baptism with water as the sign and seal of their repentance. John is thus pictured in the NT as belonging to the prophetic line of biblical prophets, but as "more than a prophet," i.e., the eschatological prophet who serves as the immediate forerunner and herald of the final act of God's saving history (Matt 11:9 = Luke 7:26).

f. Jesus. All four Gospels picture Jesus as a prophet. He is regarded as a prophet not only in the eyes of the people (Matt 16:14; 21:11; cf. 26:68; Mark 6:15; 8:28; 14:65; Luke 7:16; 9:8, 19; John 4:19; 9:17), but in one of the few sayings preserved in all four Gospels, he applies the proverb of the prophet rejected in his native land to himself (Matt 13:57; Mark 6:4; Luke 4:24; cf. 13:33; John 4:44). Moreover, Jesus is pictured as receiving a vision at the beginning of his ministry corresponding to a prophet's call (Matt 3:13–17; cf. Isa 6:1–10, and the role that 6:9–10 plays in the Gospels' accounts of Jesus' ministry; Mark 4:10–12 [= Matt 13:10–11 = Luke 8:10]). The spirit that he received in baptism would be understood in a Jewish context as the spirit that made one a prophet. Jesus is described as having apocalyptic visions of the fall of Satan (Luke 10:18) and even of delivering prolonged apocalyptic discourses, Mark 13:4–37 (= Matt 24:3–36 = Luke 21:7–36); Luke 17:21–37. For Luke especially, "prophet" is not a mistaken, preliminary, or minor category, but is one of his major categories of christological thought: Jesus is indeed the eschatological prophet promised in Scripture (Luke 24:19; Acts 3:22–23; 7:37; cf. Deut 18:15–18), who specifically identifies the Spirit that empowers him as the prophetic Spirit of Isa 61:1–2 (Luke 4:16–21). Jesus' authority is not the derived authority of the scribe, but the immediate authority of the inspired prophet (Matt 7:29).

Yet, if in the case of John the Baptist the historical figure of the prophet John is covered with layers of Christian interpretation, this is all the more true in the case of Jesus. Was the historical Jesus a prophet; or does "prophet," i.e., "eschatological prophet," the final messenger from God before the end, belong to the early layers of Christian interpretation of the significance of Jesus? Christian scholars of the most varied theological positions have generally agreed that the NT's picture of Jesus as prophet is historical bedrock. Conservative and evangelical Christians, while affirming the "higher" christological titles as more important, have, nonetheless, concurred in asserting that Jesus was also a prophet (Jeremias 1971). Liberal theologians, while considering other titles such as "Son of God" to be later church interpretation, have celebrated Jesus as the prophet of social justice (Rauschenbusch 1917; Enslin 1968). Rudolf Bultmann's agnosticism about the historical Jesus did not extend to his doubting that Jesus was a prophet, and his students who returned to the ("new") quest of the historical Jesus found "prophet" to be the key category (Bultmann 1958; Bornkamm 1960; Conzelmann 1969). Some recent American study of Mark (Mack 1988) and Q (Robinson 1987; Kloppenborg 1987) has argued that the prophetic picture of Jesus was a church construction, and that Jesus was more like a Cynic sage than a Jewish prophet, but the majority of scholarship would see two prophetic figures, John and Jesus, at the beginnings of the Christian movement.

C. Prophecy Reflected in the Literature of Early Christianity

The following survey presents the documentation for the phenomenon of Christian prophecy from its origins to the middle of the 2d century, i.e., prior to the advent of the "New Prophecy" with Montanus.

1. Paul. The first reflection of Christian prophecy in Christian literature is 1 Thess 5:19–20, in which Paul appears as the advocate of the prophetic gift over against its detractors. Prophecy has appeared in the Thessalonian congregation, had created some sort of problem that caused some of the Thessalonians to reject it, and Paul promotes their acceptance of the phenomenon as a gift of the Spirit, but not without critical evaluation. The most extensive discussion of Christian prophecy in the NT is found in 1 Corinthians 12–14. As in 1 Thessalonians, the discussion has a polemical tone, again revealing Paul as an advocate of prophecy, this time over against an inappropriately high valuation of glossolalia. These prophecies were more than normal pastoral preaching; it was a matter of direct revelation (cf. 1 Cor

14:29–32). It is impossible to gain any idea of the content of the revelations of the Corinthian prophets, except that in contrast to glossolalia they were expressed in intelligible language, and in Paul's view were directed to the edification of the whole church rather than responses to the private inquiries of individuals. The brief reference to prophecy in Rom 12:3–8 is valuable in that it is not polemical. Rather, a fundamental assumption of Paul's comes to expression here, namely, that wherever there is a church the Holy Spirit is at work, and wherever the Spirit is to be found there is a principal manifestation of the Spirit, the gift of prophecy. Prophecy, in fact, is the only constant in Paul's "lists" of charismata (1 Cor 12:8–11, 28–30; 13:1–2; Rom 12:6–8). When Paul "ranks" spiritual gifts, prophecy appears second only to the apostolic office or, from another perspective, love.

Since Paul insists so adamantly on his apostleship and thus does not refer explicitly to himself as a prophet, it has often been overlooked that, when defined functionally as above, Paul is a prophet who does in fact implicitly claim to exercise the prophetic gift (1 Cor 13:2; 14:6, 37). Though reluctant to parade it, he has "visions and revelations of the Lord" (2 Cor 12:1–10). The many points of contact between Paul's own biographical statements and the prophets of the Hebrew Scripture document Paul's awareness of standing within the prophetic succession (cf., e.g., Gal 1:15–16; Jer 1:5; Isa 49:1). Scholars have identified numerous passages in Paul's epistles where he is incorporating his own prophetic revelations or the oracles of some other Christian prophet. Three that are commonly so identified are 1 Thess 4:15–17; Rom 11:25–26; and 1 Cor 15:51–52, while a larger number are identified more tentatively. Paul's epistles also contain a large number of prophetic forms and formulas, which he seems to use habitually and unconsciously even when he is not citing a prophetic oracle (Müller 1975).

Paul's prophetism was once understood as of a piece with Hellenistic prophecy generally (Reitzenstein 1927; Leisegang 1919). More recent study has indicated that Paul's understanding of prophecy was not simply a reflection of the prophetic phenomena experienced in his churches but stands in tension with them (cf. 1 Thess 5:19–20 and especially 1 Corinthians 12–14). While the line between "Greek" and "Jewish" understanding of prophecy should not be drawn too neatly, it is, nevertheless, the case that Paul's understanding of prophecy is shaped by his Scripture and Jewish tradition, as well as by the understanding of prophetism in early Jewish Christianity.

2. Deutero-Paul. It is striking that there is no reference at all to prophecy in Colossians, and that "spirit" occurs only twice, each time with reference to the human spirit. "Spiritual" in 1:9 and 3:16 does suggest insight and songs given by the spirit (not just "lively tunes"), but Colossians seems very reserved with reference to the Pauline enthusiasm for prophecy, and may already express a reaction.

Ephesians, on the other hand, looks back upon the first generation and considers prophets, along with apostles, to be a constituent element in the foundation of the Church (2:20; 3:5; 4:11). The great spiritual insight of the inclusiveness of the Church was given through the post-Easter Christian prophets (not the historical Jesus!). While it is clear that the author of Ephesians admires prophets, it is equally clear that they are no longer a living reality in his church.

Likewise in the Pastorals, prophecy is primarily a remembered phenomenon from the Pauline past, rather than a vital part of the Pastor's own church, in which not charisma but "regular" ordination at the hands of authorized officials designates people for leadership in the Church. There may still be some stirrings of the prophetic spirit manifest in the references in 1 Tim 1:18; 4:14 and 2 Tim 1:14, but if they refer to the time of the author, then the gift of prophecy is regarded with more than a bit of suspicion. The point seems to be that claims to charismatic endowment should lead to regular ordination, and in fact operates properly only with the legitimately ordained channels and in connection with the deposit of tradition *(hē parathēkē).* More likely these texts, like 1 Tim 4:1–5, belong to the fictive world of "Paul" in the first generation. As in Ephesians, prophecy seems to be admired from a safe distance.

3. Q. Our earliest source for Palestinian Christianity is the hypothetical document Q, which is often considered a witness to the prophetic nature of earliest Christianity. "Prophets" are mentioned in six pericopes of Q. Of these, four refer to the prophets of Hebrew Scripture (the convention of designating Q passages by their Lukan location is here followed): 6:23; 10:24; 11:47; 16:16. ("Prophesy" in the Q passage Matt 7:22 is a Matthean addition; "prophets" in the Q text Luke 13:28 is a Lukan addition.) The

way in which these texts are used indicates that for the Q community the prophets were considered the key leaders of ancient Israel. Two references point to prophets of the Q community's own time. In 7:26 John is called "more than a prophet," a designation that would include both John and Jesus as the twin messengers of transcendent Wisdom (cf. 7:33–35. In 11:49 the prophets of the Q community are included in this same line. The result is that for the Q community there was an unbroken succession of prophets from the times of Israel through John and Jesus to the Christian prophets of their own community. Rejection and persecution were the common lot of all (11:47–51). The Q document is replete with prophetic forms such as [*amēn*] *legō de hymin* ("[Amen] I say to you"). Whether some sayings of Christian prophets may be contained in Q as sayings of Jesus is discussed below.

4. Mark. Though he quotes their writings often, Mark specifically refers to OT prophets only twice (1:2; 7:6, both times to Isaiah), and makes two incidental references in connection with the understanding of Jesus as a prophet (6:16; 8:28). He never refers to John the Baptist or Jesus as a prophet (except for the implied self-identification by Jesus in 6:4). His only reference to prophets in the post-Easter time of the Church is 13:22, where they are considered false prophets, and are the Church's only opponents specifically named. Mark seems to be opposed to the prophetic phenomenon, which may indicate that Christian prophets who announced new sayings of the Lord were a problem in his church.

5. Matthew. The gospel of Matthew, on the other hand, seems to represent a church where prophecy is present and critically affirmed by the author, much as was the case with Paul and the Pauline churches. Unlike Paul, the author himself is not a prophet, but more of a scribal type (he seems to be describing himself in 13:52). His church may have been "founded" by the Q messengers (Luz 1985); he seems to stand in a later phase of the Christian prophecy manifest in the Q community. Matthew rephrases his Q source to read "the prophets *who were before you*" in 5:12, joining his own community to the prophetic community of Israel and Q. A saying peculiar to Matthew, 10:41, concludes his version of the "Missionary Discourse," indicating that Christian prophets were among the missionaries sent out by Matthew's church. In 7:15–23, general exhortations to the Christian community, in which neither the word nor idea of prophecy appears, have been altered to deal specifically with the problem posed by prophecy in the Matthean church. The passage makes clear that for Matthew the gift of prophecy did not guarantee that one was a true disciple; "doing the will of God" was the ultimate criterion.

6. Luke-Acts. Acts is the only NT document that purports to describe prophets in the earliest Church. Agabus stands out most clearly (11:27–30; 21:1–14) as one who is not only called "prophet" by Luke but fits the functional definition given here as well. Judas and Silas are prophets (15:32). Philip has four daughters who prophesy (21:9). Anonymous prophets proclaim their message by the Spirit, a term used interchangeably in such contexts with "Holy Spirit," "Spirit of the Lord," and "Spirit of Jesus," showing that it is the exalted Christ who is thought of as active in the prophetic event (16:6–7; 20:23; 21:4). A group of prophets and teachers at Antioch includes Barnabas and Paul (13:1–2). That Luke intends to include Barnabas among the prophets seems to be clear both from the grammar of this text and from 4:36; whether or not Paul is called a prophet in 13:1–2 is not absolutely clear. At the least, Paul is associated very closely with church prophets and is described by Luke as functioning as a prophet (9:3–6; 13:9–12; 16:6–9; 18:9–10; 22:6–21; 26:9–20; 27:23–24). In addition to this portrayal of particular individuals who manifest the prophetic gift, Luke understands that the Spirit has been poured out on the whole church, and this Spirit is preeminently the Spirit of Prophecy (2:17–18, 38; 4:31; 6:10; 16:6–7). This means that, though Luke does recognize certain persons in the Church who function consistently as prophets (whom he so designates), he does not draw a sharp line between prophets and nonprophets. For Luke, whoever in the church acts in the power of the Spirit is something of a prophet.

Luke is obviously interested in portraying the Church as the continuation of the OT people of God, which leads him to portray Christian prophets (as well as John the Baptist and Jesus) as similar to the prophets of his Bible. Agabus' binding himself with Paul's belt, for example, is reminiscent of the symbolic acts performed by Isaiah, Ezekiel, and Jeremiah (Acts 21:10–14; cf. Isa 20:2–6; Ezekiel 4–5; Jer 13:1–11). This and other Lukan *tendenzen* make it difficult to extract the historical reality that lay behind Luke's theological portrayal. Prophets may have been much more active in the leadership of the earliest

Church, for example, than Luke's account indicates, for it emphasizes his own interests in ordered apostolic leadership. In this, Luke-Acts belongs with the Deutero-Pauline tradition discussed above. This means that in the gospel of Luke, where Jesus is portrayed in the garb of a biblical prophet, it is difficult to distinguish history from Luke's own theologizing. An exception may be provided by the outburst of prophetic phenomena in the Lukan Birth story (cf. Luke 1:35, 41–45, 67–79; 2:29–35), which may preserve memories and materials from early Christian prophets.

7. John and the Johannine Tradition. Only Jesus is called "prophet" in the gospel of John (4:19, 44; 9:17), and only Caiaphas is said to "prophesy" (11:51). Yet the function of Christian prophecy seems to be clearly evidenced in the Johannine church. Whether or not the author of Revelation is regarded as a member of the Johannine "school," the numerous points of contact between the gospel and the Apocalypse indicate interaction between the evangelist and Christian prophecy, since the Apocalypse obviously was written by a prophet. The letters, too, come from a circle that was familiar with the prophetic phenomenon and was beginning to experience some manifestations of it as problematic, without denying its validity per se (1 John 2:20, 27; 4:1–3). And since the "we" of 1 John cannot be separated from the "we" of the Fourth Gospel, we would expect a priori that the gospel would also originate from a circle in which the prophetic ministry was alive. The internal evidence of the gospel bears out this expectation. The Johannine portrayal of both the Paraclete and Jesus seems to be influenced by the author's perception of the ministry of Christian prophets in the Johannine church (cf. Boring 1978). On the night before Jesus' death, the disciples are promised that the Spirit will come in Jesus' name and speak with Jesus' authority, the Paraclete who will both keep alive the memory of Jesus and reveal new truth after Jesus' death (14:15–17, 25–26; 15:26–27; 16:8–11, 12–15). The functions of Christian prophets are here described.

8. Revelation. The Apocalypse is our most obvious, and most extensive, example of Christian prophecy among our earliest documents, being rivaled only by the later Hermas. Like Paul, the author does not specifically use *prophētēs* of himself, but nonetheless claims to write *prophēteia* (1:3; 19:20; 22:7, 10, 18–19) and to belong to a group of *prophētai* (22:9). the "book" (i.e., letter) is throughout the address of the risen Lord to his church through his immediately inspired spokesman. It is not only chapters 2–3 that are presented as the word of the exalted Lord, but the document as a whole. The subjective genitive of 1:1 embraces the whole document (cf. the series of quotations in 21:9, 15; 22:1, 6, 8, 9, 10, 12). Although the apocalyptic form of sealed scroll and interpreting angel is retained, it is subordinated to the understanding of revelation as Christian prophecy in which the risen Lord speaks through his prophet. Though saturated with apocalyptic content as well as apocalyptic forms, Revelation is thus, nonetheless, a thoroughly prophetic document. "Prophetic" and "apocalyptic" are not alternatives. Unlike the apocalyptists, John speaks in his own name the revelations he receives from the exalted Lord. That he uses traditional materials and stereotyped forms is no objection to the reality of his visionary experiences, for prophets customarily made use of traditional forms and materials to convey their messages received in various degrees of "ecstatic" experience.

9. Didache. The Manual of Church Order (*Didache* 6–15) comes from a Christian community that both honors prophecy and has come to experience it as a problem. This is the reason for the intense interest of the author(s) in prophecy, an interest that causes the instructions on prophets to be elaborated far beyond what is said about "apostles" and "teachers." These instructions do not seem to be all of a piece, indicating that they came into being from different hands over an extended period. For example, the prophet is considered to be above question when he speaks "in the Spirit," so that to challenge him is the unforgivable sin (11:7); and yet some things that he says are not to be tolerated, even if said "in the Spirit" (11:12). The criterion of true prophecy is whether he teaches according to the truth (11:1); but even that prophet who teaches according to the truth is a false prophet "if he does not practice what he teaches" (11:10). The *Didache* has been most influential in supporting the one-sided theory that early Christian prophets were itinerant "wanderers" rather than "settled" (Harnack 1910), but a close reading of the *Didache* indicates that its support for this purported characteristic of early Christian prophetism has been overemphasized.

10. Ignatius. The one instance in the Bishop of Antioch's letters that may refer to Christian prophets is not clear; it may refer to biblical prophets (*Phld.* 5:2). In any case, the reference is only incidental and provides no information. On the other hand, Ignatius speaks of himself as having "cried out" with a "great voice," the "voice of God," in which "the Spirit was speaking" (*Phld.* 7:1–2), in a context which suggests he thought of himself as speaking prophetically. The content of his oracle is an admonition to "give heed to the bishop, the presbyter, and the deacons," so Ignatius is somewhat like the Pastorals in that charisma serves primarily to reinforce church order through the developing regular channels.

11. Odes of Solomon. The prophetic spirit was thought to inspire not only oracles but hymns (cf. 1 Cor 14:15; Col 3:16; Eph 5:19; cf. the *Hodayot* from the prophetic Teacher of Qumran). The collection of forty-two hymns, all composed by the same author, seems to express the claim to prophetic inspiration. In some of them Christ speaks in the first person, as in Revelation. Particularly well-known is the concluding hymn, which expresses the prophetic self-consciousness in the words (42:6).

Then I arose and am with them,
and will speak by their mouths.

12. Hermas. The *Shepherd of Hermas* likewise emanates from within a structured ecclesiastical context, the Roman church in the first half of the 2d century, and is written by an author who never refers to himself as a prophet. Unless the "prophecy" of the author is only a literary device, the author is, nonetheless, a prophet by our definition, for the document repeatedly presents itself as the revelation of the Holy Spirit or Son of God to his church in the latter days (e.g., *Vis.* IV. 1.3; *Sim.* IX 1.1). The prophetic phenomenon seems still to be present in the author's church, where both "true" and "false" prophets can be observed and must be tested (*Man.* XI). There still seem to be some marks of genuine prophetic self-consciousness, e.g., the revelation of a second chance of repentance in view of the impending persecution and the imminent return of the Lord (*Vis.* III. 1.9). But even if the author does have some personal prophetic experiences, for the most part his writing is a tedious, labored, uninspired, and uninspiring work, formally in the prophetic category but written by one for whom prophecy is already a traditional phenomenon that may be stereotyped. In him, we hear the last faint echoes of the "old" prophecy. After him, references to prophecy in the Church are oriented to the "New Prophecy" of Montanism, either in affirmation or in repudiation.

D. General Characteristics and Themes of Early Christian Prophecy

1. Extent, Uniformity, and Variety. The survey above indicates that prophecy was not rare, episodic, or isolated, but was a widespread phenomenon in early Christianity that has left its traces in a variety of early Christian literature. Christian theology's emphasis on "the Prophets" (of the Hebrew Scripture) as those who predicted the days of Jesus and the Church has contributed to the fact that "prophecy" is frequently neglected as a major category for comprehending early Christianity and its own self-understanding. In fact, prophets and prophecy form a primary common denominator and line of continuity between the Hebrew Bible and the Christian Scripture. We have seen that there is considerable variety in the manifestations of prophecy in early Christianity. There are, nonetheless, enough common features to permit some general impressions, to which there are always exceptions.

2. Prophets as Church Figures. The context of prophecy is the worshipping congregation, to which prophets belong as constituent members. Although prophets, like others, on occasion travel from place to place, it is overdrawn to impose a doubtful interpretation of prophecy in the *Didache* on all our other sources, and picture itinerary as of the essence of Christian prophetism.

3. Prophets as Religious Figures. While Early Christianity generally believed that the Spirit was given to the body of believers as a whole, and not only to gifted individuals within it, prophecy was not an amorphous potentiality diffused throughout the Christian community. There was usually an identifiable group that functioned as prophets, who were recognized as such by the Church. Since the Spirit was given to the Church at large, however, the prophetic gift did not separate prophets from the Christian community. The Church as a whole, which also possessed the Spirit, was charged with critically evaluating the utterances of the prophets (Rev 2:2, 6, 14, 15, 20; 1 Corinthians 14). The prophets spoke with authority as they announced the unqualified word of the Lord, but it is also clear that they should

expect a deliberate, engaged response from the community. The prophets functioned in the gathered worship of the community, not in private séances or consultations. The burden of their message was the edification of the community, not the satisfaction of private curiosity.

4. Prophets and Tradition. Tradition and revelation are not alternatives. The reality of the revelatory experiences of the prophets did not mean that they were divorced from tradition. Their oracles could be expressed using words from Scripture or other Christian tradition as the vehicle of their message.

5. Prophets and the Continuing Voice of Jesus. Prophets could express their revelations in words of the historical Jesus, which they sometimes took up and re-presented in a modified form more relevant to the new situation. Many scholars believe that new sayings of Jesus were spoken by church prophets. These sayings were blended into the Church's tradition of Jesus' words and appear in the narrative framework of the Gospels as sayings of the earthly Jesus. Since to early Christianity the earthly Jesus and the heavenly Lord were one and the same person, prior to the fixation of the tradition in the writing of the Gospels no consistent distinction was made between sayings of the pre-Easter Jesus and post-Easter revelations through church prophets. Although the presence of such prophetic sayings in the gospels is generally acknowledged, whether particular sayings that originated as Christian prophecy can be identified with any degree of confidence is a disputed point among scholars (pro: Boring 1982; con: Aune 1983; Hill 1979).

M. EUGENE BORING

PROPHETS, LIVES OF THE. A short Jewish writing, deriving probably from the 1st century C.E. Its opening words describe the work's content: "The names of the prophets, and where they are from, and where they died and how, and where they lie."

Although Syriac, Ethiopic, Latin, and Armenian versions are extant, these all appear to derive from Greek originals. The numerous Greek witnesses are generally sorted into four major recensions: long and short recensions attributed to Epiphanius, another ascribed to Dorotheus, and an anonymous recension. Of these the last appears to be the earliest and to preserve the best text. It is best represented by Codex Marchalianus (Cod. Vaticanus Gk. 2125, 6th century, Vatican Library), known by the siglum Q. The Greek manuscripts differ considerably in the order in which the canonical prophets are presented and in their choice of nonliterary prophets to be treated.

Because of provenance and subject matter it is often assumed that the document was written originally in a Semitic language: Syriac, Hebrew, or Aramaic. Torrey (1946) believed it possible to demonstrate that certain problems in the Greek text are due to the mistranslation of an underlying Hebrew writing. Klein, on the other hand, maintained that an Aramaic original was as possible as a Hebrew one (1937). Schermann (1907a), whose work on the document remains fundamental, postulated a Hebrew source, but insisted that the earliest Greek text was not simply a translation. It thus remains possible that, despite an origin in the folklore of Jewish Palestine, the work may have first assumed its present shape in Greek.

Some of the Greek mss are clearly Christian products, incorporating sections concerning John the Baptist, his father Zechariah, and other early figures referred to in the NT. Fortunately, the Q ms contains none of these obvious interpolations, but more subtle Christian alterations are suspected at a few points. A date after the emergence of Christianity is probable if 2:13 ("And this will be for you a sign of [the Lord's] coming, when all the gentiles worship a piece of wood") is taken as a Jewish expression of disgust at Christian superstition, but the words may just as well represent a Christian interpolation anticipating Jesus' Parousia, when the full number of gentiles have been converted. (References and quotations follow the translation of Hare *OTP* 2: 379–99.) Perhaps significant is the fact that there is no clear mention of the destruction of Jerusalem in 70 C.E. (a possible allusion may be found in the ambiguous language of 12:11); such an omission would be surprising in the opening passage concerning Isaiah's grave, which seems to assume that the readers can make a pilgrimage to the site. Moreover, it has been proposed that this same passage presupposes that the pool of Siloam is situated outside the walls of Jerusalem. This was no longer the case after Herod Agrippa added a new southern wall to the city's fortifications in 41–44 C.E. An early date is also suggested by the author's allusion to Elijah as "a Thesbite, from the land of Arabs" (21:1), since Nabatean control of this area ended in 106 C.E. Of still greater importance for the dating of the document is the fact that its interest in the graves of the prophets is paralleled by the erection of an impressive monument at David's tomb by Herod the Great (Jos. *Ant* 16.7.1 §182). We may suppose that this interest in venerating David's resting place spread to include other ancient worthies, as witnessed in the saying attributed to Jesus by Matt 23:29 ("Woe to you … for you build the tombs of the prophets and adorn the monuments of the righteous"; cf. Luke 11:47–48). Since there is no mention of newly constructed monuments in the *Lives*, it is even possible that its publication early in the 1st century was one of the factors encouraging the activity to which Jesus' saying alludes.

The author appears to have precise knowledge of Jerusalem. This inclined Torrey (1946) to the opinion that the author was a Jerusalemite Jew. Since both the Hebrew and Greek textual traditions of Scripture are reflected in the document, we can postulate that its author was a bilingual Jew living in Judea.

In Codex Q, twenty-three prophets are treated, in the following order: Isaiah, Jeremiah, Ezekiel, Daniel, Hosea, Micah, Amos, Joel, Obadiah, Jonah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi, Nathan, Ahijah, Joad (the unnamed "man of God" of 1 Kings 13), Azariah, Elijah, Elisha, and Zechariah, son of Jehoiada. It is to be noted that the position of Daniel conforms with the sequence of the LXX, not with that of the MT, and that the order in which the Twelve are presented is likewise closer to that of the LXX.

The amount of space devoted to the various prophets varies greatly. Joel receives the least attention: "Joel was from the territory of Reuben, in the countryside of Bethomoron. He died in peace and was buried there." The major prophets and Daniel, however, are treated at considerable length through the incorporation of legendary traditions, many of which are known to us from other Jewish sources.

The sections devoted to Elijah and Elisha are also extended, but in these two cases the material is primarily a summary of "signs" attributed to the two prophets in the canon (1–2 Kings). This material is omitted by the Dorotheus recension, and is replaced by shorter additions in the two recensions attributed to Epiphanius. Torrey is therefore justified in regarding these passages of Codex Q as later additions (1946).

Of special interest is the fact that in all four recensions the sections dealing with Elijah and Elisha contain brief birth narratives. Respecting Elijah, for example, it is reported: "When he was to be born, his father Sobacha saw that men of shining white appearance were greeting him and wrapping him in fire, and they gave him flames of fire to eat. And he went and reported (this) in Jerusalem, and the oracle told him, 'Do not be afraid, for his dwelling will be light and his word judgment, and he will judge Israel.' " This is one of the earliest witnesses to the belief that Elijah has been assigned a judging role in the eschatological drama.

The document is not profoundly theological. It is a good example of "folk religion," replete as it is with legend and superstition. Interest in Jeremiah's grave, for example, is motivated by its effectiveness in healing snake bites: "And those who are God's faithful pray at the place to this very day, and taking the dust of the place they heal asps' bites" (2:4). In terms of the history of religion, the document provides evidence of the emerging practice of venerating the saints, which later became such a prominent feature of popular Christianity.

DOUGLAS R. A. HARE

PROSELYTE [Gk *proselytos* (προσελυτος)]. In antiquity the term "proselyte" was used only in the context of Judaism. In the LXX it translates Heb *gēr,* a word designating a resident alien or sojourner in the land. Later it became a technical term for a convert to Judaism, thus representing one aspect of the more general phenomenon of conversion in antiquity (the basic work on this subject remains Nock 1933). The term is used in Matt 23:15 and Acts 2:11 (—Eng 2:10); 6:5 and 13:43. The difficulties in determining this word's meaning include the relative paucity and frequent obscurity of the extant occurrences, and the lack of a thorough critical analysis. Not only do scholars today differ widely in their interpretation of the evidence, even the Jews of antiquity seem to have held a wide range of opinions regarding the proselyte (Cohen 1989: 14). To establish the background for the NT meaning of the term, here the most important Jewish (OT, Apocrypha and Pseudepigrapha, Philo, Josephus, rabbinic literature, and epigraphic evidence) and Greco-Roman sources concerning conversion to Judaism are presented.

In the Hebrew Bible the *gēr* was an alien who resided in the land, thereby lacking the protection and privileges associated with blood relationship and native birth. The term occurs most frequently in the Pentateuch. The Book of the Covenant portrays the *gēr* as standing in a special relationship to Yahweh (see Exod 20:10; 22:21; 23:9, 12). Even so, the *gēr's* status was not religious, but reflected the fact that the *gēr,* as an alien, was under the influence of the God, to whom the land belonged. While Deuteronomy includes the *gēr* in the observance of some religious rites and festivals (5:14; 16:11, 14; 29:11), when 31:12 explicitly states that the *gēr* must be present for the solemn reading of the law, the intent was to expose the *gēr* to the demands of the law, not to imply that he was a full-fledged member of the cultic community (*TDOT* 2: 455). In P nearly the same religious rights and duties apply to the *gēr* as to the full

citizen (Num 15:14–16). This inclusion of the *gēr* in the religious life of the nation arose from the people's sense of their own separateness, which demanded full differentiation from all foreigners. Since the people could not avoid contact with the *gērîm,* they had to provide a place for them in the religious community (*TDNT* 6:730). In the late strata of P, the *gēr* was fully integrated into the life of the community by circumcision and mode of life (*TDOT* 2: 447). In the prophetic literature the *gēr* is routinely associated with defenseless widows and orphans as those who are unjustly oppressed (Jer 7:6; 22:3; Ezek 22:7, 29; Zech 7:10; Mal 3:5) and is said to have a share with the tribes of Israel in the promised inheritance (Ezek 47:22–23).

The LXX translated Heb *gēr* with Gk *prosēlytos* 77 times, but only in those cases where the context suggested a religious meaning, employing the terms *xenos* and *paroikos* elsewhere. This narrowing of the definition was a result of the Jews' altered circumstances in the Diaspora. The translators of the LXX appropriated the OT concern for resident aliens on behalf of the gentiles who adopted the religion and customs of Judaism, thereby providing a biblical basis for a practical reality.

Proselytes play a minor role in the Apocrypha and Pseudepigrapha. Achior the Ammonite believed firmly in God, was circumcised, and joined the house of Israel (Jdt 14:10). In *Joseph and Aseneth* the Egyptian Aseneth converted to Judaism in order to marry the patriarch Joseph.

While Philo did use the term proselyte for converts to Judaism (*Somn* II 273; *Spec Leg* I.51, 308), he seems to have preferred the more familiar term "alien" (*epēlus, epēlutes, epēlytos*). Philo asserted that converts had equal status with those who were Jews by birth. Moreover, because of their conversion they deserved special attention, having left country, family, friends, customs, tributes, and honors for the sake of the truth (*Spec Leg* I.51–53; 4.178; *Virt* 102–4, 219). He contrasted the virtues of the converts with the vices of those Jews by birth who had forsaken the faith (*Virt* 182; see *Praem* 152; *Spec Leg* I.51).

Josephus avoided using the term "proselyte." The closest he came was to call Fulvia, a Roman woman of high rank, a "convert to Judaism *[proselēlythuian tois loudaikois]*" (*Ant* 18.82). Normally he employed such phrases as those who "adopt our laws *[nomous eiselthein]*" (*Ag Ap* 2.123); those "aliens *[allophylous]*" who "elect to share" Jewish customs and who "desire to come and live under the same laws with us" (2.209–10); or those who "became converts to Judaism *[eis ta loudaiōn ethē ton bion metebalon]*" (20.17; see also 20.139). Even so, Josephus remains the foremost source for accounts of conversion to Judaism in the biblical period. The most extensive surviving account of a convert is that of Izates, king of Adiabene, who was instructed in the Jewish faith by a merchant named Ananias (*Ant* 20.17–95). Izates' mother, Helena, while sympathetic, warned that his subjects "would not tolerate the rule of a Jew over them." Ananias agreed with her, contending that Izates could "worship God without being circumcised." Another Jew, Eleazar, a Galilean with a reputation for strict adherence to the ancestral laws, told Izates that he "ought not merely to read the law but also, and even more, to do what is commanded in it." Izates took this advice and was circumcised. Later his brother, Monobazus, seeing that the king's pious worship of God "won the admiration of all men," likewise wished to convert to Judaism. Some members of the royal family subsequently supported the Jewish revolt against Rome (*JW* 2.520; 5.474).

In addition to accounts of conversion, Josephus also related that Jewish customs held some attraction for gentiles: "There is not one city, Greek or barbarian, nor a single nation, to which our custom of abstaining from work on the seventh day has not spread." Some also observed fasting, the lighting of lamps, and many of the dietary regulations. Moreover, the gentiles imitated "our unanimity, our liberal charities, our devoted labor in the crafts, our endurance under persecution on behalf of our laws" (2.281–83; see 2.179–80). The wealth of the Jewish temple was attributable to contributions from Jews and "those who worshipped God *[loudaiôn kai sebomenôn ton theon]*" (*Ant* 14.110). Nero's wife Poppaea, was "a worshipper of God *[theosebês]*" and pleaded on behalf of the Jews (*Ant* 20.195). The Jews in Antioch attracted "multitudes of Greeks" to their religious ceremonies (*JW* 7.45).

Because we lack a critical analysis of the rabbinic literature on the topic, it is difficult to state with any certainty the importance of this evidence for understanding conversion to Judaism in the biblical period. Schiffman presents a brief summary of the evidence drawn from the Tannaitic literature (1985: 19–39).

There conversion to Judaism entailed acceptance of the Torah, including an identification with the historic experience of the Jewish people. For males, circumcision was required as the ultimate sign of Jewish identity; the convert must be purified in a ritual bath; and the convert was to bring a sacrifice to the temple. The requirements of baptism and sacrifice are not attested before the end of the 1st century C.E. (Collins 1985: 171).

Kuhn has identified ten inscriptions referring to Jewish proselytes, including two from Jerusalem and eight (out of a total of 554 inscriptions referring to Jews) from Italy, a number he considers "surprisingly small" (*TDNT* 6:732–34). The Roman inscriptions come from the catacombs, where the proselytes were buried with the Jews, an indication that they were accepted as full members of the community.

Greco-Roman sources include scattered references to conversion to Judaism, many of which are openly hostile. Horace (65–8 B.C.E.) is often cited as the earliest attestator of Jewish proselytizing zeal, when he stated: "We [poets], like the Jews, will compel you to make one of our throng" (*Sat.* 1.4, 138–43). Nolland, however, attributes this statement to the realm of politics and personal advantage and not to that of the propagation of religious ideals (1979: 353). Epictetus (ca. 55–ca. 135 C.E.) contrasted those who observed some Jewish customs with those who were true converts: "Whenever we see a man halting between two faiths, we are in the habit of saying, 'He is not a Jew, he is only acting the part.' But when he adopts the attitude of mind of the man who has been baptized and has made his choice, then he both is a Jew in fact and is also called one" (cited in Arr., *Epict. Diss.* 2:19–20).

Tacitus (b. ca. 55 C.E.) considered those who were attracted to Judaism "the worst rascals," for they renounced their ancestral religions and sent contributions to Jerusalem. The Jews, he said, were extremely loyal toward one another, but toward everyone else they exhibited only hatred and enmity. They adopted circumcision to distinguish themselves from other peoples. Moreover, those who converted to their ways followed the same practices, so that the earliest lesson they received was "to despise the gods, to disown their country, and to regard their parents, children, and brothers as of little account" (*Hist.* 5.5). Juvenal (b. 67 C.E.), in a satire on the bad influence of parental vices, described a progressive attraction to Judaism from one generation to the next. The father, he said, observed the Sabbath. His offspring worshipped nothing but the clouds and the divinity of the heavens, and would no sooner eat swine's flesh than human. In time they were circumcised. Then they would give directions only to those who worshipped as they did, and would conduct none but the circumcised to the desired fountain. "For all which the father was to blame, who gave up every seventh day to idleness" (*Saturnae* 14.96–106). Cassius Dio (ca. 160–230 C.E.) observed that the title "Jews" applied both to those who are from Judea and "to all the rest of mankind, although of alien race, who affect their customs," a class which had increased "to a very great extent" (*Roman history* 37.17.1). Tiberius banished the Jews from Rome because they "were converting many of the natives to their ways" (57.18.5a). Those who "drifted into Jewish ways" were subject to the charge of atheism, which was punishable by death or at least by the confiscation of their property (67.14.2).

These references in Greco-Roman literature to conversion to Judaism are consistent with the unsympathetic attitude these sources display toward Judaism in general. Their hostility is confirmed by Philo's and Josephus' references to the difficulties converts encountered. Given this context, Millar states, the ability of the Jewish apologists to present Judaism as appealing depended on three factors. These authors focused on issues for which they could expect a sympathetic hearing, such as their conception of God, and they emphasized the role of Judaism in training for the conduct of life. Moreover, the Hellenistic world was receptive to new cult forms, especially those, like Judaism, which included a monotheistic element, emphasized the expiation of sins, and expected a happy afterlife (*HJP²* 3/1: 153–58).

To a certain extent the Jewish apologetic was clearly successful. Both Jewish and pagan sources attest that at least some Jewish practices gained wide acceptance in the Greco-Roman world. Cohen has identified a diversity of favorable responses to Judaism, ranging from admiration for some aspects of Judaism to conversion (1989: 15–30). Those gentiles who displayed some sympathy for Jewish religion without actually converting to Judaism are sometimes called "God-fearers." See DEVOUT. Determining the number of gentiles who converted remains problematic. Millar suggests that at one point (probably in the last centuries B.C.E.) their numbers may have been considerable, based on the "immense expansion of

Judaism" that seems to have taken place during that time. During the Roman period, he says, actual conversions to Judaism seem to have been less frequent than other less formal associations (*HJP²* 3/1: 171).

This evidence indicates that in the NT the term "proselyte" refers to gentiles who had converted to Judaism. Proselytes from Rome were present at Pentecost (Acts 2:11). Nicolaus, a proselyte of Antioch, was one of the seven deacons (6:5). "Devout proselytes *[tôn sebomenôn prosêlytôn]*" and Jews followed Paul and Barnabas out of the synagogue at Antioch in Pisidia (13:43). The reference in Matt 23:15 to the scribes and Pharisees who "traverse sea and land to make a single proselyte" has frequently been taken to refer to the missionary zeal of the Jews in general and the Pharisees in particular. Little other evidence suggests that the Pharisees (or their descendants) were concerned with the conversion of the gentiles, except as a theoretical question. Alternately, if this saying originated with the evangelist writing after 70 C.E., rather than with Jesus speaking before 70, it would serve as an example of the Christian polemic against the nascent "normative" Judaism of the rabbis (see Wild 1985: 123). This passage is akin to the references to the "circumcision party" in Acts 11:2 and the Pauline Epistles (parallel also to Eleazar's approach to Izates of Adiabene): once a gentile became a Christian, some Jews and Jewish Christians would attempt to bring the convert into full conformity with the requirements of the law.

PROSTITUTION

[Heb *zĕnût* (זְנוּת), *zĕnûnîm* (זְנוּנִים), *taznût* (תַּזְנוּת)]. The practice of indiscriminate sexual relations in exchange for payment is attested throughout antiquity, as well as in the Bible. This entry consists of two articles that survey this practice. The first provides an overview to the phenomenon of prostitution as it is attested in the OT, as well as the metaphorical references to prostitution contained in the biblical text. The second focuses particularly on the question of whether and how extensively cultic (or sacred) prostitution was practiced in the ancient and biblical world.

OLD TESTAMENT

Although the Hebrew root *znh* underlies all the major OT words for "prostitute" and "prostitution," derivations from the root also refer to premarital sex and to adultery (extramarital sex). The prostitute is called a *zônâ* or *ʾiššâ zônâ* but perhaps also a *qĕdēšâ.* Evidence for male prostitution is lacking (but see B below).

———

A. The Prostitute in the OT

B. Cultic Prostitution in the OT

C. Prostitution as a Metaphor

———

A. The Prostitute in the OT

The label *zônâ* is used for the professional prostitute who accepts payment for her services, but perhaps can also be applied simply to a woman who had sex before marriage (Lev 21:7, 14 and the opinion of R. Elazar in *b. Yebam.* 61b). Israelite society's attitude toward prostitution was decidedly negative; yet despite legislation intended to outlaw this institution (Lev 19:29; for Deut 23:18, see B below), the prostitute seems to have been tolerated. While priests were not allowed to marry prostitutes and their daughters were burned for plying this trade (Lev 21:7, 9, 14), these strict standards did not apply to the

lay Israelite. Prostitutes had access to the king for judgment (1 Kgs 3:16), and scholars find it worthy of mention that the Bible passes no moral judgment against Tamar, who posed as a prostitute (Genesis 38); Rahab (Joshua 2, 6); or Samson, who frequented a prostitute (Judg 16:1). Rahab in particular is cited as evidence of the Bible's ambivalent view of prostitutes, because it is she who shows exemplary wisdom and faith—so much so that in later tradition she is the progenitrix of great men (*b. Meg.* 14b; Matt 1:5).

On the other hand, this toleration is accompanied by a great degree of contempt. Bird (1974: 67) writes that the stories of Rahab and Tamar

> … also presuppose their low repute. In both accounts the harlot heroines are made to demonstrate in their words and actions faith, courage and love that would scarcely be expected of the average upright citizen and thus is all the more astonishing and compelling as the response of a harlot—that member of society from whom one would least expect religious and moral sensitivity.

Treating a girl as a prostitute was seen as a grave offense to family honor, one that justified, in the eyes of Simeon and Levi at least, death (Gen 34:31). The prostitution of one's wife was considered a horrible event on par with the death of one's children and the loss of one's patrimony (Amos 7:17). In 1 Kgs 22:38, the mention of harlots washing in the pool of Samaria where Ahab's bloody chariot was flushed out is no doubt intended as an insult to his dignity, similar to his blood being lapped by dogs. Having relations with prostitutes carried a stigma (Gen 38:23). While Lev 21:7, 14 presuppose that an Israelite would marry a former prostitute, Jer 3:3 suggests that prostitutes were a stubborn, unrepentant lot.

In Mesopotamia, prostitutes were also a tolerated, yet deprecated class of women (see the entry *ḫarīmtu*, "prostitute," CAD 6:101–2; having seven daughters become prostitutes is on par with having seven sons immolated "before Adad" [*AfO*, Beiheft 1 73 No. 8:7, NA]). The goddess Ishtar is compared to a "loving *ḫarīmtu,"* yet this is probably more of a negative reflection on Ishtar than an allusion to the exalted status of the prostitute (*Sumerisch-babylonisch Hymnen*, 106: 51). Their rights and restrictions are mentioned in law codes (Lipit Ishtar #27, *ANET*, 160; Middle Assyrian Law (henceforth MAL) #40, #49, #52, *ANET*, 183–85). This legal recognition stands in contrast with the *de jure* prohibition of prostitution in Israel, whatever the case *de facto.* Thus, Lev 19:29 prohibits the Israelite from selling his daughter into prostitution "lest the land be filled with depravity." This probably reflects the practice of selling one's children into debt slavery hinted at in Exod 21:7; 2 Kgs 4:1; and Code of Hammurabi (henceforth CH) #117 (*ANET*, 170). Deuteronomy's prohibition is more absolute: "No Israelite woman shall be a prostitute" (23:18; see B below).

Israel's greater intolerance of prostitution was probably influenced by several factors. First, paternity would be largely unknown with regard to the children of a prostitute (Jephthah in Judg 11:1 is an exception; for another, see the case in Lipit Ishtar #27, *ANET*, 160). MAL #49 (*ANET*, 184) probably reflects the normal situation in that the paternity of the harlot's children is unknown; and so they inherit from their mother: "If a prostitute dies, her children will receive a share like a brother together with the brothers of their mother." In both Israel and Mesopotamia, property and status were normally inherited patrilineally. Adoption, the transfer of the legal paternity of a child, was practiced in Mesopotamia, as evidenced by legal texts and wills (CH #185–87, *ANET*, 174; MAL #28, *ANET*, 182; for Nuzi, see Paradise 1972: 269–80). This did not seem to be the case in Israel, where we find almost no mention of the transfer of legal paternity outside of the family (Tigay, *EncJud* 2: 298–300; Moule, *IDB* 1, 48). Adoption is not mentioned in biblical law. A society which valued the patrilineal bloodline so highly would logically have a real abhorrence of children with no known paternity and of the mother who bred them. These offspring would have no proper inheritance and no patronym. Also, unknown paternity could lead to unwitting incest, another practice abhorred by YHWH (Leviticus 18, 20).

Second, Israel was to aspire to be a "holy nation," and this included a strict code of sexual morality. A comparison of the sexual ethics in biblical law with those reflected in Mesopotamian law codes reveals the absolute nature of the former. For example, Hittite law #200 (*ANET*, 197) absolves a man who had sexual relations with a horse or mule but not with a pig or bovine (#187, #199, *ANET*, 196), while Lev 18:23, 20:16 prohibit the Israelite from having carnal relations "with any beast." MAL #14 (*ANET*, 181) decrees punishment for an adulterer only if he was informed of the married status of the woman, while the

OT makes no such exception (Exod 20:14; Lev 18:20; 20:10; Deut 22:22). CH #154 (*ANET*, 172) imposes banishment for the man who has intercourse with his daughter, and death by fire for he who lies with his mother (#157). In Israel, the punishment for incest seems to be more uniformly severe. In Leviticus 20, execution (probably stoning), death by fire, *kārēt* (the imminent end of the family line according to traditional Jewish exegesis and Wold 1978), dying childless, and "bearing one's iniquity" (probably a reference to *kārēt*) are the sentences imposed upon those who commit incest. It is difficult to decide which is more severe, death by stoning or the end of one's line through divine intervention. Israel's God was highly intolerant of sexual relations outside of narrowly prescribed circumstances. The activities of a prostitute certainly fell outside of these limitations.

Third, the metaphor of apostasy as *zĕnût,* "harlotry," linked the breaking of the exclusive bond with YHWH, the Sinaitic covenant, with the rupture of the most exclusive bond known in Israelite society, marriage (Jer 2:20, 25; 3:1–13; Ezekiel 16; 23; Hosea 1–3). Apostasy, therefore, seemed all the more unacceptable because of its association with adultery and promiscuity. The process, however, may have been bidirectional in that sexual promiscuity may have seemed all the more heinous because of its kinship with religious infidelity. The title of the prostitute, *zônâ*, and her activities, *zĕnût* or *zĕnûnîm*, carried the cargo not only of sexual, but also of religious infidelity because of the currency of the expression *zānâ ʾaḥărêy ʾĕlōhîm ʾăḥērîm* (Exod 34:15–16; Deut 31:16; Judg 2:17; 8:33; 1 Chr 5:25). The use of this metaphor therefore may have served not only to make apostasy more repulsive but also prostitution, which came to symbolize infidelity and lack of discrimination in the religious sphere as well.

Possible allusions to the prostitute's distinctive garments or ornaments have been found in several OT texts. Gen 38:15 reports concerning Tamar that, "When Judah saw her, he took her for a harlot; for she had covered her face." While some see the veil alluded to here as the customary garb of a harlot, an alternative explanation is preferable: her situation suggested her vocation because a crossroads (v 14) is a traditional place for a harlot to sit (Jer 3:2; Ezek 16:25), and because Tamar's face was covered, Judah could not identify her as his daughter-in-law (so suggests Rashi and LXX's surplus at the end of the verse, "and he didn't recognize her"). MAL #40 (*ANET*, 183) prohibits the common harlot from wearing a veil. Jeremiah's allusion (3:3) to a prostitute's distinctive "forehead" (Heb *mēṣaḥ*) could suggest some peculiar ornament (Holladay *Jeremiah* Hermeneia, 115), yet it is more likely that an internal trait is intended. The forehead is the seat of obstinacy (Ezek 3:7; Isa 48:4), and *Tg. Neb.* translates here *ḥûṣpā,* "impudence." Prov 7:10 may allude to the distinctive dress of a prostitute (for the unusual term *šît,* see also Ps 73:6). In Hos 2:4, the prophet implores his straying wife to "put away her harlotry from her face and her adultery from between her breasts." While this could be a dramatic and graphic way of telling her to refrain from her promiscuity, a more literal meaning is also possible (Andersen and Freedman, *Hosea* AB, 224–25). Perhaps she wore some badge or adornment which suggested that she was a harlot. In v 5, the enraged husband threatens to strip his wife if she does not voluntarily remove these items, while v 15 mentions a nose ring and pendants. Alternatively, these adornments need not be the badges of prostitution, but rather the items that women customarily used to make themselves more attractive—cosmetics (2 Kgs 9:30; Jer 4:30) and jewelry (Isa 3:16–23).

The prostitute's fee was called *ʾetnan* (Deut 23:19; Isa 23:17–18; Ezek 16:31, 34, 41; Hos 9:1; Mic 1:7) and perhaps *ʾetnâ* (Hos 2:14; see Andersen and Freedman, 254). Ezek 16:33 uses the terms *nēdeh* and *nādān* for the gifts given to a prostitute. The use of these wages for sacrificial purposes was prohibited (Deut 23:19). Mic 1:7 may suggest that the *ʾetnan* was not an insignificant source of income for a temple (van der Toorn 1989: 193–201). Prov 6:26 seems to compare the meager price of a prostitute's serves (a loaf of bread) with the heavy cost of adultery—one's precious life. Prov 29:3, on the other hand, suggests that keeping company with prostitutes leads to poverty. Prostitutes were commonly encountered in public places such as highways (Gen 38:14; Jer 3:2; Ezek 16:25; Prov 7:11–12) or pilgrimage sites (Hos 4:14), yet Jer 5:7 condemns those Jerusalemites who go "trooping to a harlot's house." Isa 23:15–16 suggests that prostitutes commonly sang and played the harp.

The "foreign woman" *(ʾiššâ zārâ* or *nōkriyyâ)* of Proverbs 2; 5–7 is probably not a harlot but rather an adulteress (2:16–17, 6:29–35; 7:19). Prov 6:26 seems to contrast the prostitute and the adulteress, who is

also called an "alien" (*nōkriyyâ,* v 24). In Proverbs 7, the seductress appears in a harlot's garb (if that is the intent of *šît zônâ,* v 10) yet she does not receive wages as a harlot, but rather rewards her paramour with a feast (v 14). Only Prov 23:27 identifies the *nōkriyyâ* as a *zônâ,* but the LXX reads here *zārâ,* not *zônâ.*

B. Cultic Prostitution in the OT

It has long been assumed that the terms *qādēš/qĕdēšâ* allude to the practice of cultic prostitution in Israel, yet recent studies seriously question this widespread assumption. See also PROSTITUTION (CULTIC). The supposed role of the Mesopotamian *qadištu* as a cult prostitute has been thought to provide proof that her Hebrew counterpart, the *qĕdēšâ,* likewise had a sexual function in the cult. Yet the research of Gruber (1986: 133–48), Hooks (1985: 15–17), and Gwaltney (1964) gainsays this assumption. The *qadištu* assumed various cultic roles, yet none of these were sexual. Among other classes of female cultic functionaries, only the *kezertu* and perhaps the *ḫarīmtu* may have combined both cultic and sexual functions (Gallery 1980: 333–38; entry *ḫarīmtu,* CAD 6: 101–2). Further, the term *qdšm* at Ugarit signifies a class of male cult personnel, who are generally mentioned after the *khnm,* "priests." Any insinuation of sexual activity is lacking (Kinet 1977: 80; von Soden 1970: 329–30; Gruber 1983: 170–71). Extrabiblical sources, therefore, cannot be used as evidence for the sexual/cultic role of the *qādēš/qĕdēšâ,* nor does the LXX provide proof for the translation "cultic prostitute" (Dion 1981: 41–48).

In the OT, the assumption of sexual/cultic functions for these groups may result from the mistaken conflation of the discrete roles of these two groups, *qādēš* and *qĕdēšâ.* On the basis of Ugaritic texts and various passages in the books of Kings which refer to the *qādēš* (1 Kgs 14:24; 15:12; 22:47; 2 Kgs 23:7), it can be concluded that *qādēš/qĕdēšîm* refer to a priestly class rejected by orthodox Yahwists. The nature of their activities is not specified. In contrast, the feminine *qĕdēšâ* always appears as a synonym of *zônâ,* the common Hebrew word for prostitute (Genesis 38; Deut 23:18–19; Hos 4:14). This suggests a bifurcation of these two closely related words, *qādēš* and *qĕdēšâ,* masculine and feminine, as they seem to refer to two very different phenomena. This proposed distinction stands in opposition to the consensus of commentators that the collective noun *qādēš* refers to both the male and female members of the same class, *qĕdēšîm* and *qĕdēšôt* (e.g., Gray, *Kings* OTL, 311).

That these two homonymous nouns should refer to professions so different may be inferred from two biblical passages. 2 Kgs 23:7 could suggest that *qĕdēšîm* refers only to males since it reports that the women *(nāšîm)* present in the *bāttêy haqqĕdēšîm* were involved in weaving and nothing else. The second passage is Deut 23:18: "No Israelite woman shall be a *qĕdēšâ* nor shall any Israelite man be a *qādēš."* If the collective noun *qādēš* referred to both male and female cult prostitutes, then only one clause would be needed—*Lō› yihyeh qādēš mibbĕnê yisrā›ēl,* "No Israelite shall be a *qādēš";* this would be sufficient to prohibit all Israelites, male and female, from the act of sacred prostitution. The bipartite nature of the verse, with each half referring to gender, may suggest that the feminine and masculine nouns should be distinguished and could refer to two distinct classes of people, pagan or non-Yahwistic priests and common harlots. The Deuteronomist treated both of these classes in the same verse because both of these professions were seen as abhorrent to the pious writer and, more obviously, because of the similarity of the two words, *qādēš* and *qĕdēšâ.* Deut 23:18, accordingly, serves as a blanket prohibition against Israelite women becoming sexual mercenaries *in general,* and not specifically cult prostitutes.

When this verse is considered with its complement, v 19, the matter becomes more complicated because of *keleb,* "dog." While it can be suggested that there is no necessary connection between the two verses and that v 19 should not be used to explicate v 18 (or vice versa), the appearance of *qĕdēšâ* and *zônâ,* which are used together in Hos 4:14 and Genesis 38, makes this disjunction unlikely. Most commentators read v 18 and v 19 together as an attempt to limit prostitution, especially of the cultic sort, in Israel; and they understand *keleb,* "dog," as a reference to a male cultic prostitute so that *qādēš* is thereby provided with a synonym (e.g., Driver *Deuteronomy* ICC, 265; Mayes, *Deuteronomy* NCB, 320). This cultic interpretation of *keleb* is also based on an extra-Israelite inscription from the 4th century B.C.E. found at Kition. This inscription lists the expenses of a temple and its various personnel who receive stipends (*KAI* 2: 54–55; Cooke 1903: 65–70). While *klb* here could refer to a canine, a human referent is plausible

because of the widespread use of *klb* in the ANE as a term equivalent to "faithful servant" (see *kalbu*, CAD 8:72; the Lachish Ostraca, *ANET*, 322; and personal names in Akkadian, Ugaritic, and Hebrew). A *keleb* would therefore be a servant at the sanctuary whose activities are unclear. The terms *klb/klbm* are also found at Ugarit; while the singular clearly refers to a canine (*UT* 125: 2, 15; Krt: 123, 226), the referents of the plural are unclear (*UT* 305: 4; 329: 18). Some scholars have suggested that the "dogs" listed among those not allowed into messianic Jerusalem in Rev 22:15 are male cult prostitutes, but this interpretation is based on Deut 23:19 and the Kition inscription. The use of "dogs" elsewhere in the NT offers no support (Matt 7:6; 15:26; Phil 3:2). In any event, no extrabiblical proof speaks for the identification of *keleb* in Deut 23:19 as "male cult prostitute."

Other interpretations of Deut 23:19 are possible. First, the verse may actually refer to a canine. The Mishna adopts this interpretation: "What is the 'price of a dog' *(mĕḥîr keleb)*? When one says to his fellow: 'Take this lamb in exchange for this dog' " (*m. Tem.* 6:3). The lamb, which would otherwise be suitable for the altar, is prohibited in this case because it was acquired in exchange for a dog. This association is not surprising since dogs were used for herding in Israel's pastoral economy (Job 30:1; Isa 56:10–11). The exchange of a lamb for a "sheepdog" in the Mishna's example may therefore reflect everyday practice.

Deuteronomy's prohibition of the "price of a dog" should then be viewed against the background of the OT's attitude of disgust and contempt toward these animals: a dog returns to its own vomit (Prov 26:11) and eats the unclean (Exod 22:30), including human flesh (1 Kgs 14:11; 16:4; 21:23–24; 2 Kgs 9:10, 36; Jer 15:3). A "dead dog" is synonymous with a despised and worthless object (2 Sam 9:8; 16:9), and Job 30:1 may be an adaptation of a popular expression of contempt (Pope, *Job* AB, 193). It is therefore understandable why the "price of a dog" would have been prohibited from donation to the temple. The word *mĕḥîr* also suggests that a canine may be the intention of the verse since it refers to the price in exchange for an object rather than a "wage" (2 Sam 24:24; 1 Kgs 10:28; 21:2; Jer 15:13; Prov 27:26; Lam 5:4; in Isa 45:13; and Mic 3:11, it appears as a synonym of *šōḥad*, "bribe," yet this too would be inappropriate for a professional prostitute's fee). Canines and prostitutes are also linked in 1 Kgs 22:38, and here both serve to symbolize Ahab's final disgrace.

According to this approach, Deut 23:18 and v 19 are juxtaposed because they both mention prostitutes, the *qĕdēšâ* and *zônâ*. The *qādēš* in v 18 refers to pagan priests, and the *keleb* in v 19 refers literally to canines (although the association of these two in parallel may be intended to mock and disparage these non-Yahwistic cultic officials).

A second possible interpretation of Deut 23:19 is offered by Gruber (1983: 167–76; 1986: 133 n. 1). On the basis of the books of Kings and Ugaritic texts, he concludes that the *qādēš* had no connection with cultic sex, but rather, as suggested above, was an official in a pagan cult. Further, in the inscription from Kition, the "dogs" seem to be some sort of temple servants. Gruber thus concludes that *both* verses, 18 and 19, contain references to common prostitution and to a kind of pagan cultic official; thus, as in many other places in the Bible, a cultic prohibition and an ethical prohibition have been placed side by side. An A-B-A´-B´ pattern *(qĕdēšâ-qādēš-zônâ-keleb)* becomes apparent, with A/A´ containing synonymous terms for the common prostitute and B/B´ containing labels for unorthodox cultic officials.

These two interpretations of *keleb* offered above (literal canine and cultic servant) are important to the better understanding of Deut 23:18–19 because either allows us to see the traditional translation of *qādēš*, "cultic prostitute," as only one, and perhaps not the best, understanding of the text.

How then are we to explain the use of the title *qĕdēšâ,* which suggests a relationship to holiness, for the common prostitute? From the premodern exegetes, Naḥmanides explains the term as the result of the phenomenon in Hebrew that one word can have a certain meaning along with its opposite (commentary on Deut 23:18). Thus, she who separates herself from holiness, just as she who guards herself from defilement, can be labeled with the root *qdš.* Further, two passages in the Bible employ the root *qdš* in the sense "to separate," "set apart" (Josh 20:7; Jer 12:3); and perhaps the title *qĕdēšâ* is derived from this—the prostitute by virtue of her unmarried status and ill-repute is alienated from the community and so "set

apart." According to Snijders, the promiscuous woman in Proverbs is labeled *ʾiššâ zārâ,* a "foreign woman," for the same reason (1954: 96).

Gruber cites a linguistic analogue to the label "holy one" for a prostitute. He writes that the use of the same root for "prostitute" *(qĕdēšâ)* and "cultic functionary" *(qādēš)* is not surprising, since from *ḥrm,* a root synonymous with *qdš,* we have in Hebrew the noun *ḥerem,* "the ban," and the verb *lĕhaḥărîm,* "to ban, devote, consecrate" (Lev 27:28), but in Akkadian the term *ḫarīmtu* "prostitute." This can be explained by the fact that the root meaning of the term is "she who is set apart," whether for exaltation or degradation (Gruber 1986: 148).

Two passages other than Deut 23:18 mention the *qĕdēšâ,* and neither necessarily justifies the translation "cult prostitute." In Genesis 38, Judah encounters Tamar at a crossroads, not a temple or shrine, and takes her for a *zônâ,* common harlot (v 15). It is Judah's Canaanite friend, Hirah, who introduces the word *qĕdēšâ* in his query to the people of Timnah, and they reply with the same term (vv 21–22). The variation, therefore, may be based on their different ethnic backgrounds, since Hirah inquires of the harlot's whereabouts with a term that suggests her identity as he and the townsmen would know it, but with a term different from that used by Judah. On the other hand, if *zônâ* and *qĕdēšâ* are synonymous, the retort, "there has been no *qĕdēšâ* here" (v 22), makes little sense because Tamar did indeed pose as a harlot and the townsmen would have been aware of it. It can be argued, however, that Tamar offered herself not to any and every man but only to Judah, and that she stationed herself at a public place just long enough to catch his eye. That the men of Timnah did not take note of her is then understandable (Hooks 1985: 169). The Israelite audience would have been familiar with the equivalence of these two words and perhaps amused by the Canaanite's ascription of holiness to a sexual mercenary who sits at crossroads.

Hos 4:13–14 offers a cultic setting for the activities of the *qĕdēšâ,* with the mention of mountaintops, shade trees, incense, and sacrifice. Debatable, however, is the relationship of her activities to the cultic event, since the presence of prostitutes at a religious festival could be just one of the excesses such merrymaking would precipitate (van der Toorn 1989: 202). Ginsberg comments that "inviting prostitutes to the sacrificial banquets was a feature of the festivity rather than of the ritual" and that "the prophet's fulminations are aimed at the depravity of this dalliance not at its alleged rituality …" (*EncJud* 8: 1019; also Gruber 1986: 134, n. 5). This interpretation of the verse sees the presence of a harlot at a high place for a feast as natural as her modern counterpart's appearance at a Mardi Gras or saint's day. Further, Hos 4:13–14 can be compared to Deut 23:19, which bars the donation of a whore's wages to the temple: if a whore's wages are prohibited, how much more the whore herself!

C. Prostitution as a Metaphor

Prostitution is widely used in the OT as a metaphor for Israel's defection from its covenant god. In fact, "prostitution" (Heb *znh*) is the dominant term when apostasy is characterized as illicit sex. This is surprising, since "adultery" (Heb *nʾp*) is, strictly speaking, more suitable for the characterization of Israel's relations outside of its "marriage bond" (the covenant) than is *znh,* the legal term which applies also to premarital sex.

Several factors may account for this: (1) *znh* implies that the illicit activity is habitual or iterative since the participle *zônâ* describes the professional whore; (2) the motive, personal gain, is supplied; and this is exploited by the prophets who point to Israel's folly in her pursuit of material goods from "no-gods" (Hosea 2); (3) *znh* implies a multiplicity of partners, and this all the more ridicules Israel's indiscriminate choice of fetishes for worship (Jer 2:20, 28); (4) the participle *zônâ* suggests a treacherous and hardened woman (Jer 3:3), and the concrete image of the whore is well suited for the personification of Israel as a woman; and (5) the root *znh* refers to illicit sex only by females, and because Israel in the covenant relationship adopts the feminine role, it is more fitting that a verb used strictly for females play a central role (*nʾp,* on the other hand, refers to illicit sexual activity by both sexes—a *nōʾēp* is a man, whether single or married, who engages in sex with a married woman [Lev 20:10]). The root *znh,* while strictly speaking less appropriate for symbolizing Israel's covenant breaking, was therefore a more effective rhetorical tool.

Prostitution is used as a metaphor for subjects other than Israel's apostasy, and even foreign cities in the OT are labeled *zônôt.* In Isa 23:15–18, Tyre, the great commercial emporium, is likened to a whore and her profits called *ʾetnan,* "a harlot's hire." Because the issue here is not fidelity to any covenant, a probable motive is the prophet's negative view of commerce. Israel was chiefly an agricultural nation with only sporadic experience with far-flung trade (Reviv, *EncJud* 15: 1294). In Isa 23:8; Hos 12:8; Zech 14:21; Prov 31:24; and Job 40:30, traders are called "Canaanites" and the international trade mentioned in 1 Kgs 9:26–28; 22:49 seems to be the exception. This disapproving attitude toward international trade no doubt facilitated its comparison to prostitution, a decidedly negative pursuit. Further, prostitution, by itself a commercial act, is akin to commerce because of the indiscriminate attitude which the seller has toward his/her customers. Other forms of commerce as well as prostitution can therefore be labeled "promiscuous." These factors, in addition to the OT's poetic convention of treating cities as women, explain the prophet's use of a prostitute in the personification of Tyre.

In Nah 3:4–7, Nineveh, the capital of Assyria, is depicted as a whore who charms nations and leads them to their downfall. "Harlotries and enchantments," (v 4) i.e., seduction and love spells, are the devious means by which a woman could exercise power over men and, in the eyes of the wisdom teacher, lead them to destruction (Prov 2:16–19; 5:7–14; 6:24–36; 7:6–27). Nineveh's means of allurement could be a reference to its physical splendor (*tôbat ḥēn* in v 4) or military might.

According to Isa 1:21, Jerusalem, "the faithful city that was filled with justice," has become a harlot. The prophet's charge isn't based on the worship of other gods, but rather on immorality and injustice. The root *ʾmn* (v 21), which represents concepts such as faithfulness, trust, and stability, finds its antithesis in *znh.*

Prostitution is also used to represent political alliances with foreign nations. In several OT passages, political and military allies are called "lovers," and the image suggested is that of Judah as a woman married to YHWH but pursued by (and pursuing) lovers who ultimately disappoint her (Lam 1:2, 19; Jer 4:30–31; 22:20–23). While the reliance of Israel and Judah upon other nations was condemned by the prophets as an affront to YHWH (Isaiah 30–31; Jer 2:18, 36–37; Hos 5:13; 7:11–12; 12:2; 14:4), only Ezekiel specifically labeled this activity *zĕnût,* "harlotry" (16:26–29; chap. 23). In Ezekiel 23, however, the boundaries between political and religious apostasy are blurred since the prophet also focuses upon cultic transgressions, with the mention of idolatry (vv 7, 30), the sisters' "whoring" during the sojourn in Egypt (v 3; certainly not a reference to political alliances; cf. Ezek 20:7–8), and the repeated use of the verb *ṭmʾ,* "to defile," (vv 7, 13, 17), which is more suggestive of idolatry than political dealings. The prophet seems to suggest that Israel's foreign alliances brought about the worship of foreign gods. While strategic alliances, strictly speaking, may not have encouraged heterodoxy, royal marriages with foreign princesses for diplomatic purposes seem to have inspired apostasy on even a popular level (1 Kgs 16:31–32; 18:21–22; in the case of Solomon, only the king himself seems to have gone astray; 1 Kgs 11:1–10). Further, the cosmopolitan atmosphere in Jerusalem during the age of Assyrian hegemony seems to have inspired the worship of new gods (Cogan 1974: 91–96). These two factors, therefore, may supply the background of Ezekiel's association of political alliances and religious apostasy.

CULTIC PROSTITUTION

In OT commentaries and textbooks the existence of "cultic" or "sacred" prostitution in ancient Israel is frequently presented as a historical fact. On the basis of such texts as 1 Sam 2:22; 2 Kgs 23:7, 14; 2 Chr 15:16; Ezek 8:14; Hos 4:13; and others, it is assumed that in paganized Israelite cults, worshippers engaged in sexual intercourse with devotees of the various shrines, as a way to promote fecundity and fertility. Under the influence of Canaanite mythology, so the argument runs, many Israelites had come to see the processes of nature as the result of the relations between gods and goddesses. Divine intercourse would lead to abundant harvests and an increase of cattle. Cultic prostitution, performed by humans, was a form of imitative magic by which the gods could be moved to engage in similar activities, with all the ensuing beneficial results. Corollary to this view is the interpretation of the terms *qādēš* and *qĕdēšâ* as male and female "cult prostitute." Orthodox Yahwism combated these evils. Priests, prophets, and wise men alike denounced cultic prostitution as idolatry and utter foolishness. The fierceness of their reproval is all the more understandable when the heathen background of the sexual rites is taken into account.

In recent years, however, the widely accepted hypothesis of cultic prostitution has been seriously challenged. Various scholars have argued that the current view rests on unwarranted assumptions, doubtful anthropological premises, and very little evidence. At the same time the Ugaritic and Mesopotamian material, often referred to as evidence of cultic prostitution in neighboring civilizations, has been critically reevaluated and shown to be less unambiguous than it has often been assumed. These reasons call for a fresh look at the biblical material, to see to what extent prostitution in Israel may have been "cultic" or "sacred."

In order to dispel the possibility of terminological confusion, let us first define the content of the notion "cultic prostitution." When speaking of cultic prostitution, scholars normally refer to religiously legitimated intercourse with strangers in or in the vicinity of the sanctuary. It had a ritual character and was organized or at least condoned by the priesthood, as a means to increase fecundity and fertility. There is, however, another, more restricted way in which one can speak of cultic prostitution. We may use the term to call attention to the fact that the money or the goods which the prostitutes received went to the temple funds. A careful scrutiny of the evidence will show that the term "cultic prostitution" can be maintained only when used in the latter, limited sense. For the sake of clarity, however, it might be better to abandon the term altogether and to stick to circumscriptions such as "prostitution that was profitable to, and at times organized by, the temple and its administration."

An important argument of those who claim the existence of cultic prostitution in ancient Israel rests upon the various texts which picture debauchery as a corollary of communal rites. The OT contains indeed ample evidence of religious feasts that led to sexual excesses. The description of the cult of the golden calf, projected back into the misty times prior to the settlement in Canaan, can be considered as an archetype of the events (Exodus 32). During the celebrations "the people sat down to eat and drink, and rose up to play" (Exod 32:6). The latter verb, *ṣaḥēq,* is an unmistakable euphemism for sexual activities, similar to the Akk *ṣiāḫu,* "to laugh," "to make merry." In all likelihood, the story reflects the preexilic practices in the N kingdom, where the Lord was worshipped in tauromorph form (1 Kgs 12:26–33). Despite the presence of the image of a young bull, however, nothing indicates that the participants in these Bacchanalia were consciously playing their part in a fertility cult. We must bear in mind that the Israelite festivals were among the rare occasions where one could eat to satiety and drink one's fill, with song and dance contributing to the festive mood. Under such circumstances one could easily lose one's sense of propriety and momentarily indulge in a type of behavior that would otherwise be deemed inadmissible. The same holds true of the cult of Baal-Peor (Numbers 25; 31:13–20; Ps 106:28–31) and the

cultic parties denounced by Hosea (Hos 4:13ff.; 9:10). The ban on transvestism, laid down in Deut 22:5, is also probably directed against such religious orgies, during which the customary distribution of roles was, by way of exception, suspended. One can imagine the licentious behavior to which this could lead.

It deserves to be emphasized that nothing warrants us to speak of cultically organized prostitution in connection with these instances of debauchery. Sexual libertinage was simply a frequent ingredient of the ANE festivals. A paragraph in the Middle Assyrian Law (tablet A, §55) deals with the case of a young woman who has been seized and violated "within the city or in the open country or at night in the street or in a storehouse or at a festival of the city." One is reminded of Judg 21:19–23, where the yearly feast of the Lord at Shiloh becomes an occasion for the Benjamites to take a wife by force. In both cases the relationship was perhaps established in a less brutal way than the texts affirm. According to the Babylonian Talmud, on Ab the 15th and on Yom Kippur, the Israelite girls dressed in white, danced in the vineyards, and invited the boys to make their choice (*b. Ta‹an.* 26b, cf. 31a). This tradition suggests that the affairs developed with the accord of both partners, the regulation of the Middle Assyrian Laws being merely a juridical construct to settle the ensuing situation of the girl. In all this, ANE man does not considerably differ from us. Sexual excesses were part of the expected ritualized behavior at festivals and belonged as such to the popular culture of the time. The same could be said of fraternity parties, New Year's parties, and the like in our own secular religion.

Besides the attestations to incidental sexual promiscuity at the occasion of festivals, however, the OT also mentions a specific category of people who are generally considered to have been the "professionals" of "cultic" prostitution in ancient Israel. These are the *qĕdēšîm*, a term frequently rendered as "cult prostitutes." Although the traditional understanding of this term has been challenged on the basis of the evidence concerning the Ugaritic *qdšm,* the parallelism between *qĕdēšâ* and *zônâ* in Genesis 38 and Deut 23:18–19 (—Eng 17–18) favors the idea that the *qĕdēšîm* engaged primarily in sexual activities. The Ugaritic *qdšm* seem to have consisted of all the nonpriestly temple personnel, who had been dedicated to a deity. They were free to marry and have children and could be released from their service by a royal decree. The situation of the Israelite *qĕdēšîm* may, to some extent, have been similar. Their functions need not be narrowed down to those of prostitutes; they may have performed a variety of menial tasks in the sanctuary as well. It cannot be denied, though, that during some periods they also functioned as prostitutes in the service of the temple. According to 2 Kgs 23:7, they had special rooms in the Jerusalem temple, a state of affairs intolerable to the zealous reformers, yet apparently accepted by the clergy in earlier times. Prostitutes operating as it were in the shadow of the temple, then, existed in ancient Israel. However, any links between the latter and a hypothetical fertility cult, it need hardly be said, belong to the domain of speculation. Prostitution as a source of profits for the temple?—yes; prostitution as an integrating part of fertility rituals?—no.

In a number of texts, the fulfillment of a vow appears to have been one of the motives for occasional prostitution. In ancient Israel the vow enjoyed great popularity, especially among women. A discreet indication of this popularity is found in the regulations concerning the Nazirite vow. The pertinent text, Numbers 6, specifies that members of both sexes are free to take this vow ("man or woman," Num 6:2). In a context which usually speaks only of men, this detail is striking indeed. Ordinary vows, too, were frequently resorted to by women. Childless wives were sometimes led to take a pledge by their desire for offspring, as 1 Sam 2:11 and Prov 31:2 show. At the time of fulfillment, however, difficulties could arise. Since women were financially dependent upon their husbands, the latter had to supply the means of payment. When a husband was unaware of his wife's religious pledge or did not agree with it, she found herself in a delicate situation. What was she to do when he refused to take responsibility for her actions? Was the vow to remain unfulfilled? Under such circumstances prostitution might seem to a woman the only solution left.

An illustration of such recourse to prostitution as a means to pay vows is given by Proverbs 7, where we find a portrait of the *nōkriyyâ,* the "strange" woman. She is described as a danger for the adolescent, whom she tries to persuade into accepting her erotic proposals: "Come, let us be satiated with love play till morning, let us delight ourselves with love" (Prov 7:18). In order to make the young man accept her

offer, she refers to the predicament she is in: "I must provide a sacrificial meal, today I am to fulfill my vows" (Prov 7:14). Nothing obliges us to say that the vows of the woman were vows of fertility. Apparently, the term of her engagement has expired and the promised offerings are due today. What can she do? Her husband, she explains, has gone on a long journey; he took the bag of money with him, and will not be home until the full moon (vv 19–20). These words are indeed meant to seduce her victim. Yet they are not mere reassurances, designed to allay the youngster's fear of an untimely intrusion by the husband. Nor is the detail of the "bag of money" simply an indication of the duration of the business trip. No, the woman implies that she does not have access to the money she needs in order to discharge her religious obligations. The only way out she can think of is prostitution. Of course, she is no common whore! Under normal circumstances she would not dream of doing such things. But necessity knows no law. This woman from outside is using her (fictitious?) situation as an excuse for her desire of sensual enjoyment. Yet her arguments presumably impress her potential companion. Of course, adultery is wrong, but do not the ends justify the means in this case? He would not be merely buying a pleasure, but contributing to a good cause.

There are various reasons to assume that situations such as the one hinted at in Proverbs 7 arose rather frequently in ancient Israel. One of the texts on which this assumption is based is Num 30:1–16. The issue raised in this chapter concerns the vows taken by women. Only the widow and the divorced woman are regarded as independent and must at all times abide by their vows. Unmarried daughters, betrothed girls, and married women, on the contrary, are all subject to the authority of a man, be it their father or their husband. In case they should take a vow, father or husband has a right to cancel it, though only within a period of twenty-four hours on their hearing of the woman's engagement. Apparently, specific circumstances called for these rules. It has been suggested that the female vows referred to implied the abstinence from marital intercourse; thus, the husband would be directly affected by the consequences of his wife's piety. The text, however, does not say this. Ordinarily, vows were paid in movable goods, and there is no reason to assume that this was different in the case of women. In her case, though, it was her father or husband who had to furnish the promised goods. Since the latter had a stake in the matter, he was entitled to a say as to the validity of the vow. A woman could have her reasons, however, to hide her vow from her husband. When the time of payment came, she had to find means of her own to discharge herself of her pledge. Unless she resorted to prostitution as a way to acquire the necessary means, she had to retract her promise, which was considered a very serious offense (Deut 23:22—Eng 21; Eccl 5:3). In certain sections of the population, prostitution under these circumstances may have seemed preferable, so long as the revenues were set apart for the temple treasury.

Other biblical texts, too, allude to the practice of paying vows with money acquired by prostitution. The clearest instance is found in Deut 23:18–19 (—Eng 17–18).

> There shall be no *qĕdēšâ* among the daughters of Israel,
> nor shall there be a *qādēš* among the sons of Israel.
> You shall not bring the hire of a harlot or the wages of a dog
> into the house of the Lord your God in payment for any vow:
> for both of these are an abomination to the Lord your God.

The verses show that, also among Israelites, the custom of paying vows by means of prostitution was a known phenomenon. Two distinct, yet connected practices are put in parallelism. The service of "consecrated persons" *(qĕdēšîm)* from Israelite extraction and the annex custom of paying vows with money acquired by prostitution are prohibited in the same breath. What the two have in common, it seems, is the recourse to prostitution as a way to make profits for the temple. The "harlot" *(zônâ)* parallels the *qĕdēšâ,* while the "dog" (*keleb,* a euphemism for the catamite) parallels the *qādēš.* Because of the destination of their income, their activities can be presented under the cloak of religion. The temple used the money it thus acquired, among other things, to pay for the production of divine images. Therefore Mic 1:7 can speak of Samaria's idols that have been gathered "from the hire of a harlot" (cf. also Isa 23:17–18). See also PROSTITUTION (OLD TESTAMENT).

The concept of prostitution as a means to pay vows was so well-known, that the Greek translators of Prov 19:13b had recourse to it in elucidating a passage that otherwise remained obscure to them. Whereas the Hebrew text speaks of a wife's quarreling that is likened to "a continual dripping of rain," the LXX talks about the unholy "votive gifts (*euchai*, the current translation of Heb *nědārîm*) from the hire of a hetaera." From a text-critical point of view the Masoretic Text is to be preferred, but the Greek rendering reveals the notoriety of the custom that interests us here. On the basis of these texts, we may conclude that the phenomenon of women—and, occasionally, men—prostituting themselves in order to obtain the money to fulfill their vows was known and to some extent accepted in broad layers of the Israelite society. Until the Deuteronomic reform it seems to have been tolerated by the official religion, which preferred the resulting votive gifts over an ethical rigorism.

Considering the available evidence, then, there is no need to postulate the existence of sacred prostitution in the service of a fertility cult. The witness of the OT certainly does not compel us to posit that the Israelites had recourse to such forms of sympathetic magic. The comparative material that is adduced to demonstrate a common ANE pattern of ritually staged copulation as a magical means to promote fertility is not as conclusive as is sometimes said. Prostitution whereby the income fell to the temple was definitely known, but its alleged magical connotation remains unproved.

Without going into a discussion of all the available ANE evidence, it will be useful to conclude this survey with a succinct analysis of the Mesopotamian data. Both the Sumerian and the Akkadian lexicon contain a number of words meaning "female prostitute." Generally, the attention of OT scholars has been monopolized by the *qadištu,* clearly cognate with Heb *qědēšâ.* The connection between the two terms is frequently said to go beyond the level of etymology; both would have been designations of the "cult prostitute." A survey of the texts in which *qadištu* occurs, however, shows that the term is frequently used, especially in the 1st millennium B.C.E., for a wet nurse or a midwife. One should therefore avoid narrowing down her activities to those of a prostitute. Nevertheless, the term does at times refer to a prostitute. Together with the *ḫarīmtu* and the *ištarītu*, the *qadištu* operated under the patronage of Ishtar, the goddess of love. There is no evidence, however, that such prostitution was ritual in the sense that it was part of a fertility cult. In Akkadian texts, the brothel can be called "the house of Ishtar," even though the entertainment offered there involved nothing particularly religious. Prostitution was a profane profession, unattractive perhaps, but on the whole not dishonorable. Also, the frequent connection of prostitutes with temples should not be interpreted as proof of the sacred character of their profession. Neo-Babylonian records from the Ishtar temple of Uruk show that the temple hired out certain members of its lower female personnel as concubines to private citizens. The relations between the hierodule and the man were conducted at the home of the latter, and nothing indicates that he had any higher designs than to have a pleasurable time. To the temple, prostitutes could be a source of income, but they were not cultic functionaries.

In a famous passage of the *Histories,* Herodotus tells us that every Babylonian woman had to prostitute herself, once in her life, to a stranger within the precincts of the Ishtar temple (1.199). Assyriologists disagree about the accuracy of this information. Supposing Herodotus was right, one cannot make him say that the women did so as part of a fertility rite. The only thing the "Father of History" tells us is that the piece of silver the woman received in payment belonged to the deity. This is precisely what we have found in the OT. We may even wonder whether Herodotus might not have mistaken the prostitution in payment of a vow for a general, once-in-a-lifetime duty. However that be may, the cuneiform evidence does not warrant the conclusion that the Mesopotamians practiced cultic prostitution in order to enhance the fertility of the soil or the flocks. The only instance one could quote to support the idea of a connection between sexual intercourse and fertility in nature is the so-called "sacred marriage." Evidence for this custom, however, is scarce and stems mainly from the late 3d millennium B.C.E. Also the term "prostitution" could hardly be applied to this.

In short, both the evidence from the OT and the Akkadian and Ugaritic data do not support the hypothesis of "cultic prostitution." Ancient Near Eastern civilizations were familiar with prostitutes

working in the service of the temple, as they were with the phenomenon of prostitution as a means to pay vows. In neither case, however, does there seem to have been a conscious connection with fertility rites.

———

A. Title of the Book

The Hebrew title for the book of Proverbs, *mišlê šĕlōmōh,* derives from the superscription in 10:1 (cf. also the longer form in 1:1 and 25:1). Variants to this title are *sēper ḥokmāh* and *mišlôt* (the latter derives from Eusebius and uses a plural form of *māšāl* otherwise unknown, the usual plural being *mĕšālîm*). The Septuagint (LXX) title is *paroimiae;* and the Vulgate has *proverbia,* from which comes the English title "Proverbs." In the Hebrew Bible *māšāl* designates a wide range of literary types—taunt, allegory, lament, simile, and so on—but its etymology implies likeness and, in the view of some interpreters, authoritative word (from *mšl,* "to rule"). The fundamental feature of the sayings within the book therefore seems to be "comparison." Brief proverbial sayings set one image over against another, making an explicit or implicit comparison. Not every isolated saying compares two things, however, and some sayings extend considerably beyond a single distich, in the process multiplying the number of likenesses under consideration.

B. Authorship

Although certain features of the book associate the name "Solomon" with discrete units, other names also occur in connection with specific sections of the book. Some textual units lack any name whatever. Furthermore, the superscriptions may derive from a time later than the actual composition of the sayings within a given collection. The book therefore takes the shape of an anthology, its individual components coming from various periods of Israel's history. At least two, and probably three, short sections (Nos. 3, 6, and 7 below) stem from non-Israelite sources, making the anthology truly international.

Superscriptions set off seven distinct collections from their present context.

1. 1:1–9:18 The Proverbs of Solomon, David's son, king of Israel.
2. 10:1–22:16 The Proverbs of Solomon.
3. 22:17–24:22 The Words of the Wise.
4. 24:23–34 These also belong to the Wise.

5. 25:1–29:27 These also are Proverbs of Solomon that the men of Hezekiah, king of Judah, transcribed.
6. 30:1–14 The Words of Agur, son of Jakeh, the Massaite.
7. 31:1–9 The Words of Lemuel, king of Massa, with which his mother instructed him.

The last two brief collections have attracted miscellaneous sayings in the first instance and an alphabetic poem in the second.

8. 30:15–33 Numerical Sayings (except vv 20, 32–33).
9. 31:10–31 An Acrostic poem on a virtuous Woman.

Various signs of disunity within collections one and five, particularly arguments of style, content, and grammar, suggest that even further discrete units once existed (10:1–14:35; 15:1–22:16 and 25:1–27; 28:1–29:27).

In LXX the different location of material and additional sayings indicates conscious acknowledgment of foreign material and a desire to promote specific concepts. The Greek text gathers together the collections of foreign extraction, yielding the following sequence: 22:17–24:22; 30:1–14; 24:23–34; 30:15–33; 31:1–9; 25:1–29:27; 31:10–31. Much additional material in LXX appears toward the end of various collections (for example, 9:12, 18; 15:27, 29, 33; 16:1–9; 24:22; 27:24–27).

The occurrence of the same proverb in more than one larger entity gives further indication of multiple collections. For example, the same conclusion reinforces instruction about industry akin to the ant's and an object lesson concerning the effects of neglect on a vineyard (6:6–11; 24:30–34). Brief sayings occur more than once in identical form and in slightly altered language, and specific expressions appear in more than one literary context.

A satisfactory explanation has not surfaced for the prominence of Solomon's name in the book of Proverbs or for the implicit attribution of Ecclesiastes to him and explicit mention of him as author in Song of Songs and Wisdom of Solomon. Ordinary citizens venerated kings of the ancient Near East as patrons of wisdom if not actual possessors of extraordinary insight. The praise of Solomon for wisdom surpassing that of all other kings acknowledges this fact and is perhaps a product of his subjects' strong wish to be ruled by an astute monarch.

The tradition in 1 Kgs 5:8–14 (—Eng 4:29–34) that Solomon composed three thousand proverbs and one thousand and five songs actually summarizes their subject matter. One searches almost in vain within the book of Proverbs for sayings and songs about trees, beasts, birds, reptiles, and fish. Such encyclopedic lists have survived in Egypt and Mesopotamia, but biblical onomasticons have vanished if they ever existed. Given the tradition that Solomon's wisdom excelled that of everyone else in the Near East, it seems reasonable to assume that Israelite sages would have vigilantly preserved his noun lists.

Even those interpreters who think the tradition about Solomon's wisdom stems from his patronage of sages rather than from his actual authorship have difficulty explaining the divergence between the descriptions in 1 Kings 5 and the book of Proverbs. Some critics understand the reference in Kings as legend designed to legitimate a harsh regime that operated on the principle of might rather than justice. The apologia certainly depicts the young king as recipient of divine wisdom, which he promptly exemplifies in the judgment concerning the actual mother of a surviving infant, a story found in numerous cultures, and in his riddle contest with the Queen of Sheba. Whether such stories succeeded in counteracting the baneful effects of living memory remains unanswered, for this oppressive side of Solomon's reign was not totally suppressed in the biblical record. In this ancient apologia the climactic place of the references to Solomon's vast wealth may be instructive, for the belief that wise persons prospered became axiomatic at one time. As the wealthiest king in Israel's memory, Solomon must naturally have invited thoughts associating him with extraordinary wisdom. In all likelihood, the allusion to Hezekiah's men represents accurate recollection of a powerful and prosperous king of Judah whose patronage of sages allowed them to collect and transcribe earlier proverbial sayings. The ambiguous expression, men of Hezekiah, recalls the Masoretic Text of 1 Kgs 10:8, in which the Queen of Sheba expresses admiration for Solomon: "Happy are your men, happy these your servants who stand before you continually, hearing your wisdom."

The initial collection is preceded by an introductory paragraph similar to the one in the Instruction of Amenemopet. The biblical preface (1:2–6) concludes with a thematic statement (1:7); together they serve as an introduction to the first collection and possibly to the whole book. Technical vocabulary of the wise abounds here: wisdom, discipline, discerning words; perceptive discipline, i.e., correct, fair, and upright; prudence, knowledge, and perspicacity; teaching and steering; simile, enigma, words of the wise, and riddles. In addition, verbs emphasize the learning and teaching process: to know, to perceive, to receive, to give; to hear, to add, to obtain; to understand. Distinct groups of people are also mentioned: the simple, youth, the wise (singular and plural). The thematic statement, "The fear of the Lord is the beginning *(rēʾšît)* of knowledge; fools despise wisdom and instruction," grounds intellectual pursuits in religion. The word *rēʾšît* may extend beyond the temporal to the substantive, making piety the fundamental ingredient of all knowledge. The use of the Tetragrammaton, rare in Wisdom Literature such as Job and Ecclesiastes, is very much at home in Proverbs 1–9.

C. Date

Biblical wisdom is notoriously difficult to date, largely because of the timeless quality of its teachings. Sages endeavored to communicate insights that transcend space and time. Their teachings aimed at universal assent by any intelligent individual, Israelite or non-Israelite. Accordingly, the wise remained silent about the specifics of national history, choosing rather to dwell on things accessible to every human being. With Ben Sira a decisive shift took place, and Israel's sacred traditions entered the repertoire of professional teachers. In contrast to earlier Wisdom Literature, Sirach (Ecclesiasticus) can be dated with confidence to the decade between 190 and 180 B.C.E. See WISDOM OF BEN-SIRA.

Assigning relative chronology to the various collections in the book of Proverbs must therefore be done with considerable reservation. The previous tendency to date segments of the book on the basis of a form-critical judgment that brief sayings in distich or tristich form (sentences) antedate longer imperatives accompanied by warnings or exhortations (instructions) has collapsed because of Egyptian evidence. The discovery of Papyrus Insinger and the Demotic writings of Onkhsheshonqy demonstrated the existence in very late times of sentences, whereas instructions from the 3d millennium have survived. It appears that genre was more a matter of social setting than chronological period; in general, rural folk had a natural affinity for sentences, and members of the court preferred instructions.

Although the form-critical argument for the lateness of Proverbs 1–9 does not require an early date for this collection, other features do come into play, especially the role of *ḥokmāh,* whether merely an elaborate metaphor or an actual personification, and the heightened emphasis on piety, possibly even influenced by the Torah in its Deuteronomic form. In addition, the earlier literal use of *bĕnî,* "my son," and *ʾābîkā,* "your father," appears to have given way to technical nuances for student and teacher, just as *ḥākām,* "intelligent one," has taken on the sense of "professional sage." It follows that the present order of collections in the book of Proverbs does not reflect the chronology of the separate entities, and the clue from that other factors shaped the sequence seems valid for the Hebrew as well. Although conjectural at best, a plausible reconstruction of the various stages of development reads as follows. An ancient collection of family teaching (10:1–22:16) was enlarged by a body of knowledge with conceivably broader application (25:1–29:27), then supplemented by professional instruction, first in a collection that duplicates several instructions preserved elsewhere in an earlier Egyptian text (22:17–24:22) and later by a body of instructions in which Egyptian imagery is completely integrated (1:1–9:18). The miscellaneous collections in 24:23–34 and 30:15–33 may very well have preceded the last mentioned unit, possibly even antedating 22:17–24:22. The sayings of Agur (30:1–14) and instruction of Lemuel's mother (31:1–9) probably followed the larger collections temporally, despite stylistic features in Agur's remarks that echo Canaanite literature. Actually, numerical sayings were widespread in the ancient world; and Agur seems to cite Job and certainly quotes from Psalms and Deuteronomy. His sentiments resemble the words of Qoheleth (Ecclesiastes), who probably was active about the middle of the 3d century. The latest section in the book of Proverbs, 31:10–31, appears to draw its power from the personification of Wisdom but extols wives of flesh and blood.

An interesting case has been made for the present arrangement of the book as a creative reinterpretation of old wisdom for theological purposes. The essence of the argument is this. Chapters 1–24 have a framing device and cyclic composition, whereas 25–31 use an additive technique. Chapters 1–9 combine two elemental or core blocks (2–4, the personal acquisition of wisdom, and 5–7, ethical advice, mostly about sex). A speech in first person (1:20–33 and 8:1–36) and a framing ring (the prologue, 1:2–7, and the final contrasting "allegory" about wisdom and folly, 9:1–18) enclose the two kernel blocks. Chapter 10 serves as an entranceway into the following collection, and chap. 15 functions as a second theological focus. Verses 4–5 in chap. 10 offer the kernel saying on poverty and riches, and verses 1–8 constitute a minicomposition around older wisdom, infusing new meaning into earlier teaching. Within chaps. 10–15 only 14:7 uses the style of instruction, but in 16:1–22:16 it occurs frequently (16:3; 18:22; 19:18, 20, 27; 20:16; 22:6, 10). Instruction style therefore wraps itself around the central unit of proverbial wisdom, providing an effective transition to 22:17–24:22, where imperatives increase noticeably. Chapters 25–27 appear to be more empirical and general, whereas 28–29 contain a pronounced theological bent. A plait pattern is discernible in chap. 29, a linking of a verse with the one after its immediate sequel (1 and 3; 2 and 4; 7 and 9; 12 and 14; 15 and 17; 19 and 21; 20 and 22).

D. Content

1:1–9:18. This section purports to give parental advice to children. The chief literary device is that of a father (the "I") speaking to a son (the "you"), for the most part warning against rival discourse and thus reinforcing an ideology, the ethos of the family. Readers assume the role of sons who must choose between those values that preserve society and alternative actions that undercut family stability. Various dangers threaten young men, but two stand out here: the encouragement from young companions to unite in an endeavor to get rich quickly through criminal activity and the seductive invitation to sensual pleasure from illicit sources. In both instances the father manipulates the rival discourse, underscoring the dangers accompanying such misconduct. He even reinforces his own authority by appealing metaphorically to a higher level, the transcendental, on which God disciplines wayward children. Furthermore, the father confesses that he was once a child, in this way drawing adults into the discourse and uniting the generations. Occasionally, the father appeals to the authority of torah, a body of teaching that protects those who walk in its paths.

A mother's voice, although never audible, gives additional weight to the warnings against dangerous conduct. Because the principal threat to young men involves a specific kind of woman, the father's discourse receives an ally in feminine form. The voice of Wisdom comes to the assistance of the father, openly inviting young boys to share her feast and, like a prophet, sternly warning those who resist her advances. Together, the two encourage youth to direct their erotic impulses toward their own wives and to pursue knowledge with the same passion. In this context, metaphorical language functions to explore the mystery of eros, which has a dark side in addition to its luminous one. Woman represents access to ecstasy and agony; hence she offers pleasures that seem to justify any risk. That situation enables females whose ways are foreign to wreak havoc as harlots; and adulterous women disseminate their poison, prepared in attractive vials. The discourse acknowledges the power inherent in seductive speech, for it corresponds to secret desire in the hearts of those being addressed. Nevertheless, clear warnings accompany the verbal allure: follow her and die; she speaks folly, behaving unacceptably all the time.

The son's silence contrasts markedly with vocal appeals from various quarters. He faces a choice of allegiance, whether to contribute to consensus or to join the ranks of society's dissidents. He can resist his father's voice, learning how to do so from the very one who urges him to obey parental instruction. An Egyptian instruction, Anii, has a rare instance in which a son actually responds to his dad's teachings, insisting that the vigorous moral demands are beyond his capability although appropriate for the father, who counters such claims with weighty arguments. The son's silence in the book of Proverbs may have contributed to the climate in which the books of Job and Ecclesiastes give voice to rival discourse of a different kind. The call for all readers to adopt the position of a son subject to an authoritative father yields to outright challenge of traditional authority. On his part, the father adheres to belief that allegiance

precedes knowledge, so that habitual conduct eventually creates its own ethos in which such behavior becomes natural, like breathing.

Modern interpreters have divided 1:1–9:18 into ten speeches, but they differ on the precise delineation of each unit and the criteria for identifying distinct sections. Introductory formulas consisting of direct address ("my son") and of an appeal to hear or receive instruction suggest the following divisions: (1) 1:8–19; (2) 2:1–22; (3) 3:1–12; (4) 3:21–35; (5) 4:1–9; (6) 4:10–19; (7) 4:20–27; (8) 5:1–23; (9) 6:20–35; (10) 7:1–27. These units assert the personal authority of the teacher and understand wisdom as ordinary human capacity, in contrast to the two places in this larger collection where a personified Wisdom claims to possess godlike power to bestow life and riches.

10:1–22:16. The second collection in the book of Proverbs consists of brief observations about life that make their point in distich form. These two halves of a line balance one another synonymously, antithetically, or synthetically.

1. Condemnation is ready for scoffers,
   and floggings for the backs of fools (19:29).
2. The poor use entreaties,
   but the rich answer roughly (18:23).
3. The eyes of the Lord are in every place,
   keeping watch on the evil and the good (15:3).

Some observations begin with a particle of existence that functions merely to introduce an anomaly.

There is a way which seems right to a man,
but its end is the way to death (14:12).

Others judge one thing to be preferable to another.

Better is a dry morsel with quiet
than a house full of feasting with strife (17:1).

Still other observations make simple comparisons.

Like vinegar to the teeth, and smoke to the eyes,
so is the sluggard to those who send him (11:26).

Occasionally, a question expresses utter astonishment at incongruities.

Why should a fool have a price in his hand to buy wisdom,
when he has no mind? (17:16).

Because these sayings are complete in a single stich, the relationship to the larger context is uncertain. A few modern critics have posited thematic units, particularly in chaps. 10–15. For example, 11:3–8 introduces a topic (the just and the wicked), 11:9–14 [17] specifies the effects of conduct on neighbors and society in general, and 11:18–20 repeats the two themes. In verses 9–12, 14 the Hebrew letter *bet* occupies the initial position, although this phenomenon may be accidental. Similar repetition occurs in 15:13–14 (*lēb,* "heart") and in 16:27–29 (*ʾiš,* "person"). If the principle linking the individual sayings expresses intentional design, no one has discovered a clue to the structure, which gives the appearance of randomness.

The sayings in this collection lack the distinctive features of the instructions in 1:1–9:18, specifically imperatives and the direct address, "my son" (but see 19:27). The "sentences" capture a single facet of reality, stating the truth in a "matter-of-fact" way. Readers are expected to give their assent, for the observations derive from collective experience. Hence the sayings dispense with reinforcements of any kind; they thus resemble traditional sayings embedded within biblical narrative and oracular literature, e.g., "The fathers have eaten sour grapes, and the children's teeth are set on edge" (Jer 31:29; Ezek 18:2).

The observations constitute astute insights about human behavior, both the good and the bad; and they probe the inner spirit as well: the significance of a wink (16:30), the effectiveness of a bribe (17:8), the unpredictable manner in which generous persons acquire more wealth and stingy ones become poorer (11:24), the posturing of a buyer before and after a purchase (20:14), the necessity of looking beneath the surface of things (13:7), the power of speech to beget good or ill (15:1), the allure of gossip (18:8), the loneliness of the heart in its moments of grief or joy (14:10), the underlying sadness that laughter

obscures (14:13). A few proverbial sayings explore the limits imposed by the deity on human beings (16:9, 33; 19:21), even on kings (21:1). For the most part these sayings exude optimism (12:21; 13:9; 15:3), a confidence that the Lord holds the reins of the universe securely in hand.

22:17–24:22. The unusual feature of these instructions is their affinity with the earlier Egyptian Instruction of Amenemopet. That relationship has been shown as follows:

PROVERBS	AMENEMOPET	SUBJECT
22:17–18	3:9–11, 16	Appeal to hear
22:19	1:7	Purpose of instruction
22:20	27:7–8	Thirty sayings
22:21	1:5–6	Learning a worthy response
22:22	4:4–5	Do not rob a wretch
22:24	11:13–14	Avoid friendship with violent people
22:25	13:8–8	Lest a trap ruin you
22:28	7:12–13	Do not remove landmarks
22:29	27:16–17	Skillful scribes will be courtiers
23:1–3	23:13–18	Eat cautiously before an official
23:4–5	9:14–10:5	Wealth flies away like and eagle/geese
23:6–7	14:5–10	Do not eat a stingy person's food
23:8	14:17:18	Vomiting results
23:9	22:11–12	Do not speak before just anyone
23:10–11	7:12–15; 8:9–10	Do not remove landmarks of widows
24:11	11:6–7	Rescue the condemned

The principle of polygenesis may explain some similarities, for identical proverbial sayings occasionally emerge in cultures where no direct contact with one another has taken place. Nevertheless, the astonishing affinities in this instance indicate that the biblical author drew upon the earlier literary tradition or both authors used a common source. The reference to thirty (sayings) becomes understandable in light of the thirty chapters in Amenemopet.

The long rhetorical unit about the dangers associated with excessive drinking (23:29–35) also has a close parallel in Egypt, but nothing here seems to require a theory of dependence. The idea of the deity weighing the heart (24:12) has its closest analogue in Egyptian symbolism about a final judgment of human deeds. Furthermore, the frequent mention of kings and service at the court stands out in this larger unit, 22:17–24:22. Presumably, such notions corresponded to reality in Israel only briefly, although literary conventions persist long after the social conditions giving birth to them have vanished.

24:23–34. A miscellaneous collection overlapping with 6:6–11, this brief section witnesses to the value of justice in society, offers helpful advice on priorities when embarking on a major undertaking like building a house, and encourages nonretaliation for offenses. The overlap with 6:6–11 has a different introductory scenario, but both discuss the folly of laziness.

25:1–29:27. The essential meaning of *māšāl* as similitude comes to expression in this early collection, for an impressive number of sayings begin with the preposition of comparison, "like," whereas others achieve the same thing by juxtaposing competing images. The social setting of this collection has generated considerable speculation, one scholar proposing two distinct settings, the court for 25–27 and rural society for 28–29. Evidence hardly supports the thesis that the former unit served as a mirror for princes and the latter unit as advice to peasants. The opening section, 25:2–10, does reflect on the different functions of God and king, pausing to offer sound counsel about the means of securing royal authority and of finding one's appropriate niche in the councils of power. The remaining sayings apply broadly to Israelite society, without dwelling on peculiar concerns of the royal court. To be sure,

eloquence and accuracy in reporting facts apply to persons in the king's service, and courtiers profit from keeping a civil tongue. So do other people, who must learn self-discipline, the right time to act, the advantages of breaking free from the rule of lex talionis (an eye for an eye), the necessity of speaking at crucial times and the folly of doing so in some circumstances, the dangers of initiating violence, the advantage of intellectual discussion, and so on. The concluding section in 27:23–27 reverts to royal imagery, specifically wealth and a crown, but makes a sharp transition to the concerns of everyday sustenance.

The contrast between poor and rich surfaces again and again in chaps. 28–29, and the responsibility of a ruler to assure justice constitutes a society's deepest hope and harbors its greatest fear at the same time. Experience finds expression in the concession that a king's favor can be bought, so that pure justice rests with Yahweh alone. Nevertheless, the divine empowerment of poor people and their oppressors (29:13) has not escaped this astute observer of human experience.

30:1–14. Extraordinary disagreement characterizes scholars over the scope of this unit and its essential character, whether skeptical or pious. Some interpreters follow LXX's lead in viewing the teaching as humble piety, while others think Agur takes conventional wisdom to task. A strong argument can be made for understanding verses 1–14 as a coherent unit, either as a dialogue between two people or as a teacher citing popular views in order to refute them. More probably, a skeptic challenges traditional wisdom, questioning God's existence and feigning ignorance, although insisting that those who profess orthodox views should demonstrate their knowledge of the Creator. An interlocutor rebukes Agur for heterodoxy, quoting Scripture, and is in turn warned against adding to the teacher's words. A sublime prayer follows, one that by distinguishing social status may mount further attack on the privileged teacher who has forgotten God while basking in the lap of luxury. The concluding section has a transitional statement about servants and masters, one that functions with reference both to humans and to God, together with four incisive observations about types of people who are worse than honest skeptics like Agur: children who dishonor their parents, hypocrites, proud persons, and rapacious cutthroats.

This section demonstrates remarkable skill at rhetoric, utilizing double meanings and clanging symbols, the dashing of expectations. Promising prophetic revelation, it offers human words that are either Delphic gibberish or astonishing confession of practical, at least, atheism. Theophanic language evokes derision in a citation from God's speech in Job ("Surely you know"). The request to be spared poverty and riches demonstrates unusual perception about the role of sociological status in shaping one's religious views. This negative attitude toward wealth accords ill with the prevailing understanding of virtue and its rewards, but Israel's teachers seem to have had difficulty adopting a consistent attitude toward the poor.

30:15–33. Graded numerical sayings alternate with three observations that allude to the four types of persons in 30:11–14. Those who show disrespect for parents will suffer hideously (30:17); adulteresses eat and wipe their mouths without any awareness of offense, consequently remaining pure in their own eyes (30:20); proud individuals ought to refrain from boasting (30:32); and violent people should control their tempers (30:33). The numerical sayings isolate for scrutiny various categories that resemble one another: things that are never satisfied (Sheol, the barren womb, a thirsty ground, fire), movement that leaves no trace (an eagle in the sky, a serpent on a rock, a ship at sea, a young man and a maiden), intolerable circumstances (a king who once was a slave, a fool with a full stomach, a previously spurned woman who weds, a maid who succeeds her mistress), four small creatures able to adapt to circumstances (ants, badgers, locusts, and lizards), and four "prancing" (self-important?) creatures (a lion, a cock, a billy goat, and a king).

31:1–9. This instruction consists of a superscription (31:1), a queen mother's direct appeal to her son (31:2), and four "words" of advice. These admonitions concern relationships with women and excessive drinking. Lemuel's mother tells her royal son to provide strong drink for oppressed victims of society who need something to forget their misery. She also urges him to pay special attention to the matter of justice, becoming a powerful advocate for vulnerable members of society whose voice would otherwise go unheeded. The entire instruction makes effective use of rhetoric, combining terms of endearment, repetition, inclusion, suspension of subject matter, and double entendre.

31:10–31. The personification of Wisdom as a woman served to correct many sayings that emphasize women as temptresses and disrupters of harmony within households. Nevertheless, personified Folly neutralized this embodiment of discernment. Therefore another means of salvaging women's reputation was needed; the final poem endeavors to do just that. Its effectiveness suffers because of its orientation toward the good wife's contribution to her husband and children. Her worth seems to depend on how successfully she enhances his standing in the community. The description of their entrepreneurship suggests that Israelite women took an active role in business. The religious criterion for evaluating women (31:30) comes as something of an afterthought.

E. Function

During the earliest phases of Israelite society, power rested in elders, who perpetuated their singular authority through legal statute and traditional saying. Apodictic law compelled assent insofar as it voiced the will of respected figures whose wide experience, fairness, and good judgment set them apart from ordinary citizens as custodians of valuable lore. Similarly, proverbial sayings carried the weight of cumulative experience, hence embodied a way of life that was binding on everyone but persons who questioned the fundamental basis of society. These two, law and traditional saying, constitute ancient Israel's attempt to establish and maintain order in complex human relationships.

Although the locus of both law and aphorism reached beyond the privacy of a family's tent to the centers of daily deliberation, particularly the gates where important judicial decisions were rendered, the lofty position of parents in the early system of clans reinforced the authority of these literary forms. This domestic setting left its mark on proverbial teaching, which strengthened its own appeal to hearers by adopting the emotion-laden language of father to son. Older proverbial collections in the book of Proverbs dispensed with such specific designations of speaker and addressee, but ancient Near Eastern parallels from Egypt and Mesopotamia demonstrate the antiquity of this language, which eventually took on the technical sense of teacher (*ʾāb*, "father") and student (*bĕnî*, "my son") so prevalent in Proverbs 1–9.

These parental teachings emerged from persistent efforts to penetrate reality so as to order life for maximum success in achieving honor, wealth, health, and offspring. The notion of steering lay at the heart of such instruction, and an appreciable amount of self-discipline too. Optimism prevailed about the extent to which individuals controlled their own destiny. Virtue received its reward and vice, its punishment, with rare exceptions, which emphasized divine freedom. In due time, skepticism made its presence felt, particularly with regard to the impenetrability of the universe. In Egypt a noticeable increase in piety accompanied such pessimism, and the same may actually have occurred in Israel as well. Although an attitude of confident reverence pervades much of the proverbial literature, growing insecurity seems to have evoked opposite responses, skepticism and dogmatic assertions.

The introduction of monarchy in Israel brought about a definite shift in the power base, the center of authority moving from the heads of families to a chief of state. This change came slowly and after much resistance on the part of those who watched their status in the community dwindle year by year. Concentration of power in Jerusalem and international commerce hastened the emergence of a professional class of courtiers equipped to handle the complex affairs of state on behalf of royalty. Such learned figures graced the courts of Egypt and Mesopotamia from early times. Precisely when they first appeared in Israel remains a mystery; but they were firmly planted in the 8th century B.C.E., producing a tradition associating them with the court of King Hezekiah. Even David enjoyed the benefits of two counselors, Ahithopel and Hushai, whether in fact or as a piece of literary fiction.

One can easily imagine the responsibilities of such courtiers, despite the silence about their duties in Wisdom Literature. International diplomacy must have stood high on their agenda, and thus the mastery of various foreign languages. The educating of young princes may also have fallen to these courtiers, and perhaps, too, the entertaining of nobility with feats of eloquence like those in 1 Esdr 3:1–4:41. The courtiers probably kept records, both political and economic, and prepared propaganda for aspiring and fading regimes. Considerable attention would have gone to the training of young potential courtiers, hence to perpetuating their profession. In all likelihood instructional literature in the book of Proverbs belongs to

such "in-house" pedagogy. This scholarship for internal consumption may have encouraged the kinds of philosophical reflection that eventuated in the books of Job and Ecclesiastes.

The disappearance of monarchy in 587 B.C.E. and the drastic alteration of lifestyle, whether in Exile or in the Judean countryside, brought about a radically different job description for professional sages. The accompanying loss in perceived status further fueled fires of discontent, already exacerbated by historical circumstances involving the populace at large. Adversity propelled these learned teachers into strange alliances with the ruling priestly class, or alternatively with persons located on the fringes of society, at least in their conviction that justice had departed once and for all. This retreat in opposite directions suggests that wisdom may always have possessed distinct perspectives corresponding roughly to the differences in literary genre that have complicated all attempts to comprehend the phenomenon. However, the two different orientations, the experiential aphorism and the reflective probing, functioned in a complementary way, possibly to the very end. Their union in Sirach merely continues a trend set in motion by the authors of Job and Ecclesiastes.

The preceding account of professional sages in ancient Israel suggests that they possessed remarkable adaptability, a willingness to change with the times. A Hellenistic text, Wisdom of Solomon, shows how far the sages proceeded in their accommodation to new modes of thought. See SOLOMON, WISDOM OF. Such radical departures inevitably threatened to introduce a new entity altogether, making it difficult to determine the actual successors of the wise in later Judaism. Furthermore, this partial rendering of the development of the sapiential enterprise, like the biblical literature itself, maintains silence about onomasticons. One wonders why Israel's teachers did not compile comprehensive taxonomies of flora and fauna, among other things. Perhaps they did, and this particular feature of their intellectual achievement has vanished.

Changes in the meaning of *ḥokmāh* over the years suggest yet another means of tracing the development of the sapiential enterprise. Just as the adjective *ḥakam* and its plural assumed a technical sense in some instances (the sage or the wise), the noun *ḥokmāh* also acquired a rich nuance of astonishing magnitude. Foreign influence definitely played a part in this fascinating speculation about a personified figure who embodied the highest and noblest aspirations of the sages, but Israelite ideas laid the foundation itself. As a matter of fact, prophetic language dominates the initial appearance of *ḥokmōt* (Prov 1:20–33), specifically the image of pouring out the spirit, the description of stubborn refusal to hear, and the references to undesirable consequences of such action. The people refused to listen to the proclamation; they spurned the outstretched hand; Wisdom will mock them in their distress; when they call, she will not answer; unable to find her, they will eat the fruit of their way and gorge themselves on their own misconduct. This threatening posture approximates that of a prophet who speaks in God's name, the prophetic ego merging with the divine. These foolish individuals have not just ignored a human teacher; they have also treated God with contempt.

The plural *ḥokmōt* has caused considerable speculation, none of which satisfactorily explains the form: a plural of abstraction, an ancient Canaanite goddess, an orthographic mistake. Curiously, the next section to introduce this figure, Prov 8:1–36, uses two expressions in parallelism (*ḥokmāh* and *tĕbûnāh,* although referring to a single individual (cf. 7:4). Several links with the earlier text stand out—the place of instruction, the objects of the teaching, the allusions to "seeking and finding" and to fruit, both positive here. New ideas also surface: the extraordinary worth of Wisdom, surpassing the value of jewels; Wisdom's role in the manifest rule of the earth; the integral relationship between Wisdom and morality; and her presence with God at creation.

The latter complex of ideas concerning creation, echoing sentiments from Egypt, particularly the emphasis on her presence before the various creative deeds and the picture of Wisdom as a source of God's pleasure, describes a transcendent figure loftier by far than the earlier prophetic one. The result of God's first creative deed, she therefore preceded earth itself. Either as artisan or darling child, she witnessed the firmament taking shape and rejoiced constantly as Yahweh established order despite chaotic forces of the deep. A merging of egos occurs here too, as Wisdom assures those who find her that they will discover Yahweh's favor and therefore life itself.

The third passage about an extraordinary figure known as *ḥokmāh,* Prov 9:1–6, describes a building project on a smaller scale. She constructs a house, fashions its seven columns, and prepares a lavish banquet, enlisting the aid of servants to issue an invitation to townspeople. Just as Yahweh had to contend with the waters of the deep, Wisdom must reckon with a rival force who promises sensual pleasure. Given the powerful role of erotic imagination, sweet water and pleasant bread transform a simple meal into a sumptuous feast (Prov 9:13–18).

F. Affinities with Other Biblical Literature

Proverbial sayings occur in various contexts other than the book of Proverbs. Besides traditional sayings preserved in narratives and prophetic literature, one finds similes and aphorisms in Psalms that closely resemble those in Proverbs. For example, Ps 37:16 expresses the judgment that the meager possessions of virtuous people are better than the abundance of many wicked persons. Similarly, 37:21 states that a wicked individual borrows and cannot repay, but the righteous is generous and gives away. Verse 23 insists that God directs a person's steps, establishing the one who finds divine approval. Ps 94:8–11 uses rhetorical questions in composing a didactic essay on divine sovereignty that hears, sees, and chastens. The motto in Prov 1:7a occurs in Ps 111:10a ("The fear of the Lord is the beginning of wisdom"); and the comparison of parental teaching with a lamp and light appears in Ps 119:105, here with reference to God's word. The sons of youth are likened to arrows in the hands of a warrior in Ps 127:4.

The use of *miṣwāh* and *tôrāh* in Proverbs raises the possibility that the Mosaic law lies behind the vocabulary about parental instruction. The use of these words with reference to paternal and maternal teaching in 6:20 suggests that they have the same referent in 6:23 ("For the commandment is a lamp and the teaching is a light, instruction and discipline are the way of life"). Nevertheless, an association with Deut 6:4–9; 11:18–20 seems likely, if unconscious. The Mosaic law may rest behind the language of Prov 28:4, 7, 9; and 29:18, particularly if this last verse also refers to prophecy, but all of these references may have in mind laws of the state.

Although Job and Ecclesiastes represent different genres within Wisdom Literature, they contain many proverbial sayings like those in the book of Proverbs. Perhaps Prov 30:4 alludes to God's mocking remark in Job 38:5 ("surely you know"). Sirach also has numerous proverbial sayings and didactic essays on individual themes, in both instances following in the footsteps of the unknown authors who composed the book of Proverbs. The popularity of such aphorisms is evidenced by their being embedded within devotional narratives such as Tobit (12:7–10).

G. Canonization

The sacred character of Proverbs seems never to have been in doubt, although remarks about its vivid description of a harlot in the act of seduction and about direct contradiction in 26:4–5 have survived in Jewish sources. Christian acceptance of the book seems not to have been contested, and its secular character did not pose any obstacle to considering the book canonical. In some circles, modern scholars have declared its contents pagan, but the criterion they use (proclamation of saving history) leaves much to be desired.

The Greek text has about 130 stichs more than the Hebrew, many of them highly Hellenized. Some haggadic tendencies intermingle with apparent mistakes. Other renderings may harmonize related texts in several different books, especially Psalms, Sirach, and Wisdom of Solomon.

JAMES L. CRENSHAW

PROVIDENCE. The word "providence" derives from the Latin *providentia,* the noun from the verb *providere* "take thought for," "look ahead." The Greek equivalent is *pronoia,* from the verb *pronoeisthai,* having more or less the same meaning.

As a philosophical or religious concept, Providence denotes the care of God for his creatures, "God" standing for a personal, sentient first principle. The requirement that providence stem from a personal agent might seem absolute, but in fact, among the Greeks, the Stoic philosophers adopted the concept of *pronoia* to describe the rational ordering of the universe emanating from a first principle which they designated as *theos,* "God" but which they conceived of simply as the immanent active principle of the universe.

In early Greek thought, Zeus and the other gods are portrayed as exercising care for individual mortals, and in Zeus' case even in a general way for the world as a whole, but there was no overarching idea of divine providence as embracing all human activity, nor was the word *pronoia* used in this context, apart from one remarkable passage in Aeschylus' *Agamemnon* (684–85), where the chorus, speculating on the name of Helen of Troy, speak of "someone whom we do not see, guiding his tongue fortunately *(en tychâi)* to the mark with foresight of destiny *(pronoaisi tou peprômenou).*" Even here, though, *pronoia* is used for someone discerning the course of destiny rather than steering it.

In general, it might be said to be characteristic of early Greek thought, and of writers like Pindar and Herodotus in particular, to regard the gods as being just as likely to be envious of human success, and offended by human self-assertion, as to be benevolent. There is even an undercurrent of thought (represented, for instance, in the Prometheus myth and in the post-Homeric *Cypria*) that Zeus had plans to destroy humankind and start again with a less flawed race of creatures.

The first thinker to assert a systematic doctrine of divine providence is Plato, particularly in the *Timaeus* and in Book X of the *Laws.* In the *Timaeus* (29E), he makes an assertion which was to have great impact on later philosophy, and even on Christian theology, when he states that the Demiurge, the creator god presented in that dialogue, "was good, and in the good there subsists no envy ever about anything; being free of this, then, he wished that everything be so far as possible like unto himself." *Pronoia* is not mentioned here (though the concept is clearly implied, as the opposite of "envy"), but the word is used a

little later (at 30C and 44C), referring this latter time to the forethought of the planetary gods, the Demiurge's assistants.

Later, in *Laws* X, by way of proving the existence of the gods, Plato presents us (896Eff.) with a World Soul which guides the whole universe benevolently (though hampered to some extent in its operations by another soul of opposite tendency—possibly just the negative force of Matter, though many later Platonists, such as Plutarch, took this to be an Evil World Soul in the *Timaeus,* but it was portrayed in the *Laws* as a creation soul). In the *Timaeus,* soul is an instrument of the Demiurge; but in the *Laws,* soul has the executive function of the Demiurge himself and is described as a god, with each of the heavenly bodies being a god as well (899B).

Plato then proceeds to argue against what was later the Epicurean doctrine that the gods exist but exercise no care over human affairs (899D–905D), and in the process he produces all the arguments that would later be used to support the doctrine of divine providence. This is therefore a text of fundamental importance. Plato asserts that the divinity cares for things both small and great (901B) and that we are all the possessions of the gods (902B), in which they therefore have a proprietorial interest, but that we cannot expect our personal convenience always to be served by divine providence since we are only parts of a larger whole and Providence looks to the whole (903Bff.).

The Stoic philosophers inherited this view of divine providence, but adapted it to their own materialist philosophy, God becoming now the immanent mind or soul of the universe. The Stoic doctrine of Providence thus becomes confused with their doctrine of Fate, and disputes in fact arose in the school as to the proper relation between the two concepts. We have record of a dispute between Cleanthes and Chrysippus as to whether everything fated is also providential. Chrysippus held that it is; Cleanthes that it is not (*SVF* 2.933). It is not quite clear what Cleanthes had in mind, but his view may have been that divine providence does not concern itself with a certain level of details (side effects of chains of causation), which are, nonetheless, fated.

Such an argument has some importance for later Platonist and Aristotelian doctrine. Albinus (*Didaskalikos,* chap. 26) though talking here of Fate, rather than Providence, makes the distinction that all things are comprehended by Fate, but not all things are *fated,* which may well be the distinction that Cleanthes was trying to make. Pseudo-Plutarch, in his treatise *On Fate,* presents an elaborate scholastic system (572Fff.), according to which there are three levels of Providence, the highest of which—the "intellection" or "will" of the Supreme God—transcends the sphere of Fate and "encloses" it, while lower levels of providence are coordinate with, or even subordinate to, Fate. Both Albinus and Pseudo-Plutarch, however, seek to preserve within this overarching framework of providence and fate a place for free will.

On the other hand, the Aristotelian tradition (represented most conspicuously in the later period by Alexander of Aphrodisias in his treatise *On Fate*) tended to restrict the sphere of God's Providence to the supralunary realm, leaving our world to Fate and Chance, and thus acquired the reputation of abolishing Providence, which is not quite fair, though it is admittedly not a concept that Aristotle had much use for. The Aristotelian God thinks himself (as in *Metaph.* 12), and the universe relates to him rather than the other way around.

The greatest statement of the theory of Providence in the Hellenic tradition is the treatise of Plotinus *On Providence* (*Enn.* 3.2–3), composed in the latter half of the 3d century C.E. While basically accepting the Stoic theory of Fate and Providence, Plotinus seeks to justify the rationality and goodness of God in the face of the multifarious evil observable in the world. Like the Stoics, he regards free will as a subjective phenomenon and holds that true freedom consists in understanding the way of the world and assenting to it. His treatise is the finest attempt that we have at a comprehensive Hellenic theodicy.

Two other treatises on Providence, however, should not be neglected, though they do not rise to the heights of Plotinus. One is the two-part treatise of the Platonizing Jewish philosopher Philo of Alexandria (fl. ca. 25 C.E.). This work presents the Platonic, and especially Stoic, arguments for Providence, of which it constitutes a most useful exposition, but also comes closer to Christian thought in that Philo believes in a personal God, which is not the case with the Greeks. The second book of the treatise takes the form of a

dialogue with Philo's nephew Alexander, who presents Peripatetic and Skeptical arguments against Providence for refutation.

The essay of the Roman Stoic philosopher Seneca (4 B.C.E.–65 C.E.), commonly entitled *On Providence,* is really devoted to the more restricted question, "Why, if there is Providence, do some misfortunes befall good men?" and is a rhetorical elaboration of the theme that no evil can befall a good man. It does, however, touch briefly on most aspects of the topic of Providence in general, showing how closely enmeshed that concept is, for the Stoics, with Fate.

Pronoia is also an important concept in gnostic thought. The Father, in the *Tripartite Tractate* from the Nag Hammadi Corpus, is described as "the providence *[pronoia]* of those for whom He providentially cares" (66). Pronoia figures largely also in the *Apocryphon of John* (4–7), where it is identified with Barbelo, and in the treatise *On the Origin of the World* (108–11), where Pronoia is interestingly personified, and a lower Pronoia is envisaged, left by the Light-Adam in the heavens when he reascends to the Pleroma. In each, Pronoia is to be contrasted with Fate *(Heimarmene),* which is proper to the Demiurge and his realm.

JOHN M. DILLON

PROVINCE. See PALESTINE, ADMINISTRATION OF (ROMAN).

PRUSA (40°12´N; 29°04´E). The site of the city of Prusa is now occupied by the town of Bursa in NW Turkey. Prusa and its successor occupy a fine plateau site on the N slopes of Ulu Dag (in ancient times the Mysian Mt. Olympus), overlooking the coastal plain of the Sea of Marmarra. There are medicinal hot springs at Çekirge, near the town, which have been in use since classical times. No references to Prusa occur in the Bible.

The first systematic description of Prusa-Bursa was provided by Philippson in 1913. Earlier contributions had been made by von Moltke (1836), von Hammer, and Hommaire de Hell (1846). No systematic excavations have been carried out. However, Bursa was chosen as the site for one of Turkey's first museums, which was catalogued by Mendel (1909).

The ancient geographers (Strabo 12.504; Pliny *HN* 5.148) associate the foundation of Prusa with either Hannibal or a legendary King Prusias of the 6th century B.C. In fact Hannibal spent the last few years of his life in exile at the court of King Prusias I (ca. 235–183 B.C.) of Bithynia, who is commemorated on the city's coins as founder. Dörner (PW 23.1: 1071–86) considers that Prusias I probably founded the city with the advice and assistance of Hannibal, a view supported by the evidence of the fragments of Arrian, a Roman senator and historian from Nicomedia. A fragmentary inscription from Bursa contains a city decree of, apparently, 188 or 187 B.C.; this text mentions an *epistates,* or royal governor, indicating that Prusa was firmly under royal control at the start of its existence (Robert 1937: 229). During the wars between Mithridates of Pontus and Rome, which preceded the final annexation of Bithynia by Rome in 72 B.C., Prusa was occupied by Mithridates and besieged by the Romans.

The growing prosperity of the Roman Empire is reflected at Prusa by the resumption of local coinage under Nero (54–68). Under Trajan (98–117) Prusa became one of the assize towns of the province of Bithynia, where the Roman governor conducted judicial business during his tours through the province. Assize towns benefited from the regular influx of litigants, traders, and entertainers attracted by the presence of the governor; a vivid, if satirical picture of the animated scene is drawn by the orator Dio Chrysostom, "golden mouthed," who was a native of Prusa (*Or.* 35.15–17). Of interest to biblical scholars is the 5th-century bishop Synesius' report that Dio referred to the Essenes of Palestine in favorable terms. It would be unwise to assume any great significance in this reference for the history of Judaism or Christianity in Asia Minor. The traditions of popular Hellenistic philosophy on which Dio drew included a certain superficial taste for "barbarian" (i.e., non-Greek) wisdom. So we find Dio in his surviving

speeches referring favorably to Scythian morals, to the Brahmans and the Magi, and telling a philosophical myth with a Persian setting (*Or.* 35.22; 36.39–60; 49.7; 69.6).

A brilliant light is shed on the political life of Prusa during the time of Trajan by the political speeches of Dio of Prusa (ca. 40–after 110) and by some of the correspondence of Pliny and Trajan, when the former was governor of Bithynia (109–11; *Ep.* 10.17A, 17B, 23–24, 58, 70–71 deal with the affairs of Prusa). Like most Greek cities, Prusa enjoyed a measure of local autonomy under the supervision of the Roman authorities. Local government was largely in the hands of the wealthy civic aristocracy, who were expected to contribute liberally from their personal resources to public life. The evidence of inscriptions and of Dio and Pliny shows that Prusa's constitution followed the pattern set for Bithynia by the *lex Pompeia:* there was a city council, with (probably) a property qualification for membership, and a college of magistrates presided over by a chief magistrate (*protos archon;* Dörner PW 23.1: 1071–86; Sherwin-White 1966: 720; Ameling 1984). The speeches of Dio and the letters of Pliny illustrate the danger of civic ambitions leading to rash expenditure on prestige public projects. The evidence is presented and discussed by Jones (1978) and Sheppard (1984).

The hot springs were noted for the fact that the water required no cooling before being used for bathing. There was a cult of Asclepius, Hygieia ("Health"), and the Nymphs at the springs (Robert 1946: 93–102). Prusa was the home of two noted doctors of the Roman world: Asclepiades (1st century B.C.), who specialized in water and wine cures, and C. Calpurnius Asclepiades, active in the time of Trajan.

The prosperity of Roman Prusa was founded on the combination of the rich arable land and olive groves of the coastal plain with the timber resources of Ulu Dag. Peace and prosperity were, however, rudely shattered when Prusa was plundered by the Goths in 256. There is little evidence for the later history of Greco-Roman Prusa. A bishop is attested from 325 (until 1712). During the 5th century a number of Huns were settled in the area. In 1236 the city fell to Orhan Gazi, the second Sultan of the Ottoman dynasty, who made it his capital. Today the tombs and mosques of the early Ottoman sultans are the principal monuments of the town of Bursa.

ANTHONY SHEPPARD

PSALMS, BOOK OF. The book of Psalms is unique in the Bible because it is a collection of literature of prayer, praise, and meditation. If the Bible's narrative materials relate what God has done and the prophetic literature reports what God has said, the Psalms present the response of the people to the acts and words of God. As a book of the people, the book of Psalms has been especially valued for both public worship and private devotion among Jews and Christians alike. It has also been the focal point of much scholarly research. For useful summaries of the major trends and positions in this research (and related bibliography), see Clements 1976: 76–98; and Hayes 1979: 139–43, 285–317.

A. The Name

The English title "Psalms" is derived from the Greek *psalmoi,* "songs of praise," by way of the Latin *Liber Psalmorum,* "book of psalms." Among ancient Greek manuscripts of the OT, *psalmoi* appears in Codex Vaticanus as a title for the book. Codex Sinaiticus has no title, though "psalms of David" appears at the end. Codex Alexandrinus has as the title for the book *psalterion,* the name of a stringed instrument and the basis for the English "psalter"; *psalmoi* appears at the conclusion. The noun *psalmos* is found often in titles to the psalms, as in "psalm of David." The noun comes from the Greek verb *psallo* meaning "sing (to the accompaniment of a harp)" (BAGD, 899), as in the references to David in 1 Sam 16:16, 17, 23 or to the minstrel in 2 Kgs 3:15.

The NT refers to the three-part division of the Hebrew Bible, speaking of "the law of Moses and the prophets and psalms" (Luke 24:44), with "psalms" representing the as-yet incomplete third division; note also reference to the "Book of Psalms" in Luke 20:42.

The oldest Hebrew manuscripts do not have a title for the collection as a whole. The note at the end of Book II, Ps 72:20, says, "The prayers *[tĕpillôt]* of David, the son of Jesse, are ended," thus designating the foregoing psalms as "prayers." In rabbinic and later literature, the book is called *Sefer Tehillim,* "book of praises," or simply *Tillim.* The noun *tĕhillîm,* "praises," is derived from the Hebrew root *hll,* "praise." That root also appears in "hallelujah" ("praise Yah," or "Yahweh"), found only in the Psalter, always at the beginning or ending of psalms (104:35; 106:1, 48; 113:1, 9; 146–50, beginning and end of each; etc.).

The noun "praise" occurs often in the psalms: "He put a new song in my mouth, a song of praise *(tĕhillâ)* to our God" (40:3; also 22:25; 33:1; 34:1; 48:10, etc.). Psalm 145 is the only psalm to be designated a *tĕhillâ* in the title, translated "Song of Praise."

Of the 206 occurrences of *hll,* "praise," in the OT (146 verbal, 60 nominal), about two-thirds are in the psalms or in phrases taken from the psalms (*THAT,* 493). Because the collection of psalms contains so many expressions of praise to God, it became known as "praises" or "Tehillim."

The two names preserved in the Hebrew tradition, "prayers" *(tĕpillôt)* and "songs of praise" *(tĕhillîm)*, may be taken as representing two fundamental types of psalms: prayers in time of need, or laments, and songs of praise, or hymns.

B. The Text

1. The Dead Sea Psalms Scroll. Some 30 texts containing portions of the Psalter have been found at Qumran near the Dead Sea since the discovery of the scrolls there in 1947 (in Caves 1, 2, 3, 4, 5, 6, 8, and 11). Three psalm texts have been found at other sites (parts of Psalms 15 and 16 found S of En Gedi in 1960; parts of Psalms 81 through 85 and Psalm 150 at Masada between 1963 and 1965; Sanders 1967: 145–46). In addition, the caves have yielded four commentary texts containing portions of psalms.

The most dramatic find is the Psalms Scroll from Cave 11. Discovered in 1956, it was unrolled by James Sanders in 1961 and published by him in 1965 and 1967. Sanders dates the scroll to around A.D. 50. It is made of five sheets of leather sewn to a length of almost 13 feet and is presently 6 to 7 inches wide; originally its width was 9 or 10 inches, making it about the same width as the Isaiah Scroll from Cave 1. The scroll contains all or parts of 41 canonical psalms from Books IV and V of the Psalter, beginning with Psalm 101; as well as 2 Sam 23:1–7; four noncanonical psalms (151A, B; 154; 155; and Sir 51:13ff.); and four other nonbiblical works (Plea for Deliverance, Apostrophe to Zion, Hymn to the Creator, and David's Compositions; these are interspersed in the book at a variety of places).

The psalms appear to have been popular at Qumran. "There were undoubtedly more copies of psalms in the Qumran library than of any other biblical writing …" (Sanders 1967: 9). The text of the psalms recovered thus far, says Sanders, is in close agreement with the standard Ben Asher manuscripts (Leningradensis and the Aleppo Codex), with most of the variations matters of orthography. An exception is Psalm 145, in which every verse has a refrain, "Blessed be the Lord and blessed be his name for ever and ever." The superscription to 145 reads *tĕpillâ*, "prayer," instead of *tĕhillâ*, "song of praise" (RSV); the psalm also has a subscript reading "This is for a memorial …" (Sanders 1967: 64–67). The ordering of the psalms in this scroll differs from that of the MT (Sanders 1967: 10, 16).

2. The Hebrew *Tehillim* (Songs of Praise). The critical edition of the Hebrew text of Psalms found in *BHS* is based upon the MT as represented by Codex Leningradensis (B19A or L), dated in 1008 C.E. and identified in the colophon as a production of the Ben Asher family (Würthwein 1979: 168).

The basis for a new critical edition of the Hebrew Bible being prepared at the Hebrew University in Jerusalem is the Aleppo Codex, so named because though it was originally in Jerusalem, it was moved to Cairo and then to Aleppo in Syria. Again a Ben Asher manuscript, it is dated from the first half of the 10th century. The manuscript lacks Pss 15:1–25:2. For progress reports, see *Textus: Annual of the Hebrew University Bible Project;* the publication of Psalms has not yet appeared.

3. The Greek Psalter. The Greek OT or Septuagint (LXX) was produced by the Jewish community in Alexandria, Egypt, during the first half of the 3d century B.C. Intended for Hellenistic Jews, this translation was immediately accessible to Greek-speaking gentiles as well and eventually became the OT for the Christian movement. Because of the popularity of the psalms, there are many more Greek manuscripts of that book available than of any other Old Testament book (Rahlfs 1967: 61). As the LXX became more and more the Bible for Christians, it lost popularity in the Jewish community.

The convenient edition of Alfred Rahlfs, *Septuaginta*, is based mainly on the three oldest major Greek manuscripts, all of which include both OT and NT. Codex Vaticanus (B) is a 4th-century manuscript; Pss 105:27–137:6 were lacking but were added in the 15th century. Codex Sinaiticus (S) is another 4th-century manuscript, containing the entire Psalter. Codex Alexandrinus (A) is a 5th-century manuscript, lacking Pss 49:20–79:11.

Each of these three includes Psalm 151, in which David celebrates victory over Goliath. While this psalm is not in the Hebrew Bible, it is among those noncanonical pieces included in the Dead Sea Psalms Scroll. All three manuscripts have a superscription identifying the psalm as an addition to the 150 canonical psalms: "This psalm is ascribed to David and is outside the number …" Codex S has a subscript reading "the 151 psalms of David." The subscript to A reads "the 150 psalms and one ascribed." B has no subscript.

The numbering of the psalms in the Greek OT differs from the Hebrew. The following table indicates the differences:

MT (also RSV)	*LXX*
Psalms 1–8	Psalms 1–8
9–10	9
11–113	10–112
114–15	113
116:1–9	114
116:10–19	115
117–46	116–45
147:1–11	146
147:12–20	147
148–50	148–50
———	151

As Christians transmitted the text of the Greek OT, a number of interpolations began to appear in the text. One example: in Rom 3:10–18, Paul uses parts of Ps 14:1–3 as well as Pss 5:9; 140:3; 10:7; and 36:1 to support his argument that all are sinners. In LXX Psalm 13 (Heb 14), manuscripts B and S insert precisely these quotations from other psalms in v 3. Thus, Christians enriched their Greek OT by adding this chain of quotations (see Rahlfs 1967: 30–32, for further examples).

C. The Origin and Function of the Psalms

The psalms originated in the midst of Israel's life and have continued to function in the lives of both Jews and Christians as a hymnbook for worship and a prayer book for devotion.

1. The Psalms as Response. Psalms 1 and 2 provide an introduction to the Psalter (see D below). The psalms that follow offer clues to the way in which the psalms originated.

These psalms are addressed to God, as is clear from reading the opening lines of Psalms 3–10: "O Lord …" (Psalm 3), "Answer me when I call, O God" (Psalm 4), "Give ear to my words, O Lord" (Psalm 5), etc. They address God in response to a crisis, such as being ill (Psalm 6) or being surrounded by enemies who may make false accusations (Psalms 3; 4; 5; 7; 9/10). The same crises brought on by illness (31; 32; 38; 39; 41; 51; 88; 102), enemies (17; 23; 26; 27; 57; 63), or the distress of sin (40; 51; 130) appear through the psalter. Such prayers in times of crisis are commonly called "laments," since one of the constant elements in these psalms is a complaint or lament, against God in "thou" form ("But thou, O Lord—how long?" 6:3), concerning oneself in "I" form ("… for I am languishing," 6:2), or concerning others in "they" form ("for there is no truth in their mouth …," 5:9). These first laments in the Psalter voice an individual's complaint and cry for help. The superscription to Psalm 102 describes the situation that gave rise to such prayers of the individual in times of crisis: "A prayer of one afflicted, when he is faint and pours out his complaint before the Lord" (see F.1 below).

The entire community may cry out for help: "Do thou, O Lord, protect us …" (Ps 12:7). The Community Laments (see F.1. below) provide clues to the situation giving rise to these prayers. The people may have experienced a defeat (44:9–16), or the temple and the city of Jerusalem have been devastated (74:4–8; 79:1), or they may be suffering at the hands of enemies (80:6; 12–13) or in exile in Babylon (137).

Psalms also arise out of good times, the psalmist responding to a situation of experiencing blessing. Psalm 8 celebrates God's work as Creator, addressing God with general words of praise, "O Lord, our Lord, how majestic is thy name in all the earth!" Such psalms are designated as "hymns." Psalm 30 expresses praise and thanks to God for a specific act, in this case for healing in answer to prayer (vv 1–3). Psalms of this type may be called Thanksgiving Psalms (see F.3 below).

Other psalms arose out of particular occasions. The Royal Psalms were composed for use in connection with events in the life of a king (see F.4 below). Several psalms were produced to suit liturgical needs, providing the script for a procession around the city (Psalm 48) or for the offering of sacrifices (Psalm 66; see F.6 below). More than two dozen "Wisdom Psalms" (see F.7 below) offer short observations growing out of life's experiences (Psalms 127, Psalms 128) or longer reflections on the great problems of life (Psalms 37, Psalms 73); or they may commend Torah (instruction) and its study (Psalms 1; Psalms 19; Psalms 119). The alphabetical acrostic psalms were built on the pattern of the Hebrew alphabet, probably both to facilitate memorization and also for the sheer delight of producing such a work (see E.4 below).

In sum, the psalms arose out of the midst of Israel's life in the presence of God, responding to good times and bad, providing words for the celebrations of the community, and offering guidance and reflection on the opportunities and problems of life.

2. The Psalter as Worship Book. Since the Psalter is not a manual providing directions for those leading worship but a collection of hymns, prayers, and poems for the people, the settings for these psalms in worship and other occasions must be inferred from the psalms themselves.

The hymns (see F.2 below) suggest congregational worship utilizing vocal and instrumental music and marked by exuberance and creativity (the "new song"; Ps 33:1–3). They often begin with a call to praise in the imperative plural, "Praise the Lord" (Heb "Hallelujah"; 33:1; 111:1; 113:1; 146–50), thus assuming the presence of a community. Ps 111:1 makes the congregational context for praise explicit: "Praise the Lord. I will give thanks to the Lord with my whole heart, in the company of the upright, in the congregation" (cf. 149:1; 150:1). The praise that takes place in connection with these psalms was lively, involving singing and shouting (33:3), dancing (149:3; 150:4), and the use of string, wind, and percussion instruments (33:1–3; 149:3; 150). The forms of worship change, with the community called to update its materials in a manner appropriate for new times (33:1; 96:1; 98:1; 149:1). Those engaged in praise may be standing in the temple (135:1–2), even for a service of worship at night (134). Praise came from different groups within the assembled congregation (135:19–20). The repeated refrain of Psalm 136 suggests a worship leading calling out or chanting the first part of each line and the congregation responding with "for his steadfast love endures forever." The rubric, "let Israel now say" (124:1; 129:1), again calls the gathered people to respond.

Some psalms were used as liturgies (see F.6 below), with actions accompanying the words of the psalm. Psalm 66 functioned in connection with the making of an offering (66:13–15). Psalms 48 and probably 132 were associated with processions; the latter would fit a reenactment of David's bringing the ark into the city (2 Samuel 6). Pss 24:7, 9 and 118:19–20 suggest a procession passing through the temple gates, with participants carrying branches (118:27). Ceremonial washings are suggested by 26:6 and perhaps 51:7 (cf. Num 19:18). Psalms 15 and 24 apparently functioned as entrance liturgies, the worshipper about to enter the temple area asking a question and a priest or temple official responding with the answer (15:1–5; 24:3–6; cf. Mic 6:6–8). Various attempts have been made to reconstruct liturgies and entire festivals on the basis of the psalms, but such reconstructions remain notoriously hypothetical.

The "Songs of Ascents" or "Pilgrimage Psalms" (120–34) seem to have been used as a collection especially designed for those "going up" (122:4; the root is the same as "ascents" in the titles) to Jerusalem for one of the regularly occurring festivals (Deut 16:16–17). They fit a broad pattern of anticipating the journey (122:1), setting out (121), joyful arrival (133), and concluding evening worship (134).

At one time the Community Laments (see F.1 below) functioned as part of community services of prayer and fasting, called the "fast" (*ṣôm;* Joel 1:14). These were gatherings convened at times of national emergency such as a military crisis (2 Chronicles 20) or natural disasters such as drought and famine or plague (Joel 1; cf. the listing in 1 Kgs 8:33–40). A picture of these services can be pieced together: the entire community was assembled, including the children and the newly married (Joel 1:14; 2:15–16; 2 Chr 20:13). The extremity of the emergency was demonstrated by the destruction of beauty: clothing was torn or removed (Joel 2:12; Isa 32:11), the hair was cut off, the people wept and mourned (Isa 15:2–3; 22:12), even gashed themselves (Hos 7:14), rolling in dust (Mic 1:10), putting on sackcloth, and rolling in

ashes (Jer 6:26). While these Community Lament psalms grew out of times of specific national need, their continued use indicates that they were appropriated and adapted for other sorts of situations.

The Individual Laments (see F.1. below) arose out of a variety of personal crises and must have continued to function in a great variety of life situations. Childless Hannah poured out her heart in the sanctuary at Shiloh; her prayers probably used the language of the individual laments. The priest says to Hannah, "Go in peace, and the God of Israel grant your petition …" which may account for the abrupt change of mood in many of the laments (1 Samuel 1; cf. the change from Ps 13:5 to Ps 13:6). Hezekiah's prayer from his sickbed suggests another obvious setting for these prayers (Isaiah 38; cf. the psalms associated with illness as listed above).

The book of *4 Maccabees*, written sometime between A.D. 20 and 54, concludes with a scene suggesting how the psalms were used in the setting of the family. In the last words of the mother who had lost her seven sons in persecution (2 Maccabees 7), she recalls her late husband, saying to her remaining children, "A happy man was he, who lived out his life with good children … while he was still with you, he taught you the law and prophets … He sang to you psalms of the psalmist David, who said, 'Many are the afflictions of the righteous' " (*4 Macc.* 18:9–10, 15).

Gerstenberger (1988) has suggested that there were a variety of occasions when family and friends came together and utilized the psalms. These would include not only the events of birth, marriage, and death, but also special gatherings at times of illness and sorrow and joy and thanksgiving. The laments, he suggests, were used at times of crisis in the circle of family and caring friends, under the direction of a ritual expert. Gerstenberger has compared these groups to contemporary group therapy movements under the direction of an expert in such processes. His work is a reminder that people's lives are lived not only as individuals or in congregations, but also in the world of the small group of family and friends.

Again, these occasional services cannot be reconstructed with certainty. But there is enough evidence in the OT to suggest that the prayers and songs of praise found in the Psalter were not confined to the sanctuary. The psalms came out of a variety of situations from the midst of the life of the people; it is reasonable to assume that they also functioned in a variety of life situations.

3. The Psalter as Scripture. The psalms are now in the form of a book, called the "Psalter" since the time of the Greek translations. Recent studies have demonstrated that this book has been carefully shaped and edited (see D below). That editing placed Psalm 1 at the beginning in order to suggest another way in which this collection is intended to function.

The first picture that appears in the Psalter is that of a tree, planted by a river, flourishing, yielding fruit (1:3). Used as a comparison, this is an image of a human life that is deeply rooted and marked by productivity, prosperity, and beauty. The reader asks: How could one attain to such a life? The answer is explicit: by meditating, both day and night, on the Torah of the Lord. The verb *hāgāh*, translated "meditate" (v 2), is also used for the growling of a lion as he enjoys his prey (Isa 31:4); the sense here is of the sound made as one studies the Lord's instruction in Scripture. This psalm thus suggests that the way to the kind of life symbolized by the tree involves delighting in and meditating upon Torah, here referring to the Lord's instruction that follows in the Psalter.

A second psalm with a concern for Torah—Psalm 19 (cf. v 7, translated "law")—also refers to meditation, asking that such reflecting and speaking be acceptable in the Lord's sight (19:14).

Finally, Psalm 119 offers a lengthy treatise which speaks of the Lord's Torah as a delight (v 92), of loving Torah (vv 97, 113, 163, 165), and of mediating (Heb *śîaḥ*, synonymous with *hāgāh* in 77:13—RSV 12) upon it all day (v 97). The psalm commends reflection upon God's precepts (v 15), statutes (vv 23, 48), works (v 27), and promises (v 148). It seems likely that the two Torah psalms, 1 and 119, once framed an early version of the Psalter (see D.2 below; see also Westermann 1981: 253). In any case, both suggest a particular use of the psalms of which they are a part. These ancient psalms of Israel are not only hymns and prayers to be sung and prayed at a place of public worship; they are also Scripture, designed to nurture the piety of the people in devotion and meditation.

D. The Book and the Books

The Psalter in its present form consists of 150 psalms divided into five books. Editorial work included the collecting and arranging of the individual psalms, the division into books, and the supplying of superscriptions or titles for 116 of the psalms.

1. The Beginning and Ending. The editors of the psalter placed Psalms 1 and 2 at the beginning as an introduction to the collection as a whole. These two psalms may be considered together: neither has a title; they are framed by the "blessed" formulas in 1:1 and 2:11 (the formula in 2:11 may be a contribution of the editor); and they are linked by the catchword *hāgāh*, translated "meditate" in 1:2 and "plot" in 2:1. In Acts 13:33, the 6th-century Greek Codex D as well as a number of other witnesses introduce Paul's citation of Ps 2:7 with "as also it is written in the first psalm," thus indicating either that Psalms 1 and 2 were considered as one psalm, or that there was a Psalter in existence in which the present Psalm 2 was the first psalm.

As noted above (C. 3), Psalm 1 functions as an invitation to meditate upon the psalms which follow. While Psalm 1 has its focus on the individual ("Blessed is the man …"), the focus of Psalm 2 is international because it speaks of the nations, their kings, and the Lord's anointed king on Mt. Zion in Jerusalem. Since a psalm like 137 assumes the Exile in Babylon, the final editing of the Psalter had to have taken place sometime after 587 B.C. With the time of the Monarchy past, Royal Psalms (see F.4 below) such as Psalm 2 were no longer applicable to an actual king; nevertheless, they were collected and continued to be used, providing the seedbed out of which grew the hope for a new anointed one (2:2), or in Hebrew, a "messiah."

These two introductory psalms thus suggest a reading of the Psalter for individual edification and also within an international context which included hope for a future king to take up rule from Mt. Zion.

After this introduction the Psalter begins with a series of five psalms of lament of the individual (3–7); the bulk of Book I (Psalms 1–41) consists of further Individual Laments. Moving toward the end of Book IV (Psalms 90–106), the sound of praise dominates with the Kingship of the Lord Psalms (93; 95–99) and in a series of hymns (103–6). With the beginning of Book V (Psalms 107–50) praise continues, up to Psalm 119 (109 is an exception); and the Psalter concludes with five psalms of praise, each framed with "Praise the Lord" ("Hallelujah"). Thus one can speak of a broad movement in the Psalter as a whole from lament to praise.

2. The Five Books. The Psalter is divided into five "Books" (Psalms 1–41; 42–72; 73–89; 90–106; 107–50). According to the Talmud, this is to correspond with the five part division of the Pentateuch: "Moses gave Israel the five books, and David gave Israel the five books of the Psalms" (*Midrash Tehillim* on Psalm 1). Each Book ends with a doxology, probably not an original part of the final psalm in each book, but an insertion made in the final editing (Pss 41:13; 72:20; 89:52; 106:48). Psalm 150 provides a concluding doxology for Book V and for the Psalter as a whole.

Book I is made up almost entirely of Psalms associated with David in the titles. Psalms 1 and 2 are introductory. Psalm 10 has no title because it is linked with Psalm 9 by a broken alphabetic acrostic pattern (see E.4 below). This leaves only Psalm 33, which, though not having a Davidic superscription, has clear links with Psalm 32: *BHS* indicates that some Heb mss join the two psalms; 32:11 and 33:1 are linked by "righteous" and "upright," and Psalm 33 may be regarded as carrying out the exhortation of 32:11 (Wilson 1985: 174–76). The majority of these are psalms of the individual; exceptions include 19 and 29, which are hymns; 24, which is a liturgy; and 12, which is a lament giving voice to the hurts of the community (v 7).

Within Book II Psalms 42–49 are identified with the "Sons of Korah," members of a musical guild (2 Chr 20:19; cf. also the Korah psalms 84–85; 87–88). Psalms 42–83 (extending into Book III) are called the "Elohistic Psalter" because of a preference for the divine name "Elohim" (RSV, "God") in contrast to "Yahweh." A comparison with psalms that have near duplicates elsewhere in the Psalter is instructive. Psalm 53 is almost identical with Psalm 14, but note the replacement of "Yahweh" in 14:2, 4, 7 by "Elohim" in 53:2, 4, 6. Psalm 40 (13–17) is almost the same as Psalm 70; the situation in comparing these two is more complicated. "Yahweh" of 40:13a, 16 is replaced by "Elohim" in 70:1a, 4; but "Yahweh" of 40:13b remains as "Yahweh" in 70:1b, while "Elohim" of 40:17b is replaced by "Yahweh" in 70:5b. In

general, however, Psalms 42–83 exhibit a marked preference for "Elohim," in comparison with the remainder of the Psalter. (In the 41 psalms of Book I, Yahweh appears about 275 times, Elohim 50 times. In the 42 psalms of the Elohistic Psalter, Yahweh occurs 43 times and Elohim just under 240 times. In Psalms 84–150, Yahweh again predominates.) The production of this "Elohistic Psalter" suggests an editor preparing a collection of psalms for use in the temple at a time when the name Yahweh was being used less frequently and was being replaced by the more general "Elohim." Book II ends with a collection of Davidic psalms (51–65; 68–70; 71 is untitled; as was the case with 33, *BHS* indicates that many Heb mss link it with the preceding psalm and that the LXX associates it with David). The note at the end of Psalm 72, "The prayers of David, the son of Jesse, are ended," indicates that a Davidic collection once ended at this point. This seems to be an editorial comment, since the title of Psalm 72 associates it with Solomon and since 72 comes to a definite ending in vv 18–19. The fact that Book II includes duplicates of psalms in Book I (cf. 53 and 14, 70 and 40:13–17) might suggest that these two books once had a separate existence. However, it is possible that 72:20 once referred to the contents of both Books I and II, where the majority of Davidic psalms (55 out of the 73 so titled) are concentrated.

Book III (73–89) contains only 17 psalms. Most of the Community Laments (see F.1 below) are gathered here; these include 74, 79, 80, 83, 85 (the others are Psalms 44 and probably 12). The majority of these psalms are associated with Asaph in the titles (73–83; 50 is the only other Asaph psalm), referring to a musician from the tribe of Levi who was appointed by David to provide music when the ark was brought to Jerusalem (1 Chr 6:39; 15:17–19; 16:4–6) and who was present at the dedication of Solomon's temple (2 Chr 5:12). Asaph's family was still active in music at the time of Josiah in the 7th century B.C. (2 Chr 35:15) and also at the time of Nehemiah and Ezra in the 5th century, furnishing trumpet players when the wall was rebuilt (Neh 12:35) and instrumental music when the foundation of the Second Temple was complete (Ezra 3:10).

Book IV (90–106) also consists of 17 psalms. Here are gathered 6 of the 7 psalms that declare Yahweh's kingship (93; 95–99). Other devices link psalms together: 103 and 104 both have "Bless the Lord, O my soul" at beginning and end; 105 and 106 both recite God's mighty acts in Israel's history, though with different emphases; and both begin with "O give thanks to the Lord" and end with "Praise the Lord." Principles of arrangement here are thus thematic grouping and similarity of beginnings and endings. Book IV ends with a series of hymns (103–6), the last one framed by "Praise the Lord" ("Hallelujah").

Book V (107–50) is the largest of the five books, with 44 psalms. Davidic psalms are grouped at the beginning (108–10) and toward the end (138–45). The unique Psalm 119, an acrostic with eight lines for each letter of the Hebrew alphabet, is included here. Linked to Psalm 1 with the Torah theme, it may have concluded an early form of the Psalter. Psalms 120–34 are a collection of "Songs of Ascent" (see C.2 above). Psalms 140–43 constitute a final series of Individual Laments. Book V concludes the Psalter with a series of five "Praise the Lord" or "Hallelujah" psalms, which may be viewed as carrying out the resolution of 146:21 (Wilson 1985: 193–94).

In conclusion, the locations of two types of psalms may be noted. Royal Psalms are scattered throughout the Psalter, especially at the beginning and ending of books. Psalm 2 introduces the whole Psalter and Book 1; Psalm 72 ends Book II; Book III ends with Psalm 89. At the time of the final composition of the Psalter, the monarchy had long been an institution of the past. These Royal Psalms, distributed throughout the Psalter, serve to keep alive the picture of the ideal king, or "anointed" (messiah; cf. 2:2; 45:7; see G.5 below).

Psalms framed with "Hallelujah" appear at strategic places. They may close a book (106) and the Psalter itself (146–50) or come at the conclusion of a collection of psalms (Psalm 100, after the Kingship of the Lord Psalms, 93 and 95–99; and Psalm 135, after 120–34). In several instances a psalm framed by "Praise the Lord" is followed by a psalm beginning "O give thanks" (106 and 107; 117 and 118; 135 and 136).

3. The Titles. One hundred and sixteen of the 150 psalms have superscriptions or titles in the Hebrew text, ranging from one word (98) to a lengthy comment (18). The 34 psalms that do not have titles are distributed as follows:

Book I: Psalms 1, 2, 10, and 33.
Book II: Psalms 43 and 71.
Book III: all have titles.
Book IV: Psalms 91, 93, 94, 95, 96, 97, 99, 104, 105, and 106.
Book V: Psalms 107, 111–19, 135–137, and 146–50.

Psalms 10 and 43 do not have titles because they are linked to the preceding psalms either by an alphabetical acrostic pattern (10) or by a refrain (43). Psalms 33 and 71 may lack titles because they are thematically linked to the psalms preceding them. The first two psalms themselves function as something of a "superscription" to the entire Psalter. Psalms 111–13, 117, 135, 146–50 all begin with the imperative "Praise the Lord," which also may serve as a title. In sum almost all of the psalms in Books I–III are titled; the great majority of untitled psalms are found in Books IV (10 psalms) and V (18 psalms).

Much of the information in these titles consists of specialized musical terms which are no longer understood (for discussion, see Kraus 1988: 21–32). However, other types of information are also communicated.

The title for Psalm 6 may be taken as an example, indicating these various types of information.

(a) "To the choirmaster: with stringed instruments; according to The Sheminith." Here are *directions for musical performance, addressed to the musical director.* The phrase "to the choirmaster" (JPS, "for the leader") occurs in initial position in more than a third of the psalms. Associated with the notion of overseeing ("oversight," Ezra 3:8, 9), it is understood to refer to the director of the choir. Reference may be made to the instruments to be used: "with stringed instruments" (4, 6, 54, 55, 61, 67, 76; cf. 1 Sam 16:16, 23, where the related verb refers to playing with the hand). Other instruments are sometimes referred to: the RSV translates "for the flutes" in Psalm 5, but the Hebrew is not certain; and the expression, "according to The Sheminith" (Psalms 6, 12) means literally, "according to/on the eighth," possibly referring either to the eighth musical pattern or to an eight-string instrument.

Though the matter is debated, some of these musical directions may refer to melodies, such as "according to The Gittith" (8, 81, 84), "according to The Hind of the Dawn" (22), "according to Lillies" (45, 69, 80), "according to The Dove on Far-Off Terebinths" (56), "according to Mahalath" (53, 88), "according to Do Not Destroy" (57–59, 75). "According to Muth-labben" (9), "according to Alamoth" (46), and "according to Mahalath Leannoth" (88) are unexplained. Often the Greek translators did not understand these terms and simply transliterated them; this same approach is taken in many instances by the JPS translators.

Two technical terms appearing not in the titles but in the course of the psalms are also unexplained. The meaning of *higgaion* in 9:16 is unknown; it occurs in 19:14 with the sense "meditation" and in 92:3, translated "melody." Finally, the meaning of "selah," which occurs 71 times in 39 psalms (also in Hab 3:3, 9, 13) remains unexplained. The Greek, where it occurs 92 times, translates it as *diapsalma*, which means an instrumental interlude (see Kraus 1988: 27–29).

(b) "A psalm" indicates the *type of composition.* The Hebrew *mizmôr* was translated in the Greek Bible as *psalmos* and has thus given the name to the book. *Mizmôr* occurs a total of 57 times and only in psalm titles. In 36 instances it refers to a "psalm of David." Only in Psalm 98 does it stand alone.

Other types of compositions indicated in the psalm titles include the following: "Song" *(šîr)* occurs in 30 titles, 13 times with *mizmôr* (30, 48, etc.); the term may also be used of secular songs (Isa 23:16). In the title of Psalm 45 *šîr yĕdîdōt* means "love song." "A Song of Ascents" (lit. "for goings up") is the title for each of Psalms 120–34, most likely referring to the "going up" to Jerusalem for festivals (cf. 122:4), and thus suggesting a translation such as "Pilgrimage Psalm." "Song of Praise" translating *tĕhillâ* occurs in Psalm 145; the plural form provides the Hebrew title for the Psalter. It occurs only here as a title but within psalms at 22:25; 33:1; 34:1; etc. "Prayer" translating *tĕpillâ* is found in the titles of Psalms 17, 86, 90, 102, 142 (and Habakkuk 3); also in the plural form in 72:20.

Several terms are not understood and are thus left untranslated. *Miktām* occurs 6 times, always "of David" (16; 56–60). *Maskîl* occurs 13 times, always associated with a proper name and probably meaning "skilled or artistic piece" (cf. 2 Chr 30:22)—Psalms 32, 42, 44, 45, 52–55, 74, 78, 88, 89, 142; it occurs

once within a psalm, translated "psalm" (47:7). *Shiggaion* occurs in Psalm 7 and (in the plural) in the heading for Habakkuk 3.

(c) The title may also *associate the psalm with an individual or group,* in the case of Psalm 6, "of David." In these cases the Hebrew preposition *lĕ-* appears with the name; since that preposition can mean "to," "for," "of," or "belonging to," the sense of the title is not always clear. The preposition *lĕ* occurs in the expressions "to the choirmaster" (RSV) or "for the leader" (JPS) in 55 psalms, and in these cases it does not indicate authorship.

In the Hebrew text, 73 psalms include in the title, "*lĕ*David." In 13 instances (3, 7, 18, 34, 51, 52, 54, 56, 57, 59, 60, 63, 142) the title associates the psalm with an event in David's life. In Psalm 18, the extended note identifies David as the author, "A Psalm of David, the servant of the Lord, who addressed the words of this song to the Lord …" Since all of these events are recorded in 1–2 Samuel, these notes appear to have been provided by someone searching for an appropriate setting for the psalm in the life of David as known from the biblical account, thereby attributing authorship to him.

The biblical tradition depicts David as a composer of psalms (2 Sam 1:17), as a musician (1 Sam 16:16–23; cf. Ps 151:2, "My hands made a harp, my fingers fashioned a lyre"), and as the "sweet singer of Israel" (2 Sam 23:1); since the 13 psalms associated biographically with David point to David as an author, it would seem that authorship is the intent of the expression in many cases. But because the meaning of the preposition is ambiguous, it is not possible to identify specific psalms with David as author. As the psalm tradition develops, the tendency is to ascribe more and more psalms to David; thus the LXX associates (Hebrew/RSV numbers) Psalms 33, 43, 71, 91, 93–99, 104, and 137 with David (though omitting mention of David in the titles of 122 and 124), for a total of 85 Davidic psalms. The Talmud thinks of him as the author of the psalms, just as Moses was author of the Pentateuch (*Midrash Tĕhillîm* on Ps 1:2). An insert near the end of the Dead Sea Psalms Scroll says:

> And David, the son of Jesse, was wise, and a light like the light of the sun, and literate, and discerning and perfect in all his ways before God and men. And the Lord gave him a discerning and enlightened spirit. And he wrote 3600 psalms; and songs to sing before the altar over the whole-burnt perpetual offering every day, for all the days of the year, 364; and for the offering of the Sabbaths, 52 songs; and for the offering of the New Moons and for all the Solemn Assemblies and for the Day of Atonement, 30 songs. And all the songs that he composed were 446, and songs for making music over the stricken, 4. And the total was 4050. All these he composed through prophecy which was given him from before the Most High (column xxvii, 2–11; Sanders 1967: 137)

Further individuals associated with psalms are Solomon (72 and 127), Heman (88), Ethan (89), Moses (90), and Jeduthun, one of David's musicians (39, 62, and 77; 1 Chr 25:1–2; 2 Chr 5:12).

(d) Other psalm titles include *suggestions for the use of the psalm.* In surveying these examples, it becomes apparent that the titles are part of the history of the interpretation and use of the psalms. The *content* of Psalm 30, for example, identifies it as suited for an individual giving thanks after experiencing healing; the *title*, however, suggests its use as "A Song at the dedication of the Temple." Psalms 38 and 70 are designated "for the memorial offering," Psalm 92 as "A Song for the Sabbath" (in the Gk translation, Psalm 24 is designated for Sunday, 94 for Wednesday, and 93 for Friday) and Psalm 100 "for the thank offering." The title to Psalm 60 includes the comment, "to be taught" (JPS; RSV, "for instruction"); cf. Deut 31:19; and 2 Sam 1:18).

In sum, while the psalm titles were not parts of the original psalms, they provide important clues to the history of the interpretation of the psalms and to their use in the lives of the people both individually and in the community.

E. The Poetry of the Psalms

The chief characteristic of Hebrew poetry in the Bible is balance or symmetry, commonly called parallelism. Biblical poetry is also marked by the use of repetition, a fondness for alphabetical acrostics, and the employment of metaphor and simile.

1. Balance or Parallelism. A line of Hebrew poetry is made up of two parts or cola (singular colon) which may be designated A and B. For example:

(A) When Israel went forth from Egypt,
(B) the house of Jacob from a people of strange language, (114:1)

In this example, "Israel" is balanced by "house of Jacob" and "Egypt" by "a people of strange language." Since the balancing words and phrases are synonymous and since the two cola parallel one another in meaning, this is called "synonymous parallelism." The book of Psalms, and indeed the entire Hebrew Bible, is full of this kind of synonymous parallelism (e.g., Pss 4:2–6; 8:4; 19:1–2; 24:1–3; etc.). See also PARALLELISM.

Parallelism or balancing may extend to more than two cola, with whole lines balancing one another:

(A + B) The precepts of the Lord are right, rejoicing the heart;
(A' +B') the commandment of the Lord is pure, enlightening the eyes (19:8; cf. vv 7, 9).

In the examples given, the ordering of the words in the balancing cola is the same. In Ps 114:1 "Israel … Egypt" is balanced by "house of Jacob … people of strange language." This order may be represented as A+B balanced by A´+B´. The order may also fall into a chiastic pattern, where A+B is balanced by B´+A´ (cf. "When the going gets tough, the tough get going"). For example:

(A + B) His mischief returns upon his own head,
(B' + A') and on his own plate his violence descends (7:16)
(A + B) Praise the Lord with the lyre,
(B' + A') with the ten-stringed harp make melody to him (my trans., 33:2; cf. also 137:5–6).

It is also possible that B may stand over against A, stating its opposite or standing in contrast to it. This is called antithetic parallelism:

(A) The wicked borrows, and cannot pay back,
(B) but the righteous is generous and gives;
(A) for those blessed by the Lord shall possess the land,
(B) but those cursed by him shall be cut off (37:21–22; cf. 1:6; 20:8; 32:10, etc.).

Antithetic parallelism is especially characteristic of proverbial literature (e.g., Prov 10:1–12; Eccl 8:4; 10:2, 12).

Kugel has suggested that the most general way to describe the relationship between A and B in examples such as these is the formula, "A is so, and what's more, B." He proposes a metaphor drawn from parliamentary procedure to understand the relationship between B and A; A is stated, and B then has an emphatic "seconding" character (1981: 51).

2. Other Relationships between A and B. The cola A and B may relate to one another in a number of other ways:

A makes a statement, B provides a reason:

(A) Blessed be the Lord!
(B) for he has heard the voice of my supplications (28:6).

A makes a statement: B balances with a question:

(A) For in death there is no remembrance of thee;
(B) in Sheol who can give thee praise? (6:5).

A asks a question; B gives an answer:

(A) How can a young man keep his way pure?
(B) By guarding it according to thy word (119:9).

A makes a statement; B balances with a quotation:

(A) I had said in my alarm
(B) "I am driven far from thy sight" (31:22).

A sets forth something "better than" B:

(A) Better is a little that the righteous has
(B) than the abundance of many wicked (37:16; cf. 118:8–9; 119:72; also Proverbs).

A varies; B repeats

(A) O give thanks to the Lord, for he is good,
(B) for his steadfast love endures forever.

(A) O give thanks to the God of gods,
(B) for his steadfast love endures forever. (136:1–2 and throughout).

A makes a statement with an abstract noun; B sharpens the focus with a concrete noun:

(A) Therefore the Lord has recompensed me according to my righteousness,
(B) according to the cleanness of my hands in his sight (18:24).

A states the whole; B balances with a part which stands for the whole (synecdoche):

(A) For thou dost deliver a humble people;
(B) but the haughty eyes thou dost bring down (18:27).

A and B name two terms which mark boundaries in order to designate a totality (merismus):

(A) The sun shall not smite you by day,
(B) nor the moon by night (121:6).

A may provide a simile, B balancing with reality:

(A) As a father pities his children,
(B) so the Lord pities those who fear him (103:13; cf. 103:11–12; 42:1).

3. Repetition. The psalms utilize a variety of forms of repetition. A psalm may begin with a repetition, for the sake of emphasis:

My God, my God, why has thou forsaken me? (22:1).

A repetition may conclude a psalm for the same reason:

Wait for the Lord;
be strong, and let your heart take courage;
yea, wait for the Lord! (27:14).

The same word may stand at the beginning of a succession of cola, again for the sake of emphasis:

Surely every man stands as a mere breath!
Surely man goes about as a shadow!
Surely for nought are they in turmoil … (39:5–6).

An entire colon may be emphasized through repetition:

My soul waits for the Lord
more than watchmen for the morning,
more than watchmen for the morning (130:6).

This emphasis may take the form of a refrain (42:5, 11; 43:5; 46:7, 11; 49:12, 49:20; 56:4, 11; 57:5, 11; 59:6, 14; 59:9, 17; 67:3, 5; 99:5, 9; 107:8, 15, 21, 31).

A thematically central expression may recur throughout a psalm, such as the sevenfold occurrence of "the voice of the Lord" in Psalm 29.

The same statement may begin and end the psalm, tying the whole together (the *inclusio*, or inclusion), as in Pss 8:1, 9; 118:1, 29; note also "Praise the Lord" in Psalms 106, 113, 117, 146–150; and how the "blessed" formula in 1:1 and 2:11 links these two psalms together as an introduction to the Psalter.

In Ps 118:2–4 (cf. also 135:19–20), an initial colon A grows longer with each repetition, while coupled with a B colon that remains constant:

(A) Let Israel say,
(B) "His steadfast love endures forever."
(A) Let the house of Aaron say,
(B) "His steadfast love endures forever."
(A) Let those who fear the Lord say,
(B) "His steadfast love endures forever."

In Ps 118:10–12, three A cola play upon the word"surround" and grow successively longer while the B colon again remains the same:

(A) All nations surrounded me;
(B) in the name of the Lord I cut them off!
(A) They surrounded me, surrounded me on every side;
(B) in the name of the Lord I cut them off!

(A) They surrounded me like bees, they blazed like a fire of thorns;
(B) in the name of the Lord I cut them off!

Note also the threefold repetition with variation of "the right hand of the Lord does valiantly/is exalted" (118:15–16).

Repetition may serve a liturgical purpose. The opening words of a psalm are sounded, followed by a call for the congregation to join in; and the initial words are stated again:

If it had not been the Lord who was on our side,
let Israel now say—
If it had not been the Lord who was on our side (124:1–2; cf. 129:1–2).

4. Alphabetic Acrostics. A number of psalms are constructed on an acrostic pattern, the initial letters of each line following the order of the Hebrew alphabet. The clearest examples are Psalms 25, 34, 111, 112, and 145. Psalms 9 and 10 together constitute a broken acrostic with some of the letters of the alphabet missing. Psalm 119 is unique, an acrostic with eight lines built on each of the 22 letters of the Hebrew alphabet, for a total of 176 lines. The acrostic form was probably chosen as an aid for memorization (cf. Prov 31:10–31, an alphabetical acrostic in praise of a good wife; in later Jewish tradition, recited by a husband to a wife), though it may also have been used out of pleasure at the challenge of preparing such a composition. See also ACROSTIC.

5. Metaphors and Similes for God. A *metaphor* lets one reality stand for another, as in "the Lord is my shepherd" (23:1). A *simile* is a comparison using "like" or "as," for example, "my heart is like wax" (22:14).

The Psalter is rich in metaphors for God. Most frequent are those that portray God as a place of refuge, shelter, or protection. "Rock" as metaphor for God appears 21 times, translating Heb *ṣûr* and *sela*ʿ. These are most often in expressions of trust in God. The word *miśgāb*, which has the root sense of "being high" or "inaccessible," occurs thirteen times, translated as "stronghold," "refuge," "defense," or "fortress." The word "fortress" also translates *mĕṣudâ*, always occurring with other metaphors (18:2; 31:2, 3; 71:3; 91:2; 114:2). "Refuge," *maḥseh*, which has the sense of shelter from storm and rain (Isa 4:6) or from the sun (Judg 9:15), is used as a metaphor for God eleven times in the Psalms. The Heb *māʿôz* is also translated as "refuge," "stronghold" (27:1; 31:2, 4; 37:39; 43:2; 52:7); the sense of "protection" is clear from the expression "*māʿôz* of my head" or "helmet" in Ps 60:7. God is named "hiding place," "cover," "shelter" (Heb *sēter*) in Pss 27:5; 31:20; 32:7; 61:4; 91:1; 119:114. The Lord is called a "dwelling place" (90:1), "habitation" (91:9), and "rock of refuge" (71:3), all translating *māʿôn*. The sense of *mānôs*, "refuge" (59:16; 142:4), is a place of escape. Related to these examples that portray the Lord as protection is the picture of the Lord as "shield" (3:3; 7:10; 18:2; 18:30, 35; 28:7; 33:20; 59:11; 84:11; 115:9, 10, 11; 119:114; 144:2), always in expressions of trust. The extraordinary number of such examples indicates that those praying these psalms were a people hurting, looking to their God for help.

God is portrayed as "king" in many psalms. The expressions "God reigns" and "the Lord reigns" occur as part of the Kingship of the Lord Psalms in 47:8; 93:1; 96:10; 97:1; 99:1; cf. 146:10. If one adds references to the Lord's throne (9:4, 7; 47:8; 89:14; 93:2; 103:19), it is apparent that "king" is a central metaphor for God in the psalms. God as "judge" also occurs many times.

A number of metaphors and similes appear less frequently. The Lord is "shepherd" for the individual (23:1; 119:176) or for the people as a whole (28:9; 80:1). The people may be portrayed as a "flock," implying the picture of shepherd for the Lord (74:1; 77:20; 78:52; 79:13; 95:7; 100:3). The Lord is a farmer caring for a vineyard (80:8–12) or feeding livestock (145:15–16). The Lord may be called "my portion," the sense being that the Lord is like a share or portion of land that one inherits (16:5; 73:26; 119:57; 142:5); closely related is the picture of the Lord as "my cup," i.e., my share (16:5). The Lord is a "sun" (84:11). The Lord as "father" occurs in 68:5; 89:26; and in the simile of 103:13. The Lord is a warrior (68:1–2, 11, 17, 21–23; 89:10) using nations as needed (60:7–8). The Lord may even be compared to a person awaking from a hangover (78:65).

The Songs of Ascent (120–34) are rich in imagery. The Lord is keeper and provider of shade (Psalm 121), builder and watchman (127:1), master and mistress (123:2), like a nursing mother (131:2), or like the mountains providing protection around Jerusalem (125:2).

In some instances the metaphor is implied by the action of the subject. The Lord is an archer (7:12–13; 18:14; 21:12; 38:2) firing lightning bolts as arrows (77:17; 144:6). The Lord is a bird whose wings provide protection (17:8; 36:7; 57:1; 61:4; 63:7; 91:4), a builder (102:25; 104:5), a host (23:5), a knitter (139:13), even a moth (39:11).

6. Metaphors and Similes for People. Much of the imagery for people comes from agricultural life. The person who delights in meditating on Scripture is like a tree, firmly rooted and productive (1:3). The righteous are like the palm or cedar, flourishing and productive even in old age (92:12–14). A family is blessed with a wife who is like a fruitful vine and children sprouting up like olive shoots around the table (128:3; in 127:4–5 children are called arrows in a quiver, affording protection to their parents). The psalmist trusting in God's love is "like a green olive tree" (52:8). Psalm 144 asks for God's blessing, including the wish that children "in their youth be like plants full grown" (144:12). The picture of God's people as a vine is developed in 80:8–13 (cf. 44:2).

The relationship of the individual to God may be described in terms of a sheep and a shepherd (23:1–4; 119:176); more frequently the whole people is described as a flock of sheep (28:9; 74:1; 77:20; 78:52; 79:13; 80:1; 95:7; 100:3) or even as sheep ready for slaughter (44:11, 22).

The fellowship of believers is as pleasant as an abundance of expensive perfume or the cooling morning dew (133).

The complaint section of the laments is rich in figurative language. The one suffering may use comparisons from animal life, calling himself a worm (22:6) or comparing his situation to a vulture of the wilderness, an owl of the waste places, or a lonely bird on the housetop (102:6–7). His longing for the Lord's deliverance is more than the longing of a night watchman for the morning (130:6); it is like the thirst of a person about to faint (63:1), of a deer yearning for flowing streams (42:1), or of a parched land needing water (143:6). The present situation of the people is like that of a dry creek in the Negeb (126:4). The psalmist describes his personal distress as being poured out like water, having a heart like wax, with his strength dried up like a potsherd (22:14–15). He is shriveled up like a dried out wineskin (119:83), broken like a pot (31:12), lonely as a person who is deaf and dumb (38:13–14). His life is passing away like a shadow that disappears at sundown, or it will vanish as quickly as a grasshopper that is shaken away (109:23). He may portray himself as drowning (69:1–2, 14–15; 88:7, 17). In several instances the psalmists lament the brevity of life, comparing people to grass or a flower (90:5–6; 102:11; 103:15–16, in a Thanksgiving Psalm); human life is a mere breath or a shadow (39:5–6; 102:11; 144:4), or a puff of smoke (102:3). The length of life is a mere handbreadth (39:5); a statement comparing the brevity of human life to that of the beasts becomes a repeated element in a Wisdom Psalm (49:12; 20). The Lord punishing the people made their days vanish like a breath (78:33), but their very impermanence was a ground for the Lord's mercy (78:39). The psalmist declares that he is not a permanent resident but a guest, a sojourner (39:12; 119:19).

Finally, we note the metaphors and similes that the psalmists use for the wicked person or the enemy. The wicked sprout up like grass (92:7; in contrast to the righteous who are like palm or cedar trees, 92:12–13). But they are in reality as impermanent as grass (37:2, 20), like chaff, dust, or the mire of the streets (1:4; 18:42). They are as transitory as a dream (73:20). They are like trappers, setting snares for the righteous (141:9; 142:3). They wear curses like clothing (109:18). Especially frequent is the comparison of the wicked to the lion (7:2; 10:9; 17:12; 22:13, 21; 35:17; 57:4). They may also be compared to bulls (22:12), dogs (22:16, 20; 59:6–7, 14–15), the wild ox (22:21), wild beasts (74:19), a boar (80:13), a serpent (58:4; 140:3), even bees or a blazing fire (118:12). Their tongue is like a razor (52:2) or a sword (64:3); their words are like arrows (64:3). One day they shall be shattered like a smashed rock (141:7).

The language in curses against the enemy is especially colorful: "May these lions have their teeth broken and be defanged" (58:6). "May they disappear, like water running away, like grass trodden down, like a snail disappearing into the slime, or a birth that is aborted" (58:6–8). "May they be as impermanent

as smoke or wax before a fire" (68:2), or "as grass on a roof" (129:6). "May they be blown away like whirling dust and chaff" (83:13). "Let them be like a forest consumed by a fire" (83:14–15), "like dung ground into the earth" (83:10). "May their name be blotted out of the book of the living" (69:28). "May dishonor and shame be their clothing" (109:29).

The variety and vividness of the imagery in the Psalter are evidence of the lively imagination that animates this poetry.

F. Types of Psalms

The psalms originated as Israel's response to the acts and words of God and, in fact, to what the psalmists saw as God's inaction and silence. As such, they reflect the polar experiences of human life: joy and sorrow. Joy brought before God is praise; sorrow is taken to the Lord in the form of the lament. With this, the fundamental themes running through the Psalter—praise and lament—are identified (Westermann 1981).

As literature that arose out of the varied situations of human life, the psalms are as varied as human experience itself and cannot all be neatly categorized. Nevertheless, those coming from similar situations have similar features and can be profitably considered as a group. Lines of classification cannot always be firmly drawn, for example, between a "lament" and a "psalm of trust." (In the categories below, a psalm number in parentheses indicates that the psalm only partially fits in that category.)

1. Laments or Prayers (Heb *tĕpillâ*). The Community Laments arose from times of national crisis. These include Psalms (12), 44, 60, 74, 79, 80, 83, 85, 90, 94, (108), 123, (129), and 137; five of these are gathered in Book III (73–89). The typical elements in the community lament include:

(a) the *address* (simply "O God" in 44:1; 80:1–2);
(b) the complaint in three forms, where the subject of the verb is "we" (44:22, 25), "they" (i.e., the enemy; 80:12b–13, 16a) or "thou" (i.e., God; 44:9–14; 80:4–6a; 12a);
(c) the request for help addressed to God (44:23, 26; 80:1a, 2b, 3, 7, 14–15, 17, 19);
(d) the affirmation of trust in God, which may take the form of recalling the Lord's Previous saving acts (44:1–7; 80:8–11);
(e) a vow to praise God when the crisis has passed (44:8; 80:18).

Specific psalms can be considered against the background of this pattern of typical elements: Psalm 79 develops the *request* at length (vv 6–12), while Psalm 74 extends the *they-complaint* (vv 4–8). The *affirmation of trust* is developed in 74:12–17; it can so dominate a psalm that the entire psalm can be considered a Community Psalm of Trust: 125, (126). Psalm 60 adds a divine oracle to the typical elements (vv 6–8).

The Individual Laments arise from a variety of situations of individual crisis. Included in this category are:

Book I: 3–7; 9–10; 13; (14); 17; 22; 25; 26; 28; 31; 35; (36); 38; (39); 40:11–17; 41;
Book II: 42–43; 51; (52); (53); 54–59; 61; 64; 69; 70; 71;
Book III: 77; 86; 88;
Book IV: 102;
Book V: 109; 120; 130; 140–43

Like the Communal Laments, the typical elements in the Individual Lament are:

(a) the *address* (13:1, "O Lord"; 22:1; "My God, my God");
(b) the *complaint* in three forms, with the subject "I" (13:2a; 22:2, 6, 14–15, 17a), "thou" (13:1; 22:1), or "they" (13:2c; 22:7–8, 12–13, 16, 17b–18);
(c) the *request for help* (13:3–4; 22:11, 19–21);
(d) the *affirmation of trust* (13:5; 22:3–5, 9–10);
(e) the *vow to praise God* when the crisis is past (13:6; 22:22–31).

When the *affirmation of trust* dominates, the psalm may be called an Individual Psalm of Trust: 11; 16; 23; 27; 62; 63; 131.

2. Hymns or Songs of Praise (Heb *tĕhillâ*). Included here are Psalms 8; 19:1–6; 29; 33; 47; 65; 66:1–12; 78; 93; 95–100; 103–6; 111; 113; 114; 117; 134; 135; 136; 145–50.

Many of these hymns begin with a *call to praise* in the imperative plural, summoning the assembled community to praise the Lord (33:1–3; 66:1–4; 100:1–3a; 105:1–6; 111:1; 113:1–3; 117:1; 135:1–3; 136:1a; 146–50). This imperative makes clear the congregational setting for these psalms. Following the call to praise (113:1–3; 117:1) are *reasons* for the praise (113:4–6; 117:2), which may include God's might and majesty (113:4–5) as well as God's mercy in caring for individual persons (113:6–9).

The theme of God's might as a reason for praise is developed in those psalms which place particular emphasis on the work of God the Creator (8; 19A; 104; 148; cf. 139) or on God's acts in history (78, 105, 106). A number of psalms celebrate God's work in both nature and history (8; 65; 66; 114; 135; 136; 146; 147).

Some psalms are dominated by the imperative call to praise. Psalms 146–50 are each framed with the plural imperative, "Praise the Lord!" The imperative to praise completely controls Psalms 148 and, especially, 150.

The hymns extolling the Kingship of the Lord ("Enthronement Psalms") describe the Lord as King (47; 93; 95–99); a number of these include the declaration, "The Lord reigns" (93:1; 96:10; 97:1; 99:1).

3. Songs of Thanksgiving (Heb *tôdâ*). Included here are Psalms 18; 30; 32; (34); 40:1–10; 66:13–20; 92; 116; 118; and 138. These psalms originated as a grateful response to God for a specific act of deliverance, such as healing from illness (30; 32; 116), which may be a physical manifestation of unforgiven sin (32), or deliverance from enemies (18; 92; 118; 138), or simply rescue from trouble (66:14). The title to Psalm 18 indicates how the origin of that particular psalm was understood at the time of the Psalter's editing: "A Psalm of David the servant of the Lord, who addressed the words of this song to the Lord on the day when the Lord delivered him from the hand of all his enemies, and from the hand of Saul."

These psalms assume the presence of the congregation, which is gathered either for worship (30:4–5; 34:5, 8, 9; 118:1–4, 24, 29) or for instruction (32:8–11; 34:11–14) and who hear the story of the deliverance (40:9–10; 66:16–19). There are hints indicating how these psalms were used in worship: 118:19–29 assumes a procession, while 66:13–15 and 116:12–19 point to a thank offering accompanying the psalm. In Psalm 138 the worshipper is in the outer court of the temple (v 2).

At the heart of these psalms is the *story of the deliverance*, summarized briefly, "O Lord my God, I cried to thee for help, and thou hast healed me" (30:2; cf. 18:3; 34:4, 6; 40:1–2; 66:19; 92:4; 116:1–2; 118:5; 138:3) and often expanded (18:4–19, 31–45; 30:6–11; 32:3–5; 66:16–19; 92:10–11; 116:3–4, 6–9, 16; 118:10–18).

A psalm of this type has been called a *tôdâ*, Hebrew for "thanksgiving" (116:17). The related verb, *yādāh*, occurs frequently in these psalms and is variously translated: 18:49 (RSV "extol"); 30:4 (RSV "give thanks"); 30:9 and 138:4 (RSV "praise"); 32:5 (RSV "confess"); 30:12; 92:1; 118:1, 19, 21, 28, 29; 138:1, 2, (all RSV "give thanks" or "thank," but JPS "praise"). Westermann has argued that the verb *yādāh* should be translated "praise" (cf. JPS) rather than "thank," and on that basis prefers to classify these psalms as "narrative praise of the individual" (1981: 25–30; 1989).

A number of psalms express the praise and thanks of the community or groups within the community for God's blessings or for specific acts of deliverance. These may be described as Community Thanksgiving Psalms (Crüsemann argues against such a category; 1969: 155–209). Psalm 67 expresses thanks for the blessing of a good harvest (vv 6–7). Psalm 75 gives thanks for "wondrous deeds" (v 1). Psalm 107 tells four stories of deliverance which are the basis for a refrain calling for thanksgiving (vv 4–9, 10–16, 17–22, 23–32). Psalm 124 again tells a story of deliverance, summarized in the doubled "we have escaped" of v 7. Psalm 136 begins with the triple imperative "O give thanks …" (vv 1–3) and continues by reciting God's mighty acts in creation (vv 4–9) and in history (vv 10–25) as a basis for the refrain of every verse, "for his steadfast love endures forever."

4. Royal Psalms. These are psalms composed for an event connected with the life of the king. Included are Psalms 2; 18; 20; 21; 45; 72; 89; 101; 110; 132; and 144:1–11. Psalm 45 was written for a royal wedding. Psalm 2 was intended for a king's coronation, a time when the vassal nations would be considering rebellion (vv 1–3). Psalm 18 is a royal thanksgiving, in which the king expresses gratitude for

a victory in battle (vv 6–19, 31–45). Psalm 20 is a prayer for the king's victory before battle; Psalm 21 gives thanks for answered prayers (vv 1–7) and promises future victories (vv 8–12). Psalm 72 is a prayer for the king, probably at the time of his coronation or at its anniversary. Psalm 89 is a lament, a prayer for deliverance from enemies. In Psalm 101 the king promises to rule with loyalty and justice. Psalm 110 again fits a coronation setting. Psalm 132 recalls the divine choice of the Davidic line (vv 11–12, 17–18) and of Zion (vv 13–16). In Ps 114:1–11 the king prays for victory.

These psalms originated during the period of the Monarchy and functioned during that period. After the fall of Jerusalem in 587 B.C., they took on another significance, projecting into the future a description of an ideal king to come (see G.5 below).

5. Songs of Zion. A number of psalms celebrate the Lord's choice of Mt. Zion in Jerusalem as the earthly center of the Lord's presence. These Songs of Zion (for this title, see 137:3) include 46, 48, 76, 84, 87, and 122 (cf. also 132:13). These psalms declare the Lord's presence in Jerusalem (46:7, 11), which is the city of God (46:4–5; 48:8; 76:2; 87:1–3), where beautiful Mt. Zion is located (48:1–3). Ps 48:12–14 suggest a procession around the city walls. Psalm 84 expresses the thoughts of one longing to visit the temple, where even the sparrows find refuge (vv 1–4; cf. v 10); Psalm 122 expresses the joy of a pilgrimage to the city and prays for the peace of Jerusalem.

6. Liturgies. Psalms designed for antiphonal dialogue or which associate liturgical action with the words of the psalm are called Liturgies. Here may be included Psalms 15, 24, 50, (68), 81, (82), 95, 115, 132. Psalm 15 appears to have functioned as a liturgy for entrance into the temple area, with the worshipper asking the question in v 1, "O Lord, who shall sojourn in thy tent?" and the priest responding with the answer in vv 2–5, "He who walks blamelessly, and does what is right …" Psalm 24 is similar, with the worshipper's question in v 3, "Who shall ascend the hill of the Lord?" and the answer in vv 4–6, "He who has clean hands and a pure heart …" Like Psalm 48, this psalm appears to be associated with a procession, probably including the ark. Those outside the temple area make the request, "Lift up your heads, O gates … that the King of glory may come in." Those inside respond with the question, "Who is this King of glory?" and the first group replies, "The Lord, strong and mighty …" (vv 7–8). The same exchange is then repeated in vv 9–10.

Three psalms include extensive words from the Lord delivered in liturgical settings. Psalm 50 assumes a ceremony renewing the covenant (vv 5, 16). After a description announcing God's presence, including a word from God delivered by a cultic official gathering the covenant people (v 5), there are further words from God calling for genuine prayer and thanksgiving, instead of a mechanical offering of sacrifices (vv 7–15, 16b–23). The ceremony must have included a recitation of the covenant requirements (as v 16 suggests). Ps 81:1–3 is suited to a worship setting on a "feast day." The main part of the psalm consists of words from the Lord delivered by the proper official, here reminding Israel what the Lord has done (vv 6–7, 10a), recalling their past disobedience (vv 11–12), and calling for new loyalty and obedience (vv 9, 13). Psalm 95 appears to be connected with a procession (vv 1–2) which culminates in bowing before the Lord (v 6). Once again, a divine word spoken by a cultic official calls for obedience (7b–11).

Psalm 68 refers to "solemn processions," described in vv 24–27, while Psalm 82 depicts a legal process where God pronounces judgment on the gods making up the "divine council."

Psalm 115 assumes a variety of voices. One voice (or group) asks the question in vv 1–2, and another answers with vv 3–8; three groups are exhorted and then respond in vv 9–11; the psalm concludes with a word of blessing (14–15) and praise (16–18).

Psalm 118 appears to have been connected with a ceremony entering into the temple area (vv 19–20, 26–27). Psalm 132 may have been used in connection with a procession reenacting David's bringing of the ark (v 8) to Jerusalem and thus celebrating the Lord's choice of David (v 11; cf. the Royal Psalms) and of Zion (v 13; cf. the Songs of Zion).

As one of the "Pilgrimage Psalms," Psalm 121 appears to have been used as a liturgy for travelers, with those going on a journey reciting vv 1–2 and those remaining at home speaking the words of encouragement and blessing in vv 3–8.

7. Wisdom and Torah Psalms. Included here are Psalms 37, 49, 73, 112, 127, 128, 133, and Psalms 1, 19, and 119. One does not hear the tones of either lament or praise in the Wisdom Psalms; for the most part, they are not even addressed to God. Rather, they offer reflections on the possibilities and the problems of life before God and advice on how best to live that life. In so doing, they are linked with the biblical Wisdom Literature (Proverbs, Job, Ecclesiastes). Wisdom Literature in the Bible is represented by two basic kinds of materials: the short saying (as found in Proverbs and Ecclesiasticus) and the longer, reflective essay or drama (Ecclesiastes, Job). Both types are represented in the psalms.

Psalms 127, 128, and 133 are each made up of short sayings, reflecting on such everyday themes as piety and daily work (127:1; 128:1–2), the balance between work and rest (127:2), and the blessings of life together as a family (127:3–5; 128) and as a community of believers (133).

Psalm 37 (an acrostic) presents the thoughts of an older person (v 25) to one who is discouraged because of the apparent triumphs of the wrongdoers. Psalm 73 deals with the same theme, now in the words of one who had almost lost faith because of the prosperity of the wicked (vv 2–13); this psalm concludes with words of trust and praise addressed to God (vv 21–28). Psalm 49 offers a meditation (v 3) on wealth and wisdom. Psalm 112 is again acrostic, reflecting on the blessings of those who fear the Lord and the emptiness of the lives of the wicked.

Closely related are the Torah Psalms, which focus on the importance of instruction or *tôrâ* (Psalms 1; 19; 119) in the life of piety. Psalm 1 introduces the entire Psalter by commending meditation on the teaching of the Lord as the way to the blessed life, here imaged by a tree, deeply rooted and prospering. Psalm 19 is likewise identified as a meditation (v 14). The first part is a hymnlike affirmation of God the Creator, and the second part revels in the desirability of the Lord's instruction (*tôrâ*, testimony, precepts, etc.), described as "sweeter than honey." The acrostic Psalm 119 is unique in the literature of the Bible. After the introduction (vv 1–3) it addresses the Lord, praying for insight into the wonders of the Lord's teaching (v 18). Again, it commends meditation and reflection on the Lord's works (v 27), statutes (v 48), promises (v 148), and instruction (*tôrâ*, vv 97–105). Such meditation is a joy (vv 97, 103) and furnishes direction for the walk of the believer, pictured as a sojourner on this earth (vv 1, 19, 35, 105), even as a sheep who has lost its way (v 176).

G. Theological Themes

What do these psalms say about God, God and people, and God and the universe?

1. "The Teaching of the Lord is His Delight." Psalms 1 and 2 provide an introduction to the Psalter as a whole. Psalm 1 speaks of meditating on the "torah of the Lord." The Hebrew *hāgāh*, translated "meditate," denotes the contented growing of a lion anticipating a feast after prey has been captured (Isa 31:4), the cooing of a dove (Isa 38:14), or the rumbling of thunder (Job 37:2). The notion in Psalm 1 is the sound one of reading, studying, and pondering the instruction of the Lord as written down in Scripture; since the book of Psalms is being introduced, the reference is to reading and reflecting on the psalms. This sort of meditation takes place "day and night" (cf. 63:6). The modern equivalent would be to speak of "theological reflection" upon Scripture.

This reading and reflecting is described as a delight (Ps 1:2), using the same vocabulary as that employed to describe the delight of a lover with a beloved (Gen 34:19) or the preciousness of jewels (Isa 54:12). Other Torah Psalms also refer to the joy of the study of Scripture. Psalm 19 speaks of Torah, the Lord's written instruction, as "sweeter also than honey, and drippings of the honeycomb" (vv 7, 10). Psalm 119 says, "O, how I love thy Torah! It is my meditation all the day" (v 97). Luther catches the spirit of this delight in the study of Scripture in his comments on Psalm 1:

> It is the mode and nature of all who love, to chatter, sing, think, compose, and frolic freely about what they love and to enjoy hearing about it. Therefore this lover, this blessed man, has his love, the Law of God, always in his mouth, always in his heart and, if possible, always in his ear (*Luther's Works* 14: 297–98).

The person who takes such delight in the study of Scripture—here the Psalms—is compared to a sturdy and productive tree, planted by a river (1:3).

The images evoked by Psalm 2 are in sharp contrast. The first psalm suggests individual meditation on the teachings of the Lord; the second uses the same verb, *hāgāh*, in reference to the plotting and conspiring of nations against the Lord and the Lord's chosen king. This second psalm makes an abrupt move from the world of private individual meditation into that of public international intrigue. Psalm 2 suggests that the devout and delightful study described in Psalm 1 takes place in a world where "the nations so furiously rage together," where their armies dash one another to pieces like weapons of iron smashing clay pots (v 9). But this is also a world where the Lord is ruling through the Lord's anointed or messiah (v 2), and where the oppressed may find refuge with the Lord (2:12).

Taken together, these psalms set the tone and suggest the direction for reflection on the psalms that follow. Those who engage in such meditation will find joy in so doing, and will be well nourished and productive, like trees planted by the riverside. But this theological reflection is not done in isolation. It takes place in the context of a world where nations plot and engage in war, a world, nevertheless, ruled by the Lord and where those who are hurting can find refuge in God.

Consideration of these two introductory psalms suggests a procedure for organizing theological reflection on the psalms that follow. First, what theological themes are introduced in other psalms that speak of meditation on the Lord and the Lord's teaching (such as Psalms 19, 77 and 49)? What do the psalms say about God and the individual (Psalm 1)? Then, what do they say about God and God's people in the context of the nations of the world (Psalm 2)? What do the psalms say about the problems of those who are seeking refuge and who are suffering (2:12)? And finally, what about the Lord's anointed or messiah (Psalm 2)?

2. "O Lord, My Rock and My Redeemer." Psalm 19 offers the results of meditation (v 14) upon the work of God in creation (vv 1–6) and upon the revelation of God in torah or Scripture (vv 7–13). The one who has been considering these things concludes with a prayer naming the Lord, "my rock and my redeemer" (v 14). These two metaphors suggest two assertions about God that run throughout the Psalter, especially the psalms of lament, trust, and thanksgiving: God protects and provides security for the individual, and God delivers those who are hurting from situations of crisis.

The final line of Ps 2:12, "Blessed are all who take refuge in him," links with 1:1 but also points ahead to the psalms which follow. Those needing refuge are those who are experiencing crisis. The Psalter begins with a gathering of prayers of individuals in such times of crisis, so that the bulk of Book I consists of Individual Laments. Individual Laments continue through the Psalter so that they make up about one-third of the psalms, forming the backbone of the Psalter.

What do these laments (and the closely related Psalms of Trust) assert or assume about God? A good number of them portray God with pictures that denote security for a person in a situation of distress. The largest single group of metaphors and similes describing God are in this category (see E.5 above). The psalmist asserts that God is a rock, a place of safety and security (18:2, 31, 46; 19:14); or he may pray that God be such a place of security (31:2). In a number of instances, several similar figures are clustered together, describing God as rock, fortress, shield, horn of salvation, stronghold (18:2) or as refuge, rock of refuge, fortress, and rock (71:1–3). To be "set … high upon a rock" means to be in a place of security and hiding; it is God who provides such a place (27:5). Common to these variations on the theme of God as rock is the trustworthiness of God; in 91:2 God is addressed as refuge and fortress and then the statement is made, "my God in whom I trust." There are more metaphors and similes in this broad category than in any other, primarily because the Psalter contains such a large collection of prayers coming from individuals who are in a situation of crisis and who need a person to help and a place where they can find security.

The Psalms of Trust (see F.1 above) speak of the Lord with a variety of imagery. The Lord is the place where the hurting take refuge (11:1; 16:1; cf. 2:12). The Lord is a shepherd who guides and comforts his sheep or a gracious host who provides a banquet in the midst of danger (Psalm 23). The Lord is a rock, refuge, and fortress (62:2, 6–7), or like a mother providing peace and safety for a nursing child (Psalm 131). The Lord is even compared to a bird, under whose wings the faithful can find both security and joy (63:7).

These psalms assert that the Lord provides security, but they also describe the Lord as one who rescues from distress; in metaphorical language, the Lord is rock but also redeemer (19:14). The laments describe a variety of situations of distress: those praying may be ill (Psalms 61; 32; 102) or lonely (102:7), harassed by enemies making false accusations (3; 4; 5; 7) or plagued by sin (40; 51; 130; see C.1 above). The "request for help" sections of the individual laments pray for deliverance out of such situations. When deliverance comes, the psalms of praise and thanksgiving tell the congregation the story of what God has done (30:2; 34:4) and invite them to discover God's goodness (34:8) and to join in singing God's praises (30:4–5; see F.3 above for further references).

3. "What God Is Great Like Our God?" Psalm 77 also makes reference to meditating upon the deeds of the Lord or, in modern terms, to "theological reflection." In this instance the reflection is done during a time of great personal difficulty, so that the psalmist can even ask, "Has God forgotten to be gracious?" (v 9). In thinking about what God has done, this psalmist makes a number of assertions which are central to the theology of the Psalter. First, the God of Israel is incomparable: "What god is great like our God?" he asks (v 13). Second, this God has rescued the people of Israel from bondage in Egypt, leading them through the sea and through the wilderness (vv 15, 19–20). Finally, this God also has control over nature, turning back the sea, sending rain, thunder, lightning, and earthquake (vv 16–18). In other words, the psalmist speaks of God as unique, as acting in the history of nations, and also as active in the events of nature. These themes are played upon throughout the Psalter, especially in the hymns (see F.2 above).

The most explicit OT statements declaring the Lord to be the only God are found in Isaiah 40–44 (44:6–8; 45:5–7; etc.). A number of statements in the Kingship of the Lord Psalms, however, point in the same direction, declaring that the Lord is king over the whole earth (47:2, 7, 8; 95:3–5; 97:1–5; 99:2) and over heaven and earth (103:19–22), that other gods are mere idols (96:4–5), and the Lord will judge the whole earth (96:13; 98:9).

These hymns celebrate what the Lord has done in Israel's history, telling "to the coming generation the glorious deeds of the Lord, and his might" (78:4). They center on the events of the Exodus and leading through the wilderness (78; 105; 106; cf. also Psalms 75; 107; and 124, which give thanks for specific acts of deliverance). The Kingship of the Lord Psalms cited above assert that the Lord rules over all the nations and is active in their histories as well; note also other references to the Lord judging the nations, such as 7:8; 9:8, 19; 58:11; 82:8. Some of the hymns celebrate the Lord's mighty acts in both history and in nature, including God's work in creation (33; 65; 66; 114; 135; 136; 146; 147).

God's work in creation is the theme of another group of hymns. The psalmists are astonished at the universe, "the work of thy fingers" (8:3), calling the attention of the witness of the created order to the Creator (19:1–6), reveling in the wonders of this earth (104), marveling at the forming of an individual person (139:13–18), and calling upon everything that breathes to join in praise to God (148; 150). These hymns praise God not only for creating the world and the universe, but also for maintaining and blessing that world (e.g., Psalm 104; cf. also Psalms 65 and 67, giving thanks for a good harvest and for blessings).

4. "Human Beings Are Like the Beasts That Perish." Psalm 49 is another psalm explicitly offering the results of "theological reflection," this time identified as "the meditation of my heart" (v 3). This and other Wisdom Psalms deal with the great mysteries of life and death. These reflections are here offered to rich and poor alike (v 2). The writer of this psalm is being persecuted by certain persons who are wealthy (vv 5–6). Consideration of this situation leads to two conclusions. First, the wealthy cannot buy eternal life (vv 7–9) nor will they take their wealth with them after death (v 17); they will die, like all human beings, even those who are wise (vv 10, 18–19). Second comes a more comprehensive conclusion, repeated as a refrain: human beings cannot survive their splendor but are like the beasts that perish (vv 12, 20). There is, however, a word of hope: if humans cannot ransom themselves from death's power, God can and will do so (v 15).

Other wisdom psalms also reflect on life's mysteries. Psalm 37 is addressed from the perspective of age and experience (v 25) to those disturbed by the prosperity of the wicked (v 1). Such prosperity is only temporary (vv 10, 12–13, 17, 35–36), and the wicked will soon come to an end (vv 2, 9, 20, 38). In the meantime, those bothered by the inequalities of life should not worry but be patient (vv 1, 7, 8, 34) and

find their security with the Lord (vv 39–40). Psalm 73 also deals with the problem of the success of the wicked, telling in an autobiographical fashion of one who had almost slipped away from the community of the faithful because of that problem (vv 1–14; note vv 2, 13). The psalmist kept the problem to himself, though it wore away at him (vv 15–16). In his ordinary attendance at community worship (v 17), he gained perspective and understanding, even the assurance that he was still with God and would always be so (vv 23–26). Finally, the psalmist claims God as his refuge and promises to continue to tell of what God has done (v 28). Wisdom Psalms also comment on the blessings of life in the midst of the community of worshippers (Psalm 133) and of family (127; 128).

5. "I Have Set My King on Zion." The theme of the Lord's anointed or messiah is introduced early in the Psalter, with Ps 2:2. Forming a double-psalm introduction to the Psalter, Psalm 2 is closely linked to Psalm 1, which speaks about theological reflection or meditation.

Psalm 2 is the first of the Royal Psalms, scattered throughout the Psalter. During the time of the Monarchy, these psalms functioned in connection with events in the life of the king. They articulate some extravagant hopes for the monarch. He is described as the Lord's son (2:7) and firstborn (89:27), from the line of David (89:20–37; 132:11–12; 144:9–10). He will be victorious in battle (21:7–12; 132:18; 144:10–11) and rule the nations of the earth (2:7–9; 72:8–11). Psalm 72 prays that the king might rule with justice and righteousness (vv 1–4, 7), which means special concern for the poor (vv 12–14); that he might bring prosperity and peace (vv 3 and 7, both translating Heb *šālôm*); and that he might rule forever (v 5; cf. 45:6). Ps 110:1 describes the king ("my lord") as seated at the right hand of Yahweh, victorious over all enemies, also identifying him as a priest (v 4). Many of these psalms speak of the king as being "anointed" (45:7; 89:20) or as the "anointed" (2:2; 18:50; 20:6; 89:38, 51; 132:10, 17).

After 587 B.C., there were no more kings in Jerusalem; nevertheless, the extravagant hopes articulated in these psalms remained and were projected into the future, describing an ideal anointed one, a messiah, who would finally bring about righteousness, justice, and *šālôm.* In this way these Royal Psalms became the seedbed out of which grew Israel's messianic hope. The prophets picked up these messianic themes and developed them (Isa 9:1–7; 11:1–10; Jer 23:1–8; Micah 5:2–6; Zech 9:9–10); and the NT declares that these promises find their fulfillment in Jesus of Nazareth, naming him the anointed one or (from the Greek *Christos*) the Christ (Matt 16:13–20; Mark 8:27–30; Luke 9:18–22; etc.).

Thus, the book of Psalms sounds the major theological themes that run throughout the OT and carry over into the NT. Luther perhaps understood this when he wrote the following as the introduction to his translation of the Psalms in his German Bible:

> [The Psalter] might well be called a little Bible. In it is comprehended most beautifully and briefly everything that is in the entire Bible. It is really a fine enchiridion or handbook. In fact, I have a notion that the Holy Spirit wanted to take the trouble himself to compile a short Bible and book of examples of all Christendom or all saints, so that anyone who could not read the whole Bible would here have anyway almost an entire summary of it, comprised in one little book (*Luther's Works* 35:254).

PSALMS, SYRIAC (APOCRYPHAL). The Syriac Apocryphal Psalms are found numbered consecutively from 151 to 155—subsequent to the canonical psalms—in a 12th-century Nestorian manuscript of the Psalter in Syriac. In all later Syriac mss where all five psalms appear together, these psalms are found in an order different from that of the oldest extant manuscript: 151 (also designated as Psalm I), 154 (II), 155 (III), 152 (IV), and 153 (V). These psalms are also found as filler material between parts one and two of *The Book of Discipline*, a theological treatise by Bishop Elijah, a Syrian church father who lived during the first half of the 10th century C.E. Three of these psalms (151, 154, and 155) are also found in the Psalms Scroll from Qumran Cave 11 (11QPs[a]). Additionally, Psalm 151 is found in Greek, Latin, Coptic, Arabic, Armenian, and Ethiopic versions.

Psalm 151 is found in Hebrew (11QPs[a]) as two separate psalms known as 151A and 151B. The Psalms Scroll is badly damaged where 151B is found, so that all that is left is the heading, half of verse 1, and a few letters of verse 2. The Greek and Syriac verses 6 and 7 seem to correspond in theme to the heading of 151B; however, Psalm 151B was probably much longer than these two Syriac and Greek verses indicate. Psalm 151 in the later versions is dependent on the Greek. The Greek is an obvious conflation and condensation of the Hebrew 151A and 151B, so that it portrays a drastic change in the text of the Hebrew. This change probably occurred in the Hebrew version.

Psalm 151A has undergone considerable controversy as to its translation and theology. Two verses of Hebrew 151A are absent from the Syriac and the Greek versions. Some scholars posit that these lines were intentionally edited from the original work because of Orphic influences. From this perspective the translation proclaims that the hills and the mountains do not witness to God, a nonbiblical statement. Other scholars view the psalm as being very biblical in style and theology. In this view, the psalm forms a chiasmus in structure and theme, which provides a key to its translation and interpretation. The disputed verses are thus read: "Do not the mountains bear witness to me," or "O, that the mountains would bear witness to me." It is an autobiographical psalm relating the praise of David after his election as king over Israel. The Greek and Syriac versions are not completely coherent. This psalm could be dated to the 6th century B.C.E., or earlier, on stylistic grounds; but it contains certain phrases which suggest a later date.

Psalm 152, an individual lament, and Psalm 153, a thanksgiving hymn, are both chiasmus, and relate the cries and thanks, respectively, of the psalmist upon the crisis of and deliverance from the threat of death. The psalms imitate the autobiographical style of Psalm 151A and deal heavily with the themes of death and rendering thanks. The psalms may have had Hebrew originals, but most likely, they were originally composed in Syriac imitating the Hebrew style. Therefore, they can be dated much later than Psalm 151A.

Psalm 154 could have been originally two independent psalms (a call to worship and a thanksgiving hymn) which were combined together by a redactor. If this is the case, a remarkable cohesiveness existed between the two psalms, enabling them to form a final psalm with a significant degree of internal integrity. Some scholars argue for the unity of the composition of Psalm 154. If this is the case, the author took great care to compose a psalm which easily could have been two individual psalms of integrity. It is possible that an editor composed a second psalm around or within a preexisting psalm. This alternative allows for the integrity of an individual smaller composition without relegating the unifying elements to chance. In this psalm, "Wisdom" is personified, and the faithful praise of God is exhorted. Although the psalm contains no elements unique to Qumran, several phrases and themes are congruent with Qumranic ideas. The psalm may be Proto-Essenian in origin. This psalm probably arose in the second quarter of the 2d century B.C.E.

Some scholars argue that Psalm 155 is the combination of two smaller psalms. Within the psalm is found an alphabetic acrostic from *he* to *pe.* According to this view, the original acrostic portion from ʾ*alep* to *he* was mutilated and then inserted into another psalm. Other scholars provide a convincing argument for a unified psalm and argue that the acrostic can be seen from ʾ*alep* to *he* with minor reconstructions of

the text, if one views the first stanza as containing shorter metrical units. The psalm contains three stanzas, which move from staccato cries for deliverance in the first stanza to the repentant desire of the psalmist to be taught God's ways in the second stanza. The third stanza is a thanksgiving praise to God for the deliverance sought in section one, and experienced in section two. The psalm is biblical in style and theology and is difficult to date. This psalm probably arose during the 2d century B.C.E.

These psalms and their presence within the Psalms Scroll (11QPs^{a}) have been significant for the discussion of the formation of the Psalter canon. Some scholars view the Qumran Psalms Scroll as evidence of the slow formation and canonization of the last third of the Psalter. Others see the scroll as an example of an early hymnbook or liturgical Psalter which existed apart from the history of the Psalter formation. The psalms are also significant for determining characteristics of late Jewish psalmody. During this period the breakdown in conventional psalm forms can be seen, and the use of borrowed biblical materials is evident. Traditional structuring devices were still in use, such as the alphabetic acrostic and chiasmus.

PSALTER. See PSALMS, BOOK OF.

PSEUDEPIGRAPHA, OT. A modern collection of ancient writings that are essential reading for an understanding of early Judaism (ca. 250 B.C.E. to 200 C.E.) and of Christian origins. Many of these documents were compiled or composed by Jews, while others were written by Jews but eventually were expanded or rewritten by Christians. A few seem to have been composed by Christians who depended with varying degrees on pre-70 Jewish documents or oral traditions. Almost always the Pseudepigrapha are influenced by the so-called OT: many supply revelations reputed to have been received by persons prominent in the OT; others are rewritten versions or expansions of biblical narratives; some are psalms that are occasionally modeled on the Davidic Psalter; and a few are compositions shaped by Jewish Wisdom Literature. Although these writings were composed long after Abraham, Moses, David, Solomon, Jeremiah, Isaiah, Ezra, and other famous men, they were often intentionally but incorrectly (pseudepigraphically) attributed to one of them.

Copies of *Jubilees*, *1 Enoch*, and the *Testaments of the Twelve Patriarchs* were found among the Dead Sea Scrolls. These fragments enable us for the first time to date these and related documents with some assurance. *Jubilees* and *1 Enoch* clearly predate 70 C.E. The *Testaments of the Twelve Patriarchs* in its Greek and Armenian recensions is clearly Christian, but early Semitic fragments of some testaments show that at least portions of this document are Jewish. Many Jewish documents in the Pseudepigrapha are linked in various ways with these writings or with the Dead Sea Scrolls. They now can be reliably dated to the period before the Roman destruction of the temple in 70 C.E.

Since 1970 there has been a renaissance of interest in and appreciation of the Pseudepigrapha. Since then collections and translations of the Pseudepigrapha have appeared in Danish, Japanese, Greek, modern Hebrew, Spanish, French, Italian, German, and English. The documents in the Pseudepigrapha which are Jewish and early are probably our main source for understanding and reconstructing the lives of Jews in Palestine and the Diaspora, especially before the destruction of 70.

It is not possible to define "Old Testament Pseudepigrapha." The modern collections represent a lack of consensus regarding the contents of this collection. Most scholars throughout the world are not concerned about this failure to define Pseudepigrapha. They do agree that some writings within the Pseudepigrapha are not pseudepigraphical, i.e., "falsely attributed" to another person. However, scholars agree that some writings in the OT and NT are pseudepigraphical, for example the Davidic Psalms, the Proverbs of

Solomon, and the letters incorrectly attributed to Paul, especially Hebrews, Colossians, and the Pastoral Epistles.

The Pseudepigrapha can be described if we think about the canonical OT, which was not closed when the pre-70 Jewish documents in it were composed. Many of the writings in the Pseudepigrapha were considered by Jews to be as inspired as the OT documents. Since many of them were full of prophecies, they were attributed to ancient biblical heroes such as Adam, Enoch, Noah, Abraham, Moses, David, Solomon, Ezra, and others who lived before prophecy was considered by many Jews to have ended.

The oldest Jewish documents in the Pseudepigrapha date from about the 3d century B.C.E. Others date to the period from 70 to 200 C.E., the dates assigned to the destruction of Jerusalem and the compilation of the Mishna. The latest ones date from sometime after the 4th or 5th centuries.

It is not easy today to decide whether a document is originally Jewish or Christian. Many early Christians were Jews, and they interpreted scriptures and related documents in terms of their conversion, especially their beliefs in Jesus. Sometimes they even edited Jewish documents to specify how they were to be understood. The alterations are usually christological additions. Hence, it is unwise to exclude from the Pseudepigrapha a document that is Christian in its final form since it may be an edited form of an early Jewish work. The Christian documents, or sections of them, in the Pseudepigrapha usually date from approximately 100 to about 400 C.E., although Christians frequently continued to alter the texts whenever they copied them.

The most comprehensive edition of the Pseudepigrapha, *OTP*, contains 65 documents. The names of the documents in this collection (all of which have separate *ABD* entries) and their broadly conceived genres are as follows:

Apocalyptic Literature and Related Works

1 Enoch	*Questions of Ezra*
2 Enoch	*Revelation of Ezra*
3 Enoch	*Apocalypse of Sedrach*
Sibylline Oracles	*2 Baruch*
Treatise of Shem	*3 Baruch*
Apocryphon of Ezekiel	*Apocalypse of Abraham*
Apocalypse of Zephaniah	*Apocalypse of Adam*
The Fourth Book of Ezra	*Apocalypse of Elijah*
Greek Apocalypse of Ezra	*Apocalypse of Daniel*
Vision of Ezra	

Testaments (Often with Apocalyptic Sections)

Testaments of the Twelve Patriarchs	*Testament of Moses*
Testament of Job	*Testament of Solomon*
Testaments of the Three Patriarchs (Abraham, Isaac, and Jacob)	*Testament of Adam*

Expansions of the OT and Legends

Letter of Aristeas	*Ladder of Jacob*
Jubilees	*4 Baruch*
Martyrdom and Ascension of Isaiah	*Jannes and Jambres*
Joseph and Aseneth	*History of the Rechabites*
Life of Adam and Eve	*Eldad and Modad*
Pseudo-Philo	*History of Joseph*
Lives of the Prophets	

Wisdom and Philosophical Literature

Ahiqar	*Pseudo-Phocylides*
3 Maccabees	*Syriac-Menander*
4 Maccabees	

Prayers, Psalms, and Odes

More Psalms of David	*Prayer of Joseph*
Prayer of Manasseh	*Prayer of Jacob*
Psalms of Solomon	*Odes of Solomon*
Hellenistic Synagogal Prayers	

Fragments of Judeo-Hellenistic Works

Philo the Epic Poet	*Theodotus*
Orphica	*Ezekiel the Tragedian*
Fragments of Pseudo-Greek Poets	*Aristobulus*
Demetrius the Chronographer	*Aristeas the Exegete*
Eupolemus	*Pseudo-Eupolemus*
Cleodemus Malchus	*Artapanus*
Pseudo-Hecataeus	

The documents in the Pseudepigrapha that are Jewish and antedate the destruction of the temple in 70 C.E. are indispensable sources for perceiving the life and thought of early Jews in Palestine and elsewhere, especially in Alexandria. They show us not a monolithic, closed, and orthodox Judaism but a variegated, open, and cosmopolitan Judaism which was vibrantly alive and impregnated by the thoughts in all the contiguous cultures, notably Egypt, Persia, Syria, Greece, and Italy. In these writings, as in the Dead Sea Scrolls, we are introduced to the ideas, symbols, perceptions, fears, and dreams of pre-70 Jews. Since none of them can with assurance be assigned to Pharisees, Sadducees, Zealots, or Essenes, it is wise not to describe early Judaism in terms of four such sects; rather we must now think of many groups and numerous subgroups.

A good example of the influence of Wisdom thought on the apocalypses is found in the apocalypse attributed to Enoch:

> Then Wisdom went out to dwell with the children of the people,
> but she found no dwelling place.
> (So) Wisdom returned to her place
> and she settled permanently among the angels.
> Then Iniquity went out of her rooms,
> and found whom she did not expect.
> And she dwelt with them,
> like rain in a desert,
> like dew on a thirsty land (*1 Enoch* 42: 2–3; *OTP*).

This excerpt from the Pseudepigrapha discloses the pessimism about the present condition of the earth. The people reject Wisdom and willingly accept Iniquity, which are not concepts but hypostatic beings (hence the capitalization).

Another representative excerpt from the Pseudepigrapha is an account attributed to Enoch, who claims to have experienced a journey to the heavens:

> And those men took me from there, and they brought me up to the third heaven, and set me down there. Then I looked downward, and I saw paradise. And that place is inconceivably pleasant (*2 Enoch* 8:1; *OTP*).

An interest in esoterica pervades pseudepigraphic writing. Places, like paradise and the abode of the Rechabites, and persons, like Adam, Eve, and Melchizedek—all of which are mentioned in the OT with tantalizing brevity—are often described in the Pseudepigrapha. These accounts often reflect the power of folklore in early Judaism.

Like most early Jewish writings, the Jewish Pseudepigrapha rarely mention "the Messiah." Some passages, however, are highly significant for an assessment of this Jewish belief. One of the classic passages is found in the Pseudepigrapha:

> See, Lord, and raise up for them their king,
> the son of David, to rule over your servant Israel

in the time known to you, O God.
Undergird him with the strength to destroy the unrighteous rulers,
to purge Jerusalem from gentiles
who trample her to destruction …
And he will purge Jerusalem
(and make it) holy as it was even from the beginning.
…
There will be no unrighteousness among them in his days,
for all shall be holy,
and their king shall be the Lord Messiah (*Ps. Sol.* 17:21–32; *OTP*).

The Messiah shall not be a militant hero in the normal sense, for "he will not rely on horse and rider and bow …" The gentiles who are hated are those "who trample" down Jerusalem. The *Psalms of Solomon* were written in Jerusalem sometime in the second half of the 1st century B.C.E. They contain valuable insights into the social and economic problems facing many devout Jews.

The study of Christian origins has also been revolutionized thanks to the study and appreciation of the Pseudepigrapha and of the Dead Sea Scrolls. Not only synagogal, or rabbinic, Judaism, but also earliest Christianity (from 30 to at least 70 C.E.) was part of and eventually developed out of the complex "Judaisms" which made up early Judaism. What was seen as only the "background" of Christianity is now acknowledged to be part of the "foreground" of Christianity. In particular, many of Jesus' symbols and terms, like "Kingdom of God," "Son of Man," and "living water" are not to be attributed to the post-70 Church, as many distinguished specialists claimed; they are now found in pre-70 Jewish works in the Pseudepigrapha.

The Pseudepigrapha poses a perplexing problem for many readers: Why did the authors of these writings attribute them falsely to other persons? These authors did not attempt to deceive the reader. They, like the authors of the Psalms of David, the Proverbs of Solomon, the Wisdom of Solomon, and the additions to Isaiah, attempted to write authoritatively in the name of an influential biblical person. Many religious Jews attributed their works to some biblical saint who lived before the cessation of prophecy and who had inspired them. Also, the principle of solidarity united early Jews with their predecessors who, in their eyes, had assuredly been guided by God himself. To place one's own name on a work was exceptional and ran against the tradition in the synagogue and temple: wisdom was the result of God's guidance and was often made possible through the devotion of a gifted teacher or rabbi. It is also conceivable that some of the apocalyptic writers had dreams or visions in which they experienced revelations given to Enoch, Abraham, Elijah, Ezra, Baruch, and others.

One Jewish apocalypse, Daniel is found in the OT; and one Christian apocalypse, Revelation, is in the NT. All the other early Jewish apocalypses are now placed in the Pseudepigrapha. OT specialists now observe scattered elements of apocalyptic thought in OT theology. The oldest apocalypse, however, is not Daniel, which is dated around 165 B.C.E., but *1 Enoch*, the earliest sections of which date from the 3d century B.C.E.

Jesus was influenced in some ways by apocalypticism. In particular his concept of the Kingdom of God, his contention that his own day was the end of time, and his belief that God was rapidly moving to act dynamically in the present were all shaped in some ways by Jewish apocalyptic thought. Many specialists on Paul now emphasize that he was profoundly shaped by Jewish apocalypticism. Christianity was shaped early by the visions and dreams of apocalypticism. Hence, we can grasp the significance of the Pseudepigrapha for NT research.

Finally, it is essential to state that the Pseudepigrapha is a *modern* collection. It is neither closed nor a canon. Many of the writings in it were, of course, as influential in Jewish circles (especially before the end of the Bar Kokhba revolt in 135 C.E.) and in Christian circles (especially before the Council at Nicea in 325 C.E.) as the writings later canonized. Many early Jews and many of the earliest Christians considered these documents infallible and full of divine revelation. For further information see *APOT*, JSHRZ, and *HJP*^{2} 3/1 and 3/2.

PSEUDO-. Falsely attributed names may be found under the second element of the name; for example: EUPOLEMUS, PSEUDO-; HEGESIPPUS, PSEUDO-; PHILO, PSEUDO-.

PSEUDONYMITY AND PSEUDEPIGRAPHY. Scholars employ the term "pseudonymity" to specify a fictitious name placed on a document, either originally by the author or during transmission by a copyist. The term derives from the Gk *pseudōnymous*, which means "under a false name." Similarly "pseudepigraphy" denotes the incorrect (i.e., false) attribution of authorship to famous persons. This term derives from two Greek words: *pseud*, "false," and *epigraphos*, "superscription." Emphasis must be placed on the fact that scholars judge only the titles to be "false"; the writings themselves can be invaluable.

In the 2d century C.E. Serapion employed *ta pseudepigrapha* (cf. Eusebius, *Hist. Eccl.* 6.12) to denote documents he considered falsely attributed to a NT author. Occasionally specialists use the same term to denote writings incorrectly attributed to nonbiblical authors such as Socrates, Pythagoras, and Philo of Alexandria; but more frequently they employ it to describe a large number of noncanonical texts that were improperly attributed, either originally or subsequently, to a person mentioned in the Bible or to an author of one of the biblical books. However, it is the case that some books in the OT are pseudepigraphical in the strict sense even though the term is not employed to describe them; for example, the Psalms were not composed by David, Proverbs was not created by Solomon, and Isaiah 40–66 was not written by the 8th-century prophet Isaiah. Many NT documents are also technically pseudepigraphical, including the gospels attributed to the apostles Matthew and John. For example, John 7:53–8:11 and chap. 21 are certainly not by the author of the rest of the gospel. Likewise several epistles traditionally ascribed to Paul, including Ephesians, 1 and 2 Timothy, Titus, and possibly 2 Thessalonians, are pseudepigraphical.

A large number of writings of early Judaism (ca. 250 B.C.E.–200 C.E.) are also pseudepigraphical, including most of the OT Pseudepigrapha and numerous Qumran Scrolls (cf. the *Prayer of Nabonidus* and the *Apocryphal Psalms* [11QPs^{a}]). During this formative period, for example, more than five significant collections of writings, many of them composite, were attributed to the antediluvian sage Enoch. In early Christianity, an abundance of writings were ascribed to OT figures like Solomon; the *Odes of Solomon* are a collection of hymns composed probably by a convert from Judaism to Christianity, perhaps in the early 2d century C.E., but attributed to the famous son of David. Other early Christian compositions were associated pseudepigraphically with Mary, Paul, Peter, and most of the leading characters in the NT, including Jesus. These works are collected into the NT Apocrypha and Pseudepigrapha.

Thus "pseudepigraphy" covers a wide range of writings, extending from texts included in the canon, to those that may be closely tied to the Bible, to those that were generated by other ideological (usually social) concerns. Many of the latter texts postdate the establishment of Christianity as the religion of the Roman Empire and the closing of the canon of biblical books.

To clarify the use of "pseudepigraphy" as applied to books related to the Bible and antedating 325 C.E. and the Council of Nicea, it is helpful to observe seven interrelated literary categories: (1) works not by an

author but probably containing some of his own phrases or thoughts (the oldest psalms in the Psalter that may be in some ways Davidic, 2 Thessalonians, Ephesians, and perhaps Colossians); (2) documents by an author, perhaps a pupil, who was genuinely inspired by the person to whom the work is attributed (1 Peter, and perhaps James); (3) compositions influenced by earlier works by an author to whom they are connected (Deutero- and Trito-Isaiah) or assigned (1 Timothy, 2 Timothy, Titus); (4) writings attributed to a person but deriving from later circles of schools of learned individuals (Lamentations, Proverbs, Wisdom of Solomon, *Psalms of Solomon*, *1 Enoch*, *2 Enoch*, *3 Enoch*, all the works in the Ezra cycle [viz., *4 Ezra*], Matthew, John, and virtually all the apocryphal gospels); (5) Christian writings attributed by their authors to an OT personality (*Testament of Adam, Odes of Solomon, Apocalypse of Elijah, Ascension of Isaiah*); (6) once anonymous works now incorrectly attributed to someone (Hebrews is sometimes falsely attributed to Paul); and (7) compositions that intentionally try to persuade the reader to think the author is someone famous (Psalms 151; 2 Peter [in a deceptive manner]). Such varieties of pseudepigraphy must be perceived. For many early Jews and Christians it was considered proper to attribute a thought or a document to someone who had inspired them; they employed no footnotes to hide the fact that almost all thoughts are derivative, especially when the source for a composition is God's words recorded in Scripture.

By at least 250 B.C.E. pseudepigraphy was the norm for writing in biblically inspired groups. While some of the intracanonical works are anonymous (the Pentateuch and the complex writings woven together in these books, Acts, Hebrews), many others are pseudonymous or incorrectly attributed to someone. Many of the Jewish works related to the Bible and placed within the Qumran Scrolls, the Apocrypha, and the Pseudepigrapha of the OT are attributed falsely to others for several reasons; for example, the reverence for biblical heroes and the creative thoughts their lives and traditions evoked in Jewish culture and within the individual author, the legendary accretion to biblical lore and the human need to fill in missing details in a cherished story (as in the *Genesis Apocryphon* and *Pseudo-Philo*), and especially the pervasive contention that prophecy had ceased (but cf. the *Pesher of Habakkuk* 7).

In a later period many works are attributed to outstanding people in the NT because of the reverence for them and the contention that the new revelation was only authoritative when linked with the first generation of Jesus' followers. Extracanonically, for example, numerous works were incorrectly attributed to Paul or claimed to contain authentic data about him, including *3 Corinthians*, the *Epistle to the Alexandrians*, the *Epistle to the Laodiceans*, the *Epistles of Paul and Seneca*, the *Apocalypse of Paul*, the *Vision of Paul*, the *Acts of Paul*, the *Martyrdom of Paul*, and the *Martyrdom of Peter and Paul.* Documents were also falsely attributed to Peter, namely, the *Apocalypse of Peter*, the *Gospel of Peter*, the *Preaching of Peter*, the *Acts of Peter*, the *Acts of Andrew and Peter*, and the *Martyrdom of Peter.* For the first time, however, perhaps beginning around the mid-2d century C.E., interest in Jesus' mother gave rise to many pseudepigrapha of Mary, notably the *Birth of Mary*, the *Gospel of the Birth of Mary*, the *Passing of Mary*, the *Questions of Mary*, the *Apocalypse of the Virgin*, the *Assumption of the Virgin*, and the *Coptic Lives of the Virgin*.

Early biblical exegesis in Christian circles frequently took the form of pseudepigraphy. Dogma, curiosity, apologetics, and especially the need to fill in gaps in the history of the drama of salvation gave rise to legends, storytelling, and pseudepigraphy; all of these forces need to be distinguished. Some of the pseudepigraphical works were produced by learned and gifted scholars; all of them are essential reading for a balanced view of the biblical world from 250 B.C.E., the probable time when the first works were composed in the name of Enoch, to 325 C.E., when the first Christian Council convened at Nicea.

JAMES H. CHARLESWORTH

PTOLEMAIS (PLACE) [Gk *Ptolemaeis* (Πτολεμαεις)]. See ACCO (PLACE).

PTOLEMY (PERSON) [Gk *Ptolemaios* (Πτολεμαιος)]. A name of Macedonian origin (Gk *ptolemaios* "warlike") borne by the founder and, as a dynastic name, by all subsequent rulers of the line of Greek-speaking kings who ruled Egypt after the death of Alexander the Great (323 B.C.) until the country's annexation by Rome (30 B.C.). Hence the line is known as the Ptolemaic dynasty; the period of its rule is often referred to as the Ptolemaic period; and the kings are usually referred to as the Ptolemies. They are of biblical interest because the struggles of the earlier Ptolemies with the Seleucid kings of Syria for control of Palestine led them into close contact with the Jews, toward whom they were generally well-disposed. Moreover, their promotion of Alexandria as a center of literature and scholarship was to have a profound effect upon the development of scholarship and learning in the early Christian church because the Church Fathers in essence adopted the scholarly methods of the classical tradition while rejecting its pagan content.

Fifteen kings and many persons outside the Ptolemaic royal house bore this popular name. Only those most relevant to the study of the Bible are treated here.

1. *Ptolemy I Soter* ("savior") (323 [king from 305 B.C.]–282 B.C.). Born ca. 367/366 B.C., son of the Macedonian general Lagus (hence the alternative name Lagidae for members of the dynasty) and Arsinoe, perhaps a concubine of Philip II of Macedon. After a distinguished career as one of the generals of Alexander the Great, he became satrap of Egypt in 323 B.C. and consolidated his position by hijacking Alexander's body, en route to burial in Macedonia, and taking it to Egypt. In 319 B.C. he seized Jerusalem on the Sabbath (*Ant* 12.1.1 §§3–4) in a first unsuccessful attempt to annex Palestine and Coele-Syria. The Jews taken as prisoners of war on this occasion formed the nucleus of what was to become a large and important Jewish community in Alexandria, with its own citizen rights and quarter of the city (*JW* 2.18.7 §§487–88). See ALEXANDRIA. They were followed later in Ptolemy's reign by many others who came as free settlers or mercenaries (*AgAp* 1.22 §186; *Ant* 12.1.1 §§7–9; *Let. Aris.* 12–14).

Subsequent struggles for power among the Diadochi (successors to Alexander) found Ptolemy giving refuge to Seleucus when he fled Babylon in 315 B.C. (Dan 11:5 refers to Seleucus as "one of his princes") and allied with Ptolemy against Antigonus, whose forces he defeated at Gaza in 312 B.C. However, the tables were turned in 306 B.C., when the Egyptian fleet was routed by Antigonus off Salamis in Cyprus and Ptolemy's attempts to establish a presence outside Egypt were temporarily halted.

He declared himself king in 305/304 B.C. (the title Soter was acquired from his defense of the Rhodians in 306 B.C.). After Antigonus had been defeated and killed at Ipsus (301 B.C.), Ptolemy (although he had not been present) at last contrived to occupy Palestine and Coele-Syria (the cause of the five Syrian Wars between the Ptolemies and the Seleucids over the course of the 3d century B.C.). Later he got control also of Cyprus, the Aegean islands, and the S part of Asia Minor. In March/April 285 B.C. he took Ptolemy II, his son by his third wife Berenice, into co-regency with him (his eldest son Ptolemy Ceraunus, by his second wife Eurydice, having been excluded at the time of Ptolemy's remarriage). He died in the first half of 282 B.C.

Tenacious in pursuit of his political objectives, Ptolemy was also a skilled organizer (laying down the main features of the Ptolemaic government of Egypt) and a person of learning in his own right. The (now lost) account he wrote late in life of the campaigns of Alexander the Great, although not widely read later, was admired by Arrian, who used it as a source. It was he, too, who was responsible for founding the famous museum and library in Alexandria, after he moved the capital there from Memphis (ca. 313 B.C.),

and for establishing there the worship of Serapis, a Greek interpretation of Osiris, the patron god of Memphis in his incarnation as the Apis bull.

2. *Ptolemy II Philadelphus* ("sister-loving," 282–246 B.C.). Born in 308 B.C., son of Ptolemy I, with whom he was co-regent from 285 B.C., and Berenice. Married to Arsinoe I, daughter of Lysimachus (ca. 289/288 B.C.), he later divorced her and married (ca. 279–274 B.C.) his full sister Arsinoe II, whom he associated with him as co-ruler. Hence his title Philadelphus ("brother/sister-loving"), originally a cult title of Arsinoe but applied later also to Ptolemy himself.

Overseas, his initial conflict with Antiochus I of Syria, who was challenging for control of Asia Minor (280/279 B.C.), was followed by the First Syrian War (274–271 B.C.) over Palestine and Coele-Syria. Details are unclear except that Ptolemy retained control of these areas. The result was that the way was now open for the gradual exposure of the Jews to Greek ideas and institutions; Ptolemy was responsible for the foundation there of Philoteria on the Lake of Galilee, the Hellenization of Philadelphia on the site of Rabbath-Ammon (modern Amman) (Jerome, *Commentary on Ezek 25:1–7)*, and the renaming of Acre in Phoenicia as Ptolemais. His generous treatment of the Jews is also reflected in the tradition (generally and rightly rejected) in the fictitious *Letter of Aristeas* that it was he who initiated the translation of the Hebrew Bible into Greek (the LXX), seventy (Gk *septuaginta*, "seventy") scholars being dispatched from Jerusalem, for the purpose at Ptolemy's request. See also ARISTEAS, LETTER OF.

Ptolemy had less military success later in his reign; interference in the Chremonidean War (267–261 B.C.) between the Macedonians and Athens and Sparta may have led to an Egyptian naval defeat by the Macedonians (261 B.C.), while a challenge to Antiochus II soon after the latter's accession only resulted in Ptolemy's losing territory in Asia Minor (Second Syrian War, 260–253[?]B.C.).

Within Egypt, Ptolemy promoted the spread of Hellenization and increased the country's prosperity by establishing Greek settlements (cleruchies) and bringing new areas under cultivation, particularly in the Fayum; and it was he who established the Ptolemaic ruler cult (both he and Arsinoe were proclaimed gods in 272/271 B.C.). He is chiefly remembered, however, for his generous patronage of science and the arts. The most notable results were a renaissance in Greek literature, with the work of the poets Apollonius of Rhodes, Callimachus, and Theocritus and the establishment of Alexandria as the new cultural capital of the Greek world. Yet along with his generosity toward the arts and sciences (in which he appears to have had a genuine interest), Ptolemy combined a vulgar and sensual extravagance. He is just as noted for the many mistresses he kept, his love of ostentatious display, and the magnificence of the court he established (an expense which the evidence suggests was beginning to impoverish Egypt in the last years of his reign).

3. *Ptolemy III Euergetes I* ("benefactor") (246–222 B.C.). Born ca. 284 B.C., oldest son of Ptolemy II and his first wife Arsinoe I. His marriage to Berenice II, daughter of Magas of Cyrene, resulted in the unification of Cyrenaica and Egypt. His reign began with an invasion of Syria and its territories in reprisal for the murder of his sister Berenice, wife of Antiochus II (Third Syrian [or Laodicean] War, 246–241 B.C., alluded to in Dan 11:7–9). Although he is said to have advanced as far as Bactria, his success was to be shortlived when Seleucus II combined with his brother Antiochus Hierax to force him to come to terms. Ptolemy did, however, gain some territory in Asia Minor and Thrace. On his return to Egypt, he is said to have offered sacrifice in Jerusalem (*AgAp* 2.5 §48).

Ptolemy's return had been prompted by a native Egyptian uprising, the result of Ptolemy II's extravagance having been compounded by the economic strain of the Syrian War and a series of poor Nile floods. Over the next decade Ptolemy's policy of reconciliation, shown in concessions to the Egyptian priesthoods and a generous program of temple building and restoration (the Horus temple at Edfu, begun in 237 B.C., was his foundation), did much to restore the country's prosperity. In the 220s B.C. Ptolemy began to look overseas again, assisting Athens after her liberation from Macedon (228 B.C.) and financially supporting Cleomenes III of Sparta for a period against Aratus of Sicyon (ca. 225–222 B.C.). He died probably late in 222 B.C.

4. *Ptolemy IV Philopator* ("father-loving") (222–204 B.C.). Born after 240 B.C., oldest son of Ptolemy III and Berenice II. On his accession he was challenged by Antiochus the Great, (Fourth Syrian War, 221–

217 B.C.) who by the winter of 218/217 B.C. had taken control of the Ptolemaic possessions in Asia and had reached Ptolemais in Phoenicia. Assisted by 20,000 native Egyptian troops, Ptolemy defeated him decisively at Raphia in Gaza on 22 June 217 B.C. (Polyb. 5.51–87, and alluded to in Dan 11:11–12) and so regained control of Coele-Syria.

A highly colored story in 3 Maccabees 1–2 tells how after the battle Ptolemy was thrown to the ground in a fit when he attempted to enter the high temple in Jerusalem; another (3 Maccabees 3–7, even more lurid in its details) recounts how on his return he vented his rage on the Jews of Alexandria, only to be thwarted again by divine intervention. Although this appears to be the etiology for a local Jewish festival, it may be that some of the Jews' rights and privileges were curtailed under this king.

While Ptolemy failed to capitalize upon his victory at Raphia, the role which the Egyptians had played in the battle did much to reawaken their sense of national identity. A period of serious internal unrest followed, with Upper Egypt seceding and being ruled by Nubian kings from 207 B.C. to 187 B.C. There is no doubt that the situation was aggravated by Philopator's weak and self-indulgent nature, and his reign is rightly identified as marking the beginning of the dynasty's decline. Yet his character is perhaps blackened to excess by Polybius (5.34) and Plutarch (Cleom. 33).

5. *Ptolemy V Epiphanes* ("manifest" [as a god]) (204–180 B.C.). Born 210 B.C., only son of Ptolemy IV and his sister-wife Arsinoe III. He was only a child when he became king under the regency of his ministers Sosibius and Agathocles. Antiochus the Great seized the opportunity to attack Egypt and in the Fifth Syrian War (202–200[?] B.C.) managed to extend Seleucid domination to the Sinai. The Egyptians rallied temporarily, but they were finally defeated at Panium (200 B.C.) and lost control of Palestine as well as most of their possessions in Asia Minor and the Aegean. Under the peace settlement Ptolemy married (194 B.C.) Antiochus' daughter Cleopatra I, ostensibly with the revenues of Coele-Syria and Palestine as her dowry. In fact the Ptolemies were never again to regain permanent possession of these areas. The events of this period are alluded to in Dan 11:13–18.

Within Egypt itself, however, control of Upper Egypt was regained in 187/186 B.C.; and the last native revolt in the delta was put down in 184/183 B.C.

6. *Ptolemy VI Philometor* ("mother-loving") (180–145 B.C.). Born 186 B.C., elder son of Ptolemy V and Cleopatra I. As a child, he ruled under the regency of his mother until her death in 176 B.C. In 175/174 B.C. he married his sister Cleopatra II. When Egypt was invaded by Antiochus Epiphanes (170 B.C.; referred to in 1 Macc 1:17–19), both she and his younger brother Ptolemy VIII Physcon were associated with him as co-regents (170–164 B.C.).

After Antiochus was compelled by the Roman Senate to withdraw from Egypt in 168 B.C., a struggle for power broke out between the brothers. Philometor was expelled by Physcon late in 164 B.C. but on appeal to Rome was reinstated in 163 B.C., Physcon being granted Cyrene.

In the 160s B.C. Ptolemy attempted to regain a foothold in Asia by supporting the pro-Ptolemaic group in Jerusalem under the high priest Onias III against the Seleucid faction there; and when Onias IV fled to Egypt (162 B.C.), Ptolemy and Cleopatra granted him permission to build a replica of the high temple in Jerusalem at Leontopolis (*Ant* 13.3.1–3 §§62–73). Later, with the Syrians weakened by squabbles over the Seleucid succession, Ptolemy became more open in his attempts to reestablish Egyptian power in Asia. From 150 B.C. he supported the rival claimants Alexander Balas and Demetrius II in turn, marrying his daughter Cleopatra Thea first to one (*Ant* 13.4.1 §§80–82; 1 Macc 10:51–56), then the other (*Ant* 13.4.7 §§109–10). Invading Syria, he was hailed in Antioch as king of Asia as well as Egypt but (under the eye of Rome) wisely declined the latter title (*Ant* 13.4.7 §§111–15; a more hostile account is in 1 Macc 11:1–19). He died (145 B.C.) of wounds received fighting in support of Demetrius against the forces of Alexander Balas in the plain of Antioch.

The Jewish philosopher Aristobulus from Alexandria dedicated his work on the Pentateuch (now extant only in fragments) to this Ptolemy.

7. *Ptolemy VII Neos Philopator* ("new, father-loving") (145 B.C.). Born ca. 162/161 B.C., second son of Ptolemy VI and Cleopatra II. Briefly associated in the kingship with his father in 145 B.C., he was

disposed of by his uncle Ptolemy VIII Physcon after the latter's return and marriage to Cleopatra II; he was "murdered in the arms of his mother at her wedding-feast" according to Justin (38.8.4).

8. *Ptolemy VIII Euergetes II Physcon* (145–116 B.C.). Born after 182 B.C., younger son of Ptolemy V and Cleopatra I, he was nicknamed Physcon ("pot-bellied") from his gross appearance. He was co-ruler with his brother Ptolemy VI and sister Cleopatra II in 170–164 B.C., sole ruler in 164/163 B.C. after expelling his brother, and king of Cyrene (163–145 B.C.) after Ptolemy VI's restoration. Returning to Egypt on the latter's death (145 B.C.), he married Cleopatra II and, having disposed of her son Ptolemy VII, had himself crowned sole ruler (144 B.C., although he continued to count his regnal years from 170 B.C.).

His marriage (142 B.C.) to his niece Cleopatra III, without divorcing Cleopatra II, led to a rift between them and eventually to a civil war (132/131 B.C.). First Ptolemy and then Cleopatra II were forced to flee Egypt; and although Ptolemy regained Alexandria early in 130 B.C., hostilities continued. To block Cleopatra's plan to make her son-in-law (the Seleucid Demetrius II) king of Egypt, Ptolemy supported the pretender Alexander Zabinas but in 126/125 B.C. switched his alliance to Antiochus VIII Grypus, to whom he married his daughter by Cleopatra III.

A reconciliation between Ptolemy and Cleopatra II was effected in 124 B.C.; and thereafter the three of them shared uneasily together in the rule, with Ptolemy bequeathing the kingdom to Cleopatra III and whichever of her two sons, Ptolemy IX and Ptolemy X, she should choose.

Physcon is said to have been hostile to the Jews, and Josephus (*AgAp* 2.5 §§50–55) tells against him the same lurid story of persecution which 3 Maccabees 3–7 attaches to Ptolemy IV. If he was (which is by no means certain; indeed the Greek translations of Sirach (Ecclesiasticus) and Esther were both made in Egypt during his reign [Sir, prologue; Add Esth 11:1]), then it was on account of their political support for Cleopatra II, not on any religious grounds.

9. *Ptolemy IX Soter II Lathyrus* (116–107 B.C. and 88–81 B.C.). Born 143/142 B.C., elder son of Ptolemy VIII and Cleopatra III, he was nicknamed Lathyrus ("chickpea") by the Alexandrians, who made him co-ruler with his mother (116 B.C.) against her wishes. He was twice temporarily replaced as king in favor of his brother Ptolemy X (late 110–early 109 B.C. and March–May 108 B.C.), and then he was expelled more permanently in 107 B.C. Fleeing to Cyprus, he was king there from 107 B.C. to 88 B.C.

An early attempt to retake Egypt (103 B.C.), during which he defeated the Jewish army under Alexander Jannaeus besieging Ptolemais (*Ant* 13.12.2–5 §§324–44), failed when Cleopatra's army advanced into Palestine against him. After his brother's expulsion and death (88 B.C.), the Alexandrians accepted him back as sole ruler, but the native Egyptians in Upper Egypt revolted against him (88–86 B.C.). Tragically, the revolt ended with the destruction of the ancient Egyptian capital of Thebes by Ptolemy's army.

10. *Ptolemy X Alexander I* (107–88 B.C.). Younger son of Ptolemy VIII and Cleopatra III. Governor (114/113–110 B.C.) and then king of Cyprus (110–107 B.C.) during the first period of his brother's rule, he was twice recalled to reign jointly with Cleopatra III for short periods (see Ptolemy IX above) before Ptolemy IX's final expulsion in 107 B.C. He ruled jointly with Cleopatra III until her death or murder in 101 B.C. Shortly afterward he married his niece Cleopatra Berenice, daughter of Ptolemy IX, and associated her with him in the kingship. Expelled by the Alexandrians (88 B.C.), he died in a naval battle off Cyprus while attempting to recover Egypt.

11. *Ptolemy XI Alexander II* (80 B.C.). Born ca. 105 B.C., the son of Ptolemy X and an unknown first wife, he was sent to Cos for safety (103 B.C.) by his grandmother Cleopatra III. Captured by Mithridates (88 B.C.), he escaped to Sulla (84 B.C.) and lived under his protection in Rome until the death of Ptolemy X. Married to his stepmother Cleopatra Berenice and made joint ruler with her (80 B.C.) by Sulla, he murdered her nineteen days later and was killed in turn by the enraged Alexandrians. He was the last legitimate male successor of the Ptolemaic line.

12. *Ptolemy XII Auletes* (80–58 B.C. and 55–51 B.C.). Born 111–108 (?) B.C., the illegitimate son of Ptolemy IX by a concubine. Nicknamed Auletes ("the piper") by the Alexandrians for his devotion to the cult of Dionysus, he was raised to the throne by them after their murder of Ptolemy XI (80 B.C.). He was permitted by Rome to remain king, sending troops to help Pompey in the east (63 B.C.), but was driven

out by the Alexandrians (58 B.C.) after having been forced to cede Cyprus to the Romans. On appeal to Rome and the promise of 6000 talents, he was restored by Gabinius in 55 B.C. He was father of Ptolemy XIII, Ptolemy XIV, and Cleopatra VII, last of the Ptolemaic line.

13. *Ptolemy XIII* (51–47 B.C.). Born ca. 61 B.C., elder son of Ptolemy XII. Co-regent with his sister-wife Cleopatra VII until he attempted to expel her, he was defeated fighting against Cleopatra and Julius Caesar in the Alexandrine War and drowned in the Nile.

14. *Ptolemy XIV* (47–44 B.C.). Born ca. 59 B.C., younger son of Ptolemy XII. Made king of Cyprus by Julius Caesar (58 B.C.), after Ptolemy XIII's death he was married to Cleopatra and made co-ruler with her by Caesar but was murdered by her, probably in August 44 B.C.

15. *Ptolemy XV Caesarion* (44–30 August 30 B.C.). Born 47 B.C., son of Cleopatra VII by Julius Caesar (it is claimed). Hence his nickname Caesarion ("little Caesar"). Cleopatra made him co-ruler with her (44 B.C.), and in 34 B.C. he was declared "King of Kings." After the battle of Actium, he was put to death on Octavian's orders in 30 B.C.

16. The son of Dorymenes, one of the generals whom Antiochus Epiphanes dispatched to exterminate the Jews in 165 B.C. (1 Macc 3:38; 2 Macc 4:45; 6:8). Also known as (Ptolemy) MACRON, he took the lead in eventual peace-seeking efforts with the Jews; but these efforts were undermined; and he had to commit suicide (2 Macc 10:10–13).

17. Son-in-law of Simon Maccabeus, whom he murdered with two of Simon's sons, Mattathias and Judas, in February 135 or 134 B.C. (1 Macc 16:11–17; *Ant* 13.7.4 §§228).

18. The father of Lysimachus (the Jerusalem resident who translated Esther into Greek).

19. The son of the Levitical priest Dositheus. This Ptolemy, along with his father, brought Lysimachus' translation of Esther from Jerusalem to Egypt, most probably in 114 B.C. (Add Esth 11:1).

20. Ptolemy Mennaeus, king of the Ituraeans ca. 85–ca. 40 B.C. (*Ant* 13.5.2 §§392; and 14.13.3 §330; *JW* 1.13.1 §248).

21. Ptolemy, brother of the historian Nicholas of Damascus, and like him a trusted counselor of Herod the Great (*Ant* 17.9.4 §225; *JW* 2.2.3 §21).

22. Ptolemy, finance minister of Herod charged with his signet ring and will (*Ant* 17.8.2 §195 = *JW* 1.23.8 §667).

23. Ptolemy, perhaps of Ascalon, author of a lost biography of Herod (*HJP²* 1: 27–28).

PTOLEMY MACRON (PERSON). See MACRON (PERSON).

PUAH (PERSON) [Heb *pû·â* (פּוּעָה), *pû·â* (פּוּאָה)]. Var. PUVAH. **1.** One of two named midwives of the Hebrews in Egypt (Exod 1:15). The midwives were ordered by the king of Egypt to kill all the male infants of the Hebrews at birth. An engaging question has to do with the ethnicity of the midwives. The ambiguous text of v 15 can be translated either "Hebrew midwives," or "midwives of the Hebrews"—a rendering which leaves unanswered whether they were Hebrew or Egyptian. Childs (*Exodus* OTL, 16) has enumerated some arguments on both sides. On the one hand, the names of the women are Hebrew or at least Semitic; and it is perhaps unlikely that Egyptians would have been accepted in this delicate task (but since they were slaves, the Israelites may have had no choice). On the other hand, Pharaoh probably could not have expected Hebrew women to betray in secret their own people in this way (yet Ackerman [1974–82: 86] submits that the king was depending on their demoralized position as slaves). The force of "the

midwives feared God" may be somewhat reduced if they were Israelite (though certainly far from all Hebrews feared God, and such an attitude was hardly restricted to the Hebrews).

Various explanations have been suggested for the reason why only two midwives are mentioned. Either these were the only two, the only two who disobeyed, or the only two whose names were remembered. The two may have been the head officials of the guild. However, perhaps this detail is attributable merely to the literary style of the narrative. Durham (*Exodus* WBC, 13) considers any speculation about the number of midwives and pregnant women as irrelevant. The point is the midwives' faith and its effects both for Israel and for themselves.

The name "Puah" (Heb *pû·â*) is probably cognate to Ug *pġt*, signifying " (young) girl," which occurs also as the name of the daughter of *dn·il*, *·aqht's* father. Albright (1954: 233) found "Puah" to be a good northwest-Semitic feminine name from the first half of the 2d millennium B.C.

EDWIN C. HOSTETTER

2. The second son of Issachar according to the genealogical list of Issachar's clans preserved by the Chronicler (1 Chr 7:1). In the parallel genealogies of Issachar in Gen 46:13 and Num 26:23 his name is listed as Puvah.

3. A man of the tribe of Issachar. He is mentioned in Judg 10:1 as the "son of Dodo" and the father of Tola, a man from Issachar and one of the minor judges of Israel. The relationship between Puah (Heb *pû·â*) and Tola is not very clear (McKenzie 1967: 119). In the genealogies of Issachar (Gen 46:13; Num 26:23) Tola is the son of Issachar and one of the leading clans of that tribe. He is also presented as the brother of Puah (1 Chr 7:1), also known as Puvah. The LXX renders the expression "son of Dodo" (Heb *ben dôdô*) as "the son of his uncle" and says that Tola was the son of Puah, "the son of his father's brother," that is, the son of Abimelech. It is possible that the relationship between Puah and Tola is one of political affiliation rather than a father-son relationship.

PUBLIUS (PERSON) [Gk *Poplios* (Ποπλιος)]. A fairly common Roman praenomen (first or personal name), the Latin equivalent of the Gk *Poplios.* In Acts 28:7, 8 Publius is the chief man *(protōs)* on the island of Malta. Because it would have been unusual to call a governor by his praenomen, Ramsay (1905: 343) speculates that *Poplios* is actually the Greek form of the Latin surname *Popilius.* Foakes Jackson and Lake (1933, 4: 342), however, reject this view. Since Polybius (2d century B.C.E.) habitually called the great general Scipio *Poplios,* his Roman first name being Publius, the usage in Acts 28:7, 8 should not be considered unusual (cf. Polybius books 10–15 passim). The use of the first name therefore may reflect, according to Zahn (1921, 2: 846), the friendly relationship that had arisen among Publius, Paul, and Luke during their time together on Malta. Or it may reflect the common usage among the peasants around Publius' estate.

Zahn (2: 843) documents the fact that two inscriptions found on the island, one in Greek and one in Latin, demonstrate that the term "chief man" *(protōs)* in Acts 28:7 is an official title. Thus Publius was either the highest Roman official on the island or its chief native officer, serving under the governor of Sicily. As is the case with the "city authorities" *(politarchas)* of Thessalonica (Acts 17:6, 8), the author of Acts uses a governmental term that is appropriate to the location in question.

According to Acts 28, the ship on which Paul, his guards, and his fellow prisoners were traveling to Rome wrecked on the coast of the island of Malta near the estates *(chōria)* belonging to Publius. As the leading official of Malta, Publius would automatically be responsible for any Roman soldiers or prisoners who might arrive on the island. Acts 28:7, however, indicates that he went beyond the minimum when he

"entertained us hospitably" *(philophronōs)* for three days (no doubt more permanent arrangements were made thereafter). If the "us" includes all 276 passengers on the ship (Acts 27:37), Publius must have had extensive possessions. Quite possibly, however, the "us" may be limited to selected passengers (such as Paul, Luke, the ship's captain, and the centurion) in whom Publius took a personal interest. According to Acts 28:8, Paul rewarded his kindness by healing his father of fever and dysentery. Harnack (1908: 176–77) and Haenchen (1971: 714) disagree as to whether the exactness of the medical terms used in Acts 28:7–10 indicates that the author of Acts was a physician.

According to the church father Jerome, a man named Publius was the predecessor of Quadratus as the bishop of Athens and suffered martyrdom (*De vir. ill.* chap. 19). Although the martyrdom may have occurred during the lifetime of Publius, we cannot be certain that the two men were the same.

JON PAULIEN

PUDENS (PERSON) [Gk *Poudēs* (Πουδης)]. A Christian mentioned before Linus and Claudia in 2 Tim 4:21, who along with them sent greetings to Timothy. Pudens apparently knew Timothy personally. Based on the assumption that the Pastorals were written in Rome (cf. 1:17), or are reflective of traditions from the Roman church, it has been supposed that Pudens lived in that city. It has also been theorized that he was the husband of Claudia, with Linus perhaps being their son, although this creates the problem of explaining why Pudens and Claudia are not mentioned together before Linus.

Some have thought that Pudens was Aulus Pudens, the soldier and husband of a British woman, Claudia Rufina, and friend of the Latin poet Martial referred to in Martial's *Epigrams* 4.13. This identification has been taken a step further, probably inspired by the hope of finding a link between Pauline Christianity and the British church—by those who equate Pudens with the person of the same name suggested by a fragmentary inscription at Chichester. That text has been interpreted as indicating that a certain Roman soldier, Pudens, donated the site for a temple to Neptune to the British king, Tiberius Claudius Cogidubnus, whose daughter, Claudia Rufina, he had married in Rome (*CIL* VII.17). While marriage to this British woman, Claudia Rufina, makes it quite likely that the Pudens of Martial and the Pudens of the Chichester inscription are the same person, the commonality of the names Pudens and Claudia argues strongly against extending the identification to the Pudens and Claudia of 2 Timothy. The same objection must also be advanced to any proposed link with Titus Claudius Pudens, husband of Claudia Quintilla. This couple lost an infant son who was memorialized on an inscription found on the road between Rome and Ostia (*CIL* VI.15,066). Finally, there is a theory which reasons that since some of the persons named Pudens were soldiers, then the Pudens of 2 Timothy must have held a similar occupation and was probably a prison guard in charge of Paul. But this is conjecture.

As for the ancient traditions surrounding Pudens mentioned in the *Acta Sanctorum*, e.g., that he was the son of Priscilla and that he was a Roman senator who extended hospitality to Peter, one is unable to determine where fact has been enveloped in legend.

A. Background and Sources

The societies of the ANE, with the possible exception of Egypt, shared a common legal tradition, which is nowhere more clearly marked than in the sphere of criminal law. In historical times this tradition finds expression in the legal sources written in cuneiform script, which may itself have been the vehicle for the spread of legal ideas.

The best known of these sources are the cuneiform law codes: Code of Ur-Nammu (CU)—Sumerian (21st century); Code of Lipit-ishtar (CL)—Sumerian (19th century); Code of Eshnunna (CE)—Akkadian (18th century); Code of Hammurabi (CH)—Akkadian (18th century); the Middle Assyrian Laws (MAL)—Akkadian (12th century); the Hittite Laws (HL)—Hittite (13th century).

Those law codes were not legislation in the modern sense. Although they may have had diverse secondary uses (such as political propaganda), initially they were scientific treatises, which described the law rather than prescribed it. The cuneiform scribal schools were the universities of the ANE; within their walls not only was the art of cuneiform writing taught, but scholarly research was pursued in areas such as medicine, mathematics, omens, and law.

The "scientific" method used to examine the law was as follows. A judgment in a legal case was taken, stripped of all extraneous detail so that only the bare precedent remained, and then cast into a hypothetical form, usually expressed by a casuistic style, e.g., "If a man rapes a woman who is betrothed but not yet

married …," followed by the judgment applicable in that case. The case was then elaborated by considering various alternatives—if the woman was married, if she was willing, if she was unwilling but unable to call for help—so that a multifaceted legal problem was constructed through which the principles of the law could be taught, albeit not explicitly. Eventually there came into being a canon of classic scholarly legal problems which could be drawn upon in order to draft a written law code. The law code itself would contain no more than a small proportion of the oral canon, generally recording only one or two aspects of selected classic legal problems (together with excerpts from unworked judgments and other legal sources such as royal edicts).

As cuneiform scribal schools spread through the ANE from Mesopotamia, the Mesopotamian scientific tradition in its oral as well as its written aspects was adopted in the local academies. Law codes were composed on the Mesopotamian model, in the same casuistic style, and drawing in part upon the canon of scholarly legal problems, in part on local judgments elaborated in the same way. In the sphere of criminal law, a particularly high proportion of the material comes from the common canon of scholarly problems, although it is not always evident at first because different aspects of the same multifaceted problems are incorporated in different codes. By combining the similar and not-so-similar provisions of the various codes, however, the original scholarly problem that lay behind them may sometimes be reconstructed. When this process is complete, the result is not always a monolithic, cuneiform law. Differences between the legal systems can be seen in the rulings on particular aspects of the same problem.

Although biblical Israel lay outside the sphere of cuneiform writing, its law was pervaded by the same tradition. Two law codes in the Pentateuch, the Covenant Code (Exod 21:1–22:19) and the Deuteronomic Code (principally Deut 21:15–22:29) draw from the same canon of scholarly problems as the cuneiform codes. A third source, the Priestly Code (the legal provisions scattered through Leviticus and Numbers) shares the same intellectual background but draws mainly on a tradition that is poorly preserved in the cuneiform sources. There appears to have been a scholarly literature on specifically priestly regulations which find some reflection in the biblical provisions on the same subject (e.g., Geller 1980); but the only extant example is *Šurpu* (Reiner 1958), a recitation of sins to be atoned for with the help of the priest. Some parallels have also been shown with Hittite instructions to temple officials (Milgrom 1976).

The Ten Commandments, which contain no sanctions, are a collection of moral principles rather than a law code. Nonetheless, the negative commandments refer to crimes for which punishments were imposed in the biblical legal system.

The position of biblical law within the cuneiform tradition provides the Pentateuch's sparse and obscure provisions with the necessary background for their elucidation and enables us to view the whole system which they represent. There are, however, significant differences between the biblical and cuneiform sources.

1. Date. The biblical codes are from the 1st millennium; the cuneiform codes from the 2d and 3d millennia. The legal tradition was very conservative, with the same rules recurring millennia apart; but there are signs that from the 8th century on an intellectual revolution began in the Eastern Mediterranean that was eventually to herald the world of classical antiquity and a complete change in the conception of law, especially criminal law. While the earliest of the biblical codes, the Covenant Code, which perhaps dates back as far as the turn of the millennium, is squarely in the old cuneiform tradition, the Deuteronomic Code from the 7th century and the Priestly Codes from either the same period or up to several centuries later show signs that new conceptions were beginning to affect that tradition.

2. Ideology. The cuneiform codes derive from royal jurisprudence and represent the voice of the establishment. The Deuteronomic and Priestly Codes are from circles not necessarily sympathetic to the king. Although based on the existing law, they are polemical tracts which advocate reforms. While it may be that the cuneiform codes show some tendency to idealize the law, as one might expect in an academic work, in the two biblical codes this tendency is blatant, with outright utopian measures such as the Sabbatical and jubilee years, which could never have been part of the law in practice. Criminal law in the societies of the ANE was essentially customary law which had existed from time immemorial. Innovations occurred through precedent where new circumstances arose or occasionally through

administrative orders issued by the ruler. The latter, however, were of marginal importance, effecting no fundamental change in the principles of the law. The Deuteronomic and Priestly codes, on the other hand, contain the first glimmerings of a new idea of criminal law that was eventually to become the norm in Talmudic jurisprudence.

3. Context. The biblical codes are not independent documents like the cuneiform codes but have undergone a process of editing and are inserted in a secondary context, a religious historiography. As a result, they are more heterogeneous and draw upon a variety of sources. To find the same context in the cuneiform material, it is necessary to consult diverse sources, the sum of which does not, however, add up to the same as the integrated biblical text. Furthermore, editing of the biblical text may have distorted the original meaning of the provisions (through devices such as *inclusio* and selectivity) in order to harmonize them with a particular religious perspective. On the other hand, the fact that, in contrast to the cuneiform codes, God, rather than a mortal king, is the purported author of the biblical codes should not overshadow his *function* as lawgiver. The biblical God is a divine king, whose legal role is the same as that of a mortal king except that he is the ideal king of justice, establishing equity and protecting the poor and oppressed—which is exactly how the kings of the cuneiform codes represented themselves.

The cuneiform codes provide us with a fragmentary view of the substantive law, partly because of restrictions in their length and partly because their casuistic style resulted in isolated examples. Documentary evidence of the criminal law in practice is scarce, being confined to reports of trials, which usually are concerned with the facts and the decision rather than with the legal rules at issue, and occasional references in letters.

Israelite literary tradition has yielded almost no documents of practice, but the nonlegal parts of the Bible contain numerous examples of the criminal law in practice. Of the narratives especially noteworthy are etiological stories establishing precedents such as the case of the wood gatherer on the Sabbath (Num 15:32–36) and the blasphemer (Lev 24:10–23) and juridical fables such as the woman of Tekoah (2 Sam 14:1–20) and the poor man's ewe lamb (2 Sam 12:1–14). While both types of account are fictional, they rely for their credibility on the contemporary audience's familiarity with the applicable law.

Prophetic and Wisdom Literature use familiar examples from everyday law to reinforce arguments on religious or moral issues; e.g., the punishment for adultery in the simile of marriage between God and his wayward people (Hos 2:5; Ezek 16:37–39) and in the admonitions of the book of Proverbs (e.g., 6:32–35).

The pentateuchal law codes do not always seem to be in accord with the law in practice as evidenced in other parts of the Bible. For example, the incest laws of Leviticus are stricter than those that the biblical account records elsewhere, in terms of forbidden degrees of relationship. Whether this reflects actual changes in the law or whether such changes are merely being advocated by the Priestly source is difficult to say. Caution must be exercised in comparing the two types of sources. The biblical codes, like their cuneiform counterparts, were not legislation in the modern sense. Their text was not interpreted by the courts as authoritative (except perhaps at the very end of the biblical period); and far from being comprehensive, it presented only a small fraction of the law and assumed knowledge of the rest. Where the text of a law code is silent, therefore, it cannot be taken as rejection of a rule found in a different source without further evidence.

B. Theoretical Basis

In dealing with wrongful conduct leading to harm (other than by breach of an agreement), modern legal systems distinguish between *torts* and *crimes.* Torts are generally wrongs with a lower level of moral culpability, such as negligence, but the same act may be both a tort and a crime. A tort is conceived of purely as a personal wrong against the victim. The initiative for proceeding against the tort-feasor (guilty party) is solely in the hands of the victim, and the purpose of the court's intervention is to *compensate* the victim for any harm caused him. A crime, by contrast, is conceived of as a wrong to society, in which the harm to the particular victim is incidental—indeed, there may be no specific victim at all. The initiative is in the hands of the state, which may proceed irrespective of the victim's wishes; and the purpose is to *punish* the offender.

The ANE legal systems dealt with wrongs in a different manner. Three main categories can be discerned:

First, acts causing damage where the level of moral culpability is low, e.g., a wound inflicted in a fight where the victim is equally to blame, or negligence causing damage to a neighbor's crops by fire or flood. The initiative was in the hands of the victim, and the purpose of the court's intervention was to award compensation. This category is comparable to the modern law of torts.

Second, acts which carried a high level of moral culpability, such as incest or blasphemy, which were conceived of as bringing down divine wrath on the whole society in a form such as drought, plague, or military defeat. The link between the act and its retribution was understood as an intangible pollution by the offender of his environment. It was society through its official organs that took the initiative to protect itself by removing the pollution, usually by killing or exiling the offender, thereby appeasing divine anger. Any resemblance to modern criminal law is superficial; the analogy is rather to a contagious disease, since innocent persons who had been polluted by contact with the offender might be dealt with in the same way as the offender.

Third, acts which would constitute the principal examples of crimes in modern systems, such as homicide, rape, wounding, and theft (but also adultery). Such offenses gave rise in principle to a dual right for the victim or his family: to take revenge on the offender or his family, or to accept ransom in lieu of revenge. The initiative was therefore with the victim; and the role of the court was seen as setting a limit on the level of revenge, or in some cases, of ransom, in accordance with the seriousness of the case. Where physical punishments appear in the law codes for such offenses, they are in fact limits on revenge, and the hidden assumption is that ransom may be demanded in lieu of them. Where these payments are fixed, they are neither fines nor compensation but limits on the ransom that may be exacted, and the hidden assumption is that the right to revenge will revive if they are not paid. It must be emphasized, however, that the right to revenge was a *judicial* remedy exercisable through the courts, not a simple expression of blood feud. Uncontrolled revenge was considered the antithesis of legal order, as in the boast of Lamech (Gen 4:23–24), which typified the wicked, lawless society before the Flood.

The above three categories overlap considerably. For less serious cases in the third category, revenge may be limited to loss of freedom, which would also be the fate of a tort-feasor unable to pay the compensation demanded, while the most serious cases might also create some degree of pollution and thus involve society as a whole. For convenience, the second and third categories, which together cover the area regarded as criminal law today, will be discussed separately under the headings "Public Offenses" and "Private Offenses," although they have no real equivalent in modern systems. A further minor category of wrongs has been brought together under the heading "Offenses Against the Legal System."

C. Public Offenses

1. Apostasy. Although apostasy was not considered by its polytheistic neighbors, Israel was forbidden to have gods other than Yahweh or to worship images of them (Exod 20:2–5). One who sacrifices to another god is made *ḥrm* (Exod 22:19; see below), which entails the death penalty (Deut 17:2–7). If an entire city is implicated, its inhabitants are killed and the city with all its contents burned and reduced to rubble (Deut 13:13–18). Incitement to apostasy is also punishable by death (Deut 13:2–12). Giving one's offspring to Molech (if a god) creates pollution and carries the death penalty (Lev 20:2–3). Prosecution of apostasy is by the public authorities (Deut 13:15–16, cf. Lev 20:2) based on evidence from informants (Deut 13:9). Its theoretical basis is illustrated by the story of the people's apostasy to the Moabite gods (Num 25:1–9). Yahweh's anger is incurred; and the result is a plague—a typical consequence of pollution. The remedy is for Moses to have the leaders impaled, while the plague is actually stopped by the exemplary act of a zealot, Phinehas, in killing an apostate (cf. Ps 106:30).

2. Blasphemy. In MAL Tablet A 2 a woman who speaks blasphemy "shall bear her punishment; they shall not touch her husband, children, or daughters." The exact punishment is not stated, but King Assurbanipal (Weidner 1932: 184, 28) tells of two enemies "who spoke gross blasphemy against Assur, my god who created me: I ripped out their tongues and skinned them alive." The Akkadian term in both

sources is *šillatu*, the cognate of which is found in Dan 3:29, where Nebuchadnezzar decrees that anyone who speaks *šlh* against the god of the Jews will be dismembered and his house destroyed (Paul 1983).

In the biblical laws, two associated terms are used: "curse" *(qll)* and "slander the name" (*nqb ʾt/b-šm*). Cursing of God is prohibited (Exod 22:27—Eng22:28). Lev 24:15–16 states that one who curses God shall bear his punishment—i.e., his family shall not be touched, as in the Assyrian Laws—and that one who slanders the name is to be stoned.

The Levitical rule is purportedly based on an actual case where the offender slandered the name and cursed, and was accordingly executed (24:10–14, 23). The two actions, therefore, if not synonymous, have the same consequences in law (cf. 1 Kgs 21:13).

3. Misappropriation of *ḥrm*. In Mesopotamia, property that was reserved for a god or king might be placed under a taboo and was then known as *asakku*. To misappropriate it was to violate the taboo and incur a penalty, which apparently varied, but could be death if the circumstances warranted (Malamat 1966). A priestess who repeatedly steals the *asakku* is burned (Anbar 1974: 173), and a man who takes booty previously declared *asakku* is "not to be spared," but possibly has his death sentence commuted (ARM 5.72).

In the Bible the same institution is called *ḥrm*, but the term is used only of taboo property reserved for God. Reservation is achieved by total destruction, as in the case of the apostate city (Deut 13:13–16), and the same applies where the enemy is declared *ḥrm*. Consequently, taking enemy property as booty instead of destroying it amounts to misappropriation of *ḥrm*, a crime that will incur divine anger (1 Sam 15:1–33).

When Achan takes booty from Jericho, in spite of the city's having been declared *ḥrm* (Josh 6:17), divine anger manifests itself in military defeat for Israel (Josh 7:1–12). In punishment, Achan is to be stoned and burned, along with his family, livestock, and possessions, including specifically the *ḥrm* property taken by him and also the tent in which it had been concealed (Josh 7:22–25).

4. Sorcery. Sorcery was considered a public danger, and special procedures applied to its prosecution. According to the Edict of the Hittite king Telipinus (Hoffmann 1984: 54 §50), persons were expected to denounce members of their own family. Denunciation is to the king (Hoffmann, §50), who also interrogates the witnesses (MAL A 47). Sorcery is, therefore, the "judgment of the king" (HL 44).

Little is known of the practices that were forbidden. HL 170 mentions the killing of a snake while pronouncing a man's name. HL 44B declares the dumping on a man's land of residue from a purification ceremony to be sorcery, i.e., connected with the concept of pollution.

In the Bible, Exod 22:17—Eng22:18 states: "You shall not suffer a sorceress to live." The addressees are presumably a public body. The only type of forbidden sorcery explicitly mentioned is that of mediums calling up a spirit of the dead (*ʾwb* or *yd*ʿ*ny:* Lev 20:27). If Molech sacrifice is to the spirits of the dead, then its prohibition would belong in this category.

The role of the king is illustrated by the notice that Saul attempted to extirpate the mediums from the land (1 Sam 28:9). The practice incurs divine anger: one who consults a medium—typically a secret, collusive act not amenable to human justice (cf. 1 Sam 28:8–10)—is threatened with divine punishment (Lev 20:6).

5. Violation of the Sabbath. The biblical prohibition of work on the Sabbath (Exod 20:10; Deut 5:14) is not found elsewhere in the ANE. The penalty for infringement is death (Exod 31:14–15; 35:2). An etiological story defines gathering wood as forbidden work (Num 15:32–36). Jeremiah's appeal to the kings and inhabitants of Jerusalem to cease work on the Sabbath (Jer 17:19–27) suggests that the prohibition was not then enforced through the public authorities. Nehemiah does enforce it (Neh 13:15–22) but by administrative measures rather than direct sanctions.

6. Incest. HL 189–195A list a series of incestuous relationships classified as *hurkel*. No punishment is prescribed; but from another Hittite source, the Instructions to the Border Guard Commander (*ANET*, 211), we learn that *hurkel* was punished by death or banishment, according to local custom. Where the offender was banished, the town had to purify itself afterward. CH prescribes the same two alternatives according to type of incest: with a daughter—banishment (154); with a daughter-in-law—death (155); between mother and son after the father's death—death for both (157).

Lev 18:6–19 likewise contain a list of incestuous relationships, which it forbids and labels "abominations" *(tw‹bwt).* The offender is said to pollute himself (v 24), and failure to curb such pollution may lead to defeat and exile (v 28). Lev 20:11–21 include a further list with specific punishments, human and divine; see below.

The lists of prohibited relationships vary, even within the two levitical sources (cf. Deut 23:1; 27:20, 22–23); and none of them is comprehensive. Undoubtedly, relations with a daughter were prohibited, although this prohibition is missing from the biblical lists. All sources prohibit relations not only with blood relatives but also with certain relatives by marriage. In the latter case, the relation would already be adulterous, so that the incest prohibition perhaps refers either to widowhood (cf. CH 157) or to collusion with the husband; the point being that in spite of his acquiescence it is still an offense because it pollutes (see below). In three cases the biblical code prohibits relations that are licit elsewhere in the Bible: (1) marriage with a paternal half-sister (Lev 18:9; Deut 27:22; cf. Gen 20:12; 2 Sam 13:13); (2) marriage with two sisters (Lev 18:18; cf. Jabob's marriage to Leah and Rebekah); and (3) levirate marriage (Lev 18:16; 20:21, if not confined to the brother's lifetime), although it is enjoined as a duty by Deut 25:5. (Cf. HL 193, which specifically exempts the levirate as opposed to relations during the brother's lifetime [195A].)

7. Bestiality. HL 187–188 and 199 classify sexual relations between a man and a cow, sheep, pig, or dog as *hurkel.* They explicitly call for the death penalty but with a right in the king to grant pardon. Curiously, 200A exempts relations with a horse or mule, although in this case and where the offender is pardoned, he remains ritually impure. Lev 18:23 includes in the list of "abominations" intercourse by a man or woman with any animal, and Lev 20:15–16 prescribes the death penalty for both the offender and the animal.

8. Homosexuality. To "lie with a male the lying of a woman" is regarded as another "abomination" by Lev 18:22 and is punished with the death of both parties in Lev 20:13. In MAL 20, the same offense is punished with the offender himself being sodomized and castrated. It has been suggested (Daube 1986) that this curious punishment is based on a distinction between active and passive sodomy, the latter being the lot of the lower orders of society. Such a distinction finds no echo in the biblical law.

D. Private Offenses

1. Homicide. The basic principle was that the victim's family had a right to revenge through the death penalty or to ransom, at their choice. As the Edict of Telipinus, a Hittite king, puts it (Hoffmann 1984: 52 §49):

> A matter of blood is as follows. Whoever does blood, whatever the owner of the blood says:—If he says "Let him die!" he shall die. If he says "Let him pay ransom!" he shall pay ransom …

The "owner of the blood" is the closest male relative of the victim. He is known by the same name in Neo-Assyrian sources, and as the "owner of the life" in MAL B 2. The biblical equivalent is "redeemer of the blood" *(gw›l hdm)*, i.e., one who brings it back within the family, like redeemed family land; and it is slaying of the killer that achieves restoration. As a letter from the Babylonian king to the pharaoh (EA 8) puts it: "… the men who killed my subjects—kill them! Return their blood!" If not restored, the victim's blood may "cry out" from the ground (Gen 4:10).

By the same token, if the homicide is justified for some reason and therefore does not give a right to revenge, the blood can remain where it is. In Leviticus 20, it is said of the offender who commits a polluting act, and may therefore be killed without revenge as a measure of public safety, "his blood is on his head." Exod 22:1—Eng22:2 expresses the same idea even more strongly: the burglar killed while breaking in at night "has no blood."

a. Aggravating Factors in Cuneiform Sources. Telipinus' Edict presents the theoretical principle, which in practice was confined to aggravated homicide. In the cuneiform sources, three aggravating factors can be discerned:

(1) Premeditation. In the case referred to by the Babylonian king, where three men conspired to murder a fourth, a Mesopotamian court rules: "As men who have killed a man, they are not live men" (Jacobsen 1970). Where circumstances suggest lack of premeditation, CH 207 allows the killer to swear an oath to this effect and receive a much lighter penalty.

(2) Gross Negligence or Recklessness. CH 229 prescribes death for the negligent builder whose construction collapses on the house owner, killing him, as does CE 58 for the owner of a dangerous wall that collapses with fatal results, if the owner failed to repair it in spite of due warning. The family's right to revenge is against the offender himself, or as HL 43 puts it: "they shall receive that very man," in the case of one whose reckless behavior at a river crossing causes another to drown.

(3) Threshold Offense. Where the offender *unlawfully* distrains a member of the debtor's family (i.e., takes him into debt slavery) and causes his death through maltreatment, it is the distrainer himself who suffers death (CE 24). In normal circumstances the penalty for such an offense would be vicarious revenge, i.e., revenge against the equivalent member of the offender's family.

b. Mitigating Factors in Cuneiform Sources. Vicarious revenge was regarded as a mitigated punishment (cf. 2 Sam 12:13–14) of the offender. When there was a mitigating factor in homicide, the courts intervened to restrict revenge either by this means or by setting a limit on the ransom that might be demanded in lieu of it. Mitigating factors are:

(1) Lack of Premeditation. A classic scholarly problem concerns a fight, in which blame must be apportioned between both parties. If the death of one party ensues, HL 1 imposes a limited ransom, as does CH 207, but with the added proviso that the other party is to swear as to his lack of premeditation. Lack of premeditation (or of foreseeability of death) may lie behind HL 44A's allowing only vicarious revenge where death is the result of the victim's being pushed into a fire.

(2) Negligence. In the guarding of a goring ox or vicious dog, even when the owner has been warned of its propensity, negligence does not in the eyes of the cuneiform codes amount to aggravated homicide where the animal subsequently kills. Limited ransom is allowed, probably as an alternative vicarious revenge (CE 54, 56; CH 251).

(3) Status of the Victim. If it is the house owner's son who dies as a result of the builder's negligence (CH 230) or the debtor's son who is distrained and dies at the hands of a creditor (CH 116), then it is the offender's son upon whom revenge is exacted. If the offense is lesser, as in the case of the goring ox, and the victim is a son, limited ransom is allowed in lieu of vicarious revenge (CH 251).

The blow to a pregnant woman which causes a miscarriage is a classic scholarly problem. If it also causes her death and she is a daughter, the penalty will be vicarious revenge on the offender's daughter (CH 210), or limited ransom if the victim is from the poorer classes (CH 212—*muškēnum*). A fragmentary Sumerian code (Civil 1965: 4–5, lines iii 7′–8′) takes a more serious view, prescribing death for the offender himself.

The death of a slave invariably results in a low payment to the master. It is doubtful whether this is in lieu of revenge; it may be simple compensation, as with loss of property.

Causing the miscarriage of a fetus results in a small payment (CH 209; HL 17), which may be simple compensation. The fragmentary Sumerian code (Civil 1965: 4–5, lines iii 6′–7′) demands a much higher sum, which suggests that it is in lieu of revenge.

c. Aggravating Factors in the Bible. The same system of revenge and ransom, limited according to the circumstances, lies behind the biblical provisions but with important variations. Aggravating factors are:

(1) Premeditation. The killer who lay in wait for his victim is handed over to the redeemer of blood for revenge (Exod 21:14; Num 35:20–21; Deut 19:11–12). The victim's clan might demand that the killer be delivered up for this purpose (2 Sam 14:7). The victim's relatives would be entitled to ransom but in a case of deliberate murder might well insist on revenge. Thus the Gibeonites, whose people Saul had murdered (by waging war in breach of treaty), specifically forego their claim to ransom and demand Saul's sons, Saul being deceased (2 Sam 21:1–9).

In the case of Cain, the punishment imposed is exile, not death; but this turns out to be equally harsh, since Cain may then be killed by anyone without fear of retribution (Gen 4:11–14). Accordingly, God grants him protection and agrees to become his surrogate avenger (v 15). King David performs the same function in restraining revenge against the Tekoan woman's son (2 Sam 14:11) and acts as a surrogate avenger for Ish-bosheth (2 Sam 4:11).

(2) Gross Negligence. The scholarly problem of the goring ox is presented in Exod 21:28–32 in the same terms as in the cuneiform codes, but as aggravated rather than mitigated homicide. If the owner has previously been warned, revenge is against him in person, with no limit on ransom (v 30). Even if the victim is a subordinate member of the family, no vicarious revenge is allowed (v 31). Furthermore, the ox itself is to be stoned and not eaten (vv 28, 32), which may have been regarded as punishment of the animal.

d. Mitigating Factors in the Bible. (1) Status of Victim. If the victim of the goring ox is a slave, the negligent owner's liability is a low payment, as in the cuneiform provisions (Exod 21:32).

Where a member of the debtor's family dies as a direct result of abuse while in debt slavery, vicarious revenge is appropriate, as in CH 116. This is the import of *nqm ynqm* ("he shall surely be avenged") in Exod 21:20. Later sources polemicized against vicarious revenge (Lev 19:18; Deut 24:16), but it is not clear that it was actually abolished. Where the causal nexus between abuse and death cannot be conclusively established (Exod 21:21, "But if he survives a day or two …"), then only ransom is allowed, being limited to the amount of the debt (and thereby canceling it): "… he shall not be vicariously revenged, but it (the revenge) is his silver (the debt) (*lʾ yqm ky kspw hwʾ*)."

If a miscarriage is caused, the offender must pay unlimited ransom to the husband, but it is not clear if it is for his own life or in lieu of vicarious revenge (Exod 21:22). This is *not* the same scholarly problem as in the cuneiform codes and does *not* consider the death of the woman; it is concerned with the identity of the offender and considers the measure of punishment only incidentally (see below).

(2) Lack of Premeditation. Three pentateuchal sources on murder (Exod 21:12–14; Num 35:9–34; and Deut 19:1–6; cf. Jas 20:1–7) are based upon the same scholarly problem (not extant in the cuneiform codes). If A kills B and B's family members immediately take revenge without trial, they can claim on the apparent facts that theirs is justifiable homicide and should not in turn be avenged. If, however, A's act had been unpremeditated, killing him in revenge would be unjustified. But only A can testify to his own state of mind, and killing him without trial frustrates that possibility. Accordingly, A is given the protection of asylum pending trial, either at an altar (Exodus) or in designated cities of refuge (Numbers, Deuteronomy). Exodus and Deuteronomy do not state what happens if A's act is found by the court to have been unpremeditated—presumably it was treated as mitigated homicide. Numbers (P), in this event, converts the asylum into exile until the death of the high priest (35:25); and should A leave that place, he may be killed with impunity ("he has no blood") by the redeemer of blood (vv 26–27). Whether the same system applied in the other sources, or ever in practice, is unclear. Temporary asylum by grasping the altar, as in Exodus, is attested elsewhere (1 Kgs 1:50–53; 2:28); exile measured by the high priest's life is not (but cf. 1 Kgs 2:36–46).

The examples given of unpremeditated acts are of accidents: an accidental push, or the throwing of a weapon or stone without seeing the victim (Num 35:22–23), or the head of an ax flying off during use (Deut 19:5). Premeditated acts are those planned against an enemy (Exod 21:14; Num 35:20–21). The intermediate case of unintentional killing in a fight where blame might be apportioned is not discussed in the biblical codes; but if there were no witnesses, premeditation might be presumed (2 Sam 14:6).

e. Homicide and Pollution. Although it is a private offense, homicide also pollutes. According to a letter from the Hittite king (*KBo* 1.10 Rs. 19–20), if the brothers of the victim accept ransom, they purify the place of the homicide. Likewise in an Assyrian ransom agreement (Kwasman 1988: 393 No. 341), the offender must also wash away the blood. It is possible that a separate purification ritual was needed only when ransom was involved and that killing the offender in revenge was purification in itself. In 2 Samuel 21 Saul's crime leads to a divinely occasioned famine which ended only by David's allowing the Gibeonites to take revenge. The mode of execution is ritualistic: impaling Saul's sons "before Yahweh" (v 9).

The Priestly source takes an uncompromising stand on the issue of purification. Only revenge can purify the land (Num 35:33, cf. Gen 9:6); ransom is inadequate even for mitigated homicide (Num 35:31–32). On the other hand, exile for the latter offense appears to remove the pollution. Whether a purification ceremony was also necessary, as in the banishment of Hittite sexual offenders, is not made clear. Deut

21:1–9 record a ceremony to be performed when the victim's killer is unknown, which has been interpreted as a kind of purification ritual (cf. Deut 22:8).

2. Personal Injury. a. In Cuneiform Sources. This is dealt with in the cuneiform codes through the medium of three scholarly problems.

First, a list of injuries to various parts of the body is considered. Four codes contain such lists (CU; CE; CH; HL), which overlap to varying degrees. In declining order of frequency, the injuries are: eye, bone, hand, foot, tooth, nose, and ear. All appear to be serious, if not permanent—destruction of the eye, biting off of the nose. No mental element is mentioned, but it is probably intentional injury that is meant, not negligence or accident (Cardascia 1985). An anomalous member of the list (CE 42; CH 202–5) must be intentional: a slap in the face—suggesting that honor was as much at stake as physical integrity.

The Code of Hammurabi distinguishes between an *awīlum*—a member of the upper classes—and a *muškēnum*—a poor man, or perhaps simply an ordinary free citizen. CH 196–97 rule: "If an *awīlum* puts out the eye of the son of an *awīlum*, his eye shall be put out. Here is the famous *talio* (measure for measure), in brutally explicit language. But *talio* was simply part of the system of revenge and ransom. By this means the courts limited the level of revenge exactable, and there was always the possibility of ransom if the parties could come to terms. For the *muškēnum*, the ransom was fixed (CH 198). In CU, CE, and HL there are only fixed payments for the various injuries.

Second, a fight which leads to nonpermanent injury is discussed by CH 206 and HL 10. In both, the offender must pay the doctor's fee; and HL requires in addition that he nurse the victim, supply a man to work in his place until he is well, and pay him a small, fixed sum. These provisions are clearly compensatory in nature (suggesting that the offender was not solely to blame for the fight) and are analogous to damages in tort rather than to criminal punishment.

Third, a fight in which a woman intervenes by seizing a man's testicles is considered. According to MAL A 8 if she crushes one testicle, her finger is cut off; if she crushes both, her nipples (? text broken) are torn out. Merely laying hands on a man is punished by a payment and flogging (7).

b. In the Bible. The treatment of personal injury in the biblical codes is based on these same three problems.

Exod 21:24–25 contain a list: eye, tooth, hand, foot, plus three that are not in the cuneiform provisions: burning, wound, and blow. The context, however, is a scholarly problem not attested elsewhere. A pregnant woman has been caught up in a street brawl and injured by persons unknown (v 23: *ʾswn* = damage by persons unknown). In these circumstances, it is the duty of the local authority to pay (v 23, *ntth* "you shall pay") her compensation appropriate to her injury. In spite of its talionic phraseology, therefore ("eye for eye"), the list here refers to the principles of equitable ransom rather than to revenge. In Lev 24:19–20, on the other hand, the list unambiguously refers to retaliation: "A man who gives a blemish in his fellow: as he did, so shall be done to him—fracture for fracture, eye for eye, tooth for tooth. As he put a blemish on his fellow so shall it be put on him." The rule therefore regulates revenge as in CH. It does not explicitly exclude the alternative of ransom; but it is from the Priestly source, which is hostile to ransom (see above). Possibly considerations of purity are at issue, since the term used here for injury—"blemish" *(mwm)* is the technical term for physical defects that render a priest unfit to offer sacrifices (Lev 21:17–21).

Fixed ransom for injury is set by Exod 21:26 for the maltreated debt slave: "If a man strikes the eye of his slave, male or female, and destroys it, he shall let his slave go free for his eye." (v 27 the same for a tooth). As where the slave died, (v 21), ransom is fixed at the level of the debt owed. The debt is thus canceled and the slave thereby released.

In Exod 21:18–19 nonpermanent injury in a fight leads to tortious damages for loss of work and medical expenses. The offender is "clear" *(nqy)*—not of all liabilities, but of criminal culpability that would give a right to revenge.

Accordingly to Deut 25:11–12 if a wife intervenes in a fight by seizing the genitalia of her husband's opponent, her "hand" (Heb *kp*—female genitalia) is cut off. The facts lie between MAL A 7 and 8, but the punishment is harsher.

3. Rape. a. In Cuneiform Sources. This is considered by the cuneiform law codes in the context of a discussion of adultery. Two main aspects are treated: the status of the victim and her lack of consent.

The laws distinguished between a woman who is unattached, inchoately married, and married. According to MAL A 55, where an unattached girl is raped, her father may demand that the rapist marry her without right of divorce and with payment of a set bride money or demand the bride money without the marriage. If the rapist is married, his wife is to be assigned to the father for sexual abuse.

Where bride money has been paid for the girl, she is inchoately married, a status which aggravates the offense, making it punishable with death (CU 6; CE 26; CH 130). The purpose of this rule, the core of the scholarly problem, is to equate this case with that of a fully married woman, where the rapist's penalty is likewise death (MAL A 12, 23; HL 197). MAL A 12 relies for lack of consent on the fact that the woman was in the street on legitimate business and on testimony to her resistance to the rapist's attentions. HL 197 proposes a mechanical test: if the act took place in the city, consent is presumed; if in the country, it is not, and the offense is rape.

b. In the Bible. Of the biblical codes, only Deuteronomy discusses rape, preserving a fragment of the traditional scholarly problem. Rape of an unattached girl leads, as in MAL A 55, to forcible marriage with no divorce, and payment of a set bride money (22:28–29). (Cf. Genesis 34, where the rape of Dinah is regarded by the offender's family as meriting a similar response, but is met by Dinah's brothers with revenge beyond any normal legal limits. Likewise, Absalom's killing of Amnon in revenge for the rape of his sister Tamar was regarded as unjustified: 2 Samuel 13.) Rape of an inchoately married girl, on the other hand, is punishable with death (22:25). In this case, Deuteronomy relies on the same context for consent as HL 197—city or country—but provides it with a rationale, namely that in the city the girl's cries for help will be heard—and consent is therefore presumed if she does not cry out (22:24–27).

4. Adultery. Illicit sexual intercourse by a wife with a man other than her husband was adultery. The same act by a husband was not considered adultery, unless it was with a married woman. Adultery was an offense against the husband committed by the wife and her lover, but it was also a sin and subject to divine punishment. In Ugarit (Moran 1959) and Egypt (Rabinowitz 1959) it is referred to as the "Great Sin," and in the Bible as the "Great Evil" (Gen 39:9).

a. In Cuneiform Sources. Adultery is discussed in the cuneiform codes in a series of interrelated problems. The general principle is presented in MAL A 13:

> If the wife of a man has gone out from her house to a man where he lives and he has had intercourse with her knowing that she is a man's wife, both the man and the woman shall be killed.

This case is to be distinguished from the seduction of a man who is unaware of the woman's married status, where the man is not liable but the husband may punish his wife as he pleases (MAL A 14b and also CU 7).

If the husband catches the lovers *in flagranti delicto*, there are two possibilities. If he himself kills them on the spot, he is not liable for homicide (HL 197; probably also the meaning of CE 28 and MAL A 15a). If he chooses to bring them before the court, then the death penalty applies (CH 129; MAL A 15b), but according to HL 198, the king has the prerogative of sparing the culprits' lives.

In CH 142 if an inchoately married wife is found not to have kept her chastity during betrothal, it is treated as adultery, and she suffers the death penalty.

If a husband accuses his wife of adultery but has no direct evidence, she must take an oath in order to clear herself of liability (CH 131).

The penalties found in these codes represent regulation of revenge by the husband. Presumably the alternative of ransom existed, but no reference is known from the cuneiform sources. Adultery was regarded as a very grave offense, for which the husband was entitled to demand the death penalty. In his discretion, the husband could demand a lesser penalty, such as mutilation (MAL A 15b) or "treat his wife as he pleases" (14). Since punishment of the wife intersects with marriage law, it is probable that the latter discretion included the right simply to divorce the wife without paying the usual financial compensation (cf. CH 141).

On the other hand, adultery could not be regarded as an offense against the husband if he acquiesced in his wife's conduct, e.g., if he was suspected of sending her out for prostitution (MAL A 14).

Thus all the above provisions emphasize that punishment of the lover is dependent upon punishment of the wife. The husband is not allowed to claim a penalty for the lover while pardoning his wife's offense, and his killing of the lovers caught *in flagranti delicto* is permitted only on condition that he kills both (CH 129; MAL A 14–15, 22; HL 198). MAL A 15b also insists that the lover's penalty be mitigated in step with any mitigation by the husband of the penalty inflicted on his wife.

Where the adulterer goes undetected by the husband, the possibility of divine punishment is still to be reckoned with. Thus the gods will visit with sickness and premature death the man who secretly "entered his neighbor's house, had intercourse with his neighbor's wife" (*Šurpu* 2.47–48; 4.6 [Reiner 1958].

b. In the Bible. The biblical laws contain only fragments of the traditional scholarly problems but with supplementary details from narrative and prophetic passages.

The general principle is presented in Lev 20:10: "A man who commits adultery with a man's wife, who commits adultery with his neighbor's wife shall be killed—the adulterer and the adulteress" and in Deut 22:22: "If a man is discovered to have lain with a married woman, they shall both die: the man who sleeps with the woman and the woman. You shall eliminate evil from Israel."

The seduction of an unwitting man is the subject of three narratives in Genesis (12:10–20; chap. 20; 26:6–11) in which a foreign ruler has (or almost has) intercourse with a patriarch's wife, believing her to be his unmarried sister. The consequence is divine, but not human, punishment.

In Deut 22:20–21, where a wife is found not to have kept her chastity before marriage, she suffers death. It must be presumed that her offense took place during the period of inchoate marriage (cf. Exod 22:15–16 for the case of an unattached girl). Likewise in Gen 38:24, Tamar's unchastity is punishable with death because she was regarded as inchoately married to Shelah. Deut 22:24 extends the scope of the problem on rape of an inchoate wife to consensual intercourse, in which case both she and her lover are put to death.

If a husband accuses his wife without direct evidence, she must take an oath and undergo a ceremony of drinking bitter waters (which will have adverse physical effects if she is guilty) in order to clear herself (Num 5:11–31).

The basis of punishment is explicitly stated to be revenge by the husband, with the alternative right to ransom:

> … The fury of the husband will be passionate;
> He will show no pity on his day of vengeance.
> He will not have regard for any ransom;
> He will refuse your bribe, however great
> (Prov 6:32–35—JPSV).

Ransom was therefore unlimited, and in the discretion of the husband. In Gen 38:24, where the inchoate husband Shelah is still young, it is Tamar's father-in-law, Judah, who exercises this right. A kind of limited ransom is prescribed in Lev 19:20: "A man who lies carnally with a wife *(ʾšh)*, she being a slave pledged to the man (pointing *neḥrepet lĕʾîš*) … there shall be a proprietary claim *(bqrt).* They shall not be put to death because she was not freed." The husband cannot claim the death penalty, but he can reclaim his wife, thus canceling the debt, which thereby represents a limited ransom. The right of the husband to inflict a lesser penalty on his wife is referred to in prophetic passages which use adultery as a metaphor for the nation's apostasy (Hos 2:5, cf. Jer 13:26–27; Ezek 16:37–39). Apparently the wife is stripped naked and driven from the matrimonial home.

As in the cuneiform codes, punishment of the lover depended on the absence of acquiescence by the husband in his wife's adultery. Hence, Lev 20:10 and Deut 22:22 insist on both parties' being killed. The wording of the former law is significant: it is addressed to the lover alone, but adds "the adulterer and the adulteress," showing the former's death to be conditional upon the latter's. Collusion was a well-known factor, as seen in the deception practiced by Abraham and Isaac in representing their wives as their sisters. No human punishment is contemplated (not least because a ruler is implicated), but divine punishment is

still a possibility (Gen 12:17; 20:3, 17–18; 26:10). The inclusion of adulterous relationships in the incest categories of Leviticus 20, and the "giving of seed" to one's neighbor's wife in Lev 18:19, suggest collusion and therefore no punishment by the husband. But it remains a sin that will be visited by the divine punishment of childlessness (20:20–21). The context suggests that the Priestly source regarded adultery not merely as a personal sin but as polluting to some extent.

5. Theft. a. In Cuneiform Sources. This category was widely defined, covering fraudulent misappropriation whether by asportation, purchasing stolen property, or retaining lost property. In principle, the owner of the stolen property was entitled to the death penalty as revenge upon the thief, but in practice this was confined to aggravated cases. The courts imposed limited ransom for simple theft, either at a fixed sum or as a fixed multiple of the thing stolen. The severity of the penalty depended sometimes on the circumstances, e.g., a wife stealing from her husband was treated more severely (MAL A 3); the retainer of lost goods, more leniently (cf. HL 57–59, and 60–62). Mostly, it depended on the nature of the thing stolen:

(1) Free persons, i.e., kidnapping—death (CH 14) or a high ransom (HL 19B).

(2) *Res sacra* taken from a temple—death (CH 6; HL 126), but other temple or palace property—30-fold payment (CH 8).

(3) Animals—various multiples, depending on size (HL 59–65).

(4) Other items—various multiples or fixed sums (e.g., CH 254–55, 259–60; HL 121–28). Large sums might be in lieu of death (e.g., CH 256) or mutilation (CH 253; MAL A 5; HL 92), but the smaller sums may represent a simple debt, i.e., ransom of one's freedom.

Apart from simple theft, the cuneiform codes contain two scholarly problems. First, in the case of the owner versus the innocent purchaser of his stolen property, strict liability is imposed on the latter. He must return the goods and make a multiple payment. But the payment is lower than that for theft and probably represented a simple debt, which he could recoup from the thief if he found him (CH 9–12; HL 57–70). Second, in the case of the owner's killing an attempted burglar, if he is killed on the premises at night by the owner, there is no culpability for homicide (CE 12–13). If caught and brought to trial, he must make a very small payment—presumably a simple debt (CL 9; CE 12–13; HL 93).

b. In the Bible. Prov 6:30–31 say of the thief in general that he must pay sevenfold—all the wealth of his house. Elsewhere, the penalty varies according to the thing stolen:

(1) Kidnapping—death, for both the thief and "the one in whose possession he is found" (Exod 21:16).

(2) *Res sacra*—Jacob agrees to the death penalty for whoever is found with Laban's stolen idols (Gen 31:30–32), but this has also been explained as aggravated theft due to the element of hot pursuit (Daube 1947: 236–45).

(3) Bovines—fivefold payment; ovines—fourfold (Exod 21:37—Eng 22:1).

The theft laws of the Covenant Code (Exod 21:37–22:3—Eng 22:1–22:4), combine simple theft with the two scholarly problems. The original thief, identified by his having sold or slaughtered the stolen animal, pays a four- or fivefold penalty, probably ransom for his life. The attempted burglar may be killed with impunity at night but otherwise faces slavery unless he can pay a negotiated ransom. (Unlike the cuneiform counterparts, no limit is imposed.) The innocent purchaser pays only a twofold penalty, probably a simple debt. The innocent finder must pay the same (Exod 22:8—Eng22:9).

The theft of Joseph's cup provides a rare example of Egyptian law in the Bible. Egyptian procedure allowed an accused to propose his own penalty as the consequences of his oath's (asserting his innocence) being false. The brothers declare that he with whom the cup is found shall die; but the Egyptian official deliberately misunderstands them, to prevent it from becoming Benjamin's death sentence (Gen 44:9–10).

6. Treason. A personal offense against the king, such as disloyalty expressed by deed or word (the latter often associated with blasphemy) is treason. The king was entitled to kill the traitor and confiscate his property (MAL B 3; cf. Wiseman 1953: No. 17). In a trial of conspirators against Rameses III of Egypt (*ANET*, 214–16), the penalties range through enforced suicide for the main protagonists, mutilation for subordinates, and a mere rebuke for an associate not directly involved.

In Exod 22:27—Eng22:28 it is forbidden to curse a prince (cf. 2 Sam 16:5–10) or blaspheme, and in 1 Kgs 21:10–16 Naboth is executed for "blessing" (euphemism for cursing) God and king, and his vineyard confiscated by the king. Apparently, his sons were also executed (2 Kgs 9:26).

7. Against Parents. Striking one's father is punished according to CH 195 with the loss of a hand, and in Exod 21:15 (father or mother) with death, as is cursing them (Exod 21:17; Lev 20:9; cf. Deut 27:16). All these rules presuppose that the parents' right of discipline is not arbitrary, but subject to legal limits. For a son who is uncontrollably insubordinate and dissolute, the parents may turn to the local court, which can order his public stoning (Deut 21:18–21). In a less extreme case partial or whole disinheritance may have been the practice (Gen 49:3–4; cf. CH 168–69).

8. False Accusation. This act was considered ideal for application of the talionic principle. The accuser bears the very penalty he sought for the accused (CL 17; CH 1–4; cf. CU 26). The principle is applied in a Sumerian document from Nippur, where a son falsely accuses his father, a priest, of cultic offenses (Roth 1984: 9–14). Accusations (by a third party) of adultery are an exception: CU 11 imposes a payment of twenty shekels (MAL A 18), flogging, a payment, and castration.

In Deut 19:16–21 the talionic principle is explicit: "life for life, eye for eye … you shall do to him as he schemed to do to his brother." But where a husband accuses his wife of premarital unchastity (which carries the death penalty), his punishment is flogging, a payment, and a bar on divorce (Deut 22:13–19).

E. Offenses Against the Legal System

1. Abuse of Legal Authority. Extraordinary intervention by the ruler, usually on the basis of a petition, was required in cases of abuse since the offender was part of the system and the victim from the weaker strata of society. In the Hittite Instructions to the Border Guard Commander, the latter acts as an itinerant ombudsman for such complaints (*ANET*, 211). The penalty is within the king's discretion and may be death (CH 34). The Bible has two technical terms for such abuses: *gzl*, where property was taken from the victim (e.g., Gen 21:25; Ps 69:5), and *ʿšq*, where he is denied his legal due (Deut 24:14–15). The penalty can be compensation and/or death, at the king's discretion (2 Sam 12:1–6). If the culprit voluntarily confesses, he must restore the property plus a fifth and bring a guilt-offering for sacrifice (Lev 5:21–26). A Hebrew ostracon from the 7th century B.C. (*ANET*, 568) may represent a petition regarding abuse of authority.

2. Contempt of Court. This is punished in Deut 17:8–13 by death (cf. HL 173).

F. Methods of Punishment

1. In Cuneiform Sources. The means by which the death penalty is to be executed is usually not specified. In CH, drowning is mentioned several times (108; 129; 133; 143; 155), burning twice (110; 157) and impalement once (153). MAL has impalement in one case (A 53), while HL mentions single cases of dismemberment by oxteams (166) and beheading (173). No rationale can be discerned behind the choice of method.

Mutilation is often used as a "mirroring" punishment, e.g., severing the hand that strikes (CH 195), the lip that steals a kiss (MAL A 9), and castration of an adulterer (MAL A 15). Note also stinging by bees for stealing a hive (HL 92) and throwing the looter of a burning house into that fire (CH 25). Severing an ear is a characteristic method for punishing slaves (CH 205; HL 95).

The talionic principle is behind most cases of mutilation, where the same injury is inflicted as that which was suffered. A judgment of king Rim-Sin of Larsa applies it to the death penalty: "Because he threw the servant into the oven, do you throw the slave into the furnace" (*BIN* 7.10). Only MAL applies it to sexual violation (A 20, 55). As the talionic principle is usually a limit on revenge, there is no reason to suppose that it was not carried out in practice if no ransom was given. Flogging is used once in CH (202—sixty strokes) and frequently in MAL (between twenty and one hundred), where it is often cumulated with other punishments.

2. In the Bible. Where the Bible specifies the method of execution, the most common is stoning: for apostasy (Lev 20:2; Deut 13:11; 17:5), blasphemy (Lev 24:14, 16, 23; 1 Sam 21:10), sorcery (Lev 20:27), sabbath violation (Num 15:35–36), misappropriating *ḥrm* (Josh 7:25), disobedient son (Deut 21:21), and adultery by an inchoate wife (Deut 22:21, 24; cf. Ezek 16:40; 23:47). It has been suggested that the

common element is treason against a superior (Finkelstein 1981: 26–29), but sabbath violation and sorcery fit this category with difficulty, and the male adulterer not at all. All but disobedience and adultery are public offenses. The Deuteronomist may have wished the latter to be so regarded also, but it is not clear why they should have been singled out. Stoning is carried out by the local community except for the Molech cult, where it is the duty of a body called *ʿam hāʾāreṣ* (Lev 20:2). For apostasy, the denouncers must initiate the stoning (Deut 13:10–11; 17:7).

Death is by fire for miscellaneous sexual offenses: incest with a woman and her mother (Lev 20:14), fornication by a priest's daughter (Lev 21:9), and Tamar's adultery (Gen 38:24–26). It is by the sword for an apostate city (Deut 13:15; cf. 1 Kgs 18:40) and is the preferred method of revenge for homicide (Num 35:9; cf. 2 Sam 3:27), for which impalement is also possible (2 Sam 21:9). Dismemberment and being devoured by beasts (Dan 2:5; 6:8) appear in a foreign setting.

Mutilation occurs as a "mirroring" punishment (Deut 25:11–12) and in application of the talionic principle (Lev 24:19–20), also of the corpse of an executed criminal (2 Sam 4:12). Flogging is prescribed once (Deut 22:18) but must have been common, as Deut 25:1–3 restricts it to forty strokes, without mention of a specific offense. For certain types of incest Leviticus imposes special punishments which may be divine rather than human. As punishment for intercourse with a sister (20:17), *karet* may refer to extirpation of the culprit's entire lineage (Wold 1979). Intercourse with an aunt by marriage or a sister-in-law makes the culprits *ʾryry*, usually interpreted as childless (20:19–21).

Hanging, imprisonment, and torture are not generally used as punishments in the ANE legal systems. Hanging is to expose the corpse after death by some other means (CH 21; Deut 21:22–3). Prison is for detention pending trial or for political reasons (e.g., Gen 40:1–22; Lev 24:12; Jer 32:2–3). Torture, such as flaying alive, was used by the Assyrians in warfare against recalcitrant vassals but not in a domestic context.

Of the penalties involving revenge, only death for murder appears to have been personally carried out by the avenger. MAL gives a husband the right to mutilate his wife but under the supervision of an official (A 58).

G. Summary and Conclusions

A crime was conceived of in the ANE as a wrong against a person or a god for which the victim was entitled to revenge. The role of the court was confined to setting a limit on human revenge and to forestalling divine revenge on the society by adopting appropriate measures against the culprit. To determine the proper limit on revenge was the foremost task of Mesopotamian jurisprudence, whose learning was received into the surrounding systems, including that of biblical Israel.

The modern conception of crime as a wrong against society which is to be suppressed by impersonal punishment is derived ultimately from the jurisprudence of classical Greece. In postbiblical rabbinic jurisprudence, where Mesopotamian science gave way to Greek, the adoption of this new conception led in turn to a radical reinterpretation of the biblical texts. The later biblical codes do foreshadow this development with their characterization of certain wrongs against the person also as polluting sins against God. But they are still anchored in the conceptions of the ANE.

RAYMOND WESTBROOK

PUNITES [Heb *pûnî* (**פּוּנִי**)]. Clan descended from Puvah, who was a son of Issachar (Num 26:23).

The term "Punites" is a gentilic adjective derived from the name "Puvah" used with the article as a collective name. The Sam. Pent., LXX, Syr, and Vg preserve different spellings of these names, which transliterated would be Puah and Puites. While these readings provide a closer correspondence between the names than Puvah and Punites of the MT, this does not mean that they are earlier or better readings (Barthélemy et al. 1979: 253).

STEPHEN A. REED

PUNON (PLACE) [Heb *pûnōn* (פּוּנֹן)]. A place in the Wadi ʿArabah (Num 33:42–43). The place is generally identified with Gk *Phainô*, the present *Faynân*, the center of copper mining and smelting activities in the Chalcolithic period, the EB Age, the Iron Age, and the late Roman and early Byzantine periods, as well as an Edomite (7th–5th centuries B.C.) and Roman-Byzantine town See also FEINAN, WADI.

Punon is primarily not the name of a settlement, but the name of a district. The name can be interpreted by Arabic *faynân*, "to have long, beautiful hair." Like "Sëir" (literally: "the hairy one"), Feinan refers to a region according to its vegetation: trees, grass, and reed. Typologically, the name may go back as far as to the 4th or 3d millennia B.C. (Knauf 1987). "Punon" derives from **Pônôn* (by dissimilation of the first *ô*), which in turn derives from **Pânân* (by the common "Canaanite" shift *â* > *ô*), which can be regarded as a dialectical variant of **Paynân.* Punon is not a scribal error for Pinon (Gen 36:41; 1 Chr 1:52; and a variant reading in Num 33:42–43; cf. Weippert 1971: 433–434); as early as in the 13th century B.C. Rameses II mentions *pwnw* (that is, **Pûnô* or **Pônô;* cf. for the loss of the final *n* the Gk name *Phainô*) as one of the regions inhabited by Shasu, "nomads" (Görg 1982).

The itinerary through the Wadi ʿArabah, on which Num 33:36–43 is based, may derive from the Persian period (Knauf 1988: 54). In analogy to the Edomite occupation at Buṣeirah, Ṭawîlân, and Tell el-Kheleifeh (Parr 1988: 49), the Edomite settlement at Feinân could have extended into the 5th century B.C.

ERNST AXEL KNAUF

PURAH (PERSON) [Heb *purâ* (פֻּרָה)]. Servant (Heb *naʿar*, "boy, lad") of Gideon who went with Gideon to spy on the Midianite camp (Judg 7:10–11). His function was probably that of shield and weapon bearer (cf. Judg 9:54; 1 Sam 14:1, 6; Boling *Judges* AB, 146). The meaning of his name is not certain. One suggestion is that it is related to the Ar *furrun*, "to be better, imposing." Another is that it is simply defectively written (i.e., the vowel letter omitted) for *pûrâ*, "winepress trough" (*HALAT*, 908). The LXX and Josephus vocalize the name as Gk *Phara*, with an *a* and not a *u*, possibly indicating the Heb root *prh*, "to be fruitful."

KIRK E. LOWERY

PURIM [Heb *pûrîm* (פּוּרִים)]. See ESTHER, BOOK OF.

PURPLE. The Hebrew and Greek terms underlying the rendering "purple" refer to hues ranging from red to dark purple. Because of this color range and a variety of blending and other techniques involved in the production of "purple" dye, it is necessary to take account of such related renderings as "crimson" (Isa 1:18) and "scarlet." Since it is impossible to attain certainty as to the precise hue that an ancient author had in mind in a particular text, any color specifications here made are merely proximate.

The Hebrew words translated as "purple" in the RSV are *ʾargāmān* (cognate to Aram *ʾargwān* [Dan 5:7, 16, 29; 2 Chr 2:6—Eng2:7]), *tôlaʿ* (only Lam 4:5; "crimson," Isa 1:18), and *tĕkēlet* (only Ezek 23:6; "blue" [fabric], 2 Chr 2:6—Eng2:7, 14; 3:14). The RSV reserves the translation equivalent "scarlet" for Heb *šānî* and "scarlet stuff" for the phrase *tôlaʿat šānî* (Exod 25:4, etc.; note Num 4:8, "scarlet").

The word *ʾargāmān* is common to Northwest Semitic (Aram *ʾargwān*, Ug *ʾarmn*) and East Semitic (Akk *argamannu*), and Heb *tŭkēlet* is cognate to Akk *takiltu*, frequently (with *tabarru*) designating blue-purple or violet-blue wool. The Greek equivalent of *ʾargāmān* is *porphyra* (Lat *purpura*, hence "purple");

the equivalents of *tĕkēlet* are *hyakinthos, hyakinthinos* (*phoinikoun* at Isa 1:18); the phrase *tôlaʿat šānî* is rendered by Gk *kokkinon.*

The sources of "purple" dyes included especially marine snails of the class Gastropoda, from which was extracted a rich pigment corresponding generally to Heb *ʾargāmān* (a red purple) and *tĕkēlet* (a violet purple). From the dried bodies of females of the scale insect called the kermes *(Kermes illicis)* was extracted kermesic acid, a bright red dye (cf. Heb *tôlaʿ*, "worm"). See also ZOOLOGY.

Rubia tinctorum, an herbaceous perennial, was the source of a cheaper imitation dye known as madder that found frequent use in Egypt and in the classical world (cf. Pliny *HN* 24.4; Dioskourides 4.46; Strabo 13.4.14 [630], described as competitor with kermes and sea purple; 12.8.16 [578], with special reference to the raven black hue of Laodicean and Colossian wool; Vitruvius 7.14.1–2). Other vegetable dyes in the red-purple color range included henna, alkanet, archil (orseille or litmus), and "dragon's blood" (which was derived from the rattan palm), woad, and indigo.

Displaying nuances of shade from blood red to blue black, with exposure to the sun a principal factor in alteration of the "primitive" hue, the most highly prized was sea purple, extracted from various genera and species of carnivorous marine snails, including *Murex brandaris* (Pliny: "pelagia," common at Tyre), which produced a deep blue violet, isolated by Friedländer (1909) as dibromindigo; *Murex trunculus* (Pliny: "purpura"; a shell common to the Mediterranean region), which supplied a scarlet red; *Helix ianthina*, productive of a violet dye; and *Purpura lapillus.* In Tarentum, Sicily, a hill called Monte Testaccio is composed of brandaris and trunculus shells. Dye produced from the *Murex brandaris* was colorfast and permitted washing of garments; Cicero (*Flac.* 29[70]), snidely notes that Decianus could look the peak of fashion with but one set of garments. Various shades were secured through blending and other processes, many of the details of which belong to the undivulged secrets of the ancient world; but some conception of resources used by imitators for production of cheaper grades can be derived from later recipes that are associated with Bolus of Mendes in the Leyden and Stockholm papyri (see Rostovtzeff 1953: 1225–26 and Ploss 1962: 37–39). The startling alterations in color that took place in dyeing processes induced alchemists to search for mutations in metals, a quest that led to forgeries under the name of Demokritos. That the ancient dyers did not gather the various species haphazardly is confirmed by the fact that numerous shell heaps can be identified in terms of a specific type of murex. Garments dyed with sea purple were termed *conchyliatae vestes* in Rome. Martial sarcastically alludes to a lingering odor in the dyed clothing of one of his targets (*Epigrams* 1.49.32; 2.16.3).

Nuzi texts indicate that purple dye (Akk *kinahhu*) was processed as early as 1500 B.C.E. So prized was sea purple dye for its commercial value that the Hebrew term *ʾargāmān* acquired the sense of "tribute" in both Ugaritic and Hittite. Hittite sources reveal that such payment was made in the form of purple garments for the king, queen, crown prince, and ministers of the court.

The Greek word *phoenix* (red purple) is perhaps cognate with the name Phoenicia. Massive accumulations of shells of the purple-producing murex have been found in the neighborhood of Tyre. The prestige of Tyre in production of the dye was noted by the grammarian Pollux (1.45), who relates a Tyrian legend about its discovery by Heracles. Pliny (*HN* 5.76) and Strabo (16.2.23) report on the city's prestigious reputation for the production of purple. According to 2 Chr 2:3, 7 Solomon asked Huram, king of Tyre, to send skilled workers in purple. An amazing statement in Ezek 27:7 suggests that Tyre had competitors in the purple-textile industry whose wares even graced some of her ships (cf. v 16), and Pausanias (3.21.6) reports that after the Phoenician the best shellfish for purple dye were to be found on the coast of Laconia: at Bulis half of the inhabitants, he states (10.37.3), were involved in the production of purple dye. There is no convincing evidence that purple was a status symbol in Egypt prior to the Greco-Roman period, when its use became widespread during the reign of Ptolemy Philadelphus (283–246).

Apart from its brilliance when exposed to the sun, sea purple was highly prized for its colorfastness; and among the favored hues developed by dyers was the Tyrian shade of congealed blood (Homer's "blood of purple hue"), which at first sight appeared to be black but glistened in the light. According to Pliny the Elder, the most expensive quality of purple garment was Tyrian *dibapha*, "double-dipped," which at one

time cost 1000 denarii a pound (*HN* 9.137), apparently not an unreasonable sum; for it is estimated that 12,000 *Murex brandaris* would have been needed to produce 1.4 grams of crude dye (Friedländer 1909: 765–70, but details on probable shortcuts in the ancient technology are lacking). Martial (*Epigrams* 8.10) writes about a Tyrian cloak that sold for 10,000 sesterces. But the *amethystina* grade vied with Tyre's *dibapha* (cf. Martial *Epigrams* 2.57.2). In Aurelian's time the highest quality of purple dye was termed *blatta*, "oxblood." People of average means had to be content with imitations that were made from dyes derived from a variety of animals, minerals, or vegetables. From the text of Acts 16:14 it is not possible to determine that Lydia limited her sale to luxury items or to a specific clientele.

The prestige value of purple garments predates the Exodus. Ugaritic texts point to its importance in international relations as early as the 14th century. In the *Iliad* (8.221) Homer depicts Agamemnon in a purple cloak, and Hector's ashes are deposited in an urn that is covered with purple garments (24.796). According to the *Odyssey* (8.84), Penelope gave her husband a purple cloak when he left for Troy. The writer of Judges (8:26) assumes that the kings of Midian must have worn purple. Ezek 23:6 and 27:24 describe Assyrian governors and commanders as clothed in purple for their military operations. King Solomon's palanquin had a cushion of purple (Cant 3:10). King Belshazzar, frightened by a moving hand writing on his palace wall, promised to clothe in purple and at the same time to put third in command of the empire any one of his wise men who could read and interpret the writing (Dan 5:7). When Xerxes made Mordecai a courtier, he clothed him in purple (Esth 8:15 [LXX]; cf. 1 Macc 10:20, 62, 64; 11:57, of Jonathan's recognition by Alexander Balas, later Antiochus VI; and 14:41–44, of Simon honored by King Demetrius and the Jewish people). Plutarch records that the urn which contained the ashes of Demetrius the Great was "resplendent in its shroud of royal purple" (*Demetrios* 52.2). And Hellenistic monarchs followed the Persian and Macedonian practice of retaining an entourage of advisers whom they honored with distinctive purple garb. Livy appears to echo the custom in his use of the term *purpurati*, "wearers of purple" (see, e.g., 30.42.6). Josephus (*Ant* 14.173) notes that in 47 B.C. Herod wore purple.

Loss of status could be symbolized by stripping a disgraced person, such as Andronicus, one of King Antiochus' nobles (2 Macc 4.38), of his purple robe. Luke's story about the rich man and beggar Lazarus (16:19–31) contains the revealing touch that the former wore purple, and the evangelist dramatizes his loss of status by celebrating the ascent of Lazarus. On the other hand, soldiers make a mockery of Jesus' status by dressing him in purple (Mark 15:17; John 19:2; for which Matt 27:28 uses the term *kokkinē* [*chlamys*], suggesting a cheaper garment).

The popularity of purple extended far beyond royal courts. If the Masoretic Text is to be followed at Prov 13:21, a woman prized for virtue and wisdom clothes her entire household in purple. The Persian custom of wearing purple invaded Greece to such an extent that even philosophers such as Empedocles and the Sophists Hippias of Elis and Gorgias of Leontini adopted purple dress (Aelian, *VH* 12.32; Apuleius, *Flor.* 9). But it remained for Alexander to give the color "worldwide currency as a status symbol" (Reinhold 1970). Plutarch (*Eumenes* 8.7) relates that Alexander's secretary, Eumenes of Cardia, distributed purple felt hats and cloaks to his Macedonian bodyguard. Diogenes Laertius (8.47) reports that a long-haired boxer named Pythagoras wore a garment dyed "sea purple." In Italy the use of purple developed to such an extent from the 3d century on that it became available on the open market (cf. *P. Cairo Zenon* 59069.8.20; 59630.3; 59696.4, in reference to scarlet ribbons, *kokkinai tainiai;* somewhat later, *P. Tebt.* 112, cols. 6–13, 112 B.C.E.; 117.38–39, 99 B.C.E.; 120.3–4, in reference to two veils, *porphyroun* and *kokkinon*, 97 or 64 B.C.E.). A major factor in its spread was the repeal—over Cato's objections—in 195 B.C.E. of the Oppian Law, whose provisions included restriction of the use of purple (Livy 34.1–8). Inexpensive mineral and vegetable dyes (see, e.g., Pliny *HN* 16.77), contributed to the popularity of the color purple. From the time of Cicero, beginning with his *Sest.* (57), reference is occasionally made to "royal purple," but there is no imitation that the use of the color was restricted to royal personages, although Nero limited sale of the two highest grades, *amethystina* and *Tyria* (Suet. *Ner.* 32.3).

As a badge of wealth and luxury spending (cf. Prov 31:22) and because of its association in the popular consciousness with tyranny and decadence, purple became the target of social criticism that crossed

centuries and cultures. The comic poet Anaxandrides thought King Cotys' spreading of purple rugs in the Thracian capital for his daughter's wedding was a ridiculous luxury (Athenaios 4.131a). Cicero pilloried Verres for his extravagance in the use of purple (*Verr.* 2.2.72.716; 2.5.31.86, 137; 4.26.59). Lucretius referred to purple and gold in his assault on growing ambition for power and wealth (2.20–36, 51–52, 501 [of Meliboian purple from the coast of Thessaly]; 5.1423–29, 14.27–29; cf. Verg. *G.* 2.495). Affecting simplicity, Horace renounced the wearing of purple (*Carm.* 1.35.12; 2.18.8; 3.1.42). In numerous diatribes against conspicuous consumption by the rich and famous, Seneca decries the wearing of purple, the *color improbus* (see, e.g., *Ep.* 16.8; 76.31; 94.70; cf. Martial *Epigrams* 12.63.4–5; 14.133, 154). Similar garb is attributed in Rev 17:4 to the "great whore" (the ironical point being made that according to Roman law she ought to be wearing a toga, cf. Martial 2.39) and the "great city" (18:16), apparently in contrast to the white garments that are characteristic of God's people. It is of further interest that the whore sits on a "scarlet" beast (17:3). Plutarch (*Lykourgos* 13 = *Mor.* 997d) reminds his public that in the time of Lykourgos Sparta forbade the use of purple. From time to time politicians felt the public pulse. Polybius (10.26.1) observes that Philip of Macedon recognized the hazard in distancing himself from the populace through such apparel, and on a return to Argos after celebrating the Nemean games he laid it aside to "show that he did not consider himself better than the people." In related vein, Judas Maccabeus learned that the Roman Senate, 320 in number, disdained the wearing of purple (1 Macc 8:14–15). Threatened by mutiny of his mercenary troops, Agathocles, the tyrant of Syracuse, doffed his purple and went about garbed as an ordinary citizen (Diodoros of Sicily 20.34.3). But resistance waned in the public domain. So rampant was the desire for the color purple in the 2d century C.E. that people dreamed about purple (cf. Artem. *Oneirokritika* 1.77; 2.3.) Christian leaders joined Greco-Roman social critics in condemnation of enervating luxury. Clement of Alexandria (*Paidagogos* 2.10.108–9, 114–15), in apparent echo of Cicero's tirades in the Verrine Orations, castigated both men and women for their craze for purple robes and veils.

Apart from association of purple with tyranny, Aeschylus' censure of the conqueror of Troy for walking on a carpet dyed sea purple (*Ag.* 946; cf. 910, 957) relates to Agamemnon's guilt of hybris, whereby he invites his own doom. Alexander apparently took heed after his capture of Tyre, for he amazed Darius of Persia by appearing at the time only in white.

Ugaritic texts include the first extant reference to the use of purple in religious ceremony. In Greece, Sappho (66.8–9; 82.8; 87) views gifts of purple garments as a fitting tribute to deities. Artemis Brauronia was the recipient of a variety of such gifts dedicated by women after childbirth (see, e.g., *IG* II^2 1514–18, 1521–25). Purple was featured in Israel's tabernacle (Exod 26:1, 31, 36; 27:16; 36:8). Images of foreign deities were frequently adorned with purple (Jer 10:9). In the *Epistle of Jeremiah* (v 71) idols are satirized for their wearing of rotting purple. Purple was prescribed for the liturgical vestments of Israel's priests (Exod 28:5–8; 39:1–5). The use of purple in sacerdotal garments during the post-Alexander period is documented by Plutarch (*Aratus* 53.4) and Athenaios (7.289c). Concerning a priest of Kybele named Bittaches, from Pessinus in Asia Minor, we are told that he came to Rome about 103 B.C.E. in a bizarre costume of many colors (Diodoros of Sicily 36.13; Plutarch *Marius* (17.5). According to the Dead Sea *War Scroll* (10M 7.10–11), purple was one of the colors in the liturgical battle garb of priests.

PUT (PERSON) [Heb *pûṭ* (פּוּט)]. According to the genealogies in the Table of Nations (Gen 10:6) and 1 Chr 1:8, Put is the third son of Ham, son of Noah, and brother of Cush (Ethiopia), Mizraim (Egypt), and Canaan. He is the only one of these people without a record of the next generation in these genealogies. Five additional verses refer to Put, being the descendants of Noah's grandson. In each case, they are identified as warriors. Three times they are allies or supporters of Egypt, along with Cush and Lud in North Africa (Jer 46:9), and also Arabia, Cub, and Israel itself ("sons of the land of the covenant"; Ezek 30:5). Nah 3:8 points back to the conquest of Thebes in 668 B.C. This took place, in spite of the combined power of Ethiopia and Egypt, with the support of the men from Libya and Put. Put's soldiers also aided Tyre (Ezek 27:10) and Gog (38:5) but always in vain. The evidence of soldiers from Put in so many armies could indicate that the nation was a well-known source of mercenaries.

The identification of Put is debated. Somalia, Eg *pun.t*, has been suggested (see Westermann 1984: 511; Simons *GTTOT*, 75). The LXX and Vg of the Ezekiel passages, as well as Jer 46:9 (26:9 in the LXX), read Put as Libya. This corresponds to the Old Persian *putiya*, Babylonian *puṭa*, which in Eg was *T*ꜣ *Ṯmḥw*, Libya (*NBD*, 1003). This identification could cause difficulties in Nah 3:8 if that verse is read as listing two separate peoples, Put and Lub (Libya). Simons suggested that since Cush (Ethiopia) and Mizraim (Egypt) refer to the same people at this period, with Ethiopia dominating Egypt during the 25th Dyn. (ca. 716–664 B.C.), Put and Lub could also be identified. This is grammatically possible since each of the toponymic pairs is joined by the Heb conjunction "and," which can have an explicative function. This is not rare in the OT and would lead to a translation of "i.e." or "that is" (Baker 1980), which would solve the problem in Nahum.

PUTEOLI (PLACE) [Gk *Potioloi* (Ποτιολοι)]. A city visited by Paul on his journey to Rome (Acts 28:13). Puteoli (modern Pozzuoli; 40°49′ N; 14°7′ E) was a port city of ancient Campania on the W coast of Italy located on the N shore of the Gulf of Naples. Puteoli was ringed by a series of volcanic hills, and the name of the city, meaning "sulfur springs," is derived from this geological situation. The volcanic dust (called *pozzolana* in modern Italian), which contributed to the sulfurous atmosphere, produced a cement that resisted seawater when mixed with lime.

The earliest Greek settlement in the W seas was established sometime before the middle of the 8th century on the island of Pithecusae, just N of the Bay of Naples. Pottery confirms that the first colonists

were from Chalcis and Eretria. It was not long before many of the settlers moved to a site on an acropolis on the opposite mainland where a native population had been importing Greek pottery. This new foundation was named Cumae after a city of the same name located on the E coast of Euboea. Although the Italian Cumae was a stronghold, the city had no harbor. Ships had to be hauled onto the sand below the acropolis. When trade began to prosper, the citizens of Cumae occupied the harbor just inside the promontory, establishing the town of Dicaearchia (later known as Puteoli) and, farther E, Naples (Strabo 5.4.5f.).

Puteoli was conquered by the Samnites in 421 B.C.E., but there is a paucity of evidence until Campania came under Roman control in ca. 334 B.C.E. The Romans garrisoned the town in 215 B.C.E. and renamed it Puteoli. The following year the Romans defeated Hannibal at Puteoli (Livy 24.7.10–12; 12.1–13.7). In 199 B.C.E. Puteoli received a Roman customs station and was made a Roman maritime colony in 194 B.C.E. Sulla or Augustus may have conferred further colonial status on Puteoli, and Nero and Vespasian certainly did so. Vespasian substantially enlarged the city's territory.

Trade flourished in Puteoli under the Romans, enhanced by a newly fortified harbor and connected with Rome by a series of roads (discussed below). The harbor was protected by a breakwater, the Augustan opus pilarum (115–16 m × 372 m), which carried 15 enormous masonry piers, with at least one triumphal arch, columns topped by statues, a lighthouse, and an architectural ship's prow at the end (Strabo 5.4.6). The remains are embedded in the modern breakwater. The emporium stretched for 1.25 miles along the shore to the W of the mole.

Puteoli was naturally divided into an upper and lower city. Among the remains in the lower city are the great macellum, formerly known as the temple (or baths) of Serapis, and the temple of Augustus. Other monuments of the lower town are depicted on glass vases and engravings produced in Puteoli. The upper town was residential and recreational. A small Augustan amphitheater and a great Flavian amphitheater were situated in upper Puteoli. The Flavian complex was the third largest amphitheater in Italy seating as many as 60,000 spectators. It was constructed at the expense of the citizens of Puteoli during the reign of Vespasian. The baths of Trajan (or Janus), which may have been the same complex as the so-called temple of Neptune (or Diana), were also situated in upper Puteoli. The city was plundered to supply building materials for the cathedrals of Salerno and Pisa.

Oriental goods from Egypt and Palestine and most importantly grain from Egypt were imported through Puteoli (Suetonius *Aug.* 98.1–10; Strabo 17.1.7; Seneca *Epistulae morales* 77.1f.). Export trade included oil, fine wine, glassware, early imperial terra sigillata, and probably Republican black (Campanian) pottery. Alexandria's close trade connections with Puteoli began at the end of the Second Punic War (201 B.C.E.) and lasted until the city's prominence was eclipsed in the 2d and 3d centuries C.E.

Puteoli's population of 65,000 was entrepreneurial and highly cosmopolitan. A number of oriental cults were found in the city including those of Serapis (105 B.C.E.), Cybele, Jupiter Dolichenus, Bellona, Dusares, I. O. M. Heliopolitanus, in addition to the usual Greco-Roman and imperial worship. Puteoli was also one of the earliest Italian cities to have a sizable Jewish population (Josephus *Ant* 17.328; 18.160; *CIL* 10.1893; 10.1971). There is also an intriguing tombstone of a Puteolian Jewish freedman named Acibas, who was an agent for his master's iron mines and vineyards (*CIL* 10.1931; *CII* 1.75).

There is epigraphical evidence for trade connections between the Greeks of Palestine and Puteoli (*CIL* 10.1746). Jewish merchants were also organized in a closely knit Mediterranean trade cooperative in which Jews from Puteoli and Alexandria played an integral role (cf. 3 Macc. 3:10). After the battle of Pydna and the decline of Rhodes (167 B.C.E.) a triangular trade developed between Alexandria, Delos, and Puteoli. The extent to which Jewish merchants were involved, specifically in the Alexandrian grain trade, cannot be determined, despite the allegations of Josephus (*AgAp* 2.64). There is evidence, however, that the Jewish alabarchs of Alexandria held credits in Puteoli during the reign of Tiberius (see Josephus *Ant* 18.159–60 for the incident between Agrippa I and the Alexandrian alabarch Alexander).

Sometime after Herod's death, a charlatan called Alexander appeared and deceived Jewish inhabitants of Crete and Puteoli of considerable funds. The imposter claimed to be the son of Herod and Mariamme the Hasmonean in order to finance his trip to Italy (Josephus *Ant* 17.327–28; *JW* 2.103–4). In 39/40 C.E.

the Jewish-Alexandrian delegation led by Philo met with Gaius (Caligula) in Puteoli about injustices they suffered in Egypt. It was in Puteoli that the delegation first learned of Gaius' command that a statue of himself was to be placed in the temple in Jerusalem (see Philo *Gaium* 184–348; Josephus *Ant* 18.261–309; and *JW* 2.184–203).

Commerce and travelers went from Puteoli to Naples and then to Capua, where the Via Appia (built ca. 312 B.C.E.) led to Rome, 132 miles away. The Via Latina was a heavily traveled alternative route which went from Casilinum (just outside Capua) to Rome. In order to ease the difficulties of travel on the pre-Sullan road between Puteoli and Naples, the Crypta Neapolitana, a tunnel 750 m in length, was constructed (see Seneca *Ep. Luc.* 57.1–2) and improved by Nerva and Trajan. Nero attempted to join Puteoli with the Tiber by means of a canal. In 95 C.E. Domitian constructed the Via Domitiana, a less costly alternative, which went along the Campanian coast from Puteoli to Sinuessa (modern Mondragone), where it joined the Via Appia.

When Paul's ship landed in Puteoli, he found Christians (probably Jewish converts) living in the city. He stayed with the converts seven days before journeying to Rome by way of Capua and the Via Appia (Acts 28:13–14). A similar journey to Rome is described in the apocryphal *Acts of Peter* 6 and seems to be implied in the *Acts of Paul.*

Although Claudius installed the port at Ostia, Puteoli continued to prosper through the 2d century C.E., followed by a gradual decline until the town was abandoned in the 6th century C.E. Puteoli, like other cities on the Bay of Naples, continued to be a favorite resort area; and the wealth is evident in the magnificence of the columbria, hypogea, and mausoleums in the region. In Christian times some tombs were reused for inhumations. Many of the villas in the region can still be seen, although some are now covered by the sea. Cicero had a villa in this region, as did Nero's mother, Agrippina the younger (see Tacitus *Ann.* 14.5; Seneca *Octavia*).

SCOTT T. CARROLL

PUTHITE [Heb *pûtî* (פּוּתִי)]. One of four families from Kiriath-jearim located on Judah's N border with Benjamin and Dan (1 Chr 2:53). This clan within the tribe of Judah is connected with Shobal, Hur, and Caleb. Shobal is credited with the formation of Kiriath-jearim, earlier called Kiriath-baal (Josh 15:60; 18:14). That the genealogy in 1 Chr 2:50–55 was associated with Ephrathah and the district to the N and SW is clear from the place names mentioned. The three regions connected with the sons of Hur were Kiriath-jearim, Bethlehem, and Beth-gader, plus the surrounding areas, some of which cannot be identified (Myers *1 Chronicles* AB, 16). At least vv 53–55 probably derive from a pre-Chronistic source (Braun *1 Chronicles* WBC, 38, 42). Although a pair of David's mighty men belonged to the Ithrite family (2 Sam 23:38 = 1 Chr 11:40), there exists no further information about the Puthites or for that matter about the other two groups, the Mishraites and the Shumathites. The collective noun *pûtî* is a gentilic form of **pût.*

EDWIN C. HOSTETTER

PUTI-EL (PERSON) [Heb *pûṭî·ēl* (פּוּטִיאֵל)]. The father-in-law of Aaron's son Eleazar; hence also the maternal grandfather of Phinehas (Exod 6:25). Earlier scholars tended to connect the name with Syr *pûṭ*, "to scorn or deride." In such a case Puti-el would mean "scorned by God." Most moderns, however, consider it to have originated from Egyptian. Foreign names are attested for Israelites more than once in the OT. One finds, for example, the series of Egyptian names among members of the tribe of Levi. The associated *pwṭy·l* would be a hybrid form (Noth, *IPN*, 63), built on a pair of Egyptian words (p€ dy) plus the Hebrew *·el.* One may compare the names Poti-phar and Potiphera and their Egyptian equivalent *p€ -dy-p€ -R‹*, "the one whom Re has given" (Ranke 1935–77: 1.123; cf. Kornfeld 1978: 87–89). "Puti-el" would then signify "the one whom El has given." Since *pûṭ*, "scorn," does not appear elsewhere in Hebrew, and since many names in the Exodus account show Egyptian influence, the Egyptian etymology seems more likely.

EDWIN C. HOSTETTER

PUVAH (PERSON) [Heb *pūwwâ* (פֻּוָּה)]. Var. PUAH. PUNITES. The second of the four sons of Issachar (Gen 46:13). Puvah was the grandson of Jacob and Leah, and his name was included in the list of the seventy people who descended with Jacob and his family to Egypt (Gen 46:8–27). According to the second census list mentioned in the book of Numbers, Puvah became the eponymous ancestor of the Punites, one of the clans of Issachar (Num 26:23). However, at this point the Versions depart from the MT. The Sam. Pent., the LXX (Num 26:19 in the LXX), and other versions identify him as Puah (Heb *pu*ʿ*â*) and indicate that he became the ancestor of the Punites. In the genealogical list of the descendants of Issachar available to the Chronicler, which was based on the material found in Numbers 26, his name is also listed as Puah (1 Chr 7:1).
CLAUDE F. MARIOTTINI

PYRRHUS (PERSON) [Gk *Pyrros* (Πυρρος)]. The father of Sopater, who, according to Acts, was a companion of Paul on his final journey to Jerusalem (Acts 20:4).

The name is derived from the Greek word for fire *(pyr)* and means "fiery red." It is not found in some mss, and this led Ropes (1926: 191) to conjecture that it had arisen from a repetition with alteration of *patros* at the end of Sopater's name. Its deletion gives the mention of Sopater a certain symmetry with the other names in the list of Paul's companions, but the weight of textual evidence is for its inclusion.

The mention of personal names and family relationships probably reflects local or personal interest in these people at some stage in the development of a tradition (cf. Mark 15:21). But since this list is pre-Lukan, it cannot be assumed that these people were known by either the final author of Acts or his readers. See also SOPATER.

PYTHAGOREANISM. A philosophical and religious movement founded by Pythagoras of Samos in S Italy in the last quarter of the 6th century B.C. Various claims have been made concerning Pythagorean influence on intertestamental Judaism and the NT, only a few of which can be substantiated by concrete evidence. After a brief description of the Pythagorean tradition, we will examine some of these claims in more detail.

———

A. The Pythagorean Tradition

The history of Pythagoreanism can be divided into three periods, namely, Early Pythagoreanism, the Hellenistic period, and Neopythagoreanism.

1. Early Pythagoreanism. Our most important sources for early Pythagoreanism are accounts by Aristotle, his student Aristoxenus, and the historian Timaeus of Tauromenium. Most of these accounts are only extant in texts from late antiquity, especially in the various biographies by Pythagoras that became

very popular in the imperial period. Most important of these texts are D.L. 8.1–50, Porphyry *The Life of Pythagoras*, and Iamblichus *On the Pythagorean Life.*

The most helpful and comprehensive recent discussions of early Pythagoreanism are those by Guthrie (1962), von Fritz (PW 47: 171–268), van der Waerden (PWSup; 1979), Burkert (1972; 1985: 296–304), and Kirk, Raven, and Schofield (1983).

a. The Pythagorean Life. The Pythagorean community was famous in later antiquity for its communal living and sharing. This did not apply equally to all members, however. A distinction was made between esoteric and exoteric members: the former shared totally in the Pythagorean life, while the latter kept less strict ritual and dietary observances and were less involved in the esoteric doctrines of the sect. A period of rigorous and extended probation was required before a candidate was accepted as a full member of the community. At that point he had to take a solemn oath not to reveal any of the Pythagorean doctrines.

The esoteric Pythagoreans dressed in white linen and followed a strict daily regimen which included prayer and meditation, physical exercises, discussions of their doctrines, and a common evening meal. They were forbidden to eat beans and certain kinds of meat. Great emphasis was laid on various purificatory rites, which included a daily bath.

b. Pythagorean Doctrine. Pythagoras himself did not leave any writings, and it is therefore difficult to ascertain which teachings originated with him. According to a testimony in Porph. *VP* 18 that probably can be attributed to Aristotle's student Dicaearchus, Pythagoras taught the immortality and the transmigration of the soul, the eternal cyclic recurrence of events, and the kinship of all living things.

Since Pythagorean doctrines were not committed to writing, oral tradition played an important role in the transmission of their teaching. Apart from anecdotes about the life of Pythagoras, teachings were transmitted in the form of *akousmata*, that is, orally transmitted maxims and sayings, also known as symbols because of their allegedly secret nature. The *akousmata* are mainly concerned with a ritual piety, and together they form a catechism that regulated every aspect of the Pythagorean's life (for a comprehensive list see Burkert 1972: 170–73; for discussion, 166–92). In both doctrine and ritual Pythagoreanism shared many characteristics with ORPHISM, and it may indeed be possible to speak of a Pythagorean variant of Orphism (Burkert 1972: 125–33).

c. Pythagorean Science. In keeping with the Presocratic interest in the basic substance of the universe, the Pythagoreans postulated number as the fundamental principle. The extent of their scientific discoveries and contributions is a matter of dispute; but we know that they studied mathematics, music, and astronomy (Burkert 1972: 299–482; van der Waerden 1979: 323–480).

Both ritualistic and scientific facets of the Pythagorean movement had as their ultimate goal to bring man into closer contact with God under the slogan *hepou theō*, "follow God."

2. The Hellenistic Period. We have very little evidence that Pythagoreanism continued after the time of Archytas of Tarentum (ca. 380 B.C.). It is quite probable, however, that there were individuals and perhaps even small groups throughout the Hellenistic period who considered themselves to be Pythagoreans and who preserved the Pythagorean dietary and ritual regulations (PW 47: 268–70; van der Waerden 1979: 269–71).

Be that as it may, during the Hellenistic period a spate of Pseudopythagorean writings made their appearance, most of them under the name of some ancient Pythagorean (Thesleff 1961; 1965). These writings cover a wide variety of subjects and are heavily influenced by Academic and/or Peripatetic doctrines. Most scholars date them at the very end of the Hellenistic period, that is, in the 1st century B.C. and later, although Thesleff (1961) has argued that some of them may be as early as the 4th century B.C. and that few, if any, are later than the 1st century B.C.

3. Neopythagoreanism. From the 1st century B.C. onward there was a revival of interest in Pythagoreanism. The polymath Nigidius Figulus (100–45 B.C.), the philosophers Quintus Sextius (fl. under Augustus), Sotion the younger of Alexandria (a teacher of Seneca), Moderatus of Gades (end of 1st century A.D.), Nicomachus of Gerasa (fl. ca. A.D. 100), Numenius of Apamea (fl. ca. A.D. 150), and the wandering prophet and miracle worker Apollonius of Tyana (1st century A.D.) all considered themselves Pythagoreans.

A subterranean basilica, richly decorated with frescoes depicting mythological scenes that symbolize the ascent of the soul, was discovered in 1917 near the Porta Maggiore in Rome; it probably formed the venue of a Roman Pythagorean sect during the reign of Claudius (Carcopino 1927). Further archaeological evidence for the existence of Pythagoreans during this period is furnished by an inscription from Asia Minor dating from the 1st century A.D. Apart from an epigram with a reference to Pythagoras, it also contains a relief depicting a two-way schema, with Virtue *(aretē)* on the right and Dissipation *(asōtia)* on the left (Brinkmann 1911).

The basic features of Neopythagoreanism were an interest in arithmology, a belief in the transmigration of souls, and an emphasis on the need for the purification of the soul, which was accomplished through ascetic and theurgic practices. The doctrine of "following God" had become synonymous with the Platonic ideal of *homoiōsis theō*, "becoming like God."

B. Judaism and Early Christianity

Various points of contact between Pythagoreanism, on the one hand, and Judaism and Christianity, on the other, have been suspected.

1. Hellenistic and Palestinian Judaism. Very definite evidence of dependence on Pythagoreanism is to be found in Hellenistic Judaism.

a. Hellenistic Jewish Apologetics. True to the tendency in the apologetic movement to claim the dependence of Greek philosophy on Mosaic Judaism, some Hellenistic Jewish authors asserted that Pythagoras got many of his doctrines from Judaism. As early as the 3d century B.C. Hermippus of Smyrna, a student of Callimachus, cited with approval a tradition that Pythagoras had "imitated Jewish and Thracian doctrines and transferred them to himself." He then referred to three doctrines with somewhat obscure meanings: "Do not pass a place where an ass has defecated," "abstain from waters causing thirst," and "abstain from all blasphemy" (Jos. *AgAp* 1.22 §§162–65; Jacobson 1976; Gorman 1983: 32–36). Later, in the 2d century B.C., Aristobulus (frags. 3 and 4) also cited this tradition.

The few hexameter verses by "Pythagoras" on the unique creator to be found in [Just.] *monarch.* 2 may be still another attempt by a Hellenistic Jew to claim Pythagoras for Jewish concerns.

In traditions used by Iamblichus (*VP* 7–14; 44) which may be associated with Neanthes, attempts were even made to establish geographical links between Pythagoras and Judaism: Pythagoras was depicted as a native of Sidon "who had lived the live of an anchorite and prophet, like Elijah, atop Mt. Carmel in Palestine" (Gorman 1983: 37–40). More importantly, however, dependence can be shown going in the other direction.

b. Aristobulus. The first Jewish "philosopher" in Alexandria, Aristobulus (2d century B.C.), made use of Pythagorean arithmological doctrines to explain the significance of the number 7 (frag. 5; Hengel 1974, 1: 163–69).

c. Wisdom of Solomon. The author of Wisdom may have been influenced by the writings on kingship attributed to the Pythagoreans Diotogenes, Ecphantus, and Sthenidas (texts in Thesleff 1965: 71–75, 79–84, 187–88), although their dates are uncertain (Thesleff 1961: 65–71). Concepts that occur in Wisdom, such as that of God as universal ruler who cares for all men, of the just man as an imitator of the divine ruler, of divine prudence and beneficence, closely parallel ideas expressed in the Pythagorean tracts (Reese 1970: 73–79).

d. Philo. Philo had a very positive evaluation of Pythagoreans, referring to them as "the most saintly company" (*Quod omn* 2). Although there are only a dozen explicit references to Pythagoras or Pythagoreans in his writings (*Quaes Gen* 1.17; 1.99; 3.16; 3.49; 4.8; *Leg all* 1.15; *Op* 100; *Quod omn* 2; *Provid* 1.22; 2.42; *Anim* 62; *Aet* 12), he made extensive use of Pythagorean arithmological doctrines in his exegesis. His lost work, *On Numbers*, was probably dependent on a Pythagorean source text (Moehring 1978).

e. Essenes. Of the Essenes, a Jewish sect which lived W of the Dead Sea and which is nowadays usually identified with the Qumran community, Josephus (*Ant* 15.10.4 §371) explicitly asserted that they "observed the way of life that Pythagoras had taught among the Greeks." A number of scholars, notably Lévy (1927: 264–93), have therefore attempted to demonstrate that the sect was extensively influenced by

Pythagoreanism. Since the discovery of theQumran material, there has been less enthusiasm for this hypothesis (Hengel 1974, 1: 245), although Dupont-Sommer has argued that the discovery has only strengthened the hypothesis. According to him the similarities between the Essene/Qumran community and the Pythagoreans can only be explained by direct influence. Some of these similarities are the following: (1) Both communities practiced a communal life with no private property; (2) both groups had a solemn oath of initiation, but prohibited the taking of oaths otherwise; (3) both groups wore white linen exclusively; (4) both practiced asceticism; (5) both seemed to have paid special honor to the sun; (6) the calendar used by the Qumran community probably originated with the Pythagoreans; and (7) there may be an indication in 1QS 10:4 that the sect made use of Pythagorean arithmology (Dupont-Sommer 1955: 86–91). Apart from Dupont-Sommer's last argument, which is indeed based on a scribal error (Hengel 1974, 1: 246), none of the similarities mentioned are necessarily of Pythagorean origin; and all may be attributed to Hellenistic influence in general (Hengel 1974, 1: 243–47). Josephus' statement should therefore be regarded as *interpretatio Graeca.* See also ESSENES.

2. New Testament. Despite Lévy's claim that the Gospels were decisively influenced by legends about Pythagoras' life and doctrines (1927: 295–339), no Pythagorean element can with certainty be discerned in the NT. There are, however, a few cases where Pythagorean influence cannot be excluded completely.

a. Gospels. Much of Jesus' teaching, especially in the Sermon on the Mount, on oaths, marriage, revenge, and prayer, has elements in common with Pythagorean doctrines (Lévy 1927: 310–20). It has been suggested (Schattenmann 1979: 216–19) that the sayings about removing any part of the body that causes one to stumble (Mark 9:45; Matt 5:29–30; 19:11–12) may be directly influenced by a Pythagorean saying: "Banish by all means and cut off by fire and sword and every contrivance, illness from the body, ignorance from the soul, extravagance from the stomach, strife from the city, discord from the home, and likewise, immoderation from all things" (Iambl. *VP* 34). Similarities between other gnomic sayings in the Gospels and Pythagorean symbols relating to dietary laws have been pointed out by Grant (1980: 308–9), although he is careful not conclude that this implies direct dependence on Pythagoreanism.

b. Acts. The early Christian community in Jerusalem described in Acts 2:44–45 and 4:32 approximates the Pythagorean ideal of common property and harmonious friendship, although these characteristics were shared by all political utopias of Greek philosophy and were thus not specifically Pythagorean.

c. Colossians. The philosophy against which the author of Colossians warned his readers (Col 2:8, 16–23) may be a brand of Pythagoreanism. Schweizer has argued that the world view and way of life taught by this philosophy agree in many respects with the doctrine of the *Pythagorean Memoirs* cited by Alexander Polyhistor (D.L. 8.24–33). There is the same emphasis on the importance of the elements of the world, on the worship of heroes/angels, on the flight from this world to the world above, on purification by abstaining from some kinds of food and by baptism, and on mystical visions (Schweizer *An die Kolosser* EKKNT, 103–4, 217–18; van der Waerden 1979: 86–87).

d. "Haustafeln." The "HAUSTAFELN" or lists of household duties in Col 3:18–4:1; Eph 5:22–6:9; and 1 Pet 2:18–3:7 show some similarities to the various Pseudopythagorean *oikonomika* attributed to Bryson, Callicratides, Perictione, and Plinthys, although they do not agree sufficiently for us to postulate a direct dependence (Balch 1977). See also HOUSEHOLD CODES.

3. Early Christianity. Pythagoreanism was very influential among Christians of Alexandria from the 2d century A.D. onward. Its arithmological, metaphysical and ascetic doctrines fascinated not only gnostic Christian sects, but also somewhat more orthodox Christians like Clement of Alexandria and Origen (Grant 1971). A collection of Pythagorean ethical sayings, Christianized and circulating as *The Sentences of Sextus*, remained popular right into the Middle Ages (Edwards and Wild 1981).

4. Conclusion. Although Pythagoreanism had no more than a tangential influence on Hellenistic Judaism and early Christianity, its piety and strict ethics made it attractive to some Jews and Christians. It also bore sufficient resemblance to these movements to be used as a model to describe groups such as the Essenes and the early Jerusalem church.

PYTHON [Gk *pythōn* (πυθων)]. See SLAVE GIRL AT PHILIPPI.

Q

Q (GOSPEL SOURCE). "Q" (the abbreviation for German *Quelle,* "source") is the name scholars have given to the hypothetical source that would account for the gospel material (not found in Mark) that Matthew and Luke have in common.

———

A. Nature of Q
   1. Existence
   2. Language
   3. Unity
B. Theology of Q
C. Sitz im Leben
D. Conclusion

———

A. Nature of Q

1. Existence. Within the terms of the Two-Source theory as the solution to the SYNOPTIC PROBLEM, the agreements between the three Synoptic Gospels are accounted for in two ways. In most of the passages where all three gospels are parallel (the "triple tradition"), Matthew and Luke depend on Mark's gospel. In other parts of the tradition where Matthew and Luke are parallel (the "double tradition"), the agreements between those two gospels are explained by their dependence on common source material. This material is usually known as "Q."

Some have tried to dispense with Q as part of a wholesale rejection of the Two-Source theory in favor of the Griesbach hypothesis (Farmer 1964; Dungan 1970); others have retained the theory of Markan priority but have questioned whether one needs to posit a lost source Q to explain Matthew's agreements with Luke: Luke's dependence on Matthew might be an adequate explanation (Farrer 1955; Goulder 1978). Nevertheless, the majority of scholars today would favor a form of the Q hypothesis, rejecting for a variety of reasons the theory of Luke's dependence on Matthew. See SYNOPTIC PROBLEM.

For those who would accept some form of the Q hypothesis, the extent of the Q material is reasonably clear. This material covers all the double tradition; it also includes some passages where there is a Markan parallel (the Temptation narrative, the Beelzebul controversy, the parable of the mustard seed and others), so that Mark and Q must have overlapped in places.

Consideration of the Markan tradition in Matthew and Luke shows that at times the latter evangelists omitted material from their Markan source. It is clearly possible that the same has happened with Q: some passages available to both evangelists may have been omitted by one (or both) of Matthew and Luke. Speculation about Q material which is in neither Matthew nor Luke is clearly futile. However, several have argued that in various cases, some passages which occur only in Matthew or Luke might be Q material which the other evangelist has omitted (Schürmann). Nevertheless, such theories must remain slightly speculative. Further, they usually depend quite heavily on a prior understanding of Q as a whole into which the passage in question fits easily. Such additions to Q would then not significantly alter the character of Q as a whole (Vassiliadis 1978). Most are therefore content to work with a fairly minimal definition of Q, i.e., as material common to Matthew *and* Luke, before possibly expanding this with an occasional Sondergut passage. Thus a widely acceptable starting point for discussion of Q would include the following verses: Luke 3:7–9, 16f.; 4:1–13; 6:20–23, 27–49; 7:1–10, 18–35; 9:57–60; 10:2–16, 21–24; 11:2–4, 9–20, 23–26, 29–35, 39–52; 12:2–12, 22–31, 33f., 39–46, 51–53, 57–59; 13:18–21, 23–30, 34–35; 14:16–24, 26–27, 34–35; 15:4–7; 16:13, 16–18; 17:3–4, 6, 23–24, 26–30, 33–37; 18:14; 19:12–27; 22:28–30 with the Matthean parallels (clearly with debates about individual verses, especially in the longer sections). (It has become customary to refer to verses in Q by referring to their Lukan references

only; this is in no way intended to prejudge the issue of whether Matthew or Luke has preserved the Q version more accurately.)

2. Language. The problem of the original language of Q has been discussed frequently. Some have claimed that the verbal differences between Matthew and Luke in Q material can often be explained as due to variant translations of an Aramaic original. Hence Q must have been an Aramaic source. Perhaps the most famous example is Matt 23:26/Luke 11:41, where the difference between Matthew's "cleanse" and Luke's "give alms" has been explained as due to a slight misunderstanding/misreading of an original Aramaic *dakkau* (= "cleanse"), being mistakenly read as *zakkau* (= "give alms"). Appeals have also been made to the Semitic nature of much of Q's language (Bussmann 1929; Bussby 1954).

It is doubtful if more than a very few cases of variation between Matthew and Luke can be explained in this way. The Semitic nature of Q's Greek does not demand an Aramaic Vorlage: influence from is quite conceivable in a Greek-speaking Jewish-Christian milieu. Many of the alleged translation variants turn out to be simply cases of synonyms, and the differences between Matthew and Luke can often be explained just as well as due to the redactional activity of the evangelists (Kloppenborg 1987). For example, in Luke 11:41, Luke's "give alms" may well be LkR (Lukan redaction), reflecting Luke's concern for almsgiving. In other parts of the Q material, the verbal agreement between Matthew and Luke amounts to virtual verbal identity in Greek (Luke 3:7–9; 11:9–10 and pars.). In these instances the measure of verbal agreement seems to demand a common Greek source. Further, some features of Q's Greek can be shown to be characteristic of a source originally written in Greek and uncharacteristic of translation Greek (Turner 1969). This suggests that much of the Q material was available to Matthew and Luke in Greek form. This leads to the question of whether the Q material should be regarded as a single source.

3. Unity. Even among those who would deny that Luke knew Matthew and hence would affirm that Matthew and Luke depend on common source material, there has always been dispute as to whether it is appropriate to think of this material as a single source, Q. Some have argued that the Q material never existed as a unified source prior to its inclusion by Matthew and Luke. "Q" may simply represent a mass of oral traditions. (Jeremias; Wrege). Others have pointed to the fact that Q apparently contained no passion narrative. Is it then credible to think of a written source containing a mass of Jesus traditions but no account of the passion? Further, Q seems to lack any formal structure, starting apparently with a strong narrative element but petering out into a mass of unrelated sayings (Farrer 1955). There is also the problem of the measure of verbal agreement between Matthew and Luke. In some instances Matthew and Luke are almost identical in Greek (Luke 3:7–9 and par.); at other times the verbal agreement is minimal (Luke 14:16–24; 19:12–27 and pars.) (Rosché 1960). Hence Bussmann's theory of two sources, one Greek and one Aramaic.

These arguments are not conclusive. The measure of variation in verbal agreement between Matthew and Luke in Q passages has been shown to be statistically comparable to the measure of verbal agreement between these two gospels in Markan passages (Carlston and Norlin 1971). It may be that Q was available to the evangelists in slightly different forms (a Q^{mt} and a Q^{lk}) as it is sometimes not easy to account for all the differences between the gospels as due to MattR or LkR. But it remains uncertain how far it is necessary to make such an appeal. The theory that Q represents a mass of oral traditions does not account for the common order in Q material, which can be discerned once Matthew's habit of collecting related material into his large teaching discourses is discounted (Taylor 1953, 1959). Such a common order demands a theory that Q at some stage existed in written form.

The argument based on the lack of a Passion Narrative in Q, and the apparent formlessness of Q, is also weak. Its strength depends on an a priori assumption of what "must" have stood in a source containing information about Jesus. Q clearly cannot have been a "gospel" of the same nature as the canonical gospels. But the discovery of the *Gospel of Thomas* has shown us that it was possible for some Christians to write a "gospel" with no passion narrative (Robinson 1971, 1986). Further, Kloppenborg (1987) has shown that the form of Q, as a collection of sayings together with some introductory narrative scenes, can

be paralleled in several sayings collections in antiquity. The genre of Q is thus not a problem for the theory of its existence.

None of the arguments against the existence of Q as a single source is fully convincing. It is thus best to assume that Q was a single source, available in Greek and probably in written form.

If this is the case, then the source Q is similar to the gospels themselves. It is thus not surprising that many have tried to study Q with techniques similar to those which have been applied to the gospels. In particular, there has been a significant trend in recent years to approach Q from the side of redaction criticism. This involves trying to interpret Q as a unified source in its own right and perhaps with its own distinctive theology. Many have therefore attempted to delineate a "Q theology" and to see what kind of social group of Christians, or "Q community," might have preserved this material and regarded it as significant.

B. Theology of Q

At this point the problem of the unity of Q arises once again, though in slightly different form. Many who would accept that it is appropriate to think of Q as a single written source, with a characteristic theology, would also argue that Q represents the end product of a quite complex tradition history. There may be various strata within Q so that the tradition may have undergone a complex history of expansion and adaptation. Some would claim to be able to identify a single redactional layer in Q (Lührmann 1969; Schenk 1981). Schulz (1972) distinguishes two main strata within Q, corresponding to two distinct stages in the history of the "Q community." Polag (1977), Jacobson (1978), Zeller (1982, 1984), Kloppenborg (1987), and Uro (1987) have all argued for at least three redactional strata in Q (though with little agreement in details). Schürmann (1968) postulates a four-stage growth in the tradition whereby individual sayings were expanded by secondary comments *(Kommentarworte)* which at a third stage were combined to form smaller collections before being incorporated into the larger blocks of Q at a final stage. Many have argued, for example, that the Temptation narrative is quite unlike the rest of Q and hence is probably a relative latecomer into the Q tradition.

It must, however, also be remembered that a division of a text into various strata (whether it be a simple twofold division into "tradition + redaction" or a more complex theory of strata) is not the only key which will unlock the secrets of a writer's theology. A decision to include a tradition, perhaps unaltered, may be just as positive an editorial action as an alteration into a tradition. One should not therefore write off much of the Q material as "merely" traditional and hence having nothing to contribute to Q's theology. One must also beware of making a writer too monochromatic, so that different types of material directed to different audiences, are ipso facto taken as indications of distinct strata within the history of the tradition. So, too, it is perhaps dangerous to assume too readily that we know precisely the way in which the tradition developed from individual sayings to larger complexes. One can sometimes identify ways in which Q material seems to have been redactionally modified, especially in some of the arrangement of the material (Lührmann 1969; Kloppenborg 1984). But the situation is clearly more complex than in the case of Matthew's and Luke's use of Mark since we do not have Q's traditions directly available to compare with Q: we do not even have Q itself directly available. Thus one must be prepared to allow that the substance of the Q material itself, and the choice of which traditions are included, can also help in the clarification of Q's theology (Hoffmann 1972).

A basic presupposition of much contemporary Q study is that the group of Christians who preserved the Q material did so because they believed that this material was still valid and relevant for their own day. The Jesus tradition was thus not a matter of teaching which had been given in the past but was no longer applicable. Rather, the teaching of Jesus was taken up and applied to the present. Further, the preachers of this tradition claimed that in their own preaching, the voice of the present Jesus was to be heard (Luke 10:16 par.). While a verse like Luke 12:10/Matt 12:32 might suggest some awareness of a distinction between the pre-Easter and post-Easter situations, the main bulk of the Q tradition is formulated with the assumption that Jesus' words are still valid. The contemporizing present, "I say to you," predominates as opposed to any historicizing tendencies (Boring 1982).

One theme which is universally recognized as characterizing much of the Q material is that of eschatological warning. A great deal of Q is concerned with this theme of imminent judgment, which may be catastrophic for those who are unprepared and do not "repent." Older views of Q had sought to explain Q as a kind of paraenetic manual, a supplement to fill out the kerygma of the death of Jesus, which was already presupposed (Manson 1949). Such a theory will not explain the note of warning and crisis which dominates so much of Q. Right at the start, this note of warning is sounded in the preaching of John the Baptist (Luke 3:7–9 par.); this continues through the teaching of Jesus in the Great Sermon, bracketed as it is by the eschatologically oriented beatitudes (Luke 6:20–23 par.) and the eschatological warnings against those who fail to obey Jesus' words (Luke 6:46–49 par.); the mission charge repeats the note of the imminence of the Kingdom (Luke 10:9 par.); and toward the end of Q there is the eschatological discourse warning of the End, which may come at any time (Lk. 17; 23ff. par.).

It is probable that Q is aware of a delay in the Parousia. The parables in Luke 12:39–40, 42–46; 19:12–27 par. seem to presuppose such a delay (Lührmann 1969; Schulz 1972). Nevertheless, the very form of Q suggests that Q has not given up the vivid expectation of the End which could come at any minute: the fact that Q includes this material implies that the Q Christians regarded it as still valid. Hence Q is dominated by a vivid hope for an imminent End (Hoffmann 1972).

Integrally related to the note of crisis in Q is the theme of polemic. Q is clearly not just a manual for newly converted Christians. Rather it reflects a situation where the Christian community feels itself to be threatened and to be suffering hostility. Lührmann has shown that the note of polemic against "this generation" dominates Q's arrangement of the material; e.g., in Luke 7:18–35 par., any possible hint of anti-Baptist polemic (Luke 7:18–28 par.) has been overlaid by further material setting Jesus and John the Baptist together against "this generation." So, too, the discourse against the scribes and Pharisees (Luke 11:37–52 par.) is broadened at the end to become an attack on "this generation" (Luke 11:49–51 par.).

In this polemic, use is often made of a model taken from a Deuteronomistic view of history. In this scheme, Israel's history is viewed as one of continual disobedience. God sends the prophets to Israel to call the nation to repent; the response is always negative, and the prophets suffer rejection and violence. As a result, God's wrath has been and will be experienced (Steck 1967). Such a scheme characterizes a significant part of the Q material (Steck 1967; Jacobson 1978; Kloppenborg 1987). Q Christians have evidently experienced rejection of the Christian message; and they interpret this rejection as part of the general violence inflicted on God's prophetic messengers by impenitent Israel (Luke 6:22–23; 11:49–51; 13:34f.). The prophetic self-understanding of the Q Christians may also be indicated by several formal similarities between much of the Q material and the prophetic literature in the OT (Sato 1988).

Another theme closely associated in Q with that of the suffering prophets is the theme of Wisdom *(Sophia).* Late Judaism spoke at times of Wisdom as an almost personified being in her own right, and there are also traditions of Wisdom's preaching being rejected by men (cf. Prov 1:20–33; 8:22–36; *1 Enoch* 42). In Q the two streams of tradition—that of rejected Wisdom and the Deuteronomic theme of the violent fate suffered by the prophets—coalesce so that Wisdom herself becomes the agent who sends out the prophets, all of whom suffer violence (Luke 11:49–51; 13:34f. pars.; and also 6:23; 7:31–35; 9:58). Within this pattern, Jesus appears as one (possibly the last) in the line of the suffering prophets. (Hence it is worth noting that Q does not ignore the death of Jesus. Little salvific significance is attributed to Jesus' death, but the latter *is* implicitly incorporated into a wider interpretative theological scheme.)

Several of Q's warnings of eschatological judgment are couched in terms of the coming of the "Son of Man." The whole question of the Son of Man sayings in Q and the broader question of Q's christology have aroused much discussion. Some have argued that "Son of Man" reveals Q's distinctive contribution to christological development within primitive Christianity (Tödt 1965; Edwards 1971). For example, Tödt claimed that the identification of Jesus with the figure of the Son of Man was due to the Q community. Jesus had spoken of the Son of Man as a figure other than himself. On the basis of the resurrection experience, Q achieved the "christological cognition" of identifying the coming Son of Man with Jesus himself and then undertook to continue the preaching of Jesus as still valid in the post-Easter period.

The place of "Son of Man" within Q's christology is much disputed. Tödt's theory that originally Jesus thought of the Son of Man as someone other than himself would be questioned by many today. More importantly here, many have questioned whether "Son of Man" reflects Q's own interests, or whether it was already part of Q's tradition and hence not relevant for Q's redaction and thus for Q's theology (Lührmann 1969; Schürmann). However, the Son of Man saying in Luke 11:30 may well be due to Q's redaction (Edwards 1971); and in any case, one cannot dismiss all traditional elements in Q as contributing nothing to Q's theology. It seems therefore best to regard "Son of Man" as a christological "title" of some importance for Q.

Its significance is more debated. It is often thought that "Son of Man" is primarily for Q a reference to Jesus in his capacity as a figure (as judge or advocate) of the end-time (cf. Luke 17:22–37 par.), and it is often pointed out that Q has no "suffering Son of Man" sayings similar to Mark 8:31. Certainly the "eschatological Son of Man" is very strongly represented in Q. However, there are a number of Q sayings referring to the present activity of Jesus as Son of Man (Luke 6:23; 7:34; 9:58; 12:10; and arguably 11:30). Although some have claimed that the use of the term here refers to Jesus as authoritative (Tödt 1965), or to Jesus as returning judge (Hoffmann 1972), it may be relevant that all of these sayings occur in contexts which imply rejection, hostility, and suffering. "Son of Man" is thus a term which seems to be closely linked in Q with these themes (together with the related themes of rejected Wisdom and the suffering prophets). It may be, therefore, that the theme of the "suffering Son of Man" is not so alien to Q as many have claimed (Tuckett 1982).

C. Sitz im Leben

What can be said about the situation of the Christians who preserved the Q material? It is probable that Q reflects a group of Jewish Christians with a fairly conservative attitude to the Jewish Law. It is in Q that we have one of the most conservative statements about the continuing validity of the Law (Luke 16:17 par.); and if, as seems likely, the Lukan context of this saying reflects the Q context, then Q deliberately places 16:17 after 16:16 in order to guard against a possible antinomian interpretation of the latter verse. Elsewhere in Q, the Law is presupposed as still valid and binding on the Christian. The polemic against the scribes and Pharisees in Luke 11:37–52 par. is directed only against their hypocrisy in not obeying the Law themselves. Luke 11:42d may well be a Q-redactional comment to insist that the Law must still be kept. If, as also seems likely, Luke 14:5 par. was part of Q, then Q reflects a sabbath controversy but, unlike Mark, has Jesus operating strictly within the Law to justify his behavior (the rescue of a *man* in a pit would be accepted by all as a legitimate breach of the sabbath law). Further, much of the argument in the woes against the scribes and Pharisees, especially the woes about purity and tithing, seems to operate within Pharisaic presuppositions (Schulz 1972). Given the fact that the Pharisees were probably a relatively small group within pre-70 Judaism, the virulence of the opposition here may indicate a rather close link between the Q Christians and the Pharisaic movement (if they were not close, then each group would probably have ignored the other).

Whether this is still the case at the stage of Q's redaction is not certain. Many have claimed that by the time of this stage, the polemic has sharpened and broadened in scope to be directed against "this generation," a term which refers to the whole Jewish people, not just one part such as the Pharisees (Lührmann 1969; Schürmann 1986). Lührmann has gone further and argued that the sharply polemical tone of Q's redaction means that Israel now only has the threat of judgment; for Q has embraced the gentile mission, and for the Jewish as a whole there is now no hope at all (Lührmann 1969; Kloppenborg 1987).

The meaning of the term "this generation," however, is not absolutely certain. Although some claim that it is a technical term for the nation Israel and lacks any temporal reference (Lührmann 1969), it seems hard to exclude all temporal sense from a saying such as Luke 11:31f., par. Thus others have argued that the term does retain a temporal significance, referring to the people of the final generation before the end (Hoffmann 1972; Schulz 1972). Further, it seems doubtful if one can identify "this generation" with the whole of Israel tout court. At the very least, the term must exclude the Q Christians who, as we have seen,

were probably Jewish Christians. It thus seems more likely that Q's polemic is directed against only a part of the Jewish community among which the Q community existed.

The problem of Q's attitude to gentiles and the gentile mission is also disputed. Q does have several sayings which seem to presuppose a friendly attitude to gentiles (Luke 7:1–10; 10:13–15; 11:31f.; 13:28f. pars.), though others have claimed that these refer only to the past or the future: there is nothing in relation to the present (Hoffmann 1972). Many too have argued that Q's rather strict attitude to the Law effectively excludes the possibility that Q had undertaken the gentile mission. (Schulz 1972; Wegner 1985).

These arguments are of varying weight. The relationship between the Law and the gentile mission should not be made too simplistic. A gentile mission is not ipso facto incompatible with a conservative attitude to the Law. Even Paul expected his gentile converts to observe considerable parts of the Law without any questioning. Nevertheless, it must be said that the presence of slighting references to gentiles, almost in passing (Matt 5:47 [Luke's parallel, referring to "sinners," is generally accepted as LkR]; Luke 12:30 par.), make it hard to believe that Q was engaged in a gentile mission. The natural language of Q seems to assume that "gentiles" are those who are outside the sphere of salvation. Thus the terms of reference seem to be wholly Israel-oriented (unless one can assign the slighting references to an earlier stratum in Q: so Kloppenborg—but then why have they been left unredacted by a later stage of Q?). Gentiles seem to be brought into the picture only to shame the Jewish hearers (Meyer 1970), though whether Q holds out any hope for that audience is not clear.

A much discussed feature of Q arises out of Q's version of the mission charge. Here the Q missionaries are told to take absolutely nothing for their journey, not even the basic necessities of life such as food or clothing. Elsewhere, too, Q sayings seem to presuppose an extremely radical break with past personal ties. The Q Christians are told that they must "hate" their own families (Luke 14:26 par.); they are told they must take up their cross (Luke 14:27 par.). They are not to worry about their daily needs (Luke 12:22–34 par.) since God will provide for them. They are to be the followers of the Son of Man, who has nowhere to lay his head; and they are to break with their past in such a radical way that they are not even to go home to bury a member of their own family (Luke 9:57–60 par.). These sayings have led to the plausible theory that behind Q lies a group of Christians who obeyed these instructions to the letter. Hence Q presupposes the existence of wandering prophets or charismatics who made a radical break with their own homes and went about preaching the message of the kingdom (Hoffmann 1972; Theissen 1979). However, the presence of sayings like Luke 10:2 par. may suggest that the final stage of Q also presupposes a group of settled Christians providing backup support for the wandering preachers (Zeller 1982, 1984).

The precise meaning of such a lifestyle depends heavily on the social situation in which such action takes place. Such renunciation could be a voluntary act, similar in kind to the renunciation practiced by Cynic preachers but taken to even more radical extremes (Hoffmann 1972). Schottroff has argued that the "renunciation" implied is simply a reflection of the general extreme poverty which all suffered at the time and Q's preaching is simply a message of how to come to terms with this. Nevertheless, such a theory will not explain all of Q. Q evidently expects other Christians to help the missionaries and provide material support for them: hence some material possessions are assumed. Other sayings only make sense on the same assumption (Luke 16:13; Matt 6:19–21). So too, the sayings about leaving family seem to imply a situation where the Q Christians are in a rather different social situation from that of their neighbors. The lifestyle implied here thus seems to be peculiar to the Christian. In part it is thus a voluntary decision to adopt such a lifestyle and the results are closely connected with the Christian commitment. It is not necessarily something which the Q Christian shares with all his/her contemporaries. This applies particularly in the case of the references to persecution in Q, which are frequently connected with the lifestyle of the wandering charismatics.

Q says much about persecution at a fairly general level. Many have deduced from this that the Q community was suffering very real persecution from its neighbors. At the more "theological" level, it is clear that the Q Christians regard the persecution which they are experiencing as a continuation of the

violence suffered by all the prophets in the past. Yet as the latter may be somewhat stylized (not all the prophets suffered violence), the same may be true of Q. Q has a great deal of polemic (against "this generation") for refusing to accept the message of the prophets past and present, but it is hard to infer that such refusal resulted in actual violence against the Q community. Luke 6:22–23 can be interpreted quite naturally as relating to verbal abuse, social ostracism, and perhaps polite indifference, but not necessarily to any physical violence. The precise meaning of the final woes against the scribes and Pharisees is debated, but a strong case can be made for the penultimate woe (against the tomb builders Luke 11:47–48 par.) being directed against those who simply ignore the present prophetic message and try to distance themselves from the past by building tombs for prophets whom "their fathers" killed: the actual violence belongs to the past alone (Steck 1967; contra Hoffmann 1972). If so, the same may also apply to the doom oracle in Luke 11:49–51, where again the period of physical violence seems to be limited to the OT era. Elsewhere in Q, there is violent polemic against apathy (Luke 17:22–37), strong words against waverers (Luke 11:23), against those who seek signs (Luke 11:29–32, but there is no indication that the sign seekers are being physically violent), against those who might give up their Christian allegiance (Luke 12:9—possibly reflecting a persecution situation, but the polemic is *not* directed against the persecutors themselves). Luke 16:16 is probably too vague for the reader to know precisely what is in mind. Only Luke 13:34–35 might imply physical violence in the present, though it is not clear how much is present and how much is past.

If could be that the Q community is *not* suffering a great deal in physical terms. No doubt the Christian message has evoked opposition, some verbal abuse, some polite indifference. So too the wandering preachers have evidently not always found a welcome and been provided with a home (Luke 10:10–11). From the Christian side this was no doubt seen as "persecution," and it has evidently led to a closing of the ranks and some quite violent denunciation of those outside. But such opposition may not have involved any great measure of physical violence.

D. Conclusion

Recent studies have shown how fruitful a redaction-critical approach to Q can be. At first sight such work may appear to be extremely hypothetical, being based on what some would argue is a very questionable presupposition (the very existence of Q as a single document). However, the very distinctiveness of the Q material as shown by recent redaction-critical studies of Q is in itself an indication that this material did exist as a separate entity at some stage in the development of the synoptic tradition. Theories about the theology of Q, if successful, may therefore provide further support for the hypothesis of the existence of Q. Q may also alert us to the great variety within primitive Christianity. It shows us a version of the Christian faith which is perhaps less cross centered than, say, Paul or Mark; but it is nonetheless real for that.

C. M. TUCKETT

QAʿAQIR, JEBEL (M.R. 145103). A mountain (Arabic, "Mountain of the Cairns") situated on a ridge eight miles W of Hebron, near the modern village of Simiyeh, at an altitude of about 400 m. It is located just at the E edge of the Shephelah, where it borders upon the lower slopes of the central hills, in the inner reaches of the Wadi Lachish.

The one-period EB IV cemetery and settlement at Jebel Qaʿaqīr was discovered by tomb robbers in the summer of 1967 and thus came to the attention of archaeologists. It was excavated by W. G. Dever in 1967, 1968, and 1971, sponsored and funded by the Hebrew Union College in Jerusalem. The excavations revealed at least six different shaft-tomb cemeteries all around the base of the ridge near the valley floor. All belonged to the EB IV period, ca. 2300–2000 B.C., a largely nonsedentary interlude between the urban Early and Middle Bronze eras in Palestine. Cemetery B had been extensively robbed, but some 40 tombs were investigated and planned, and nearly 20 undisturbed tombs were excavated. Cemeteries C, D, E, and F produced another 20 tombs, but it is clear that dozens, probably hundreds, of others are present in the vicinity. The tombs were regularly laid out and spaced a few feet apart along several natural rock terraces down the slope, all oriented the same way. Typically, a round elliptical shaft, up to six feet deep, led to a round chamber, the doorway to which was blocked by a single large stone. Several tombs had shallow body shelves, lamp niches, graffiti, and other distinguishing features. Many tombs contained a single human burial; others two to four individuals. Most burials were accompanied by part of a sheep or goat carcass. In every case the burials were secondary, and the bones, even those of the animals, were

disarticulated and completely disarrayed. The 47 adult and 2 children's skeletons constitute an exceptionally large and well preserved sample for this period and reveal much about diet, disease, and longevity (Smith 1982). Although many tombs contained a pot or two and occasionally a copper weapon, more than half had no grave goods at all. The disproportionally large number of tombs, the decarnate bones, and the scant offerings all suggest that these are the remains of seminomadic pastoralists who migrated along a seasonal circuit and carried their dead with them for later burial at an ancestral burying ground (Dever 1980). The evidence from similar shaft tombs of numerous EB IV sites in Palestine points to the same conclusion. See JERICHO; DHAHR MIRZBÂNEH; BEER RESISIM.

Evidence of scattered domestic occupation on the nearly milelong S-shaped ridge above the cemeteries consisted only of a dozen or so enigmatic stone cairns (not burials); a rambling low boundary wall; a unique potter's kiln; a single dolmen of the "table top" variety; and a half-dozen or more caves used as shelters. One cave, G26, produced a nearly complete domestic assemblage of some 30 restorable pots, flint blades, and ground-stone implements (Dever 1981). Another, G23, was apparently a pottery dump, which yielded fragments of nearly 1,800 vessels, none restorable (Gitin 1975). The vast domestic ceramic repertoire from Jebel Qaʿaqīr fills out our corpus of EB IV pottery, which was based until recently on the somewhat atypical assemblages from tombs. It helps not only to define further Dever's "Family S" (= "Southern-sedentary"; 1980), but also gives us for the first time sufficient material on which to base an analysis of ceramic technology and decorative design (London 1985).

WILLIAM G. DEVER

QADES, TELL (M.R. 200279). A site in upper Galilee located about 15 km N of Safed. The site comprises a tell at the W edge of the Kadesh Valley and a low hill overlooking the valley some 200 m to the E. It is to be identified with the Kedesh in Naphtali mentioned in both biblical and extrabiblical sources. See KEDESH.

A. History of the Site

The importance of this site in antiquity is attested both by the surface remains strewn over the site and by the numerous references to it in the historical sources. Kedesh was one of the main cities in Upper Galilee during the Canaanite and Israelite periods. The city is probably mentioned in Egyptian sources of the 2d millennium B.C.E. Kedesh is listed as one of the defeated Canaanite towns in Josh 12:22; as one of the levitical cities in Josh 21:32 and 1 Chr 6:61; and as a city of refuge in Josh 20:7. It is also mentioned as one of the strongholds of Naphtali legacy. The Assyrian king Tiglath-pileser III conquered the city in 733/732 B.C.E. together with other Galilean cities which are listed in 2 Kings 15:29. Kedesh is mentioned in one of the Zenon papyri (*PZen. Col.:* 59004), as well as in the account of the battle between Jonathan the Hasmonean and the generals of Demetrius (1 Macc 11:53–73; see also *Ant* 13.154). Josephus (*JW* 4.104) relates that Titus' army set up camp at Kedesh during the campaign against Yohanan of Gush Halav, and that following the massacre of the Jews of Caesarea in 66 C.E., the latter avenged themselves by attacking many Gentile settlements, including *Kadasa (tōn) Tyrion,* "Kedesh (of) the Tyrians," i.e., Kedesh in the region of Tyre (*JW* 2.459). Kedesh was known as one of the strongholds of Tyre in the Galilee and was in constant conflict with the "Galileans" (*JW* 4.105).

According to both the epigraphical and archaeological evidence, Kedesh flourished during the 2d –3d centuries C.E. The town is mentioned also in later historical sources. Thus, Eusebius (*Onomast.* 116.10) note that Kedesh lay 20 miles from Tyre.

B. Research of the Site

Tell Qades—or Tel Kedesh—is one of the largest and most important tells in Upper Galilee (ca. 100 dunams); however, it has not yet been excavated, except for a rescue excavation carried out in the 1950s by Y. Aharoni. On the N part of the tell, on what may have been the ancient acropolis, stood an Arab village. The rescue excavation, the archaeological survey, and the surface remains scattered on the site indicate that the site was continuously occupied from the Bronze Age until the end of late antiquity.

A vast cemetery extends to the NE of the tell. The rock-hewn tombs are dated to various periods and have not yet been investigated systematically, except for a tomb of the MB Age and some from Roman times.

On the hill E of the tell are the remains of a well-preserved monumental temple, and W of this are remnants of mausoleums and decorated sarcophagi. Rock-hewn tombs were discovered at the N and NW fringes of the hill. During the 19th century the site was surveyed in varying detail by E. Renan, V. Guerin, and C. Wilson, and especially by C. R. Conder and H. H. Kitchener of the Survey of Palestine, whose work has been the main source of knowledge of the temple until recently. Since these 19th-century investigations, the site has been explored by only a few scholars, like F. Fenner, G. Dalman, and C. Watzinger. During 1976–77, A. Ovadiah, M. Fischer, and I. Roll made an extensive survey of the site, and in 1981 and 1983–84, they conducted three seasons of excavations.

C. Description of the Temple Complex

The architectural complex at Kedesh, located on the upper part of the S slope of the tell, includes a large *temenos* (sacred enclosure) with a monumental temple at its center. The *peribolos* enclosing the *temenos* is rectangular in plan and measures about 55 × 80 m; because of the topography of the area, its S wall also served as a retaining wall. The E facade of the *peribolos,* only partially preserved, was probably symmetrical in design and had a monumental entrance leading into the *temenos,* similar to the sacred complexes of Helios at Kasr Naus and Zeus at Hosn-Suleiman (Baetocaece) in Syria. The "baroque" characteristics of this design correspond well with the general trend of Roman architecture in the Orient. In view of the parallel walls of the *peribolos* and the temple, it is obvious that the two structures were an integrated architectural complex, although the temple did not stand in the exact center of the *temenos.* The wall of the *temenos,* which is not of uniform construction, stood exposed in a number of places.

The temple consists of a rectangular cella and a portico. See Fig. QAD.01. Its outer dimensions (without the portico) are 20.66 m × 22.63 m; its inner dimensions, 17.60 m × 20.04 m; and its overall length (including the portico), 31.25 m. Only the E facade of the cella remains standing and is preserved to a height of ca. 7.50 m, or 14 courses. Three carved and ornamented entrances pass through the facade: a central opening symmetrically flanked by two smaller ones. The neatly worked ashlars are laid according to the typical Roman dry-wall method, smoothly fitted to each other.

No evidence of columns was found inside the cella to suggest that this inner space was divided into aisles; nor were there traces of any piers against the N and S walls that might have supported the roof. This suggests that the roof, despite the considerable width of the hall (17.60 m), was supported by transverse wooden beams, which, in turn, carried a series of lighter timbers or cross-rafters intersecting and slotted into the transverse beams. It is also possible that in order to reduce the span of the beams, they rested on consoles fitted against the N and S walls of the temple. Similar techniques were probably used to support the roofs in several Roman temples in Syria, such as those at Kasr Naus, Hosn Niha, and Majdal Anjar. Many fragments of terra-cotta tiles were found, both of *solenes* and *kalypteres,* which obviously had been used to cover the roof of the cella.

A paved section of neatly fitted rectangular slabs was found in the E part of the hall, approximately on the same level as both the S entrance threshold and the pavement of the portico. There were also traces of the underpinnings of three steps leading down from the central entrance threshold to the floor of the cella.

An apse, measuring 5.60 m across, abutted the inner side of the W wall of the cella, opposite its central entrance. This was apparently designed to accommodate a statue or relief of the patron deity of the temple, a kind of *adyton,* such as those of the temples at Rahle, Burkush, and Palmyra. This apse was apparently a secondary addition to the temple.

The portico apparently had a hexastyle (six-column) facade, consisting of two groups of three columns each. Parts of the entablature, bases, and capitals also came to light, indicating that the temple probably stood about 12 m high.

To enter the cella the priest probably used the side entrances, which were more or less on the same level as the floor of the portico and the floor of the cella. The approach to the threshold of the central entrance, which was elevated ca. 1 m above the floor of the portico, was probably by a ramp, of which some remains were discovered.

A row of sockets in the threshold in the central entrance implies that it was blocked by a chancel screen which prevented the devotees from entering through it, although they could look inside and see the statue or the relief of the god.

D. Architectural Decoration

The Roman temple of Kedesh exhibits one of the richest collections of architectural features in Israel. Judging by the remains on the surface, and by the items discovered in the excavations, it was a Corinthian temple in the fullest sense.

The fragments of the entablature, the Corinthian capitals, along with the bases and pedestals indicate that the temple was part of a series of "baroque" sites which were built in the E within the framework of Imperial architecture of the 2d century C.E. The character of the architectural decoration, the arrangement of the different items, and their workmanship emphasize the high artistic quality of the temple.

About 10 m of the entablature can be reconstructed. Remaining fragments of the cornices have coffers and consoles, which have been common in the E since the Hellenistic period. They are made up of moldings typical of the Corinthian egg-and-dart *(ovolo),* coffers, consoles, and astragals motifs. Among other motifs decorating the entablature are a stringed musical instrument (cithara), a basis resting on a tripod, and a crescent with a star.

E. Identification of the Temple Deity and Manner of Worship

It has been suggested that the temple at Kedesh was dedicated to Helios. However, the epigraphical and iconographical data imply a different identification. These include (1) two Greek inscriptions, one of which was found close to the temple and the other in secondary use in the wall of the nearby village police station at Qadis; and (2) two eagles with outstretched wings, one carved on the lintel of the central doorway and the other on the lintel of the N doorway.

The Greek inscriptions refer to Baal-shamin, the "Holy God of the Sky," one of the main gods of the Syro-Phoenician region during the Roman period. This god is mentioned in inscriptions from Palmyra, Damascus, Hosn-Suleiman, and elsewhere. Three of the temples erected in his honor are well known: in Palmyra, in Dura-Europos, and in Seia in S Syria. The two eagles mentioned above support the identification of the deity as Baal-shamin.

To the N and the S of the two side openings of the cella are two kraters carved in stone, with narrow channels leading inside the building. These almost certainly served for libations of wine, oil, or the blood of sacrificed animals intended for the god, in return for which the worshiper received the blessing or oracle from the priest. Possibly the grooves were connected with a religious ceremony facilitating contacts between the world of the living and the world of the dead. The existence of mausoleums to the W of the temple complex and of tombs to the N strengthens this supposition. To the best of our knowledge, these libation channels are unique in the architecture of temples in the Roman world. Above the S krater is an apsidal niche with a sunken, carved relief of a human figure wearing a toga, holding a pear-shaped vessel with basketlike handles in the right hand and a spear in the left. The proximity of the figure to the krater and to the grooves suggests that it depicts the act of libation and symbolizes the worshiper.

F. Summary

The research at Kedesh so far has revealed a rich and elaborate architectural complex consisting of a *temenos* with a temple of the *prostylos hexastylos* type at its center. The architectural decoration is in the Corinthian style with "baroque" characteristics. Its layout and architectural motifs are typical of the decorative context in the Roman East, especially of the Syro-Phoenician region. The temple is the southernmost link in the chain of Roman temples in this region.

In addition to the types of architectural decoration, dated inscriptions discovered previously as well as those from the recent excavations provide evidence for dating the complex. Three Greek inscriptions are dated respectively to 117/18, 189/90, and 214/15 C.E. It may therefore be assumed that construction of the temple complex began around the beginning of the 2d century and continued in stages over a century or so.

Although it is still difficult to determine when the temple was abandoned, it appears that it was destroyed by an earthquake, possibly the one that struck the region on May 19, 363 C.E.

A. OVADIAH
MOSHE FISCHER
ISRAEL ROLL

QASHISH, TEL (M.R. 160232). A site located at the foot of Mt. Carmel in the NW end of the valley of Jezreel. It contains ruins dating to the OT period.

A. Location and Identification

Tel Qashish is situated on the right bank of the Kishon river, in one of its meanders, so that it is protected by the river on two sides. Tel Yoqneam can clearly be seen 2 km to the S. The site is elongated, measuring 180 m × 60 m. It slopes steeply in all directions, except in the NE region, where the approach way and gate were located. The site measures some 10 dunams and is clearly divided into two parts, with the W half ca. 5 m higher than the E half. The reason for this is that while the earliest settlement (EB) extended over the entire surface of the mound, subsequent occupation (in the MB and LB, as well as in the Iron Age) was limited to the W part of the site. EB strata are therefore to be found immediately below the present surface in the E part of the site, while MB and LB strata are to be found right below the surface in the center and highest part of the site.

Tel Qashish dominates one of the fords of the Kishon. It also dominates the S exit of the narrow pass, connecting the plain of Acco and the valley of Jezreel. The strategic location, the accessibility of Bronze Age strata, the opportunity to study a small rural site and at the same time to investigate its relationship to a neighboring larger town (Tel Yoqneam) led to the choice of this site for excavation.

Aharoni (*LBHG*, 151) has suggested that the site be identified with "Helkath," no. 112 on the list of Canaanite sites conquered by Thutmosis III, neighboring Jokneam (n. 113 on that same list). Another possibility is to identify the site with Dabbasheth (meaning "camel's hump"), mentioned in the description of the border of the tribe of Zebulun, which "goes up westward, and on to Mareal, and touches Dabbasheth, then the river that is east of Jokneam" (Josh 19:11). Such an identification suits well the order of sites on the border, the immediate vicinity of Jokneam, as well as the general appearance of Tel Qashish (which resembles a crouching camel).

B. The Excavations

The excavation of Tel Qashish is part of a larger, regional archaeological research project—the Yoqneam Regional Project. See JOKNEAM; QIRI, TELL. Eight seasons of excavations have been conducted so far. Two areas are being investigated: "A" on the high part of the site, and "B" in the lower. Together, an area of about 1,100 square meters is being investigated (10 percent of the surface of the site). Fifteen levels of occupation have been noted, spanning EB I through the Persian period.

1. Early Bronze Age. With the exception of a few Neolithic flint tools, found on bedrock, the earliest occupation level of the site is attributed to EB I. The settlement extended beyond the limits of the tel itself, as evidenced by the large amount of pottery and flints scattered all over the area N of the site (some nearly 100 m away). Due to the limited size of the excavated area, only one complete dwelling and a few fragments of others are known so far, with two architectural phases clearly discernible. The houses are

small, with their corners rounded on the outside but with 90-degree angles on the inside. This method of constructing corners finds close parallels in the EB I levels of sites such as Megiddo and Byblos. Typical ceramic finds include bow-rimmed pithoi and grey burnished ware. Two cylinder seal impressions on jar fragments are noteworthy, one of which has two close parallels at other sites in the region (Megiddo and Tel-Shadud). In EB II, the site was fortified by a wall 2.5–3.0-m wide, surprisingly massive for a site of that order. The stones were laid in a herringbone fashion, a style also noted in the dwellings. Two major and several subphases of construction were discerned and attributed to EB II–III. The houses are well built, yet in spite of several constructional features common to several of them, no uniformity in plan was observed. Early Bronze Age houses were also excavated in area A. These are of a somewhat different nature than those situated near the fortification wall, even though they are of the same period; the houses there are somewhat larger, and no herringbone construction was observed. The ceramic finds are rather poor and monotonous, comprising mainly platters, cooking pots, and storage jars. In spite of the location of the site in a region where Khirbet Kerak Ware should be expected, the total absence of this ceramic family at Qashish is noteworthy. Cylinder seal impressions on storage jars are relatively common.

In the last phase of the Early Bronze Age settlement—within EB III—the fortification wall went out of use. Following a certain occupational gap, new houses were built, partly superimposed on the derelict fortification. Their standard of construction was inferior compared to that of the previous houses; the walls were built of small rough stones, and the plan consisted of a forecourt behind which was a room serving as living quarters.

2. Middle Bronze Age. Remains of the Middle Bronze Age are confined to the high part of the site and include a fortification system and dwellings. This fortified village may have been preceded by an unfortified phase (stratum X), which is hardly attested. The MB fortifications consist of a 2-m-wide wall, a rectangular tower built against this wall's inner face, and a small glacis of small stones and earth dumped against its outer face. Inside the wall a series of rooms and a courtyard were unearthed. These were built against the inner face of the fortification wall on one side and opened onto a paved alley on the other. Similar arrangements were noted at contemporary sites such as Gezer, Shechem, and Taanach. Three phases of a rather short duration were noted, the final being characterized by infant burials in jars, a phenomenon known from several contemporary sites, including neighboring Tel Yoqneam. Just as at Yoqneam, the transition between the MB and LB ages at Qashish (strata VIII–VII) was peaceful.

3. The Late Bronze Age. This settlement was unfortified, and only fragmentary house walls and a few ceramic assemblages have been found so far. Imported (Cypriote and Mycenaean) pottery is relatively scarce. The settlement suffered two destructions in the course of the period: once in the 14th century and again by the end of the 13th (marking the end of the Late Bronze Age).

4. Iron Age. The remains of the Iron Age settlement are even scantier than those of the previous period: it seems that a small settlement, confined to the higher part of the site, was established in Iron I. A round installation built of stone slabs, probably an oil press, is noteworthy. An exact parallel is known from contemporary Yoqneam. The ceramic assemblage includes collar-rim jars and several Philistine sherds. Remains of Iron II are extremely fragmentary, attesting to some occupation during this period.

5. Persian Period. The final phase of occupation is dated to the Persian period. An impressive building was excavated in the E section of the site. It appears to have been an isolated farmhouse built of extremely large stones, which were still clearly visible on the surface of the mound. A few coins, stray sherds, and glass fragments indicate some kind of activity at the site during the Hellenistic and Mamluk periods.

Stratum	*Period*	
I	Persian	Isolated farmhouse
II	Iron III	Scanty remains
III A–B	Iron II	Scanty remains
IV A–B	Iron I	Farm and agricultural instalations
V	LB II A–B	Isolated tower, destruction by fire

VI	LB I B	Unfortified settlement, destruction by fire
VII A–B	LB I A	Unfortified settlement destruction by fire
VIII	LB II–III	Fragmentary paved areas, ash pockets
IX A–C	MB II	Fortified settlement
X	MB I–II	Occupational surface, sherds
XI	EB III	Unfortified settlement
XII	EB II–III	Fortified settlement
XIII	EB II–III	Fortified settlement
XIV	EB I	Unfortified settlement extending beyond site
XV	EB I	Unfortified settlement extending beyond site
—	Neolithic	Stray flint tools

AMNON BEN-TOR

QASILE, TELL (M.R. 130167). A site situated on the N bank of the Yarkon river, about 1 mile from the Mediterranean coast. Two Hebrew ostraca found on the surface of the mound led to systematic excavations of the site, which were carried out under the direction of B. Mazar (1949–51, 1956) and continued under the direction of A. Mazar (1971–74, 1982–84). The 4-acre site is located on a *kurkar* (sandstone) ridge overlooking the Yarkon river and the coastal plain. A permanent settlement was founded on the site in the mid-12th century B.C. The founders were probably Philistines, "Sea Peoples," who settled the S coastal plain of Palestine during the 12th century B.C. Tell Qasile was an important port town, since the Yarkon river was ideal for anchoring the small ships of that time. Seafaring and trade were thus basic factors in the economy of the settlers. Though the ancient name of Tell Qasile is unknown, it is one of the most important sites for studying the material culture of the Philistines during Iron Age I. Three successive occupation levels of the Philistine town were discovered (strata XII–X), covering a span of about 180 years (ca. 1150–980 B.C.). The town was finally conquered and burnt, probably during the conquest of the region by David. The transitions from stratum XII to XI and then from stratum XI to X appear to have been peaceful, and they mark a gradual growth and development of the town.

The buildings of stratum XII are built of mud bricks and are laid on the bedrock, without stone foundations. The two most important structures from this level are the temple and a public building. The temple is a small edifice containing one room, with benches along the walls and a raised platform. A large courtyard in front of the temple accommodated ritual ceremonies and sacrifices. The public building, situated S of the temple, contained a large hall, with benches along the walls and a free-standing hearth, recalling similar hearths in the Aegean and Anatolian worlds. In the following stratum (XI), the city was rebuilt, usually with stone structures. The temple was rebuilt on the remains of the previous one; it was somewhat larger, the entrance was at the NE corner, and a small chamber built inside the main structure served as a treasury, where a large collection of cult objects was found.

In stratum X, the temple was enlarged and redesigned. See Fig. QAS.01. An entrance chamber with a wide opening led to the main hall, the roof of which was supported by two cedar pillar with circular stone bases. Inside the main hall, benches skirted the walls, and a raised platform served as the "holy of holies" in the sanctuary; a narrow room at the back of the temple served as a treasury room. Stone walls surrounded the courtyard of this temple, in which auxiliary rooms and a sacrificial altar were constructed. In both stratum XI and stratum X, a small shrine was built to the W of the main temple. This was a small room with benches along the walls and a raised platform in one corner.

The finds in the successive temples at Tell Qasile are of particular importance, since they contain a unique collection of cult objects made of pottery, as well as of metal, alabaster, and ivory. Some of the cult objects are of particular importance as unique art objects from the period of the Judges. Both the plans of the temples and the shapes of the cult objects reflect a strong Canaanite influence on the local culture. Yet similarities to cultural phenomena in Cyprus, as well as in the Aegean world, point to the origin of the local population, though it can be conjectured that the Philistine newcomers were just the overlords of a local autochtonous population. This is corroborated by the nature of the rich pottery assemblages found in the sanctuary, which show a combination of characteristically Philistine traditions and traditions typical of the Canaanite culture.

A dwelling quarter excavated at the S part of the tell demonstrates the urban planning and the design of private dwellings during the 11th century B.C. See Fig. CIT.05. The houses are arranged in well-planned blocks; each house is square and contains a courtyard divided by a row of pillars. The rich finds in these houses illustrate the wealth of the population on the eve of the Israelite conquest. Imported pottery from Phoenicia, Cyprus, and Egypt implies trade connections.

The destruction of Tell Qasile during the time of David did not end the town. During the United Monarchy, the town was partially rebuilt (strata IX–VIII), though not as densely as in the previous period, and it probably served as a port town for Israel. The town was destroyed at the end of the 10th century B.C., perhaps during Shishak's invasion of the country. A gap in occupation lasted most of the Iron Age, and only in the late 7th century did a small settlement exist on the site, perhaps related to the Judean expansion to the coast during the time of Josiah.

During the Persian period, a large building at the top of the mound perhaps served as an administration building or a farmstead. A rock-cut square well supplied water to the site during this time. During the Hellenistic and Roman periods, there was a small settlement on the site. Isolated structures from the Byzantine period, particularly a large public bathhouse on the mound and a synagogue at the foot of the mound, are evidence for a small town which existed in the vicinity of the tell. An isolated estate, dated perhaps to the time of the Crusaders, was found on the top of the mound.

QATABANIAN LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

QEDAH, TELL EL- (M.R. 203269). A site, located in N Israel between the Sea of Galilee and the Huleh basin, which is certainly to be identified with biblical Hazor. Hazor is first mentioned as the major military power organizing the N coalition against the Israelites (Jos 11:1, 10) and is specifically described as standing on a "mound" (Heb *tēl;* Josh 11:13). The area was later ascribed to the territory of Naphtali (Josh 19:32, 36). The city's military strength is again described when Hazor was able to muster 900 chariots of iron in conflicts with Israel in the days of Deborah (Judges 4). Its strategic importance is further demonstrated when Solomon chose to fortify Hazor along with Jerusalem, Megiddo, and Gezer (1 Kgs 9:15). The environs of Hazor were later targets of a prophetic denunciation by Jeremiah (49:28–33). The name "Hazor" comes from the Hebrew *ḥāṣēr,* "enclosure," which aptly describes the site. Tell el-Qedah (Tell Waqqas) is an imposing mound, with a 180-acre Lower City of the Bronze Age and a 30-acre Upper City or acropolis at the S end, which dates to the Iron Age. It is strategically situated at the juncture of the E flanks of the Lebanon range and the W edge of the Jordan Valley (4 miles SW of the Huleh basin), on the N border of Palestine and astride the main route N to Syria and beyond. In the Neo-Assyrian annals documenting troop movements S into Palestine, Hazor is always named along with Abel Beth-Maacah and Dan as prominent fortresses on the N frontier.

C. Other Sites Named Hazor

———

A. History of Investigations

The mound of Hazor was first investigated in 1928 by J. Garstang, although his soundings remain largely unpublished. It was then excavated in 1955–58 and 1968–72, in a major project carried out by Yigael Yadin and other prominent Israeli archaeologists. Yadin's principal excavation areas were A, B, BA, G, L, and M in the Upper City; and, in the Lower City, areas C, D, E, F, H, K, N, P, and 210. (The Lower City has its own local strata numbering sequence: 4 = XVII; 3 = XVI; 2 = XV; 1b = XIV; and 1a = XIII.)

B. Results of Excavations

1. Early Bronze Age. The site was first occupied in EB II–III (strata XXI–XIX; ca. 2900–2300 B.C.), followed by a break in the EB IV period (scant material of stratum XVIII; ca. 2300–2000 B.C.).

2. Middle Bronze Age. The beginnings of the urbanized city of the 2d millennium B.C. are already seen in the relatively few structures and tombs of MB I (stratum "Pre-XVII"; ca. 1900–1800/1750 B.C.). One tomb, found only in reconstruction work in 1971–72 in connection with the area L water tunnel, contained more than 150 vessels of this and the beginning of the next stratum.

During the MB II period (stratum XVII; ca. 1800/1750–1650 B.C.) there was a substantial buildup of domestic structures, accompanied by rock-cut cisterns (some with numerous scarabs), a system of underground tunnels (originally tombs?), and intramural jar burials, especially of infants. A large, but only partially cleared, mudbrick palace or citadel was found in area K. A jar inscribed with a personal name is the earliest-known Akkadian inscription found in Israel. Most significant are the area-K and multiple-entryway city gates, and the earliest city defenses in areas C, G, H, K, and P. The latter consisted of varying combinations of earthen embankments (the typical MB glacis), fosses, counterscarps, and massive stone and mud-brick ramparts. All these elements were superbly engineered and adapted to the topography and defense requirements of the differing areas of the 180-acre Lower City, which appears to have been entirely developed (local stratum 4). To this horizon belong the earliest-known references to Hazor in the literary sources—the Brussels Execration texts from Egypt (ca. 1825–1775 B.C.) and several references in the Mari texts (ca. 18th century). The Mari texts mention tin-trading caravans plying the routes between Upper Mesopotamia and Hazor (as well as Dan) in N Palestine. This is the period when true tin-bronze technology came into widespread use in Palestine, and Hazor must have played a significant role in the redistribution of the vital element of tin, which had to be imported. At Hazor itself, a fragment of a cuneiform tablet contains part of a Sumerian-Akkadian lexical text of the Mari period.

The zenith of the Lower City was reached in MB III (stratum XVI = local stratum 3; ca. 1650–1550 B.C.), when a population of ca. 15,000–20,000 would have made Hazor probably the largest Canaanite city-state in Palestine. The inhabitants of stratum XVI reused and augmented all of the above domestic features. The extensive rock-cut tunnels of the previous stratum were reused for storage, reservoirs, and even drainage channels. The underground cisterns were also reused (like Cistern 9012). Particularly significant was the reconstruction of the simple area-K gateway into a monumental three-entryway, towered city gate like those known from Shechem and Gezer, as well as prototypes found throughout Syria and Anatolia at this time. This gate was accompanied by a stretch of casemate city wall, one of the earliest known examples of this type of fortification in Palestine (see others at Ta‘anach and Shechem). The palace-citadel in area A continued. The first temples appeared in stratum XVI: in area A is a rectangular temple with basalt orthostats at the entrance; a double (or "bilobate") temple is in area F; and in area H is a bipartite temple (the later tripartite "orthostat" temple; below). Stratum XVI ended in a major destruction, as did most sites in Palestine at the end of the MB. These destructions were in

connection with Egyptian punitive raids following the expulsion of the Asiatic (or "Hyksos") princes at the end of the 17th and beginning of the 18th Dynasties (ca. 1540–1500 B.C.). An ephemeral post-destruction stratum, "post-XVI," consists mostly of burials and some transitional MB III/LB I pottery. It is probably to this horizon that we should attribute the reference to Hazor on the walls of the temple at Karnak, which lists the sites conquered by Thutmose III.

3. Late Bronze Age. The full developed LB I period witnessed the rebuilding of urban Hazor during the early part of the Egyptian New Kingdom (stratum XV; ca. 1500–1400 B.C.). The city gate in area K was reused, as apparently were some of the earlier city walls. The area-A rectangular temple was slightly altered and reused. The area-H bipartite temple from stratum XVI was reused in its basic form, but it was modified to include a forecourt that featured a stone offering table; a semicircular basin and drainpipe system for animal sacrifices; and a potter's workshop, which was found in situ with many ceramic miniature bowls (votives). Finds of particular significance included bronze figurines; a bronze plaque of a robed priest, which has almost exact Syro-Mesopotamian parallels (one of the finest art objects ever found in Bronze Age Palestine); and a liver model used in divination, which reads in Akkadian (in part): "Ishtar will eat the land; Nergal will …; the gods of the city will come back." A new temple was built in area F—a square, "mazelike" structure that has close parallels with the Mt. Gerizim temple at Shechem and with the Amman airport temple.

During the well-known "Amarna Age" in LB IIA, Hazor reached the peak of its recovery (stratum XIV; ca. 1400–1300 B.C.). One tomb contained large quantities of Mycenaean IIIA pottery imported from the Greek mainland. Some of the fortifications appear to have continued along with the temples. The area-H temple was converted from a bipartite into a tripartite structure, and most of the interior was lined with splendid basalt orthostats in the N Syrian style. The newly built "stelae temple" in area C was especially significant. It consisted of a semicircle of ten (?) small monoliths of dressed basalt, with a basalt statue of a seated king or deity. The center stele has a bas-relief depicting a pair of upraised palms, above which is a disk-within-a-crescent. These symbols are often associated with Baʿal Ḥarmmōn and the Phoenician goddess Tanit (Asherah of the Canaanite pantheon). Near the temple was found a potter's workshop for mass-producing votive vessels; a small, well-modeled terra-cotta cult mask; fine cylinder seals of Mitannian (or N Syrian) style; and a splendid silver-plated bronze cult-standard.

A partially cleared structure below the Iron Age "pillared building" (below) suggests an Amarna Age palace. Its ruins included basalt orthostats; stone columns and bases; a staircase; and the forepart of a magnificent basalt lioness. It is possible that these are remains of the palace of Abdi-Tirshi, a king of Hazor in the 14th century B.C., who is mentioned in the Amarna letters. Some idea of the importance of the city, as inferred from these letters, is the fact that he alone of the Palestinian princes styled himself "king." Abdi-Tirshi presumed to oversee other N cities, seized rival city-states, and connived with the lawless "Habiru" against the pharaoh. An Akkadian fragment from Hazor (unfortunately found out of context) probably belongs to this horizon and concerns litigation over a real-estate transaction, which was brought to the attention of the king of Hazor. Further textual evidence of the importance of Hazor in the LB II period is gained from its mention in topographical lists of Amenophis III (ca. 1400 B.C.), Seti I (ca. 1300 B.C.), and Ramesses II (ca. 13th century B.C.).

The final phase of the Late Bronze Age, LB IIB, is attested by stratum XIII (ca. 1300–1220 B.C.), when Hazor was clearly in decline. While the temples were mostly rebuilt, the area-H temple demonstrates the decline with its misaligned orthostats and generally poor alterations. This phase ended in a massive destruction of the entire Lower City, which was buried under several feet of debris and was never reoccupied. Yadin dated this conflagration to ca. 1250–1230 B.C. on the basis of the presence of Mycenaean IIIB pottery, which ceased to be imported from the Greek mainland by 1220 B.C. Yadin also attributed the destruction to the incoming Israelites under Joshua, who according to Josh 11:10 captured "Hazor … the head of all those kingdoms" and killed its king, Jabin. More recently, however, other scholars have pointed out that the destruction was probably too early to allow connection with Israelite invaders (if any) in Joshua's time. Among the most impressive remains from the stratum XIII destruction are those objects connected with the last phase of the area-H orthostat temple. These include basalt

offering tables, altars, and basins; a basalt seated figure of a king or deity; a terra-cotta temple model; ceramic votive vessels; cylinder seals; beads and other jewelry; terra-cotta zoomorphic figurines; a bronze bull (probably an El figurine); and bronze figurines representing other deities.

4. Iron Age. Following the massive destruction of the city, there was only a "squatter occupation," consisting mostly of huts and rubbish pits among the ruins (stratum XII; early 12th century B.C.). Yadin supposed this to be the early attempt at settlement by the Israelites after their capture of the city. The following phase (stratum XI; ca. 11th century B.C.) exhibits a more permanent settlement, although it has relatively few structures. A somewhat enigmatic installation was interpreted as a *bâmah,* or "high place." A hoard of bronzes in an associated votive jar included a lugged ax and a seated bronze El/Baal figure. Both, however, are typically LB in design and may be holdovers from earlier levels, and thus are not characteristically "Israelite."

Iron Age Hazor really began as an urban center with the Solomonic era (strata Xb–a; mid-late 10th century B.C.). The large Lower City was abandoned from this point on; the new settlement centered on the 30-acre Upper City. Particularly important for this period is a large citadel complex in area B and the casemate defensive wall and splendid four-entryway city gate, both of which were found in area A. The latter was compared by Yadin with the nearly identical walls and gates found at Megiddo and Gezer, thus confirming the historical footnote in 1 Kgs 9:15–17. Hazor, refortified by Solomon as part of his strongly centralized administrative system, probably served as the regional capital of the district.

The late 10th/early 9th centuries B.C. (strata IXb–a) are characterized by a decline, then a destruction about the time of the rise of the Omrides (ca. 875 B.C.; or perhaps associated with the raids of Ben-Hadad of Damascus in the early 9th century; cf. 2 Chr 16:4). During the Omride dynasty, Hazor (stratum VIII) was again a most impressive site. On the acropolis, the principal building was a multiroomed citadel, some 70 by 80 ft. constructed with thick walls and ashlar masonry. Several "Proto-Aeolic" (or palmette) capitals found in stratum VII probably originated here. In area G, solid walls were built over the casemates, but in area A the casemate city walls were reused, with the chambers often used as storerooms. In area A, a large three-room structure (the "pillared building"), with a double row of monolithic columns flanking the center aisle, probably served as a storehouse. The most dramatic change in stratum VIII was the construction of the monumental water system in area L. This consisted of a massive stepped shaft, some 50-ft square and about 100-ft deep, cut through the solid rock; from this vertical shaft branched a domed lateral gallery, which sloped downward for some 80 ft to reach a deep underground spring. The ground-level entrance was guarded by a sort of "gatehouse." This marvelously engineered water system, comparable in date and function to the one at Megiddo (and perhaps also at Gezer), was probably constructed in anticipation of the Assyrian advance.

During the late 9th century B.C. (stratum VII), the citadel, pillared storehouse, water system, and other features were reused. This stratum ends in a destruction, perhaps related to the Aramean incursions into the N of Israel ca. 810 B.C.

In the early 8th century (stratum VI), Hazor experienced a renaissance. The area-B citadel continued, but other public areas in the Upper City were converted to residences, workshops, and storage facilities. Near the citadel was a two-story house, with a well-preserved staircase, which may have belonged to an important official or an elite family. Another fine house produced an ostracon with the name "Makbiram" and a carved ivory panel. The destruction that ended stratum VI was probably caused by an earthquake in the time of Jeroboam II (ca. 786–746 B.C.).

Hazor, like all major sites in the N, was destroyed by the Assyrians (strata VB–a), in this case undoubtedly by Tiglath-pileser III in 732 B.C. (1 Kgs 15:29). The citadel, which had been reinforced by an added offsets-insets perimeter wall, was completely destroyed. Among the remains were several objects inscribed in Hebrew, including a storejar "belonging to Pekah, *semadar*" (a kind of wine); another vessel reading "belonging to Delayo"; a bowl inscribed *qodeš,* "holy"; an ivory *pyksis*-box; a carved stone ladle with an embossed hand; stone cosmetic palettes; Asherah figurines; and the skeleton of a partly consumed pig.

Stratum IV (late 8th century B.C.) represents the postdestruction period. It was a temporary, unfortified settlement, which Yadin thought was occupied by the returning Israelite survivors of the Assyrian destruction. The main feature excavated in stratum III was an Assyrian-period citadel. There is no 7th–6th century material that might provide a context for the references to Hazor in Jer 49:28–33.

5. Persian and Later Occupations. Hazor's final days are represented by scattered Persian finds of stratum II (ca. 4th century B.C.), among which were a large citadel on the acropolis, Persian coins, and imported Attic wares. A final, smaller citadel belongs to stratum I (3d –2d centuries B.C.) and may be associated with references in 1 Macc 11:47 to Jonathan's struggles against the Seleucid king, Demetrius II, on the "plain of Hazor." The abandoned site, despite its strategic location and formidable appearance, lay neglected until its rediscovery as biblical Hazor in 1875 in the proposed identification of J. L. Porter.

C. Other Sites Named Hazor

Two other sites named Hazor are found in the Hebrew Bible. In Judah, Hazor-hadattah (so LXX, or "New Hazor"; Josh 15:23) may be located at el-Jebariyeh. In Benjamin, a Hazor (Neh 11:33) has been identified with Khirbet Hazzur, 4 miles NW of Jerusalem. See also HAZOR.

QIRI, TELL (M.R. 160227). A site about 4 km of Mt. Carmel, where the hill country tapers off into the Jezreel valley. The site contains artifacts dated to the biblical period.

A. Location and Identification

Tell Qiri is situated within modern Kibbutz Ha-Zorea, 2 km S of Tell Yoqneam. It does not have the characteristic appearance of a tell, but instead consists of numerous occupation layers on the E slopes of Mt. Carmel that descend into the Shophet river (the site's water source). Wall fragments, tombs, potsherds, coins, etc., encountered during recent construction activities seem to indicate that the size of Tell Qiri was about 10–12 dunams, which fit well the pattern of other village sites in the region (Qashish, Reʿala, etc.). These chance finds indicate human activity at the site in almost all periods, from the Neolithic to present times. When excavations started in 1975, about one third of the site was still free of modern buildings; today, the entire site is covered by the houses of Kibbutz Ha-Zorea.

Qiri is the Arabic name of the site. So far no identification with an ancient or biblical place is possible, and it appears that Qiri was a rather insignificant rural site never mentioned in antiquity. Even though a substantial part of the population of the land lived in such small, rural sites, they remain almost unknown and outside the scope of most archaeological investigation. The opportunity to shed some light on this type of settlement provided the impetus for the excavation of the site.

B. The Excavation

The excavation of Tell Qiri is part of a larger, regional archaeological research project—the Yoqneam Regional Project; cf. JOKNEAM; QASHISH, TEL. The site was excavated between 1975 and 1977 by a team from the Hebrew University of Jerusalem, headed by Amnon Ben-Tor. This was the first site investigated in the regional project; excavation techniques and registration and ceramic typology principles developed and tested here were also applied to other sites excavated by the project. Even though sporadic finds indicate some kind of activity in Tell Qiri at almost every period, stratum numbers

were assigned only to those periods yielding architectural remains. The earliest settlement (stratum), which was reached in a very limited area, is Neolithic. Some walls, a stone silo, a substantial amount of pottery, and flint tools (axes, picks, chisels) were found. The pottery, which includes dark-face burnished ware, correlates well with other assemblages known from the region belonging to the transition from Late Neolithic to Chalcolithic, and dating to the second half of the 5th millennium B.C. Meager remains of houses of an unfortified Middle Bronze II village (stratum X) were encountered on the site's E slope (area E).

The main importance of Tell Qiri lies in the substantial accumulation of the Iron Age strata: four main strata (IX–VI/V), further subdivided into twelve subphases in an uninterrupted sequence, represent an unfortified Iron I–II village (12th–8th centuries B.C.). Gradual changes and development in house plans and ceramic typology can clearly be observed. Dwellings were built of mudbricks on stone foundations, the walls being 0.6-m thick. Since room dimensions never exceeded 2.5 m, the houses could be roofed without supporting pillars. Only once through the entire period—between strata VIII and VII (i.e., between Iron IB and IC)—was there a significant change in the orientation of the buildings. Apparently there was also no major break in the ethnic identity of the village's population during all that time. Botanical remains include olive, wheat, pomegranate, peas, and vetch. Sickle blades represent 45 percent of the lithic assemblage; 80 percent of the animal bones belong to sheep and goats, and 15 percent belong to cattle. Some hunting and fishing was also practiced, as indicated by various fish, gazelle, and fallow-deer bones. This repertoire of finds clearly indicates the rural character of the site, and this is reinforced by the large number of silos and agricultural installations uncovered.

An interesting group of finds includes 10th-century B.C. cooking pots, the rims of which were incised before firing with a sign similar to one of the Phoenician/Hebrew letters of the alphabet, a phenomenon characteristic of sites in the Jezreel Valley at that period (such as Megiddo, Tell Yoqneam, and Tell Qashish). So far, neither the incised signs nor their significance is understood.

A noteworthy ceramic assemblage was unearthed in a dwelling of stratum VIII (= 11th century B.C.), including an incense burner, a double libation vessel, a chalice, a cup and saucer, and a votive bowl. The cultic nature of this assemblage is reinforced by the apparent remains of sacrifices found there. A number of bones belonging to the right foreleg of sheep and goats clearly indicate the practice of sacrificing "the right thigh" (cf. Lev 7:32–33).

From the strata of the Persian period onwards, only fragmentary buildings and some pottery, glass, and coins were found. Some 20 rock-cut tombs of the Persian period were discovered uphill on the W part of the site; the dead were placed in the tombs with their heads pointing north, and the tombs were covered by flat stone slabs. The cemetery, as well as all other remains of strata IV–I, was severely damaged by modern building activities associated with the modern kibbutz.

Stratum	Period	
I	Roman–Byzantine	Fragmentary walls, surface finds
II	Early Roman	Fragmentary walls, water installations
III	Hellenistic	Isolated building
IV	Persian	Houses, cemetery
V/VI A–C	Iron II	Public (?) building, house fragments
VII A–C	Iron IC	Rural settlement, agricultural installations
VIII A–C	Iron IB	Rural settlement, agricultural installations
IX A–C	Iron IA	Rural settlement, agricultural installations
X	Middle Bronze II–III	Rural settlement on E slope
XI	Late Neolithic	Rural settlement, agricultural installations

QUADRATUS. Earliest known Christian apologist, who, according to Eusebius, addressed his work to the emperor Hadrian, presumably when he first visited Athens in A.D. 124–125. His date is known only from Eusebius' *Chronicle* and *Church History,* and the latter work contains the one known fragment of the apology. Eusebius had the whole work, but cited it only to indicate Quadratus' intelligence, "apostolic orthodoxy," and early date. The passage cited contrasts the genuine healings and raisings from the dead of "our Savior" with those of another person whose miracles were only in semblance or had temporary effects, or else with a "seeming" Savior who accomplished no permanent achievements. Quadratus said that those healed or raised from the dead lived on "for a considerable time" after the "departure" of the Savior. In consequence, "some of them survived even to our own day," that is, presumably up to the time of Quadratus' birth (*Hist. Eccl.* 4.3.1–2).

The context of his argument, regrettably not reported by Eusebius, could have lain in philosophical debates over men treated as gods because of fictitious miracles, or in debates over Christ's miracles, or in both at once. About half a century later, Irenaeus may have relied on Quadratus for his own discussions of miracles (*Haer.* 2.31.2 and 2.32.4), later copied by Eusebius (*Hist. Eccl.* 5. 7). Irenaeus claimed that in Christian churches there were those who "cure the sick by laying hands on them, and … the dead have been raised and remained with us for many years." It is not absolutely certain what time frames either Quadratus or Irenaeus had in view, for the latter spoke of the reign of Domitian, nearly a century earlier, as "not long ago but practically in our own generation" (*Haer.* 5.30.1; a passage known to Eusebius, *Hist. Eccl.* 5. 8. 6).

Contemporary gnostics used the title "Savior" for their spiritual Jesus, but presumably Quadratus had in mind the more practical "salvation" provided by healings and raisings. In his time, the emperor Hadrian himself was often hailed as Savior, but the apologist would hardly have criticized to his face.

Attempts to identify Quadratus with others of the same name or to connect his work with other writings have not been successful. It is unlikely that Quadratus' apology enjoyed any success, for its theme is not repeated by the later apologists of the 2d century.

QUAIL. See ZOOLOGY.

QUART. See WEIGHTS AND MEASURES.

QUARTER, SECOND (PLACE). See SECOND QUARTER.

QUARTUS (PERSON) [Gk *Kouartos* (Κουαρτος)]. A Christian identified as the brother who sends greetings through Paul to the church at Rome (Rom 16:23). Mentioned after Tertius, the stenographer (v 22); Gaius, Paul's host (v 23); and Erastus, the city treasurer (v 23), Quartus (a Latin name meaning "fourth") is the last person cited by Paul in Romans 16 who sends greetings. The description, "the brother," given to Quartus is generally taken in the figurative sense to indicate membership in the Church, and is usually translated "our brother" (RSV, NEB), meaning "fellow Christian." This interpretation raises the question of why Quartus is singled out with a designation common to all the others in Romans 16. An alternative reading is to take "the brother" in the sense of physical relationship, meaning that

Quartus is the brother of the previously mentioned Tertius or Erastus. In support of a link between Tertius and Quartus is an implied connection of siblings based on the meaning of their Latin names: Tertius, the "third" born, Quartus, the "fourth" born (Bruce *Romans* TNTC, 266). The problem with this reading is that the mention of the names Gaius and Erastus between Tertius and Quartus weakens a possible association between the latter two. Also, if Quartus were "the brother in the flesh" of Erastus, the person mentioned immediately before him, the possessive pronoun *autou,* "his," would be expected. Because of these difficulties, it is better to take "the brother" in the sense of spiritual brotherhood. Perhaps Paul included this designation for Quartus because he exhibited the qualities of being a "fellow Christian" in an exemplary way.

JOHN GILLMAN

QUEEN. The English word "queen" is used to translate three Hebrew words in the OT: *malkâ, šēgal,* and *gĕbîrâ.* The term *malkâ,* the feminine form of *melek* (king), describes foreign queen regnants and consorts, e.g., the queens of Sheba (1 Kgs 10:1ff. = 2 Chr 9:1ff.) and of Persia (Vashti—Esth 1:9; and Esther—Esth 2:22). The term *šēgal* occurs only twice: in Neh 2:6 it refers to the wife of King Artaxerxes of Persia, while in Ps 45:9 it refers to a woman who (clothed) "in gold of Ophir" stands at the right hand of the king. The term *gĕbîrâ,* the feminine form of *gebîr* ("lord" or "master"), is used of a foreign queen (1 Kgs 11:19), but more often it designates the mother of a Judean or Israelite king (1 Kgs 15:13 = 2 Chr 15:16; 2 Kgs 10:13; Jer 13:18; 29:2).

3. Hittite Queens
4. Foreign Queens in the Bible

B. Israel and Judah
1. Queen as Ruler
2. Queen as Wife
3. The Queen Mother

———

A. ANE Background

1. Egyptian Queens. The 18th Dynasty (ca. 1570–1320 B.C.E.) represents a high point in the history of Egyptian queens. Queen Hatshepsut (wife of Thutmose II and stepmother of Thutmose III) assumed control upon her husband's death and undertook several building projects (e.g., the mortuary temple at Deir el-Bahri; additions to the Temple at Karnak, etc.). Two other queens, Tiy (wife of Amenophis III) and Nefertiti (wife of Akhenaten), are given unusual prominence in both statuary and inscriptional remains.

2. Mesopotamian Queens. Information is scarce concerning the queens of Mesopotamia. At least one woman, Ku-baba, achieved the position of queen regnant. Originally a barmaid, she ruled Kish in the 3d millennium and is the only example of a ruling queen known. Other queens achieved prominence as consorts. Baranamtara (wife of Lugalanda) and Shag-Shag (wife of Urukagina) are mentioned in various temple records. Wives of the last rulers of Lagash (Early Dynastic period), they apparently functioned in a cultic capacity. In addition to these examples, two Neo-Assyrian queens—Sammuramat (wife of Shamshi-Adad V; mother of Adad-nirari III) and Zakutu (wife of Sennacherib; mother of Esarhaddon)—were active as queen mothers. Sammuramat served as queen regnant for her son, Adad-narari III, while Zakutu was probably influential in getting Esarhaddon, the youngest of Sennacherib's sons, appointed his father's heir.

The correspondence of the women at Mari (Old Babylonian period) provides readers with an unusual glimpse into the world of Šibtu, queen of Mari. Daughter of one king (Yarim-Lim of Yamḫad) and wife of another (Zimri-Lim of Mari), Šibtu exerted great influence on the royal court. Though the king retained

supreme authority, she often served as his deputy in his absence. As queen, it fell within her duties to oversee the palace, supervise court officials, engage in cultic affairs, and serve as the king's representative in both domestic and state matters. (Batto 1974: 8–21).

3. Hittite Queens. Hittite queens, titled *tawannannas*, occupied positions of great influence. A *tawannanna* served as regnant in the event of the king's death or as his deputy during his absence. She participated in a broad spectrum of activities—political, military, diplomatic—and could on occasion oppose the king. In addition, she had a special relationship with the sun-goddess and played an important role in the cult. One of the more notable *tawannannas* was Paduhepa, wife of Hattusilis III, who had her own seal for state affairs.

4. Foreign Queens in the Bible. Five foreign queens are mentioned in the Bible: the queen of Sheba (1 Kings 10); Taphenes of Egypt (1 Kgs 11:19–20); Vashti of Persia (Esther 1–2); Esther of Persia (Esther 2–10); and Candace of Ethiopia (Acts 8:27). Of these, only the queens of Sheba and Ethiopia are portrayed as sovereign rulers. The two Persian queens—Vashti and Esther—were consorts in whom little power resided. Each was dependent on her royal husband for her position at court.

B. Israel and Judah

1. Queen as Ruler. Neither Israel nor Judah accepted the idea of a female regnant. Only one woman—ATHALIAH of Judah (2 Kings 11)—aspired to and attained the throne. Wife to one king (Jehoram) and mother of another (Ahaziah), Athaliah seized the throne upon her reigning son's death. In spite of her gender, she amassed enough support to sustain a seven-year reign. She was finally killed in a temple-sponsored coup. See also JOASH.

2. Queen as Wife. a. Diplomatic Marriage. Royal marriages in Israel and Judah helped to establish alliances, strengthen treaties, neutralize potential enemies, and generally reinforce relationships between the parties involved. There are four accounts of an Israelite or Judean king marrying a foreign princess: (1) David's marriage to Maacah, daughter of Talmai, king of Geshur (2 Sam 3:3); (2) Solomon's marriage to "pharaoh's daughter" (1 Kgs 3:1); (3) Ahab's marriage to Jezebel, daughter of the king of Tyre (1 Kgs 16:31); and (4) Jehoram's marriage to Athaliah, offspring of the royal house of Israel (2 Kgs 8:18). A fifth possibility is Solomon's marriage to Naamah (1 Kgs 14:21). Although the MT simply describes Naamah as an "Ammonitess," in 1 Kgs 12:24 (LXX) she is called the "daughter of Ana, son of Naash, king of the children of Ammon." If this tradition is correct, Solomon married into the royal house of Ammon as well as the one of Egypt. Each of these wives represented an important diplomatic link between her own country and that of her husband's. Thus, Solomon's marriage to "pharaoh's daughter" was aimed at strengthening relations between Israel and Egypt. The same can be said of Ahab's marriage to Jezebel, which helped ally Israel with Phoenicia. Moreover, Jehoram's marriage to Athaliah may have been responsible for the end of years of hostilities between Judah and Israel. Marriages between royal houses could also give credibility to sovereign claims. David's marriage to Maacah, for example, probably proved helpful in his later bid for Geshur. Domestic policy was another determining factor in the selection of a king's wives. Royal marriages to commoners helped to ensure the allegiance of their powerful families. Since so little information is preserved about these marriages, it is difficult to determine which were politically significant. Information is also scarce about the composition of the king's harem vis à vis his political policies. Only one harem—Solomon's—is described in terms of its ethnic composition: according to 1 Kgs 11:1–2, it included women from Egypt, Moab, Ammon, Edom, Sidon, and Hatti, a wide range of locales which may reflect Solomon's diplomatic agenda, or simply attest to his eclectic taste in women.

b. Royal Harems. Although no technical term is used in Hebrew to designate the king's wives and concubines, there is ample evidence that such a body of women existed. The most notable is the report of Solomon's 700 wives and 300 concubines (1 Kgs 11:3). While these figures are probably exaggerated, it is quite possible that Solomon kept a large number of women in his harem. Nor was Solomon the only king to do so. Rehoboam reportedly had 18 wives and 60 concubines (2 Chr 11:21), while Abijah's wives numbered 14 (2 Chr 13:21). Other kings had harems which are not numbered: Saul (2 Sam 3:7; 12:8), David (2 Sam 3:2–5; 5:13; 11:27; 15:16; 16:21–22; 20:3), Ahab (1 Kgs 20:3–7), Jehoiachin (2 Kgs

24:15), Jehoram (2 Chr 21:14, 17), and Zedekiah (Jer 38:23). The royal harem did not exist without censure; numerous wives were thought to threaten a king's piety: "And he [the king] shall not multiply wives for himself, lest his heart turn away …" (Deut 17:17).

Was the king's harem politically significant? There is some evidence to suggest that the harem played a part in the succession process. Whoever possessed the former king's harem also possessed a key to his throne. This conclusion is implied in Abner's quarrel with Ishbaal (2 Sam 3:6–11), in Nathan's oracle to David (2 Sam 12:7–15), in Absalom's capture of Jerusalem (2 Sam 16:15–23), and in Adonijah's request for Abishag (1 Kgs 2:13–25). When Absalom revolted against his father David, David was forced to leave Jerusalem (2 Samuel 15). Upon Ahithophel's advice, Absalom publicly possessed the concubines David left behind (2 Sam 16:20–22). The two events—the possession of the city and the possession of the concubines—are equated with the seizure of David's throne. Twice, in the case of Abner/Ishbaal and Adonijah/Solomon, either the possession of or the desire to possess a former king's woman was interpreted as a bid for the throne. Even Yahweh, through the prophet Nathan, marked David as the future king by giving him Saul's wives (2 Sam 12:8). This function of the harem, however, seems to have been confined to the David/Solomon stories. Perhaps as Israel's succession policy became more defined, the political significance of the harem declined.

c. Influence. It is hard to determine the influence of the king's wife. Although many wives may have been active, information is preserved for only a few. Athaliah of Judah is mentioned briefly in the evaluation of her husband's reign. She is the reason he walked "in the ways of the house of Ahab" (2 Kgs 8:18). More is recorded about Jezebel of Israel. Jezebel is said to have caused the apostasy of her husband Ahab (1 Kgs 16:31), to have persecuted the prophets of Yahweh (1 Kings 18–19), and to have planned the judicial death of Naboth the Jezreelite (1 Kings 21).

As a member of the harem, the king's wife usually gained prominence upon her son's succession. Occasionally she was able to influence dynastic decisions. Although succession in the southern kingdom usually followed the principle of primogeniture (passing from father to the oldest son), two royal wives apparently circumvented convention. The most detailed account focuses upon Bathsheba's intervention on behalf of her son Solomon. Although Adonijah was David's oldest surviving son, Bathsheba convinced David to appoint Solomon as his successor (1 Kings 1). A more implicit instance of a wife's affecting the succession process is found in 2 Chr 11:21–22. While Abijah was not Rehoboam's oldest son, he was nevertheless designated king. Abijah's mother was Maacah, Rehoboam's "favorite" wife. Once again, it would appear, a royal wife stood behind the selection of a king.

3. The Queen Mother. Information concerning the king's mother is often—though not always—preserved in the introductory regnal formula of her son. Of the eighteen mothers who are named, fifteen are of Judean kings, two of Israelite kings, and one is from the period of the united monarchy. See the following table:

				MOTHER'S	REFERENCE
KING/SON	MOTHER	FATHER	HOME		
Solomon	Bathsheba	Eliam	?	2 Sam	11:3
					12:24

ISRAEL

Jeroboam	Zeruah			1 Kgs	11:26
Ahaziah	Jezebel	Ethbaal	Tyre	1 Kgs	16:31
					22:52
Jehoram	Jezebel	Ethbaal	Tyre	2 Kgs	3:2
					9:22

JUDAH

Rehoboam	Naamah	?	Ammon	1 Kgs	14:21

Abijah	Maacah	Abishalom	?		15:2
Asa	Maacah	Abishalom	?		15:10
Jehoshaphat	Azubah	Shilhi	?		22:42
Jehoram	?	?	?	——	——
Ahaziah	Athaliah	Omri/Ahab (?)	Israel	2 Kgs	8:26
Joash	Zibiah	?	Beersheba		12:1
Amaziah	Jehoaddin	?	Jerusalem		14:2
Azariah	Jecoliah	?	Jerusalem		15:2
Jotham	Jerusha	Zadok	?		15:33
Ahaz	?	?	?	——	——
Hezekiah	Abi	Zechariah	?		18:2
Manassah	Hephzibah	?	?		21:1
Amon	Meshullemeth	Haruz	Jotbah		21:19
Josiah	Jediah	Adaiah	Bozkath		22:1
Jehoahaz	Hamutal	Jeremiah	Libnah		23:31
Jehoiakim	Zebidah	Pedaiah	Rumah		23:36
Jehoiachin	Nehushta	Elnathan	Jerusalem		24:8
Zedekiah	Hamutal	Jeremiah	Libnah		24:18

The queen mothers come from a variety of locations: three are foreign (Jezebel, Naamah, Athaliah); five are from the provinces (Zibiah, Meshullemeth, Jedidah, Hamutal, Zebidah); three are from Jerusalem (Jehoaddin, Jecoliah Nehushta), and seven are named without any mention of their homes.

Did the mother of the king hold specific rank and powers? Since only two Israelite kings' mothers are mentioned, it is difficult to know if the position of "queen mother" existed in the northern kingdom. If it did, no information other than the accounts of Jezebel have survived. The same cannot be said about Judah. All but two Judean kings (Jehoram and Ahaz) have their mothers' names preserved. In at least one instance, the mother of a Judean king (Jehoiachin) possessed her own ceremonial attire and throne (Jer 13:18). Moreover, a Judean king's mother occupied a position from which she could be removed. Asa, for instance, found it necessary to depose his mother/grandmother (?) before he could carry out his cultic reforms (1 Kgs 15:11–13). Another mother, Athaliah, ordered the death of Davidic family members and was obeyed (2 Kgs 11:1). It is difficult to imagine this happening unless she possessed a strong power base.

If the position of queen mother existed in Judah, what was its origin and function? Molin (1954) argued that Judah was originally a matriarchal society which came under the influence of the Hittites. In this context, the queen mother functioned to ensure the succession of the male regent. Donner (1959) also acknowledged Hittite influence, but rejected positing a matriarchy in Judah. Rather than viewing the position of queen mother as an indicator of Judah's social structure, he identified it as part of Judah's political framework. A different approach was taken by Ahlström (1963), who located the position in the cult: as a representative of the goddess, the queen mother would participate in Jerusalem fertility rites. Rejecting the suggested social and cultic origins, Andreasen (1983) turned to the world of politics as the queen mother's original location. For Andreasen, the queen mother was a "lady counselor" whose role was reflected in the motif of "Lady Wisdom" in Proverbs.

a. Influence. The queen mother could and did exercise political and religious power. Her activities, however, were confined to domestic rather than international matters. Bathsheba, for example, mediated (unsuccessfully) between Adonijah and Solomon for the favors of Abishag (1 Kgs 2:13–25). According to the account, Bathsheba enjoyed access to her son's throne as well as a privileged position near it. Another queen mother—Jezebel—was active throughout the reigns of her two sons, Ahaziah and Jehoram (1 Kgs 22:52; 2 Kgs 9:22). Perhaps the most astonishing display of royal influence exercised by a queen mother is found in 2 Kings 11, in which Amaziah's mother, Athaliah, wielded enormous political power when

she ordered the massacre of the royal family. Considering the power vacuum which existed after Jehu's murder of Amaziah, Athaliah's move reflected great political acumen (2 Kgs 11:1).

The queen mother also influenced cultic affairs. Maacah supported the worship of Asherah and had a cult object erected in Jerusalem (1 Kgs 15:13). Jezebel actively promoted Baalism and the worship of Asherah, while persecuting the prophets of Yahweh (1 Kings 18–19). Finally, although there is no record of Athaliah supporting either Baal or Asherah, the temple of Baal was destroyed immediately after her death. This action suggests that the temple was protected by Athaliah and could not be eliminated while she was alive. But do these three instances imply the queen mother actually participated in cultic rites? At least two scholars—Ahlström and Terrien—think they do. According to Ahlström (1963), the queen mother was the king's consort in the *hieros gamos* ritual in Jerusalem. Terrien (1970), however, concludes that the position of queen mother was only one cultic element (along with male prostitution, sun rituals, the sacred snake, and chthonian forces) of an omphalos myth in Israelite religion.

b. Literary Treatment. Of all the Israelite and Judean queens named in the book of Kings, only four are given more than cursory mention: Bathsheba, Maacah, Jezebel, and Athaliah. Of these four, all but Bathsheba are portrayed in negative terms. Their characterization employs identifiable narrative elements and casts them into a character "type"—that of the "wicked queen/queen mother." This typecasting of queens warns the reader of the dangers of women in power.

When the stories of Jezebel and Athaliah are analyzed, six elements basic to their character emerge: these women are (1) non-Judean; (2) politically powerful; (3) aggressive; (4) connected with Asherah and/or Baal; (5) liabilities to their husbands and sons; and (6) responsible for the death of others. While elements (1), (4), and (5) are reminiscent of the "foreign woman" character type, the remaining elements each point to an important distinction. The "wicked queen/queen mother" differs from the "foreign woman" in the source of her power. Whereas the foreign woman relies on seductive wiles to achieve her ends, the wicked queen's power resides in her position; she commands rather than charms others into obedience. Maacah's account is much shorter, but contains three (perhaps four) of the "wicked queen/queen mother" elements: (1) she may be foreign (?); (2) she supports the worship of Asherah; (3) she has power and has to be deposed; and (4) she is a liability to her son.

LINDA S. SCHEARING

QUEEN OF HEAVEN (DEITY) [Heb *měleket haššāmayim* (מְלֶכֶת הַשָּׁמַיִם)]. The epithet of an otherwise unidentified deity worshiped in Judah during the 7th and 6th centuries B.C.E., and possibly in earlier periods as well. The queen of heaven is mentioned only in the book of Jeremiah (7:18; 44:17, 18, 19, 25), where her cult is condemned as one of the defections of the populace of Judah from exclusive worship of the god Yahweh. According to the prophet, the divine wrath provoked by non-Yahwistic observances such as those popularly conducted on behalf of the queen of heaven culminated in the Babylonian conquest of Jerusalem and the deportation of many of the city's inhabitants. After the Babylonian invasion, devotion to the queen of heaven persisted among Judean refugees residing in Upper Egypt ("the land of Pathros" [Jer 44:1]), including the cities of Migdol, Memphis, and Tahpanhes, where Jeremiah had been brought after the Exile, apparently against his will. The prophet publicly denounced

veneration of the queen of heaven (Jer 44:1–14, 24–30). The refusal of the Judeans to stop worshiping the queen of heaven is included as a cause of the calamity that befell Judah (Jer 44:20–23); and the transplanted cult of the goddess in Egypt became the subject of a prophetic oracle threatening the extermination of the Judean population resident in Egypt (Jer 44:24–29; cf. Jos. *Ant* 10 §180–82; Wiseman 1956: 94–95; on the political history of this period, see Spalinger 1977, especially pp. 240–41).

The first of the references to the queen of heaven occurs in the context of the "Temple Sermon" (Jer 7:7–15); the others in a third-person prose narrative about Jeremiah's prophetic activities in Egypt. The compositional history of these prose passages is disputed (see JEREMIAH, BOOK OF), but it is widely agreed to be Deuteronomistic in character if not origin.

The Masoretic vocalization of the epithet is *měleket haššāmayim,* the first element of which has been distorted as if it were the construct noun *měle (ʾ)ket* (from the root *lʾk* "to work") rather than *malkat* (from the base *malkā-*, "queen"). Indeed, the consonantal spelling *mlʾkt* is found in many mss of these verses. The distortion was probably introduced to avoid pronouncing the religiously offensive epithet of the goddess (see Gordon 1978–79). The LXX's *tę stratią tou ouranou,* "the stars of heaven," is evidence of further distortion (or interpretation) of the title, also evident in the Targum to Jer 7:18, which reads (in Aramaic) *kwkbt šmyʾ,* "the stars of heaven." These translations may be intended to avoid the abhorrent title, or they may preserve a midrashic interpretation of the epithet. But there is no doubt that the Hebrew text of Jer 7:18 and 44:17, 18, 19, and 25 originally read "queen of heaven" *(*malkat haššāmayim).* This interpretation of the epithet is supported by the Greek translations of Symmachus, Theodotian, and Aquila, and in Latin by the Vulgate (Ackerman 1989: 118 n. 2).

Considerable energy has been expended in attempts to ascertain the identity of the queen of heaven more precisely, but only the loosest consensus has emerged from these scholarly efforts. It has long been supposed that the title "queen of heaven" referred to the Mesopotamian goddess Ishtar (so, e.g., Kittel 1927: 86), and this view has frequently been assumed (Bright *Jeremiah* 56; Anderson 1975: 399; Held 1982: 76–77) and defended (Weinfeld 1972: 148–53). Associated with this identification of the queen of heaven is the premise that hers was one among other Mesopotamian cults that entered Israel and Judah as part of the official state religion of the Neo-Assyrian empire imposed after 722 B.C.E. This view gained general acceptance after Ostreicher advanced it in 1923, but reconsiderations of the evidence in its favor (McKay 1973; Cogan 1974) have significantly reduced scholarly confidence in its correctness. See PALESTINE, ADMINISTRATION OF (ASSYRO-BABYLONIAN).

Diminution of emphasis on the Assyrian influence on Israelite religion has been matched by increasing attention to the Canaanite elements. The view that the queen of heaven is to be identified with the Canaanite goddess Ashtoreth, also known by the Greek name Astarte, is relatively recent (du Mesnil du Buisson 1970: 126–27; 1973: 56, 271) but widely accepted (Delcor 1982; Olyan 1987). Most recently it has been argued that the queen of heaven is "a syncretistic deity whose character incorporates aspects of West Semitic Astarte and East Semitic Ištar" (Ackerman 1989: 116–17).

Three activities are mentioned as part of the veneration of the queen of heaven: burning incense to her (if this is the proper interpretation of Heb *qattēr* [Jer 44:17, 18, 19, 23]; see INCENSE), pouring out libations to her (Jer 7:18 [implied]; 44:17, 18, 19 [2x]), and preparing cakes for her. This third activity is the strongest evidence that the cult is Mesopotamian in origin. The Hebrew word designating the cakes is *kawwānîm,* a loanword from Akk *kamānu,* designating a variety of sweetened cake (CAD 8: 110–11). The cakes called *kamānu* were used frequently in Mesopotamia as offerings to the goddess Ishtar (the evidence is discussed partially and from a primarily archaeological perspective by Rast [1977], more strictly philologically by Delcor [1982: 104–12]). Their Hebrew reflex is found only in Jeremiah (7:18; 44:19), where *kawwānîm* is a technical term associated with the cult of the queen of heaven.

The phonetic shape of Heb *kawwān-* is like that of Aramaic loanwords derived from Akkadian words with medial /m/ (e.g., Aram *nwrʾ* /nawrā (ʾ)/, from Akk *namāru* [Kaufman 1974: 143]; Aram *gwḥ,* borrowed into Mishnaic Heb as *kwk,* from Akk *kimaḫḫu* [O'Connor 1986: 218]). This linguistic fact might indicate that the cult was adopted directly from Mesopotamia by Arameans in Syria, and reached Judah through Aramean mediation.

The only extrabiblical reference to the queen of heaven in a Northwest Semitic text is in the greeting of one of the 6th-century B.C.E. papyrus letters written in Aramaic discovered at Hermopolis (BK 4.1). The letter in question was written by a Syrian residing at Ofi in Egypt to relatives in Syene, and mentions in its opening sentence temples of the god Bethel and the queen of heaven. Several instances of the divine name *ʿnt* (Anat) in compound names of deities and personal names from these and related Aramaic texts are considered by Porten (*ArchEleph*, 176–77; 1969: 120–21) to be evidence that the queen of heaven was the Canaanite goddess Anat. (Vincent made the same identification in 1937 [p. 635] on less secure grounds. It was also considered by Hvidberg-Hansen [1979, 1: 96].) The proposal has the merit of evidence, and it cannot be undermined by alternative etymological explanations of *ʿnt* in the onomastica (as attempted by Olyan 1987: 170).

In Judah, the cult of the queen of heaven was apparently a private observance that could involve entire families (Jer 7:18), but it is particularly associated with women, perhaps economically advantaged women (Jer 44:9, 15, 19, 20). The loyalty of women (and, apparently, their husbands) to this cult in the face of the prophet's denunciation is striking, and raises questions about the marginal status of women in the Yahwistic cultus affirmed in the Law and Prophets of the Hebrew Bible (see van der Toorn 1987: 33–42; 125–27 [cited *apud* van der Toorn 1989: 194 n. 4] and the observations of Ackerman [1989: 110, 117–18]).

QUESTIONS OF BARTHOLOMEW. See BARTHOLOMEW, GOSPEL OF (QUESTIONS)

QUFIN, KHIRBET. See MAARATH.

QUINTUS MEMMIUS (PERSON). See MEMMIUS, QUINTUS.

QUIRINIUS (PERSON) [Gk *Kyrēnaios* (Κυρηναιος)]. When P. Sulpicius Quirinius, who appears to have been born in the fifties B.C., died in A.D. 21, he was one of the most powerful men in Rome. He was noted for his long service as a soldier and his long-standing friendship with the emperor Tiberius (A.D. 14–37). He has also long been the subject of intense controversy. This controversy stems from Luke's statement that the birth of Christ took place while Quirinius was governor of Syria and Herod the Great was on the throne of Judea. The other evidence for Quirinius' career, some inscriptions from Syria (which are not to be confused with the acephelous text from Tibur which has wrongly been thought to provide details of his career), Tacitus' *Annales,* Josephus' *Antiquities of the Jews,* and Strabo's *Geography,* reveal that Luke's statement must be incorrect: Herod died in 4 B.C., but Quirinius was governor of Syria in A.D. 6/7.

Luke wrote (2:1–2), "It happened in those days that a decree went out from Caesar Augustus that the whole world be registered for a tax, the decree first went out while Cyrenius was governor of Syria." Cyrenius is the Greek form of the name Quirinius (*PW* 4: 823), and the fact that he held a census during his term in office is confirmed by an inscription from Apamea (modern Aleppo) in Syria as well as by Josephus. Although it was already recognized in antiquity that there was a problem with Luke's chronology—Tertullian knew that Sentius Saturninus was governor of Syria at the end of Herod's life (*Adv. Marc.* 4.19)—a number of efforts have nevertheless been made by modern scholars to reconcile this statement with Luke's belief that Herod was still alive when the census was held. The most forceful argument has been that Quirinius must have been governor twice and that he must have held two censuses. It is based upon the contention that Quirinius is the officer mentioned on an inscription from Tibur which contains part of the career of a senator in the reign of Augustus.

This inscription does not, however, preserve the name of the man it commemorates, and, indeed, it preserves only part of the career. The surviving section runs, "… king, which he brought under the control of Caesar Augustus and the Roman people, the senate decreed two days of thanksgiving to the immortal gods because of the deeds which he had successfully accomplished; as proconsul he obtained the province of Asia and, serving *again* as a legate of the divine Augustus with pro-praetorian power he obtained the province of Syria and Phoenicia …" (*ILS* 918). The Latin text of the phrase, "… serving again *(iterum)* as legate …," is *legatus pr. pr. divi Augusti iterum Syriam et Phoenicen optinuit.* Many scholars have wanted to translate this as "serving as legate of the divine Augustus with pro-praetorian power he obtained the province of Syria and Phoenicia *again (iterum),*" taking *iterum* with *optinuit* rather than with the words which proceeded it. This has enabled them to claim that this official governed Syria twice, and that he thus must be Quirinius. Aside from an obvious circularity, the most serious objection to this argument is that this is not the proper way to read the Latin. In normal Latin *iterum* is understood with the words that precede it. There is no reason to translate it any other way here, and the phrase should be taken as a reference to the fact that the man in question had held more than one province as a legate of Augustus (Syme 1973: 592–93).

A great number of other arguments have been adduced at one time or another to reconcile Luke's narrative with the facts of Roman history. All of them fail to answer four other basic objections to the historicity of Luke's statement (*HJP²* 399–427). These are:

1. There is no other evidence for an empire-wide census in the reign of Augustus.
2. In a Roman census Joseph would not have been required to travel to Bethlehem, and he would not have been required to bring Mary with him.
3. A Roman census could not have been carried out in Herod's kingdom while Herod was alive.
4. Josephus refers to the census of Quirinius in A.D. 6/7 as something that was without precedent in the region.

In the face of these objections, it is impossible to defend Luke's dating of the Nativity. The easiest explanation for his error is that he wished to provide a synchronism between the birth of Christ and a

famous event and so picked upon the census of Quirinius, which caused a great stir throughout the region, as Josephus makes plain. See also CENSUS (ROMAN).

P. Sulpicius Quirinius was a man of considerable importance in the reigns of Augustus (31 B.C.–A.D. 14) and Tiberius. Indeed, Tacitus picked upon his career as a model for that of a *novus homo,* a man without distinguished ancestors in Roman political life, who moved into a position of great influence through his considerable abilities as a soldier and an administrator, and his even more considerable abilities as a courtier.

It may be deduced from the fact that Quirinius held the consulship in 12 B.C. that he must have been born in the early 50s B.C.; as a plebeian he could not have been consul before the age of 42. It is therefore possible that he served in the campaign which ended with Augustus' victory at Actium (31 B.C.), and it is very likely that he served with Augustus' armies in Spain during the following decade. He reached the praetorship by 15 B.C., and in the next year went out to govern the province consisting of Crete and Cyrene. This was not ordinarily an important appointment, but in this case it appears that there was serious trouble in the area. Quirinius distinguished himself by defeating a desert tribe, the Marmarici, which was raiding the area (*PW* 4: 824–27). It was about this same time, if not before, that he married into one of Rome's most distinguished families, the Appii Claudii. We do not know much about this marriage, other than that there were no children and that Quirinius was single again by A.D. 2. Nevertheless, it is clear that Quirinius was moving in very distinguished circles by this point in his life.

Quirinius was *consul ordinarius* in 12 B.C. This meant that he was in office at the beginning of the year, which was a sign of Augustus' particular favor. In the course of this year he must have played an important role in the ceremonies which marked Augustus' assumption of the office of *Pontifex maximus,* high priest of the state religion. In 6 B.C. serious troubles threatened the E part of the empire and the Augustan regime itself. The Parthians appeared to be preparing to go to war in Armenia, and when Augustus appointed his stepson Tiberius to the command, Tiberius opted to retire instead. An expedition could not be mounted for another four years, and in the meantime an experienced soldier was needed to keep an eye on developments in the area. Quirinius went out as governor of Pamphylia/Galatia, the province which bordered Armenia. He served with distinction in that area for at least six years. In 5/4 B.C., he conducted a series of campaigns against the Homonadenses, a tribe on the northern slopes of the Taurus, and was awarded the coveted *ornamenta triumphalia,* the "triumphal ornaments," which had replaced an actual triumph as the highest honor to which a senator could ordinarily aspire as a mark of military success (Levick 1967: 206–14; Syme 1973: 592). In A.D. 2, he was appointed chief adviser to Gaius Caesar, Augustus' grandson, who had been in nominal command of the east since 2 B.C.

Quirinius' appointment marked an important point in the dynastic politics of the reign, for he replaced Marcus Lollius, who had shown considerable hostility toward Tiberius, who was then living in virtual exile on Rhodes. Quirinius had always treated Tiberius with deference (Tac. *Ann.* 3.48), and it was in A.D. 2 that Tiberius' star began to rise once again. Augustus' other grandson, Lucius, had died in that year, and Tiberius was recalled to Rome. At this point, even though Tiberius was not yet restored to his former position, it was clear that he was once again an important factor in political life. When Gaius died after a long illness in A.D. 4, Tiberius emerged once again as the heir apparent, and Quirinius was one of his closest friends. It was at this time that Quirinius married Aemilia Lepida, a woman many years younger than he, who was the daughter of another of the great noble families at Rome and who had previously been betrothed to Lucius Caesar (Tac. *Ann.* 3.23). Even though the marriage was short-lived and unhappy, it was a clear mark of Quirinius' eminence.

Quirinius was therefore one of the most important men in Rome when he was appointed governor of Syria in A.D. 6 to oversee the annexation of the kingdom of Judea; Augustus had previously removed its ruler, Archelaus, a son of Herod the Great, in response to complaints by his subjects (Jos. *Ant* 18 §1–10). A revolt broke out as he seized the royal estates and auctioned them off, but this does not appear to have caused Quirinius great difficulty; he left the area under the administration of a *praefectus* who would be responsible to the governor of Syria in the future. It was also at this time (A.D. 6) that he conducted his census throughout Syria and the newly occupied territory.

The length of Quirinius' term as governor is not known for certain, though he must have returned to Rome by A.D. 12, the year in which Quintus Metellus Creticus is first attested in the province (it is not certain that he was Quirinius' direct successor). He appears to have continued to be a close associate of Tiberius, who became emperor after Augustus' death in A.D. 14. In A.D. 16 his young kinsman by marriage, Scribonius Libo Drusus, asked him to intercede with Tiberius on his behalf when he was charged with treason (Tac. *Ann.* 2.20). Quirinius refused and told him to take his request to the senate, a response which showed Drusus that he had no chance of acquittal since the response could be interpreted as coming from Tiberius himself. In A.D. 20, Quirinius' ex-wife, Aemilia Lepida, was brought to trial on the charges of poisoning, adultery, assailing the imperial house with magical practices, and claiming—falsely—to have had a child by Quirinius. Aemilia was exiled, though not before leading a demonstration of noble women at the theater in which Quirinius was roundly abused (Tac. *Ann.* 3.23). He died in the next year and was granted a public funeral: the last sign of Tiberius' enduring favor.

QUMRAN PESHARIM. See PESHARIM, QUMRAN.

QUMRAN, KHIRBET (M.R. 193127). A settlement near the NW shore of the Dead Sea which was associated with the people who produced the Dead Sea Scrolls. Although noted in various explorations of the area around the Dead Sea since 1851 (de Vaux 1953: 89), Khirbet Qumran attracted the attention of archaeologists only because of the discovery of the Dead Sea Scrolls in caves in the nearby cliffs. See also DEAD SEA SCROLLS.

The area W of the N end of the Dead Sea is given a triangular shape by the convergence of the cliffs and the coast, which come together at Ras Feshkha. About 500 m N of Ras Feshkha, an aquifer surfaces, producing brackish springs, which today nourish reeds, brushwood, and tamarisks. Near the biggest spring, Ain Feshkha, are the ruins known as Khirbet Feshkha. Three km further N, the plain is cut by the Wadi Qumran, which drains the Buqeia, the great valley at the top of the cliffs. The ruins are located on the N bank of the wadi where it cuts through a marl terrace below the cliff, whence the name Khirbet Qumran, "the ruins at Qumran."

The first scrolls were found in early 1947 (de Vaux 1973: vii), but the area from which they came was pinpointed only at the end of January 1949. Official negligence is excused by the turmoil that preceded and followed the withdrawal of British forces in May 1948. But when Captain Philip Lippens, a United Nations Observer from Belgium, approached Major General Lash of the Arab Legion in January 1949, the response was immediate. With the approval of the Jordanian Department of Antiquities, troopers of the legion were sent to the probable area, and within two or three days Captain Akkash el Zebn had found the cave (Harding 1955: 6).

Cave 1 was excavated shortly afterwards by G. L. Harding and R. de Vaux. At that time a surface examination of the nearby ruins indicated no relation to the cave, but the developing controversy regarding the authenticity of the scrolls made it imperative to determine whether the ruins threw any light on the documents, and a thorough investigation was authorized. Responsibility for the excavation was given to de Vaux, who completed the project in five seasons: 1951 and 1953–56. The hiatus in 1952 is explained by the need to follow up new manuscript discoveries by the bedouin. From January 21 to March 3, de Vaux excavated the caves in the Wadi Murabbaat. During March 10–29, he directed a systematic search of the caves in the cliffs 4 km N and S of the Wadi Qumran. Finally, between September 22 and 29, he conducted a careful survey of the marl terrace on which the ruins stand. The last item in the program, the excavation of Khirbet Feshkha, was undertaken in 1958. During these years preliminary reports appeared regularly in *Revue Biblique,* but the closest to a final report that de Vaux produced was his 1959 Schweich Lectures at the British Academy in London. These appeared as

L'archéologie et les manuscrits de la mer Morte (1961). Just before his death in 1971, de Vaux completed a thorough revision of this book, which was published as *Archaeology and the Dead Sea Scrolls* (1973).

Three km S of Ras Feshkha, R. De Langhe excavated Khirbet Mazin in December 1960 and January 1961 (Stutchbury and Nichol 1962). It appears to have been erected in the Roman period, and was reoccupied in the Byzantine period. There is no evidence that it was related to the installations at Qumran or Feshkha (de Vaux 1973: 88). Some 9 km further S at Ain el-Ghuweir, P. Bar-Adon in 1969 made the first Israeli contribution to the problem of Essene settlement on the coast of the Dead Sea. He brought to light a rectangular building (19.5 m × 43 m), and the pottery of the two levels of occupation showed similarities to that of Periods I and II at Qumran. Some 800 m to the N was a small cemetery. The mode of burial and tomb types were the same as those of the cemetery at Qumran (Bar-Adon 1977). The precise relationship of this settlement to Qumran is still undefined (de Vaux 1973: 89).

A. The Caves

Of the 270 caves, crevices, and holes examined in 1952, 40 contained material ranging from the Chalcolithic to the Arab periods, while 26 of the latter furnished pottery identical to that of Cave 1 (de Vaux 1973: 50–51). The suspicion that the bedouin had planted manuscripts in the caves was negated by the archaeologists' independent discovery of fragments in every cave in which the bedouin reported finds (Caves 1, 2, 4, 6, and 11). The archaeologists themselves discovered Caves 3, 5, and 7–10, which contained manuscript fragments of the same type (de Vaux 1973: 95–97). The pottery found in the scroll caves is of the same type as that found at Qumran (de Vaux 1973: 54), and in one case a manuscript fragment was found still attached to a piece of its linen wrapper and adhering to the neck of a jar (Harding 1955: 7). The scrolls, therefore, must have been placed in the caves when the 1st century A.D. pottery was in use and the settlement occupied. The conclusion that the documents belonged to the inhabitants of Khirbet Qumran is inescapable.

B. Khirbet Qumran

The stratigraphy of Khirbet Qumran revealed eight phases ranging from the 8th century B.C. to the Second Jewish Revolt (Table 1):

	Qumran	Feshkha	Ain el-Ghuweir
ca. 700–600 B.C.	Israelite		
ca. 150–100 B.C.	Ia		
ca. 100–31 B.C.	Ib	I	I
ca. 4 B.C.–A.D. 68	II	II	II
ca. A.D. 69–74	III		
ca. A.D. 74–132		III	
A.D. 132–35	Second Revolt		

1. Israelite Period. The oldest structure at Qumran is a rectangular building. See Fig. QUM.01. A row of rooms bordered the courtyard on the E; there may have been others along the N and S walls. Outside the W wall, but protected by its own enclosure, was a round cistern fed by runoff from the terrace to the N. The pottery shows it to have been in use from the 8th century to the 6th century B.C., when it suffered a violent destruction that is naturally associated with the fall of the kingdom of Judah in 586 B.C. A wall in the plain running S to Ain Feshkha is also dated to this period.

There is general agreement that this structure must be one of the six cities in the wilderness mentioned in Josh 15:61–62. The majority of scholars identify it with Ir-hammelah, the "City of Salt," (references in de Vaux 1973: 91–94), but it has been suggested that the Iron Age buildings near Ain el-Ghuweir (Blake 1966: 565–66) should be identified with the "City of Salt," in which case Qumran would be Sekaka (Bar-Adon 1977: 22–23). This latter hypothesis, however, leaves out of account one of the three Iron Age sites in the Buqeia—Khirbet Abu Tabaq, Khirbet es-Samra, and Khirbet el-Maqari—which were explored by Cross and Milik (1956). These farming installations could have been set up by Jehoshaphat (2 Chr 17:12), but Uzziah (2 Chr 26:10) seems a more likely candidate.

2. Period Ia. Sometime in the 2d century B.C., Qumran was settled by a new group, whose identity is considered in the entry ESSENES. Two rectangular cisterns were dug beside the round cistern, which was brought back into service. Water intake was increased by the provision of two feeder channels that collected runoff from the terrace. The purpose of the small rooms around the cisterns is not clear, but the function of the two kilns in the SE corner is obvious. The pottery of this phase is virtually identical with that of the subsequent period (de Vaux 1973: 5). Hence, the date of the beginning of this settlement cannot be determined with any precision. But if the buildings of Period Ib were occupied from about 100 B.C., the beginning of Period Ia must be placed sometime in the second half of the 2d century B.C. (de Vaux 1973: 5), but exactly when is a matter of some debate (Laperrousaz 1978: 748–52). The number of occupants was small.

3. Period Ib. An influx of new occupants made a building program imperative, and it is in this phase that Qumran acquired what was to be virtually its definitive form. See Fig. QUM.02. The round cistern and the two adjoining ones were retained in service, but the water system was expanded by the addition of two ritual baths and four large new cisterns. The terrace catchment area was too small to fill all of these, so a dam was built across the Wadi Qumran in the cliffs. This directed winter flash floods into an aqueduct that fed the system. The main building block was dominated by a tower that had no entrance at ground level; in times of danger from nomadic mauraders it would have served as a refuge for some of the inhabitants and as a secure place to store essential foodstuffs. The tower was entered via a wooden bridge from the two-story building to the S. The upper floor of this building, which had collapsed into the room below, contained two inkwells plus a plastered table and bench (de Vaux 1973: 29). These suggest a scriptorium, and provide an important link with the manuscripts found in the nearby caves. The bench around the walls in an inner room on the ground floor suggests that the room was an assembly chamber.

The refectory was easy to identify. Not only was it linked to the water system to facilitate cleaning, but the adjoining room contained over a thousand vessels, plates, bowls, beakers, small jars, and jugs (de Vaux 1973: 12). Deposits of bones, carefully buried under potsherds in most of the open areas, indicate that some of the meals had a religious significance that has not yet been adequately explained. The bones also reveal something of the occupants' diet, which consisted of mutton, lamb, goat, beef, and veal (de Vaux 1973: 12–15). The rest of building was given over to a kitchen and workshops, one containing a corn mill. The best preserved of the workshops was the pottery in the SE corner, with its washing basin, storage pit, wheel position, and kilns. It was here that the distinctive pottery found in the ruins and caves was made (de Vaux 1973: 54).

The building contained very few rooms that might have served as living quarters, yet the cemetery indicates a sizable population, which has been estimated at about 200 (de Vaux 1973: 86). The area could certainly have sustained such numbers (de Vaux 1973: 84–86). The inhabitants lived in caves, in tents on the marl terrace, and in underground chambers carved into the marl (de Vaux 1973: 56–57).

The pottery of Period Ib can be dated only very roughly, to the end of the Hellenistic era. The coins, however, permit greater dating precision. According to de Vaux (1973: 18–19), the buildings were certainly occupied during the reign of Alexander Jannaeus (103–76 B.C.) and possibly during that of John Hyrcanus (135–104 B.C.). They were destroyed by an earthquake and a fire, after which the site was abandoned for a generation. De Vaux (1973: 20–23) opted for the simplest hypothesis—the fire was caused by the earthquake—and identified the earthquake with that recorded for the year 31 B.C. by Josephus (*JW* 1.370–80). Others, however, claim that the earthquake merely gave the coup de grace to a building that had already been destroyed by enemy action, but they cannot agree on a date. Laperrousaz (1978: 760) placed it in the context of the struggle between Hyrcanus II and Aristobulus II (67–63 B.C.), whereas Milik (1959: 94) preferred the Parthian invasion of 40 B.C. Neither of these authors has offered an explanation of why a settlement of no strategic importance and far from the war zone should have been the object of military action. Neither do they explain the absence of any destruction level at Khirbet Feshkha. Nonetheless, their hypotheses explain why Qumran was abandoned, whereas de Vaux's does not. Since the majority of the population lived and worked outside the edifice, which had not been badly

damaged, it would have been natural for them to rebuild the community center, were the earthquake the only catastrophe.

4. Period II. Continuity both in pottery types and in the function of rooms indicates that the site was reoccupied by the same group that had abandoned it (de Vaux 1973: 24). Rooms that were too badly damaged were left untouched or partially cleared and walled off, while others were brought back into use. The loss of space was compensated for by roofing over, or building in, what had previously been open spaces. The tower was reinforced with a sloping stone girdle. The silted-up decantation basin was abandoned, and the water channel extended to a new smaller decantation pool, which received the periodic flow from the aqueduct.

The beginning of this period is dated by de Vaux (1973: 33–36) to the early part of the reign of Archelaus (4 B.C.–A.D. 6) on the basis of a complex argument based on the coins. It ended in a violent destruction, which is dated to the third year (A.D. 68/69) of the First Revolt by the end of the coin series of this phase (de Vaux 1973: 36–37). The buildings at Qumran would have been visible from the N end of the Dead Sea, which Vespasian visited in the spring of A.D. 68 to test whether the unusually salty water would support bound nonswimmers (*JW* 4.477), and the tower might have suggested a military post. The claim of Laperrousaz (1978: 764–66) that Period II should be divided into two phases separated by another abandonment around A.D. 6 does not seem to rest on solid evidence.

5. Period III. Roman arrowheads found in the destruction level of Period II, and Roman coins discovered in the new occupation level, show that Qumran was occupied by a Roman garrison, presumably until Masada fell in A.D. 74 (de Vaux 1973: 41–44). During operations against this fortress and Machaerus, it was essential for the Romans to control traffic on the Dead Sea. Only the tower and the adjoining areas on the E and S were refurbished for use. The water channel from the aqueduct was modified to serve only the large cistern in the SE corner.

6. Second Revolt. Coins attest the occupation of Qumran by resistance elements during A.D. 132–35, but it must have been of short duration for no structures can be attributed to this level (de Vaux 1973: 45). If Milik (1960: 163–64) is correct in his interpretation of a letter found in the Wadi Murabbaat, the name of the site at this period was Mesad Hasidin, "Fortress of the Pious."

7. Cemetery. The main cemetery of Periods I and II is located 50 m E of the buildings and contains about 1,100 tombs, 26 of which were excavated by de Vaux (1973: 45–48). The bodies were placed with their heads to the S in a cavity under the E wall of a trench, which was 1.2 m to 2 m deep. The tombs in the well-planned section nearest the buildings all contained male bodies, but some of those located in the extension of the cemetery over the hillocks to the E contained bodies of women and a child. Small secondary cemeteries on the terrace N of the buildings and at the foot of the terrace S of the wadi contained about 15 and 30 tombs, respectively. These contained male, female, and infant bodies (de Vaux 1973: 57–58). Very few of the individuals buried in these three cemeteries had passed their fortieth year (de Vaux 1973: 47).

C. Khirbet Feshkha

In terms of pottery and architectural style, the two main occupation levels correspond to Periods Ib and II at Qumran. The period of abandonment between the two phases, however, was marked by neither fire nor earthquake, whereas the end of this settlement was as violent as that of Qumran. Once again Laperrousaz (1978: 773–85) has disagreed with de Vaux's conclusions, and has equated Feshkha I and II with the two subdivisions he discerned in Qumran II, but his reasons are no more convincing. In contrast to Qumran, Feshkha was not reoccupied immediately after Period II, but parts of the ruins were reused in the late 1st century A.D. and early 2d century A.D., and again in the Byzantine period.

The central building, consisting of a series of rooms around a central courtyard, is of less importance for determining the function of Feshkha than the adjoining installations. The principle feature of the enclosure to the S is a long cobble-floored, roofed building which opens to the S; it would have been suitable for ripening dates (de Vaux 1973: 73). Palms were certainly cultivated in this area in antiquity, as the presence of their wood, leaves, and dates at Qumran and in its caves confirms (de Vaux 1973: 74).

The installation to the N is more complex. From a water-control box are run two channels separated by a paved area. The W channel first serves a large basin, and then skirts its edge to serve two smaller ones, whereas the E channel ends in a rectangular pool. All that can be said with certainty is that this complex served an industrial purpose. The initial suggestions that it was used for the preparation of leather or parchment are excluded by the complete absence of any traces of tannin or organic residue (de Vaux 1973: 78–82). Zeuner's hypothesis (1960) that it was a fish farm has encountered no such decisive objections, but in that case one would have expected the installation to have been designed differently. Despite this uncertainty, it is clear that Khirbet Feshkha was a dependency of Qumran, to whose industrial and agricultural needs it catered (de Vaux 1973: 84). The inhabitants also farmed in the Buqeia at the top of the cliffs, to which ancient paths lead from both Qumran and Feshkha.

J. MURPHY-O'CONNOR

QUOTATIONS OF OT IN NT. See NEW TESTAMENT, OT QUOTATIONS IN.

QURAYYA (28°47′N; 36°00′E). An archaeological site *(Ar al-qurayayah)* in NW Saudi Arabia, not mentioned in the biblical texts but possibly associated with the Midianites, and perhaps to be identified with the Ostama of Ptolemy's *Geography.* It is situated ca. 63 km NW of Tabuk and 125 km SE of Aqaba, in a region of broken sandstone and shale hills, cut by innumerable wadis, fringing the W edge of the Tabuk basin. The configuration of the region is such that flash floods flowing eastwards from the Hejaz mountains into the basin during winter and early summer can be utilized for agricultural purposes before they are lost in the gravels, sands, and silts of the basin itself, and it is no doubt this advantageous setting in an otherwise inhospitable environment which enabled the site to be originally settled. It is also close to the main N–S route from Arabia to Palestine and Syria, the route followed by the Mecca pilgrims and by the Hejaz railway.

The existence of ruins at Qurayya was known to a number of early travelers in the region, such as Wallin in 1848 and Burton and Doughty in 1877, though none of them actually visited the site. The first-known European visitor was B. Moritz, in 1906, who recorded a dozen or so examples of Thamudic, Nabatean and Kufic graffiti and published them, with a good description of the ruins (which he referred to as Greje), two years later (Moritz 1908: 399–415). Alois Musil did not visit the site during his journey of 1910, but he was aware of it (as al-Krajje) and tentatively identified it with Ptolemy's Ostama (Musil 1926: 43, 312). In 1951 it was visited by H. St. J. Philby, whose account of the topography and the visible remains was thorough and accurate (Philby 1957: 171–84). The first sketch plans of the site and its

immediate surroundings were made in 1968 by a University of London archaeological survey team, who also published the first detailed analysis and interpretation of the remains (Parr, Harding, and Dayton 1970: 219–41). Since then Qurayya has been visited by members of the Saudi Arabian Antiquities Department who have added important details to the description (Ingraham, Johnson, Rihani, and Shatla 1981: 71–75). No accurately measured survey has ever been made, however; nor have proper excavations (apart from a few very minor soundings) been carried out. Knowledge of the site remains inadequate for anything but a superficial description and a tentative understanding of its chronology and its historical significance.

The Qurayya ruins, in their entirety, cover many km^2 and comprise a number of distinct though closely related parts. The most prominent feature is an isolated outcrop of gray-green shale siltstone, about 1 km long and 350 m broad at its widest point; it is oriented approximately E–W. The summit of the outcrop is steeply ridged, with its crest running along the long axis, and its highest point being some 50 m above the level of the broad wadi beds which surround it. It is protected on almost all sides by sheer cliffs, which justify Philby's designation of it as the Citadel Hill. Only at the SW corner is the rock face sufficiently low and broken to provide a means of access, and it was probably here that the original approach was located. The summit is divided into three roughly equal parts by two stone walls, stretching N–S from cliff to cliff. These are built of thin slabs of the local siltstone set in mud mortar and are about 1.40 m thick, surviving in places to a height of over 3 m. A distinctive feature of their construction is the way in which they are composed of separate unbonded sections, each about 3 or 4 m long, perhaps in order to localize any collapse resulting from an earthquake or hostile action. The W wall has a series of semicircular towers projecting from its W face, while there are traces of what may be gateways in approximately the middle of each wall. Other stone structures on the summit include several ruined square towers and what are probably masonry tombs. There can be no doubt that the Citadel Hill served as a fortified place of refuge for the inhabitants of the settlement below.

The ruins of this settlement cover an irregular area of ca. 400 m × 300 m on the level ground some 200 m from the NE foot of the citadel. The line of a surrounding wall is mostly buried beneath debris and windblown sand, but a few traces of its stone and mud-brick structure are visible. It appears to have been provided in places with projecting towers, and there may have been gateways on the N and S. Within the walled area there are considerable mounds of debris, reaching heights of ca. 8 m, and occasional stubs of walls, but there is little indication of the original layout, apart from the presence of a large flat area to the N which may have been an open marketplace.

Arising from the base of the citadel on its N and E sides are a number of long walls similar in general appearance to that which surrounds the settlement. One of them connects the settlement to the citadel, while the others enclose extensive areas of the adjacent flat wadi beds. Still other walls of similar construction can be traced over a wide area to the NE of the settlement, running in relatively straight lines across both wadi beds and the neighboring low hills and ridges, in some cases for distances of several kilometers. Throughout this area are remains of many small rectangular fields, their outlines marked by low single lines of rough stones. Double lines of stones are perhaps the remains of water channels serving the fields, and the remains of a few stone sluices are preserved. A much more substantial water channel, partly in the form of a wide ditch, runs in the direction of these fields from the site of a now-dry spring at the foot of the citadel. This complex of remains clearly suggests an agricultural system based on irrigation, which was protected by enclosure walls from damage by flood and wind and from hostile intrusion.

Finally to be noted are the ruins of three isolated buildings, two just outside the N and E sides of the enclosure wall of the settlement and the third about a km further N in the middle of the fields. They are built of ashlar sandstone masonry, an entirely different material from that employed for the other structures at the site; some of the blocks exhibit the diagonal tooling usually associated with Nabatean craftsmanship, while two of the buildings have among their ruins fragments of typical Nabatean capitals and column bases. The function of these buildings is obscure. Philby (1957) called the two closest to the settlement a nymphaeum and a palace, but there is nothing in their plans to support such a designation.

They are clearly of a different date from the rest of the ruins at Qurayya, and perhaps constitute a Nabatean way station on the Arabian caravan route.

With the exception of the three buildings mentioned above, the most striking feature of the Qurayya remains is their homogeneity, reflected in the almost identical style of construction of the walls on the citadel, around the settlement, and encircling the field systems. It is therefore reasonable to suppose that all of these features are more or less contemporary with one another, and are part of one basic design. To provide a date for this complex without a detailed survey and excavation is impossible, but the evidence of the pottery collected from the surface of the site provides some indication. A small proportion of this is of typical Romano-Nabatean ware; it is found particularly in the vicinities of the three isolated buildings described above. The majority of the pottery from the citadel, the settlement, and the fields, however, is very different. A number of types are represented, but only one of these is, with our present state of knowledge, sufficiently diagnostic to help with dating. This is a very distinctive painted ware decorated in various tones of black, brown, red, and yellow applied to a thick buff or cream slip; quite often a bichrome or polychrome effect is produced. The most frequent patterns are geometric (horizontal and vertical bands, triangles, cross-hatching, running broken spirals, etc.), but animal motifs (birds, bulls, and at least one camel) are also reported, and occasional human figures. That this painted ware (and no doubt some at least of the plain wares, which often resemble the painted ware in fabric and shape) was manufactured at the site is proved by the discovery at the N foot of the citadel of a number of ruined kilns, surrounded by spoiled and discarded sherds, some of which were painted. Petrographic analysis of the painted pottery has also indicated that the materials for its production must have derived from Qurayya or from an area of very similar geology (Rothenberg and Glass 1983; 101–13; Rothenberg 1988: 101), and it is possible that two caves cut into the face of the hill near the kilns were quarries for the extraction of claystone for use by the potters.

The dating of this distinctive pottery (for which the term "Qurayya Painted Ware" has been proposed) is still a matter for debate. (For the latest discussion, see Parr 1988). However, that it was in use as early as the 13th and 12th centuries B.C. has been proved by the discovery of identical sherds at a number of archaeological sites in modern Israel, especially at the important copper-mining center of Timna in the S Wadi Araba, where they were found in stratified contexts dated by inscribed Egyptian objects of Dynasties XIX and XX (Rothenberg 1988). This dating is supported by a comparative study of the decorative motifs, some of which—in particular the running spirals and birds—are very reminiscent of those on some LB ceramics from the Aegean and E Mediterranean (Parr, Harding, and Dayton 1970: 238). Other motifs—particularly a lotus design—suggest Egyptian parallels, and it is possible that the immediate source of inspiration for the pottery was Egyptian faience, much of which was found at Timna (Parr 1982: 129–30). Whether the Qurayya Painted Ware was also in production later than about the 11th century B.C. is uncertain; it has been suggested that it was still in vogue in N Arabia as late as the 7th century B.C. (Muhly 1984: 284), but the arguments are by no means convincing (Parr 1988). On present evidence it seems most likely that the pottery dates to the last few centuries of the 2d millennium, and in view of its profusion among the ruins of all parts of the Qurayya site it is reasonable to conclude that these ruins also date in their origin to this period.

As the result of recent archaeological surveys it is now known that this painted pottery is found not only at Qurayya and at Timna but also at a number of other localities in NW Arabia, including the oasis center of Tayma, on the main trade route to the S, and about a dozen sites in the lower reaches of several wadis leading down through the Hejaz mountains to the Red Sea coast near the mouth of the Gulf of Aqaba (Ingraham, Johnson, Rihani, and Shatla 1981: 74–75; Bawden 1983: 42–44). One such site is that of Mugha›ir Shu‹ayb (al-Bad‹), almost certainly the oasis known to the classical geographers as Madian and to medieval Arab writers as Midyan, names which derive from that of the biblical Midianites, with which this corner of the Arabian peninsula is traditionally associated (Musil 1926: 278–87). It was because of this association that the Qurayya Painted Ware, when originally reported, was designated "Midianite Ware" (Parr, Harding, and Dayton 1970: 240); and although the more neutral term is certainly now to be preferred, it is hard to avoid the conclusion that the pottery and the people were, in some way, connected.

Regardless, the existence toward the end of the 2d millennium in NW Arabia of settlements of which at least one, Qurayya, is provided with such substantial defensive architecture as to merit the term "urban" requires explanation. In the present state of knowledge, this can be little more than guesswork, but further consideration of the distribution of the painted pottery leads to a reasonable hypothesis. The quantity of Egyptian objects at Timna has been reasonably taken to indicate that the copper mines there were operated under pharaonic control, while the presence of Qurayya Painted Ware at the site shows that its users—presumably workers from the Hejaz—were in contact with the Egyptians. The presence of the pottery at sites close to the Hejaz coast, little more than 150 km across the Red Sea from Egypt, and on routes leading E toward Qurayya and Tayma, is also suggestive of an Egyptian connection. Unlike Timna, however, neither Qurayya nor Tayma have produced evidence to associate them with copper working, and it is much more likely that they were involved with the trade in aromatics. Although it has recently been denied that the land route through Arabia to the incense-producing regions of the S was in use as early as this (Crone 1987: 13–15), there is in fact persuasive evidence that New Kingdom Egypt was obtaining some of its supplies from intermediaries in the NW of the peninsula. It is at least possible, therefore, that it was Egyptian economic involvement, perhaps for the sake of both copper and aromatics, which provided the stimulus toward sedentarization and the establishment of sites such as Qurayya; and it has further been argued that the inhabitants of the region belonged to that vague category of people known to the Egyptians as Shoshu, some of whom at least, according to the Egyptian sources, may have been sedentary (Parr 1988). Whether the inhabitants of Qurayya are also to be thought of as Midianites depends on how the biblical references to that people are interpreted and what view is taken of their territorial, political, and economic status in the 13th and 12th centuries B.C.

RA (DEITY). See RE (DEITY).

RAAMAH (PERSON) [Heb *raʿmâ* (רַעְמָה)*; raʿmā* (רַעְמָא)]. A son of Cush and father of Dedan and Sheba (Gen 10:7; 1 Chr 1:9) whose name occurs in the so-called "Table of Nations" (Genesis 10) as a tribal rather than personal name (Westermann 1984: 510–11). Raamah is also named along with Sheba as a commercial partner with Tyre (Ezek 27:22). The biblical contexts point to Arabia; more specifically, the list of delivered products in Ezekiel 27 (best aromatics, precious stones, and gold) suggests a location of Raamah in S Arabia, or at least within the reach of the ancient incense route. An identification which should be considered is *rgmtm* (probably vocalized Ragmatum), the ancient name of the capital of the oasis of Nagrān (*Naǧrān*) in what was then N Yemen, today situated in SW Saudi Arabia. Later on, the name of the oasis was also transferred to the town, and the name Ragmatum disappeared. Favoring the equation of biblical Raamah with *rgmtm* are the LXX renderings of the name (1 Chr 1:9; *regma;* Ezek 27:22, *ragma*), as well as a note in the Greek and Ethiopic versions of the *Martyrium of St. Arethas* telling that the meaning of the name of the town of Nagrān is in Hebrew "town of thunder," which can only be explained if one substitutes for Nagrān the name *Raʿmâ,* since in Aram *raʿmā* means "thunder" (cf. Müller 1969: 366, n. 103).

The earliest Old South Arabic reference to *rgmtm* is found in the Old Sabean inscription RES 3943, 4 from Mārib from the time around 500 B.C. This text is an account of the deeds of a ruler who, among others, destroyed Ragmatum, the town of the king of the Muhaʾmirum, as well as all the towns in the area surrounding Ragmatum and Nagrān. In the Minaean inscription M 247 (= RES 3022, 2 from Barāqiš [ca. 340/330 B.C.]), it is mentioned that the Sabeans attacked a Minaean caravan on the route between Maʿīn and Ragmatum. Another reference to this town is found on a bronze tablet from al-Uhdūd, the ruins of ancient Nagrān, which contains a dedication to ḎūSamāwī, the lord of a temple in *[r]gmtm*; furthermore, a reference to an inhabitant of the town *ḏr[g]mtm* occurs in the fragmentary text Ja 2132 from Qaryat al-Faw, about 280 km N of Nagrān on the trade route to the Persian Gulf (see Ryckmans 1980: 198, n. 4). In antiquity, Ragmatum in the oasis of Nagrān was an important station on the incense road, the main route of which came from Mārib in Saba and led from there to the N via Dedan until it reached the Mediterranean coast.

An identification of the biblical *raʿmâ* (or *regma*) with *regma* (or *regama*) *polis* in Ptolemy (*Geog.* 6.7.14) is impossible because that town must have been situated on the Persian Gulf. Likewise, the equation with the *rammanitai* in Strabo (*Geog.* 16.4.24) is out of question, because Raimānites are understood by this gentilic; the inhabitants of Nagrān are designated in the same chapter of Strabo as *negranai.* Already in the 18th century Niebuhr (1772: 248, 293) wanted to compare the biblical Raamah with the region around Ǧabal Raima, one of the numerous Yemenite places of that name.

RAAMIAH (PERSON) [Heb *raʿamyâ* (רַעַמְיָה)]. An alternate form of REELAIAH.

RAAMSES (PLACE) [Heb *raʿamsēs* (רַעַמְסֵס)]. See RAMESES (PLACE).

RABAH, WADI (M.R. 144167). The name of one of the tributaries of the Yarkon river and of a site situated on its S bank, about 1 km E of Tell Ras el-ʿAin (M.R. 143168). Two Chalcolithic levels and mixed remains of the two Neolithic phases (Jericho IX and Yarmukian) have been identified there.

On the mound of Tell Ras el-ʿAin itself, no remains earlier than the EB were found; thus, it appears that the earlier Wadi Rabah site was abandoned sometime toward the end of the Chalcolithic period and that settlement resumed further W on virgin soil close to a spring, constituting the earliest settlement at Tell Ras el-ʿAin. For a discussion of the excavations on the mound of Ras el-ʿAin, see ANTIPATRIS. The Wadi Rabah site was excavated in November 1952. Stratum I was found to belong to the Ghassulian phase of the Chalcolithic, while stratum II belonged to a pre-Ghassulian phase.

Stratum II is significant in that its pottery is formally similar to that of Jericho VIII; however, there is a larger amount of slipped and decorated ware at Wadi Rabah than at Jericho VIII. Most of the Wadi Rabah pottery is burnished, whereas burnishing appears only on bowls at Jericho VIII, and there is no evidence of burnishing whatsoever at Tuleilat Ghassul, suggesting that the finds associated with Wadi Rabah level II not only antedate the Ghassulian culture of Palestine (which occurred ca. 3500 B.C.) but also that associated with Jericho VIII. In all these three phases of the Chalcolithic age—Rabah II, Jericho VIII, and Ghassulian—the pottery shows uninterrupted development. Finds similar to those of Wadi Rabah stratum II have been found in other excavations, such as those at ha-Bashan Street in Tel Aviv (*EAEHL* 4: 1161), at Lod (area B), in stratum IIIc of Tuleilat el-Batashi (area B), and at ʿEin el-Jarba. Based on radiocarbon dates of the Wadi Rabah stratum at ʿEin el-Jarba, it appears that the earliest possible limits for this culture is 4000 B.C. See BATASHI, TULEILAT EL-; JARBA, ʿEIN EL-; and LOD. The wide geographical horizon of this culture is reinforced by recent surveys in Galilee, where some sites demonstrate close affinities to the Wadi Rabah culture (Frankel and Gophna 1980).

Some of the pottery of these three Chalcolithic phases can be compared with Halafian ware (particularly the Halafian ware and its imitations occurring in strata XVI–XIX at Mersin in Cilicia), and a correlation can be established between the Middle Chalcolithic of Mersin and the Chalcolithic of Palestine (Kaplan 1960). Since, however, certain shapes and ornamentation characteristic of the Wadi Rabah ware were encountered only in Mersin XIX, the Wadi Rabah culture can be placed in the same horizon as that stratum; i.e., it is a Chalcolithic, not a Neolithic culture, even though no copper has been found among the Wadi Rabah repertoire of objects.

RABBAH (PLACE) [Heb *rabbâ* (רַבָּה)]. **1.** Also known as *rabbat bĕnê ʿammôn* (Rabbah of the children of Ammon), the city that served as the capital of the ancient Ammonite kingdom. The site is located on Citadel Hill (Jebel Qalʿah) in the middle of the modern city of Amman (M.R. 238151) on the N bank of the upper course of the *Nahr ez-Zerqa* (Wadi Zerqa; modern Wadi Amman), where powerful springs serve as the sources of the Jabbok river. See also AMMAN.

According to Deut 3:11, Rabbah is noted as the place where the "iron bedstead" of Og, last of the Rephaim and king of the Amorites at Bashan, was on display. It is possible that the iron bed was taken to Rabbah by the Ammonites as a trophy of their initial conquest, although Landes (*IDB* 1: 109) has suggested that it was preserved because of a special desire to show respect to the powers (human and divine) which controlled and possessed the land prior to the Ammonite emergence. At any rate, this passage shows that Rabbath-ammon was clearly already the capital of the Ammonites by the 13th century B.C.

A reference in Josh 13:25 describes Rabbah's geographical relationship to Aroer. Although some translations locate Aroer "east of Rabbah," a proper rendering should be "in front of [facing] Rabbah" (note the NIV reading of "near"). It would appear from this reference that Rabbah was clearly considered outside of the territory allotted to the Israelites.

The Ammonites were conquered by Israel, after provoking David to war by their humiliation of his messengers (2 Sam 11:1). The account of the siege (2 Sam 12:26–31) appears to provide a small clue to the actual physical layout of the Ammonite capital. Specifically, we are told in 2 Sam 12:26 that after fighting for some time against Rabbah, Joab was finally able to capture the *ʿîr hammĕlûkâ* ("royal city"). In verse 27, however, Joab informs David that it is the *ʿîr hammāyim* ("city of waters") which has been taken. The use of these two expressions has raised a long-standing question as to whether Joab was using two different names for the city of Rabbah *at large,* or was intending to describe two different locations *within* the city. Most recent commentators have apparently opted for the second interpretation, suggesting that the *ʿîr hammĕlûkâ* was a fortified royal citadel located on the top of the mound (acropolis), while the *ʿîr hammāyim* was a special fortification that guarded the city's water supply in the valley of the Jabbok. Although the two different expressions are attested in both the MT and the LXX, both Syr and Targ have changed the second expression *ʿîr hammāyim,* to *ʿîr hammĕlûkâ* in apparent support of the first interpretation. More recent critics have followed a similar approach, although Wellhausen (1871) preferred to alter the text so that *ʿîr hammāyim* was read in both verses. McCarter, on the other hand, argues that such emendation of the text is unjustified and unnecessary (*2 Samuel* AB, 310–12). He suggests that both verses refer to the same place, but that rather than referring to the entire city at large, both expressions refer to a citadel within the city which both served as the king's royal residence *and* guarded the city's water supply. If the fortified royal residence was located atop that portion of the tell which immediately overlooked the springs of the Jabbok, it could easily have doubled as a fortification for the city's water supply.

At any rate, after the city fell David placed the Ammonite crown on his head and subjected the people to forced labor (2 Sam 12:26–31; 2 Chr 20:1–3). It was during this siege that Uriah the Hittite was sent to his death (2 Sam 11:14–25). Later, when David was forced to seek refuge in Transjordan, Shobi, son of Nahash, from Rabbah, helped supply David (2 Sam 17:27–29).

It appears that Rabbah remained under Israelite suzerainty until the first half of the 9th century B.C., although it is not mentioned again until the mid-8th century B.C. (Amos 1:14). From this time until the fall of the S kingdom, Rabbah received numerous prophetic rebukes as the Ammonites tried to take advantage of Judah's increasing political difficulties (Jer 49:2; Ezek 21:25 [—Eng 21:20]; 25:5).

Rabbah-ammon became a Hellenistic city when Ptolemy II Philadelphus (285–247 B.C.) rebuilt and renamed the city Philadelphia, although the original name continued to be used by both local officials and contemporary historians. It was later conquered in 218 B.C. by the Seleucid king Antiochus III ("the Great"), who penetrated the city through a water tunnel, the remains of which can still be seen.

Josephus reveals that during the time of Hyrcanus (135–107 B.C.) Rabbah-ammon was ruled by the tyrant Zenon Cotylas and later, by his son, Theodorus. Although Alexander Jannaeus laid siege to the city during this time, he was unable to take it.

In 63 B.C., the Roman general Pompey annexed Philadelphia to the Decapolis. It remained under Arab control until Herod defeated the city in 30 B.C. During the Jewish revolt, Rabbah-ammon joined the fight against the Zealots.

During the time of Trajan, Rabbah-ammon was included in the province of Arabia (A.D. 106). A new road from Elath to Damascus, which ran through Rabbah-ammon, created an economic boom for the city which increased its wealth and importance during the Byzantine period. During the 4th century A.D., it was listed by Ammianus Marcellinus as one of the great fortified cities of Coele-Syria. It eventually became the seat of a Christian bishopric, forming one of the nineteen sees of *Palaestina tertia.*

When the city was conquered by the Muslim Yezid in A.D. 635, it was renamed Amman and made the capital of the Balqa district. During the Crusader period, it was ruled by a Transjordanian prince named Ahamant. It appears that during the Mameluke period Rabbah-ammon was deserted, and remained so

until it was resettled by some Circassians in 1876. Amman became the capital of the Emirate of Transjordan in 1921, and today it is the capital of the Hashemite kingdom of Jordan.

The first modern excavation in Amman was conducted by an Italian team led by G. Guidi in 1927. R. Bartoccini took over as director in the years 1929–33. In 1955 G. L. Harding examined the Ammon Airport structure just after it was discovered. It was later excavated by J. B. Hennessy in 1966 and, again, by L. Geraty and L. Herr in 1976. In 1966 R. Dornemann conducted a sounding on the Citadel Hill (Jebel Qal‘ah). Additional work was done at the citadel by C. Bennett (1975; 1979). Jordanian archaeologists (e.g., F. Zayadine, and A. Hadidi) have recently made several important discoveries and conducted many important soundings and excavations at various sites in Amman.

Remains from the Paleolithic, Neolithic, and Chalcolithic periods have been reported from various locations in Amman. Dolmens are also said to have been scattered throughout the area, although none of these survive, the last having been destroyed in the early part of this century. See DOLMEN.

Occupation during the various periods of the EB (ca. 2900–2300 B.C.) is thus far represented only by unstratified pottery from Citadel Hill in Amman (Jebel Qal‘ah).

Middle Bronze I occupation is likewise supported only by sherd material so far, but remains from the MB II–III (ca. 1800–1550 B.C.) have been steadily accumulating. At least four MB II–III tombs have been reported from Amman: one on Jebel Jofeh el-Gharbi, SE of Citadel Hill; one on Jebel et Taj, ESE of Citadel Hill; and two on Citadel Hill, itself. The two tombs on Citadel Hill contained thirty-six scarabs (almost all from the 13th to 17th Egyptian dynasties) and six cylinder seals of types used between 1700 and 1200 B.C. Evidence for occupation of Citadel Hill, itself, comes from a probe conducted on the upper terrace, just N of the Hellenistic-Roman wall, in which a MB II glacis was revealed in association with two walls. Finally, it should be noted that the foundation deposit at the Amman Airport structure contained scarabs from the 17th to 13th centuries B.C., as well as four cylinder seals, two of which may date to MB II–III. Although these scarabs and seals were probably heirlooms and do not date the structure, itself, (which is clearly LB; see below), they do provide additional indirect evidence for MB II–III occupation.

The LB occupation on Citadel Hill is so far supported only by unstratified sherds. More intensive excavation will probably provide new information. The most important find of this period is the Amman Airport structure (Herr 1983a; 1983b). It is almost 15 m square in plan with outer walls 2 m thick. In addition to local pottery, a large quantity of imported Cypriot and Mycenaean ware was found, enabling archaeologists to date the structure to LB IIB (1300–1200 B.C.). Although the structure was initially interpreted as a temple, further excavation and analysis have led to the suggestion that the structure served as a “tower,” perhaps for the storage of funerary gifts. The discovery of a large number of burnt human bones as well as a large pile of slightly scorched rocks (which may have served as a pyre for cremation) lends support to the idea that the site served a funerary function. The increasing corpus of MB and LB finds around Amman has forced scholars to reevaluate Glueck’s hypothesis that central Transjordan essentially lacked any sedentary occupation during these periods.

Material from Iron I (1200–1000 B.C.) is limited to a tomb on Jebel Nuzha (initially assigned to LB IIB, but more likely represents the earliest Iron I phase; see Dornemann 1983: 31–34) and unstratified sherds from the 1969 sounding of Citadel Hill (Dornemann 1983: 106). The most important finds from Iron Age IB–IIA (10th–9th centuries B.C.) include a wall on Citadel Hill (possibly built by David after his recapture of the city) and the well-known Ammonite Citadel Inscription (dated between 875 and 825 B.C.). Finds from Iron IIB–C (8th–6th centuries B.C.), which are more abundant, include several statues of Ammonite kings—the crowns of which may resemble that which was captured by David (2 Sam 12:30); wall fragments on Citadel Hill from the 7th–6th centuries B.C.—possibly destroyed by the Assyrians; four double-faced stone heads of females, which may have served as ornamental capitals for royal buildings on Citadel Hill; the Siran Bottle Inscription—a 7th-century B.C. dedicatory inscription on a bronze bottle which mentions Amminadab, son of Hisalel, son of Amminadab, king of the Ammonites (this bottle was found at Tell Siran on the campus of the University of Jordan, in Amman); and several Iron IIB–C tombs. (For a more complete summary and bibliography of finds, see Dornemann 1983; Geraty and Willis 1986.)

There has been much discussion about a number of "megalithic towers" which have been assumed to have provided an outer "ring of defense" for Rabbah during the Iron Age. More recent analysis of these structures shows that they were not all contemporary (some date as late as the Roman period), nor did they all serve military functions. Indeed, many appear to have served as agricultural farmsteads and watchtowers.

Clearly, the archaeological evidence shows that during the latter part of the Iron IIB–C period ancient Amman was at the appex of its wealth and political power. This, undoubtedly, reflects the greater independence Amman enjoyed under Assyrian and Babylonian sovereignty as opposed to the greater oppression it experienced when dominated by Israel and Judah.

There is a paucity of archaeological remains for the Persian period, but material from the Hellenistic period has been found, including some walls on the lower terrace of Citadel Hill, various houses with plaster floors, painted pottery, Rhodian jar handles, coins, and an underground reservoir at the N end of the citadel. Two reliefs of gods from the 4th–3rd centuries B.C. were found in the forum area.

The most spectacular ruins, which can be seen on the surface on and around Citadel Hill, are from the Roman period. These remains include the well-known amphitheater, a colonnaded street, the nymphaeum, the odeum, an aqueduct, a bath, a temple complex, and several Roman tombs.

Byzantine and Arabic remains include two large houses on the citadel and a Byzantine church.

RANDALL W. YOUNKER

2. A town situated in the N highlands of Judah (Josh 15:60), within the same district as Kiriath-baal/Kiriath-jearim. This settlement, whose name perhaps means "the great one" (fem.), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list was derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). It is possible that this town is the same as Rubute of the Egyptian texts, although the difficulties of locating Rubute in the hill country, as Joshua 15 suggests for Rabbah, casts some doubt on this idea. In order to retain the identification of Rabbah with Rubute, Aharoni (*LBHG,* 299) argued that this district consisted of two fortresses guarding each end of the W approach to Jerusalem (M.R. 149137; cf. Rainey *ISBE* 4: 29). However, it seems unnecessarily arbitrary to assume that this district is unique, since all the other districts in this roster form reasonably compact geographical units. If this district is not unique, then we should look for Rabbah in the hill country close to Kiriath-baal/Kiriath-jearim. In this light, it seems best to admit that Rabbah of Judah remains to be identified.

RABBI [Gk *rhabbi* (ῥαββι)]. Var. RABBONI. An honorific title found in the NT. The Hebrew word *rabbî* is transliterated just over a dozen times in the Greek text of the Gospels. In ten of these cases, the RSV retains the transliteration with the English equivalent "rabbi." In five other instances Gk *rhabbi* is

translated “master” (Matt 26:25, 49; Mark 9:5; 11:21; 14:45). In origin a title of authority, Heb *rabbî* became, by the 1st century C.E., a title as well as a mode of address.

A. Literary and Epigraphic Background

1. Biblical and Extrabiblical Evidence. In the OT the word *rab,* “big,” “great,” occurs only in construct with other nouns: *rab šāqeh,* “chief of officers” (2 Kgs 18:17 = Isa 36:2, etc.); *rab sārîs,* “chief of heads” (2 Kgs 18:17, Jer 39:3, 13; Dan 1:3); *rab māg,* “chief of princes” (Jer 39:3, 13); *rab tabbāḥîm,* “captain of the guard” (2 Kgs 25:8, etc.); Aram *rab ḥartummayyā,* “chief of magicians” (Dan 4:6, 5:1); *rab signîn,* “chief of prefects” (Dan 2:48); *rab ḥôbel,* “chief of sailors” (Jonah 1:6). In two other instances the title *rab* is not connected with a corps of officials (Jer 39:13; [41:1]; Esth 1:8). In extracanonical sources, both Aramaic and Phoenician, *rab* has the sense of “officer” or “chief,” and it appears most often in the construct form (*DISO,* s.v.). It is attested in the absolute in Jewish Aramaic texts from Qumran (e.g., 11QtgJob 19:3 [Job 29:4]; 25:1 [Job 34:24]).

2. “Rabbi” as a Jewish Title in the First Centuries C.E. The earliest evidence for “rabbi” as a title attached to a proper name (e.g., Rab Hana) occurs on Jerusalem ossuaries which apparently date from before 100 C.E. (*CIJ* 2: 249; 275–77; 277–79). The inscriptions which date from 100 C.E. to 400 C.E. stem largely from the cemeteries of Joppa and Beth-she‹arim (see the annotated list of inscriptions in Cohen 1981: 1–17). These inscriptions indicate that men entitled *rabbî* were probably wealthy, and that many were comfortable with the Greek language and with Greco-Roman artistic and architectural styles (see, e.g., Schwabe and Lifshitz 1973: no. 61). Overall, the inscriptions indicate that the title *rabbî* should be thought of as an honorific roughly equivalent to “sir,” with no explicit connection to either teaching or adjudication (much like the colloquial use of Gk *kyrios*). One problematic exception should be noted [Naveh 1978: no. 6]; the inscription cited at Mazar 1974: 46 should not be admitted as evidence.)

B. *Rab* and *Rabbi* in Rabbinic Literature

The use of the term *rab* as a title is not attested before roughly the 1st century C.E. In rabbinic literature, personages associated with the period before 70 C.E. are not referred to with a title (e.g., Hillel, Shammai), while those associated with the later periods are titled (e.g., Rabbi Aqiba, etc.). Of greatest relevance to the present discussion, however, is the absolute use of the term as well as its use as a mode of address (as in the NT). The discussion is based solely on the Mishna and the Tosepta, the two earliest rabbinic collections.

1. “Rab” in the Absolute. In the absolute, the term *rab* is used almost exclusively in two ways: to designate the master of a slave (e.g., *m. Pesaḥ.* 8.1–2; *m. Giṭ.* 4.4 = *m. ‹Ed.* 1.3; compare Gk *kyrios*) or to designate a teacher, the more relevant usage for present purposes. In one tradition about a figure associated with the period before 70 C.E. and in two pre-135 C.E. traditions, *rab* designates a link in the chain of authoritative teaching (*t. Pesaḥ.* 4.13–14; *m. Yad.* 4.3; *m. ‹Ed.* 8.7).

In traditions attributed to post-135 C.E. figures, obligations to a *rab* are explicitly filial (*m. Makk.* 2.2 with *t. B. Qam.* 9.11; *m. B. Meṣ.* 2.11 with *t. B. Meṣ.* 2.29–30 and *t. Hor.* 2.25; *m. Ker.* 6.9). Similarly, the social relations of a *rab* are the focus of other post-135 C.E. traditions, as well as of anonymous traditions (*m. ‹Erub.* 3.5; *m. Meg.* 4.5; *m. Ket.* 2.10; *t. Ber.* 5.7; *t. ‹Erub.* 4.1; 5.11; *t. Ket.* 3.3; *t. Sanh.* 3.8).

Two usages characteristic of the Tosepta deserve special mention. First, important biblical figures (Moses, Elijah, Elisha) are described in terms of the relationship of *rab* and disciple (*t. Sot.* 3.7; *t. ‹Ed.* 3.4). Second, the plural *rabbôtênû* is used for the collective body of sages, and seems to be characteristic of traditions about Usha (e.g., “*rabbôtênû* were counted [for a vote] in Usha …” [*m. Soṭa* 9.14; the only mishnaic tradition of this type]; *t. Ber* 2.11; *t. Dem.* 1.11; *t. Šeb.* 4.16, 21; *t. Ket.* 5.1; 7.11; *t. Kel. B. Meṣ.* 7.11; *t. ›Ohol.* 16.7; *t. Para* 5.1; *t. Nid.* 3.9; 4.7; 8.3). In this second case, the term *rabbôtênû* at the same time designates “our *teachers*” and members of an authoritative quorum.

2. “Rabbi” as a Mode of Address. A corrupt and apparently late tradition, which assumes that *rabbî* and *rabbān* designate teachers, distinguishes between these titles (or modes of address) on the basis of the success of disciples (*t. ‹Ed.* 3.4). Yet another anonymous tradition prescribes greeting the mourning king as *adônênû wĕrabbênû,* “our lord and master” (*t. Sanh.* 4.4), indicating that even in rabbinic literature the older (nontechnical) sense of the term was retained. The remaining examples of the term *rabbî* as a mode

of address are in direct discourse; nearly all are about figures associated with the period before 135 C.E. *Rabbî* is used as an address for a judge (*m. Ned.* 9.5; *m. B. Qam.* 8.6; *t. Yeb.* 14.10; *t. Giṭ.* 1.3; *t. Kel. B. Qam.* 1.2–3) and in legal disputes—presumably for the senior member of the dispute (*t. Kel. B. Qam.* 1.6; *t. Peʾa* 3.6). Given the earlier usage of the term, these instances are not inexplicable. In still other passages the figure addressed as *rabbî* is so called because he is a teacher (*m. Roš Haš.* 2.9; *t. Ber.* 4.16–18; *t. Maʿas. Š.* 5.16; *t. Ḥag.* 2.11; *t. Giṭ.* 1.3; *t. Zeb.* 2.17; *t. Neg.* 8.6). Finally, in two traditions about R. Gamaliel (II), held to have been the patriarch and one whom we might expect to be addressed as *rabbî* by analogy with a king or a judge, Gamaliel is addressed as *rabbênû* (or *rabbî*) by members of his circle and is challenged on the basis of laws which he *taught* them (*t. Ber.* 4.15; *t. Beṣ.* 2.12; cf. *m. Ber.* 2.5–7).

C. "Rabbi" in the New Testament

1. Mark. Mark uses *rhabbi* three times and *rabbouni* (*rabboni*) once (10:51); all four instances convey a sense of Jesus' particular greatness (Mark 9:5; 11:21 [Peter]; 14:45 [Judas]; 10:51 [Bartimaeus, who follows Jesus]). In three of the four instances, Jesus is called *rabbi* in response to a miraculous action on Jesus' part: the Transfiguration (9:5), the withering of the fig tree (11:21), and the healing of the blind (10:51). Bartimaeus' reference to Jesus as *rabbouni* is coupled with the address "son of David" (10:47, 48), suggesting that the term should be thought of as meaning "sir" or perhaps "lord," and not "teacher" (cf. 9:17, in which "teacher" is used in a case of healing). *Didaskalos,* "teacher," on the other hand, is used as a more general form of address by both disciples (4:38; 9:38; 10:35; 13:1) and nondisciples (9:17; 10:17, 20; 12:14, 19, 32).

2. Matthew. In Matthew the use of the appellation *rabbi* is polemical. The only person who addresses Jesus as *rabbi* is Judas (Matt 26:25, 49). The other two instances of the word *rabbi* occur in Matt 23:1–12. Although the Matthean material in 23:1–3 does imply some sort of public teaching (as *may* the Q material in v 4 directed in Luke 11:45–46 to lawyers), the immediate context of the address *rabbi* in 23:7 describes a group perceived to enjoy public recognition as well as the outward show of piety, men who wish to be called "sir." In 23:8 the connection between *rabbi* and teacher is made explicitly. Yet the parallelism in 23:9–10 (*patēr/patēr; kathegētēs/kathegētēs*) leads us to expect not *didaskalos,* "teacher," but *rabbi* in the second half of 23:8. This break in parallel structure protects Jesus from being referred to as *rabbi,* a term associated in Matthew with the hateful Pharisees. Moreover, if "teacher" is meant in 23:8, the theme is apparently repeated at 23:10, using the term *kathegētēs* for teacher. It is possible that the author of 23:1–12 has made use of materials in which *rabbi* meant "sir" (Matt 23:7–8), but that for the Evangelist the term had the direct (and negative) connotation of "teacher of the law." This observation may be connected with the development of the term *rab* in rabbinic literature.

3. Luke. *Rabbi* does not occur in Luke. A word needs to be said about the Lukan term *epistatēs,* however (Luke 5:5; 8:24, 45; 9:33, 49; 17:13). This term corresponds once to the Markan *rabbi* (Luke 9:33; Mark 9:5) and twice to *didaskalos* (Luke 8:24; Mark 4:38; Luke 9:49; Mark 9:38). With the exception of 17:13 the address is found only in the mouths of disciples. In LXX, *epistatēs* is used to translate *śārê missîm*, "taskmasters" (Exod 1:11 [RSV]), and elsewhere, *nāgîd,* "chief" (2 Chr 31:12 [RSV]), and apparently it covers some of the same semantic field as *rab* (see also LXX Exod 5:14; 1 Kings 5; 16; 2 Kgs 25:19; Jer 52:25; 2 Chr 2:2). Moreover, in Ptolemaic Egypt and elsewhere the title *epistatēs* designated certain kinds of officials. It is possible that the Lukan term *epistatēs* reflects (as it clearly seems to in Luke 9:33) sources which used the Heb/Aram *rabbî.*

4. John. In John, two disciples address Jesus as *rabbi* after hearing from John that he is the "the lamb of God" (1:36–38); one reports that they have "found the Messiah" (1:41). Nathanael, amazed by Jesus' supernatural vision, addresses Jesus as *rabbi,* son of God and king of Israel (1:49). Even in John 3:2, where Jesus is called "a teacher come from God" in addition to *rabbi,* the use of the term is explained on the basis of Jesus' ability to perform signs. (It should be noted, however, that in John 3:1–5 Jesus does act as a teacher of heavenly things.) When Mary Magdalene perceived Jesus to be a gardener, she called Jesus *kyrios,* "sir"; when she realized that he was indeed the risen Jesus (John 20:15), she called him *rabbouni.* This understanding should inform our reading of John 6:25, in which "the people" call Jesus *rabbi,* as well as of the remaining passages, in which a teacher is called *rabbi* by his disciples (3:26

[John]; 4:31; 9:2; 11:8). It is important to note, however, that in John *rabbi* and *rabbouni* are each glossed as *didaskalos,* "teacher" (John 1:38; 20:16, respectively); it seems to have taken on this meaning exclusively.

The precise connection between early Christian and early rabbinic traditions is unclear. As the term *rabbi* became an honorific title and a mode of deferential address in general, it was taken up by rabbinic literature in particular as a special designator for a teacher. This was accompanied in the Mishna and the Tosepta by the casting of primary figures of authority as "teachers." The semantic shift from "sir" to "teacher" that is reflected in rabbinic literature has left traces in those NT passages in which *rabbi,* used of Jesus because of his greatness, is overlaid with the predominant sense of "teacher."

HAYIM LAPIN

RABBINIC HERMENEUTICS, EARLY. See HERMENEUTICS, EARLY RABBINIC.

RABBINIC LITERATURE AND THE NT. The discovery of the Dead Sea Scrolls and renewed study, since World War II, of the Jewish pseudepigraphic writings have given new impetus to the study of the NT in its Jewish setting (Saldarini fc.; Vermes 1983: 58–68.) W. D. Davies' studies on Paul and Palestinian Judaism (1955) provided an early model for using rabbinic sources. Most English-speaking NT scholars in the 1950s and 1960s depended on the sketch of normative Judaism worked out by G. F. Moore (1927–30) as a framework for their understanding of Judaism and the topical collection of rabbinic texts by P. Billerbeck as their source for rabbinic literature. The older German evaluations of Judaism as late, legalistic, and inferior to Christianity were less determinative but not entirely absent for the English-speaking world (Klein 1978). Although rabbinic literature dated from the 2d century and later, it was widely used to interpret the NT because it contained material which claimed to be by and about Jewish teachers of the 1st and 2d centuries and also because it presented a wealth of legal, exegetical, and cultural detail about Judaism lacking in the Pseudepigrapha and historical sources. Descriptions of diverse types of prerabbinic Judaism witnessed by the Dead Sea Scrolls and renewed study of the Pseudepigrapha have only gradually eroded the uncritical acceptance of the rabbinic reconstruction of the Second Temple period and provided a more variegated foundation for understanding the NT in its Palestinian context.

A. Problems in the Use of Rabbinic Literature

The use of rabbinic literature (Mishnah, Tosefta, Palestinian and Babylonian Talmuds, midrashic collections, Targums, and mystical writings) as a resource for interpreting the NT has been questioned increasingly in recent years for several reasons. The vision of a coherent and continuous normative Judaism implied by the rabbinic sources and presented by Moore has been shown to be anachronistic for the 1st century. Prior to the destruction of the temple (70 C.E.), Judaism comprised many social groups, including the chief priest and Jerusalem notables, landowners, merchants, Pharisees and Essenes, peasants, and the economically displaced. Among them, many views of how Judaism should be lived and how it should adapt to or resist Hellenistic culture competed for recognition and ascendancy. Serious conflicts separated the governing class, who controlled the wealth and collected taxes for the Romans, from the majority of the people, who were loyal to local customs and the traditional Jewish way of life. The rabbinic way of life and thought had yet to be articulated and certainly was not dominant. The rabbinic sources retrojected their understanding of Jewish life and institutions onto Judaism as far back as Ezra in the 5th century, much as the Gospels retrojected problems and teachings of the early Church into

the story of the life of Jesus. Literary and redactional studies of rabbinic sources have shown the later biases of these works and the difficulty of isolating earlier sources and literary strata. Statements and stories attributed to named Jewish authorities, which were previously accepted as historical fact, must now be subjected to the same critical scrutiny applied to the stories and sayings of Jesus (Neusner).

NT scholars who have used rabbinic literature have often succumbed to "parallelomania," the associative linking of similar words, phrases, patterns, thoughts, or themes, in order to claim the influence or dependence of one text or tradition on another. Many of the earlier studies using rabbinic sources were based on isolated and superficial similarities in very dissimilar texts. Their argument for a relationship between the NT and rabbinic literature was based on the assumptions that the later traditions in rabbinic literature were unchanged from the 1st century, and that the fabric of Judaism was uniform enough for literary and theological details to be related to one another as if deriving from one context (for a review of NT studies using rabbinic literature, see Saldarini fc..). Such fragmentary and uncontrolled use of this complex literature must be replaced by a wholistic grasp of rabbinic life and thought which can then be compared with early Christianity (Sanders 1977: 12–24). The final documents and the traditions within them must be set within their historical, social, and religious contexts, using both literary analysis of the documents' social world and rhetorical goals and historical analysis of their political and social settings.

Rabbinic texts from later centuries have been habitually used as evidence for 1st-century Jewish institutions, leaders, and social structures. Since the rabbinic traditions reached their final forms from about 200 C.E. on, traditions must first be dated before being employed as historical evidence. No rabbinic document or set of traditions can be presumed to be early in its entirety; nor does a late historical reference in a large collection prove that all its traditions are late. The continuity and variations in Jewish and early Christian traditions must be traced by using dated texts and traditions which can be demonstrated by internal criteria to be early. The extensive and repeated redaction of rabbinic materials makes form-critical and redactional dating of texts extremely difficult.

The rabbinic view of earlier centuries is not historically reliable unless verified by 1st-century texts or the general pattern of the culture and empire. The social situation of Palestine in the 1st century was complex in the extreme. Any comparison of Judaism and Christianity must take into account the internal dynamics of the Jewish and Christian communities, their intricate relationships with each other, the divergent developments of both Christian theology and Jewish Talmudic literature, and the external pressure of the Roman Empire, all of which influenced the literature which has survived.

The Palestinian cultural context common to early Judaism and Christianity and the relative stability of traditional society make it probable that the two literatures share traditions, attitudes, and assumptions. However, later rabbinic outlooks and teachings must be separated from more fundamental, traditional, and widespread aspects of Judaism, some of which were foundational for the Jesus movement. The two possibilities of the rabbinic and Christian movements deriving materials from common sources, and of Christianity influencing Jewish literature, must be taken into account. The most likely common source for features of Judaism and Christianity is the Greco-Roman culture, within which both religions developed. For example, the rabbinic exegetical rules, attributed to Hillel, were known to Hellenistic scholars centuries earlier and were part of a common fund of knowledge available to all. Similarities and differences can only acquire significance and promote understanding when placed in a larger social, cultural, historical, and religious context.

B. Problems in the Study of Rabbinic Literature

The use of rabbinic literature in NT interpretation is impeded by a number of problems inherent to the study of rabbinic literature. Rabbinic literature often strikes the Western Christian reader as strange, a perception which has contributed to anti-Semitism. It is a closed, self-referential, elliptical body of literature which is understood only by those fully familiar with it. Fundamental cultural and theological presuppositions, such as a detailed knowledge of biblical law, are assumed. Discussions of legal and exegetical arguments and their solutions often begin without a statement of the biblical or Mishnaic problems to be discussed, because a prior detailed knowledge of the texts and problems is presumed. Legal, logical, and philosophical arguments and minutiae about matters far from traditional Christian or

modern concerns fill pages, while multiple, alternative interpretations of each word, phrase, opinion, and consequence are dialectically related to one another. Such discussions, especially prevalent in the Talmuds, take place in a timeless world of academic study and spiritual love for the Torah as God's relevation. The ultimate coherence and meaning of this world of discourse becomes evident only to those persons who enter into the dialogue and adopt the world as their own. Needless to say, such a literature resists both historical analysis and limited use as "background" for the NT. It must be studied on its own and then with the NT as part of the larger history of Judaism (Vermes 1983: 69–71).

Most rabbinic works are collections of earlier material, some of which are consistently and coherently edited with great sophistication (Mishnah, Babylonian Talmud); and others are more like loosely organized compendia (late midrashic collections). Traditions have been added and rearranged in multiple stages in accordance with the presuppositions, purposes, ethos, and interests of the community of scholars which produced rabbinic literature. The views of the final documents can sometimes be determined by literary analysis, but such documents are difficult to place in historical context. Many studies have attempted to determine which traditions are earlier and how they developed. Though some progress has been made in this area, widely differing results and methodological criteria indicate that this type of study is very hypothetical and subjective (see Saldarini 1977, and a review of studies on the Babylonian Talmud in Goodblatt 1979: 281–318). Few of the rabbinic traditions can be securely dated to the 1st century, a result pertinent for NT study.

Most rabbinic documents have yet to be subjected to sustained and extensive higher criticism which seeks to understand the original apart from its later interpretation (e.g., the Mishnah apart from the Talmuds) and the history of interpretation as a mirror of changing Jewish interests and circumstances. All rabbinic documents have received extensive traditional interpretations which treat them as one cultural whole extending over centuries, minutely examine wording and variations in formulation, and attempt to work out a consistent and coherent way of life and thought for the Jewish community. Such traditional interpretations can aid the scholar in understanding the subtleties of the texts and provide a range of possible interpretations, but many of the interpretations reflect the views and interests of later commentators rather than of the original authors.

Finally, few thoroughly scientific critical editions have established reliable texts that do justice to the long and complex manuscript tradition of rabbinic literature. Many passages in the printed editions are corrupt, so Talmudic scholars habitually make use of collections of variants and important manuscripts in precise scholarly studies. Sayings are attributed to various sages in different manuscripts, and blocks of similar or related material are often added or omitted in various manuscripts. Some manuscripts, especially of midrashic and mystical works, differ so greatly from one another as to be independent books rather than variants of one original text (e.g., the traditional Midrash Tanhuma and the Tanhuma manuscript published by Buber).

C. Uses of Rabbinic Literature

Despite the cautions voiced above and the late date of much of rabbinic literature, familiarity with it is helpful for the study of the NT. Rabbinic literature can be used along with other Jewish literature of the Hellenistic-Roman period, including the so-called Apocrypha and Pseudepigrapha, the Dead Sea Scrolls, and Diaspora Greek works, to understand Jewish culture in its breadth and diversity within the Roman Empire. Both the NT and early Church history benefit from insertion into their larger contexts, Near Eastern, Jewish, and Roman. Many assumptions, traditions, practices, and concerns of Judaism either remained constant for centuries or underwent instructive changes already in antiquity. Realistic information concerning Jewish teachings and practices—combined with an empathetic grasp of their fundamental attitudes toward God and humans—will blunt the bias often produced by NT anti-Jewish polemics and will help cure anti-Semitic NT theology which has created the caricature of the spiritually dead and legalistic Jew living a decadent way of life in a proud and hypocritical relationship with God while rejecting the obvious signs that Jesus was Messiah. Firsthand knowledge of Judaism as a vital and growing faith and way of life makes clear both the attraction of Judaism in the 1st century and the clear alternative to it offered by Jesus and the early Christian missionaries. Finally, such knowledge provides a

stimulus and guidance for taking up the still-unanswered Christian theological problem of the place of Israel in God's plans after the coming of Jesus Christ.

Detailed studies of Jewish beliefs, traditions, and practices in the NT require a comprehensive overview of Judaism and its development in the Second Temple and early rabbinic periods (Vermes 1983: 72–73). Within that context, extended rabbinic commentaries on Scripture, in conjunction with the Qumran and other Jewish interpretative literature, can illuminate hermeneutical procedures used in the NT and can sometimes demonstrate the continuity of interpretative traditions. Though the elegant structure of Mishnaic and Talmudic law cannot be attributed to the 1st century, redactional studies of rabbinic sources and comparison with other sources can sometimes place certain laws and customs in the 1st century and add to the understanding of the Jewish community's inner life. Fundamental affirmations about God and humans which Christianity derived from Judaism, and which are assumed rather than articulated in 1st-century literature, often receive a fuller treatment in rabbinic literature. A comprehensive analysis of the development of Jewish traditions, including early NT traditions and later rabbinic literature, if done with sensitivity to historical development, will yield results which illuminate the Jewish substrate of the NT (Vermes 1983: 84–87) and also reveal, by contrast, the Greco-Roman contributions to NT literature as well.

ANTHONY J. SALDARINI

RABBIT. See ZOOLOGY.

RABBITH (PLACE) [Heb*rabbît* (רַבִּית)]. A town belonging to the territory allotted to Issachar (Josh 19:20). In this sole reference to the name in the Bible, it is listed next to Kishion, which seems to be just S of Mt. Tabor (Kishion = M.R. 187229; Aharoni and Avi-Yonah *MBA,* 53). The LXX B and the Old Latin read the name as "Daberath," which is situated next to Kishion in another list of tribal holdings that were ceded from Issachar to the Levites (i.e., the Gershomites; Josh 21:28; cf. 1 Chr 6:57 [—Eng 6:72]). Daberath is also located near Mt. Tabor, approximately 2 miles NW of Kishion (M.R. 184233; Aharoni and Avi-Yonah *MBA,* 53). Tribal possession of Daberath seems to have been unclear, since it is also allocated to Zebulun (Josh 19:12).

The identification of Daberath with Rabbith is geographically possible, though several critical alterations to the text would need to be accepted. The more difficult reading in this instance appears to be the MT, and an as yet unidentified site of this name in this area is not at all out of the question.

DAVID W. BAKER

RABBONI. See RABBI.

RABMAG [Heb*rab-māg* (רַב־מָג)]. The title of Nergal-sharezer, who was present at Nebuchadnezzar's siege of Jerusalem in 587 B.C. (Jer 39:3, 13). The rabmag (Bab. *rab mugi*) was a high-ranking official in Babylonia.

A. KIRK GRAYSON

RABSARIS [Heb*rab-sārîs* (רַב־סָרִיס)]. The rabsaris (Akk *rab-ša-rēši*) was a high-ranking Assyrian official; the word in Assyrian means literally "chief eunuch." Eunuchs formed a most important part of the Assyrian bureaucracy and were numerous. The rabsaris, together with the rabshakeh and the tartan, played a major role in the siege of Jerusalem by Sennacherib (2 Kgs 18:17). (For further information about officials in the Assyrian administration, see ASSYRIA; see also Tadmor in *WLSGF*, 279–85.) The rabsaris was also the title of a high-ranking official in the Babylonian army, and he, together with the rabmag, played a leading part in the siege of Jerusalem (587 B.C.) by Nebuchadnezzar II (Jer 39:3, 13).
A. KIRK GRAYSON

RABSHAKEH [Heb *rab-šaqēh* (רַב־שָׁקֵה)]. The title of a high-ranking Assyrian official; the word literally means "chief cupbearer." As a leading Assyrian military officer, the rabshakeh played a prominent role, together with the rabsaris and the tartan, in the siege of Jerusalem led by Sennacherib (2 Kings 18–19 = Isaiah 36–37). Regarding the various high-ranking officers in the Assyrian administration, see ASSYRIA; see also Tadmor in *WLSGF*, 279–85.
A. KIRK GRAYSON

RACA. An expression of reproach used as an example by Jesus in one of his teachings (Matt 5:22). The RSV translates this term as "insult." In Matt 5:22a "raca" (Gk *rhaka*) is basically parallel in meaning to *mōre* (Fool!) in v 22b, and is thus a term of abuse or contempt. The key difference is that while the second of these is a Greek word, the first is not. It seems in fact to be the emphatic state of Aram *r (y)qˀ*, meaning "empty," and hence "worthless," "good for nothing." As a term of contempt, it is found in the Talmud and Midrash, e.g., *b. Ber.* 22b, "… she said to him, Numskull! (= *ryqˀ*) …;" and *Eccl. Rab.* to 9:15, "Woe to you, worthless fellows (*rqyyˀ*), tomorrow the Flood is coming …" (that is, these are the men of the flood generation). The word was first noticed as a Semitism by John Lightfoot (1684), who gave a series of examples from Talmudic and Midrashic literature. The context in Matt 5:22 supports the identification of "raca" as a Semitism, in that it refers in turn to the person who is wrathful with his fellow, calls him "Numskull" (*raqāˀ*) or "fool," as worthy of "the judgment," "the Sanhedrin," or "the Gehenna of fire." The use of "raca" in Matt 5:22, without any following explanation or translation in Greek, was held by Jeremias to indicate that Matthew's audience could cope with some Aramaic.
MAX WILCOX

RACAL (PLACE) [Heb *rākāl* (רָכָל)]. One of the cities listed as places to which David sent spoil following the destruction of the band of Amalekites who had destroyed Ziklag (1 Sam 30:29). The location of Racal is unknown (*IDB* 4:4). The LXX, however, has "Carmel" at this point (McCarter *1 Samuel* AB, 434), and this reading is to be preferred. Carmel is the town where David met Nabal, who was shearing his sheep and married Nabal's wife, Abigail, upon Nabal's death. Carmel is located about 7 miles S of Hebron (modern Tell el-Kirmil, M.R. 162092; McCarter, 436).
JEFFRIES M. HAMILTON

RACHEL (PERSON) [Heb*rāḥēl* (רָחֵל)]. Second and favorite wife of Jacob, mother of Joseph and Benjamin, younger daughter of Laban (Rebekah's brother), and sister of Leah (Jacob's first wife). Thus, Rachel and Leah are also first cousins to Jacob, since their father (Laban) and Jacob's mother (Rebekah) are brother and sister. On the father's side, they are second cousins once removed, since Abraham and Nahor are brothers. See Fig. RAC.01.

The story of Rachel is a story of unparalleled love and devotion in the biblical narrative. On Rebekah's suggestion, Abraham sends his son Jacob to Paddan-aram (Haran) to her father Bethuel's house to procure one of the daughters of Laban as his bride (Gen 27:46–28:5). Jacob departs precipitately on this journey because he had incurred his elder brother Esau's murderous hatred for securing the birthright of

primogeniture for himself through deception (Genesis 27). However, God reinforces Jacob's blessing in a dream-vision at Bethel, in which God promises to Jacob,

> The land on which you lie I will give to you and to your descendants; and your descendants shall be like the dust of the earth … and by you … shall all the families of the earth bless themselves (Gen 28:14).

Rachel then appears to Jacob at a well, and here begins Jacob's personal story of deep emotional attachment and love for her. Jacob initiates all the action: he single-handedly rolls away the heavy stone to water Laban's flock, he kisses Rachel, and he weeps, overcome with emotion (Gen 29:9–11). Only then does he introduce himself to Rachel as her father's kinsman (v 12). Rachel remains passively observant until then, and finally runs to tell her father, Laban. The narrative is swift and pointed. The symbolic action of Jacob rolling away the stone at the well is thematically indicative of the numerous obstacles that he must later overcome to obtain the woman he loves (seven years of servitude culminating in the substitution of Leah as first wife, then seven additional years of labor for Rachel). A further obstacle to Rachel's position as wife is her failure to have children for many years. Ironically, she dies at the birth of her second child, leaving Jacob bereft and in sorrow, a sorrow which remains with Jacob, deeply affecting his special relationship with the two sons she bore, and a sorrow which is echoed in later biblical references (Jer 31:15 = Matt 2:18). No other woman is so loved in the Bible.

Jacob's encounter with Rachel at the well (Gen 29:1–12) has some crucial points of difference to an earlier and similar scene of Rebekah's encounter at the well (Genesis 24) There, the betrothal negotiations are between the servant of Abraham (who is not named), as surrogate for Isaac, and Bethuel's household. The emissary bears choice gifts from his master, the patriarch Abraham. His camels kneel at the well outside the city of Nahor in princely fashion. Rebekah approaches and becomes the center of activity as she speaks and gives drink first to the servant and then to the camels. The life-giving water as a fertility symbol is an appropriate introduction to the subsequent betrothal negotiations, which resemble a formal "treaty" between families. Rebekah is sent to her new home with blessings of fertility, and she is received there by Isaac with love. The narrative is formal, repetitious, and oracular, and the impression is that the marriage is preordained by the deity and that it will proceed smoothly. See REBEKAH. By contrast, the well in Genesis 29 is located out in the fields, and it provides a focal point for the pastoral activity against which all of Jacob's life unfolds. Jacob is the poor stranger, his own emissary, a refugee from his brother Esau's wrath, bearing no rich gifts, only his walking staff. He is the initiator of activity when he rolls away the heavy stone by himself to water Laban's flock. Rachel, the younger daughter, is the shepherd who looks after the flock, but she is passive until after Jacob's initial outburst of action culminating in the kiss and his revelation as kinsman. The abrupt betrothal negotiations (vv 18–19) are made directly by the principals themselves and are directed by emotion and sentiment rather than the official decorum of a "family treaty." Jacob readily agrees to seven years of servitude for her, and has, it seems, already served one month for nothing. From the outset the impression is given that the marriage will be less conventional than others because it begins on a note of passion. Jacob's unparalleled love for Rachel is described in very powerful terms: "Jacob loved Rachel; and he said [to her father Laban], 'I will serve you seven years for your younger daughter Rachel' … So Jacob served seven years for Rachel, and they seemed to him but a few days because of the love he had for her" (Gen 29:18–20). This love remained undiminished even by her death, when it was transferred to her children, Joseph and Benjamin. Such a description of love is exceptional in the Bible (e.g., Jacob and Rachel's kiss is the only explicit biblical scene of a man kissing a woman); outside the Song of Songs not much is made of love between men and women.

Rachel's beauty is a prevailing motif in the competition between the two sisters. We are not told of her beauty until we meet both daughters of Laban, first the elder, Leah, who is only described as having "weak" or "dull" eyes (which is presumably a flaw) or "tender eyes" (which seems a much more appealing description):the exact meaning of the Hebrew *rakkōt* (29:17) is not clear. By contrast, Rachel is both beautiful and lovely (Heb *yĕpat-tō᾽ar wîpat mar᾽eh*), which might seem redundant but is perhaps intended to be an emphatic in aspects of both beauty and character.

After Jacob has labored the agreed-upon seven years, Laban prepares a wedding feast for Rachel. The last-minute substitution of Leah for Rachel is ambiguously interwoven with the prerogative of the elder

versus the younger daughter and is contrasted not only in terms of primogeniture but also in terms of appearance, just as Jacob and Esau are similarly contrasted in terms of primogeniture and appearance (Gen 27:11). There is symmetrical "poetic justice" in Laban's deception of Jacob in substituting the veiled Leah for her sister Rachel in the blindness of the night (Gen 29:23), just as earlier Jacob had stolen his blind father's blessing while in disguise as he substituted himself for his brother Esau. Jacob's cry of woe (Gen 29:25) echoes Esau's earlier cry (27:34, 38).

Jacob does receive Rachel to wife at the end of the week of marriage festivities with Leah (Gen 29:27), after which he serves another seven years for Rachel, a total of fourteen years' service for her. We must suppose that both Leah and Rachel were willing parties to the deception, and that Rachel had demanded legitimate compensation for being willing to let Leah precede her in marriage to Jacob. Perhaps she had compassion for her older sister who might otherwise have remained without a husband. But in the bargaining, she would then have insisted that the second wedding not be postponed until the second bridal price was paid. Normally, this was paid to the father of the woman, but since Jacob was penniless, he had to pay in services, the equivalent of seven years' hard labor for a wife. A dowry, however, was paid to the bride by her father and would be hers to control. Later, Rachel and Leah would complain that their father had kept their respective dowries for himself (Gen 31:15–16), which is perhaps a reason for Rachel stealing Laban's household gods (Gen 31:19).

Jacob's greater love for Rachel (Gen 29:30) seems to heighten the competitive mood between the two sisters as they each vie for Jacob's attention and the begetting of children from him. Rachel's barrenness and her desire for children recall other biblical stories, chiefly that of Sarah, who was regarded with contempt by Hagar as soon as Hagar became pregnant with Ishmael (Gen 16:4). Leah had borne four sons to Jacob (Reuben, Simeon, Levi, and Judah) before Rachel's envy finally erupts in a confrontation with Jacob. Now, her jealousy and anger burst forth at Jacob in the impulsive and violent outcry (Rachel's first recorded speech in the Bible): "Give me children, or I shall die!" (Gen 30:1). The demand "give" (*hābâ*) is explosive, and the sense of dying expresses imminence (lit. "I am dead"). Rachel, the barren wife, asks not for one child but for children (plural). Jacob's retort is a rebuke of her anger: "Am I in the place of God, who has withheld from you the fruit of the womb?" (Gen 30:2). The brief exchange of words is extremely effective in conveying Rachel's desperation and Jacob's rebuke, her anger and his controlled response. Rachel's practical solution of offering her maidservant Bilhah to be her surrogate in obtaining sons is intended to build her up. There is a double play on words here, since the verbs meaning "to build up" can also be construed literally as "having sons" (cf. Isa 49:17, where we have a similar allusion on *bōnîm,* which means "builders," and *bānîm,* which means "sons"). Rachel names the children thus conceived, and in the meanings of the names which she gives to the two sons (Dan and Naphtali) she voices her sense of contentment, comfort, and triumph ("God has judged me, and has also heard my voice and given me a son"; and "With mighty wrestlings I have wrestled with my sister, and have prevailed"; Gen 30:6–8).

Leah has borne Jacob six sons and a daughter (Dinah), and her maid Zilpah has borne Jacob two sons (Gad and Asher). Only then does God bless Rachel, the beloved of Jacob, with her first child, whom she names with the expressed wish for a second son: "And she called his name Joseph, saying 'May the Lord add to me another son' " (Gen 30:24). The situation is much the same with Elkanah and his two wives: Peninnah was unloved but bore many children, while Hannah was beloved but barren for many years (1 Samuel 1).

After Joseph's birth, and upon Jacob's decision to leave Laban's household, we see defiance in Rachel's demeanor. In stealing and withholding the household gods (Heb *tĕrāpîm*) from her domineering father, she becomes the unintended object of Jacob's curse: "Any one with whom you find your gods shall not live" (Gen 31:32).

Rachel dies on the journey after giving birth to her second son, whom she names Benoni ("son of my sorrow") but whom Jacob renames Benjamin ("son of the right hand"). He is Jacob's youngest and last child, the object of his great and most tender affection.

Just as Jacob had singled out Rachel for the special love in his life, so he singled her out in death by placing a commemorative pillar on her grave (Gen 35:20) to mark her tomb, where she became revered as mother and matriarch. Actually, there seem to have been two locations for the tomb of Rachel in the folk tradition, one around Bethlehem still known in Saul's day (1 Sam 10:2), and another further N in Benjamin territory. See RACHEL; EPHRAIM (PLACE); see also MARJAMAH, KHIRBET EL- and DHAHR MIRZBANEH. In the NT, Matt 2:16–18 refers to Rachel weeping for her children in connection with Herod's slaying of the infants after Jesus' birth, a reference back to Jer 31:15.

The favorite status and envy engendered by Jacob's special love for Rachel is passed down to the children and becomes evident in the children's interactions with each other. It manifests itself in the hatred of the brothers against Joseph, which is also aggravated, however, by Joseph's dreams of predominance and supremacy over his older brothers (Genesis 37). There is a psychological resonance here to Laban's treachery in substituting Leah for Rachel. In selling Joseph to the Ishmaelites on their way to Egypt (Gen 37:28), the brothers establish their superiority over him, and they punish not only Joseph, but also their father. Additional treachery is perpetrated by Reuben, the firstborn son, who usurped his father's authority in laying with Bilhah, Rachel's maid and conjugal surrogate, soon after Rachel's death, a fact not lost upon Joseph who was still a boy (Thomas Mann elaborates on this narrative in his superb trilogy *Joseph und seine Brüder*). When the ten brothers go down to Egypt as the "sons of Israel" to be emissaries for their patriarchal father, they are called "Joseph's brothers" upon their arrival, a test of the kinship bond to their brother which they tried to deny by selling Joseph into slavery. The designation of Benjamin as "Joseph's brother" has a different impact both emotionally and genealogically, because Benjamin is Joseph's only full brother, the only other one of Rachel's children. Jacob expresses his sorrow poignantly in his own words: "My son shall not go down with you, for his brother is dead, and he only is left. If harm should befall him on the journey … you would bring down my grey hairs with sorrow to Sheol" (Gen 42:38). "He only is left," says Jacob, omitting the words "from Rachel," as though only the sons of Rachel count as true sons.

Traditio-historical research into the twelve-tribe system of early Israel led M. Noth and others to postulate that Rachel and Leah were originally "eponymous ancestors" for groups of seminomadic tribes that, at various different times and in various different "waves," settled down in the area that would eventually become Israel (see Weippert 1971: 5–46, esp. 42–46). The "Rachel tribes" —Joseph (Ephraim and Manasseh) and Benjamin—were thus believed by some to have been the final wave of nomads, containing peoples whose traditions included a sojourn in Egypt, the crossing of the Jordan river, the destruction of Jericho and Ai, and the defeat of a coalition of kings near Gibeon, traditions that would later be embraced by all twelve Israelite tribes and find literary expression in the narratives of Exodus and Joshua 1–10. However, more recent study of Israelite origins has tended to reject the notions of seminomadic migrations and to question the merits of applying traditio-historical methods to the question of Israel's origins. See AMPHICTYONY.

In the blessings in Genesis 49, the blessing of Joseph (vv 15–16) is the longest of all the blessings. Yet for all the glory which will accrue to Rachel's firstborn son Joseph, the Davidic kings of Israel will come not from him but from Judah, the fourth son of her sister Leah (although Saul, the first king, was from the tribe of Benjamin).

ASTRID BILLES BECK

RACHEL'S TOMB (PLACE) [Heb *qĕburat rāḥēl* (קְבֻרַת רָחֵל)]. Burial place of the Benjaminite matriarch, Rachel, located in the territory of Benjamin S of Bethel and N of Ephrathah in the vicinity of

Ramah (Gen 35:19–20; 48:7; 1 Sam 10:2; Jer 31:15). There are two irreconcilable biblical locations for Rachel's tomb: Bethlehem and Benjamin. Modern scholars are in almost unanimous agreement that she is not buried at Bethlehem. Within the territory of Benjamin, Ramah (M.R. 172140) and Kiriath-jearim (M.R. 159135; see JAAR) are most often suggested by those who attempt to be more specific. See also EPHRAIM (PLACE).

The legends of Genesis record an ancient tradition that Rachel died giving birth to Benjamin during Jacob's journey S from Bethel. This tradition locates the place of her death a short distance N of Ephrathah—a region inhabited by the Judahite clan of the same name located at the N border of Judah. The territory of this clan extended to the E from Kiriath-jearim, which was on the N border, and to the S below Bethlehem. After Rachel was buried, Jacob proceeded into the territory of Judah and camped just beyond Migdal-eder, according to the redacted sources of Gen 35:16–29. Micah 4:8 and *Šeqal.* 7:4 (rabbinic text) seem to identify this place with the Ophel near Zion (but still well N of Bethlehem). Finally, Jacob continues his journey—we assume through Bethlehem—to his S destination of Hebron. The itinerary following the matriarch's burial may not be historical, but it must have been a geographically reasonable one to the redactor. The editorial glosses identifying Ephrathah with Bethlehem represent a tradition from a much later era when the territory of the clan and its most famous village of Bethlehem were assumed to be identical. These glosses are inaccurate with regard to the era of the matriarches and patriarches, but they account for the erroneous tradition which located Rachel's tomb at the N outskirts of Judahite Bethlehem.

Matthew (2:18) appropriated this late Jewish tradition and certainly played a role in focusing attention in the Common Era on a bogus spot. Fourth-century Christian Eusebius mentions a tomb near Bethlehem, as does the 10th-century *Jewish Guide to Jerusalem.* The 12th-century rabbi Benjamin of Tudela and latter pilgrims describe a pyramid of twelve stones, and it was probably in the same century that the Crusaders built a dome supported by four pillars over the monument. In the 18th century, Muslims enclosed the structure, and in 1841 Sir Moses Montefiore added a vestibule. However, the topographical incongruity created by the Genesis glossator was so glaring that omitted Gen 35:21 and made Jacob arrive at Migdal-eder in v 16, as would have been required by a S-moving Jacob were Rachel to be buried at Bethlehem, which she is not (see Tsevat 1962: 109). The Genesis itinerary would also appear to rule out Kiriath-jearim to the W.

The tradition represented in 1 Sam 10:1–6 is consistent with the preglossated legends of Genesis. There, Rachel is buried S of Bethel near the road to Migdal-eder, Bethlehem, and Hebron, but still within the Benjaminite territory, i.e., still some distance N of the old Ephrathite clan territory. The geography of this story is as follows. Saul leaves his home in Benjaminite Gibeah (Josh 18:25; 1 Sam 9:1; 10:5, 10, 26; 11:4; 15:34; 22:6; 23:19), which is S of the Benjaminite Ramah near the N–S route from Bethel to Jerusalem, in order to look for his lost donkeys in the Ephraimite hill country N of Benjamin. He ends up at the Zuphite Ramah, which is the home of Samuel in Ephraim, i.e., Ramathaim, the "two-hilled" Ramah (1 Sam 1:1, 19; 2:11; 7:17; 8:4; 9:5; 25:1; 28:3). Then, from this latter Ephraimite Ramah, which is NW of Benjamin, he returns home to Gibeah. (Some wish to translate Gibeah in 10:5 and 10:10 literally as "hill," but it is clear from the context that everybody knows Saul and from v 26 that he has returned home. There is really no conflict in this part of the narrative, and certainly "Gibeah" was built on or near a "hill.") On his return journey, Saul passes Rachel's tomb, *bĕṣelṣah* (v 2), and finally the Oak of Tabor, which must be S of and near the road to Bethel (v 3). But can we be more specific about these latter two references?

In 1 Sam 10:2, it is said that Rachel's tomb is "in the territory of Benjamin" (RSV). We already know that. But Heb *bigĕbûl* can also be translated as "at the boundary of." We already know, too, that Rachel's tomb is near the Ephrathite border. We are left with the *crux interpretum—bĕṣelṣaḥ.* This is almost certainly not a *nomen proprium loci* (RSV, "at Zelzah"). No such place is known in Hebrew, and on the analogy of the other two signs one would expect a modifying phrase rather than a third proper noun: the locus of the sign to be received by Saul is specifically "beside [Heb *ʿim*] Rachel's tomb at the boundary of Benjamin" (cf. Driver *NHT,* 78–79). The Greek witnesses are varied and do little more than attest to the

Hebrew letters ṣlḥ, "rush," and hence the proleptic wordplay on v 6; or with R. Yose (2nd century C.E., *Midr.* Sam. 14, cited by Tsevat 1962: 111; see Zimolong 1938) and Vg, they redivide the letters (*bĕṣēl ṣaḥ*) to get the curious "at dazzling shade," which they interpreted as "noon." The most appropriate reading seems to be *bĕṣēl ṣĕḥīaḥ* (Hertzberg *Samuel OTL,* 77; haplography), "in the shade of a shiny rock." Genesis relates that Jacob marked Rachel's tomb with a large sepulchral stone," which is there to this day" (35:20) and which likely would have been smooth and shiny after generations of anointing pilgrims (cf. even modern holy spots). This unusual word for rock would have been chosen for reasons of paronomasia to enhance the mysterious nature of the sign as well as to foreshadow the culmination of the third sign when the spirit rushes [*ṣlḥ*] on Saul (v 6). Supporting this pun and forming the connection between signs one and three is the curious employment of *ḥlp* (v 3), not normally used of human transit but more appropriate to the rushing of God or wind, to continue the wordplay in sign two. Finally, if one observes the parallel structure of the three signs, they all state a specific location, with two qualifications, followed by a mysterious activity: Rachel's tomb, at the boundary of Benjamin, in the shade of a shiny rock … (v 2); from there, and a bit further, at the Oak of Tabor … (v 3); Gibeah, of God (a surprising qualification which occurs only here), where there is a Philistine garrison … (v 5). Thus, we have learned nothing more than, but also nothing that is inconsistent with, the traditions of Genesis. Rachel's tomb is in the territory of Benjamin, near the boundary, and is marked by a monumental stone. Again, Kiriath-jearim is all but excluded from Saul's journey since, while it is on the Benjaminite border, it is decidedly S of a path from Ramathaim to Gibeah, especially in light of his following activity near Bethel, N of Gibeah.

Before reaching Gibeah, Saul passes the Oak/Terebinth of Tabor (see Trever *IDB* 3: 575). Have we any clues to its location? It is true that sacred trees were common in ancient Israel, but the author of the story assumes the audience will recognize this well-known reference. Some Greek and Latin witnesses read simply the "choice" tree, illustrating confusion surrounding the name "Tabor." The editorial addition in Judg 4:5 mentions the Palm/Post of Deborah (Heb *tōmer dĕbôrâ*) in the context of the great Deborah legend focused at Mt. Tabor (Heb *tābôr*); furthermore, a second parenthetical (verse 11) introduces the notorious Oak/Terebinth in Zaananim as a counterpart to Deborah's Palm/Post and paralleled to Mt. Tabor in the following v 12 (Boling *Judges* AB, 96–97). It is highly probable that phonetic similarity, literary parallelism, and geographic confusion have combined to yield two names for the same sacred tree, the Deborah/Tabor tree (*BDB:* 18b). Gen 35:8 mentions the Oak of Deborah is immediately preceding the story about Rachel's tomb, and the narrator employs the definite article "with a title understood and recognized by everyone": the Oak—"the well-known oak which was there" (*GKC,* §126d). That this verse sits loosely in its context has often been noted, and that the tomb of Rebekah's nurse would mark a memorable spot is highly dubious. It is much more probable that Gen 35:8 is a variant etiology for the judgment tree of Deborah/Tabor mentioned above (Vawter 1977: 363). Not only do these names converge on one tree, but the geographical references do so as well. At the tree, Saul meets three men "going up to Bethel" (1 Sam 10:3) and then proceeds to Gibeah (S of Bethel). Deborah is buried "beneath Bethel" (Gen 35:8) just before Rachel dies while journeying from Bethel S to Ephrathah. Deborah's tree is located "between Ramah and Bethel" (Judg 4:5). The latter note is secondary and geographically confused, but almost surely the original tradition meant the Ramah S of Bethel just N of Gibeah (Martin *Judges* CBC, 55–56). Hence, it seems probable that the traditions surrounding a sacred tree of Deborah/Tabor between Ramah and Bethel were focused on the vicinity of Rachel's tomb, where the story of 1 Samuel 10 takes place. An alternate name for the holy place was Oak of Weeping (Heb *bākût;* Gen 35:8), the probable setting of the etiology for the Place of Weepers (Heb *bōkīm;* Judg 2:1–5), which LXX locates near Bethel (Boling [*Judges* AB, 63] correctly notes that *hammāqôm,* v 5, is used in its technical sense to denote a sacred place).

This is the background for Jer 31:15:

> Hark! In Ramah is heard lamentation,
> bitter weeping [*bĕkî tamrûrîm*],
> Rachel weeping [*mĕbakkâ*] for her children.

There is no convincing reason not to translate Ramah as a *nomen proprium loci* as the LXX tradition of Jeremiah, a variant recension from the MT, also attests. Rachel is in synonymous parallelism with Ramah, just S of Bethel and just N of Gibeah, from which height she can peer into Ephraim and weep from her tomb for the exiled northern tribes (vv 15–22; cf. Bright *Jeremiah* AB, 275–87). The poet's use of the word *tamrûrîm* to modify the weeping could be an intentional paronomasiac recall of Deborah's renowned tree (*tōmer,* Judg 4:5; *tābôr,* 1 Sam 10:3; cf. *dĕbôrâ*) to create a triple parallelism. At any rate, the topography is consistent with Saul's rushed journey past Rachel's tombstone in Benjamin, Deborah's oak near Bethel, and on to Gibeah. Hos 5:8 parallels Gibeah, Ramah, and Bethel (Beth-aven; see Amos 5:5), and Isa 10:29 pairs Ramah and "Gibeah of Saul." Near Ramah was the Oak of Weeping (Gen 35:8) and the Weeper's Place (Judg 2:5). Only a few miles S was the border of ancient Ephrathah. In this vicinity, Rachel is most likely buried.

LAMONTTE M. LUKER

RADDAI (PERSON) [Heb *radday* (רַדַּי)]. One of Jesse's sons and an older brother of David (1 Chr 2:14). Raddai is listed as the fifth son of Jesse, and David is listed as the seventh and presumably the last. In 1 Sam 16:10, 12, David is designated as the eighth and youngest son. In 1 Samuel 16, Raddai does not appear; only Eliab, Abinadab, and Shammah are named. 1 Chr 27:18 refers to one Elihu, another brother of David. The meaning of the name Raddai is not clear. It is possibly related to the Hebrew root *rdd,* "beat out," or *rdh,* "have dominion, rule," but certainty is not possible.

JAMES M. KENNEDY

RAGES (PLACE) [Gk *Rhagoi* (Ῥαγοι)]. Var. RAGAE. A city in NE Media of Persia and the home of Gabael, to whom Tobit entrusted his money (Tob 4:1, 20; 5:5; 6:10—Eng v 12; 9:2). Located 5 miles SE of modern-day Teheran, Rages is identified with the ruins of the city of Rai (35°35´N, 51°27´E; Olmstead 1948:30). The city is located on a plain which extends from a point one hundred miles NE of the ancient capital of Ecbatana to the mountains of Elburz. Thus located, Rages also gives its name to the region around the Elburz mountains, which is called Ragae (*Rhagau*) in the book of Judith (Jdt 1:5, 15). There, we are told, Arphaxad, an otherwise unknown king of the Medes, was killed in battle. The king, however, is probably a fictional creation, and the reference to Ragae, only symbolic (Moore *Judith* AB, 124, 128–29; Craven 1983: 79–80). Nonetheless, Rages was among the oldest of settlements in Iran and of strategic importance, playing a significant role in the history of Media, the rule of Alexander, and that of his successors (Wikgren *IDB* 4: 5).

RAGUEL (ANGEL). According to that part of *1 Enoch* known as the Book of the Watchers (*1 Enoch* 1–36), Raguel is one of the six (Ethiopic mss; seven, according to the Greek ms) archangels. He is identified as "Raguel, one of the holy angels, who takes vengeance on the world and on the lights" (*1 En.* 20: 4; Knibb 1984). In *1 Enoch* 21–36, Enoch is accompanied by various angels (Uriel, Raphael, Raguel, and Michael) who interpret what he sees on his journey around the world. At the end of the earth in the W, Enoch sees a burning fire which is interpreted by Raguel as "the fire of all the lights of heaven" (*1 En.* 23: 4; Knibb 1984). Milik (1976: 219–20) derives the name of Raguel from Aram *raʿû ʾēl* ("shepherd of God") and argues that Raguel was not in charge of punishing stars but was rather their caretaker who

supplied them with fire from the reservoir at the W end of the world. The motif of vengeance would have arisen from mistranslation in Greek and Ethiopic.

CAROL A. NEWSOM

RAGUEL (PERSON) [Gk *Rhagouēl* (Ῥαγουηλ)]. The father of Tobias' wife, Sarah, and the husband of Edna (Tob 3:7; *passim*). Raguel is described as having written a marriage contract giving his daughter to Tobias in marriage (7:14), but also as having dug the young man's grave on their wedding night (8:9ff.). When Tobias survived the encounter with the demon Asmodeus, Raguel blessed God's name and gave the couple half of his possessions (8:20–21).

FREDERICK W. SCHMIDT

RAHAB (DRAGON) [Heb *rahab* (רַהַב)]. The name of a mythological sea serpent or dragon, lit. "boisterous one," referred to a number of times in the OT (Ps 87:4; 89:11—Eng 89:10; Job 9:13; 26:12; Isa 30:7; 51:9). The name of this monster has not hitherto been discovered in any extrabiblical text. In the OT, Rahab functions similarly to Leviathan, an originally Canaanite chaos monster, but whether these are to be identified or are separate monsters in origin is not entirely clear.

Rahab appears in two different contexts in the OT. On the one hand, it appears as a sea monster defeated at the time of creation (Ps 89:11—Eng 89:10; Job 9:13; 26:12), and on the other as a metaphorical name for Egypt (Ps 87:4; Isa 30:7). In Isa 51:9 the two usages may be fused.

Ps 89:10–11—Eng 89:9–10 declares to Yahweh, "You rule the surging of the sea: when its waves rise, you still them. You did crush Rahab with a mortal blow, you did scatter your enemies with your mighty arm." The following (vv 12–13—Eng 11–12) clearly spell out the creation context of this conflict, so that it is necessary to reject the view of those scholars who see here an allusion to the Exodus or, as some would maintain, to both Exodus and creation. The references to God's conflict with Rahab in both Job 9:13 and 26:12 also appear to be set in creation contexts. Job 26:12–13 reads: "By his power he stilled the sea; by his understanding he smote Rahab. By his wind the heavens were made fair; his hand pierced the twisting serpent (*nāhāš bārīaḥ*)." This expression "twisting serpent" is a term used elsewhere of Leviathan (Isa 27:1 and similarly *bṯn brḥ* in *KTU* 1.5.I.1 = *CTA* 5.1.1), which may indicate that Rahab is being equated with Leviathan. In Job 9:13–14, Job declares: "God will not turn back his anger; beneath him bowed the helpers of Rahab. How then can I answer him, choosing my words with him?" The sentiment here is rather similar to that at the end of the book of Job, where Job is humbled before Yahweh in the wake of the second divine speech in which it is implied that he (Job) cannot overcome the chaos monsters Leviathan and Behemoth, which Yahweh did overcome (cf. Job 40–42:6). As for "the helpers of Rahab," these must be other chaos monsters associated with Rahab. One may compare Tiamat's allies, referred to as "her helpers" in Enuma Elish (4: 107).

That Rahab serves as a name for Egypt is explicit in Isa 30:7, where the prophet declares: "For Egypt's help is worthless and empty, therefore I have called her 'the silenced Rahab.' " The translation "the silenced Rahab" is achieved by reading *rahab hammošbāt* for the meaningless MT *rahab hēm šābet,* which seems the most satisfactory emendation (cf. Isa 14:4). Rahab also clearly functions as the name of a country in Ps 87:4: "I reckon Rahab and Babylon as those that know me; behold Philistia and Tyre with Ethiopia—'this one was born there.' " Egypt is the most likely referent for Rahab here, paralleling Isa 30:7. That the defeated sea dragon Rahab should serve as a metaphor for Egypt is understandable when one recalls the oppressive role which Egypt played with regard to Israel before the Exodus and the location of the heart of the Exodus deliverance at the sea (Exodus 14–15). Compare the allusion to pharaoh as a dragon in Ezek 29:3–5 and 32:2–8 (reading *tannîn ,* "dragon," for MT *tannîm,* "jackals").

Isa 51:9–11 is a famous passage, which reads: "Awake, awake, put on strength, O arm of the Lord, awake as in days of old, the generations of long ago. Was it not you who hewed Rahab in pieces, who pierced the dragon? Was it not you who dried up the sea, the waters of the great deep, who made the

depths of the sea a way for the redeemed to pass over? So the ransomed of the Lord will return and come to Zion with singing, everlasting joy shall be on their heads; they shall obtain joy and gladness, and sorrow and sighing shall flee away." Verse 10b certainly refers to the Exodus, and v 11 to the new Exodus, the return of the exiles from Babylon. The reference in v 9 to the defeat of Rahab could refer to the chaos monster at the time of creation, to Egypt at the time of the Exodus, or to a fusion of both.

Finally, it should be noted that Gunkel (*Die Psalmen* HKAT) believed that Rahab is mentioned in the plural in Ps 40:5—Eng 40:4, but it is much more likely that *rĕhābîm* there simply refers to proud or arrogant men. See also DRAGON AND SEA, GOD'S CONFLICT WITH.

JOHN DAY

RAHAB (PERSON) [Heb *rāḥāb* (רָחָב)]. The story of Rahab is told in the first part of Joshua 2 and the latter part of Joshua 6. In its present context, this narrative is embedded in the account of the Israelite conquest of Jericho. Rahab is introduced as a "harlot" (Hebrew *zônâ*) in Josh 2:1 (so also 6:17, 25; in 2:3 and 6:23, only the name Rahab appears). Two spies, dispatched from Shittim by Joshua, enter her house. She hides them from the ruler of Jericho, thus saving their lives. She acknowledges the power of the Lord and extracts from the spies the promise that she and her family will be saved when the Israelites overwhelm her city. She is told to hang a scarlet cord from her window as a sign that her household is to be spared. Several verses in chap. 6 relate that Joshua kept this agreement. At the time of Jericho's conquest, Rahab and her family, alone of the city's inhabitants, are spared. They were taken outside of the camp. A final note (6:25) records that "she dwelt in Israel to this day."

Rahab's name comes from a root meaning "to be wide or broad." It appears to be the shortened form of a theophoric name (cf., for example, Rehabiah, 1 Chr 23:17; 24:21). The exact nature of Rahab's occupation has been the subject of considerable controversy. Most interpretators now see her as a "secular" prostitute without any cultic or sacred connections. Not only is this in keeping with the biblical description, but there was a Hebrew term (*qĕdēšâ*) available to the author had he wanted to highlight her status as a "sacred" prostitute. The use of the term "innkeeper" in certain Jewish traditions may be seen as an attempt to improve upon her professional standing, but that is not necessarily the case.

The story as it stands contains no indication of what motivated Rahab to risk her life on behalf of the Israelite spies. We are probably meant to connect this action with her affirmation of Yahweh's power. That affirmation, found in Josh 2:8–11 and thoroughly Deuteronomistic in language and theology, is widely regarded as a late element in what otherwise seems to be fairly early material. In a pre-Deuteronomistic stage, Rahab and her family may have been identified with that segment of the Jericho population that opposed the royal establishment and could be expected to respond positively to the invading Israelites.

The survival of Rahab and her family "to this day" suggests that there is an etiological element in the origin and subsequent development of this story. Perhaps, a well-defined group of her descendants could be singled out for some time among the Israelites. That group would obviously have a large stake in preserving Rahab's exploits.

Other elements can also be detected in the diverse traditions that have gone into this account. For example, the narrative concerning Rahab has been identified as one of several spy stories that the OT contains. Moreover, Rahab's role must be seen in light of the type of warfare Israel was waging. It was holy war, under divine command. Rahab's statement was as much an affirmation to Israel as to herself: with God on their side, the Israelites could not fail to be victorious. For her assistance, the absolute ban (*ḥērem*) on Jericho could be waived.

According to some, the essence of the Rahab story is contained in chap. 2, while the verses in chap. 6 form a not wholly consistent afterthought. It is noted, for example, that her house, although "built into the city wall" (2:15), somehow still stood after the walls fell (see 6:22). However, the entire Rahab narrative exhibits many unexpected features—not the least of which is the aid provided by the prostitute herself—

and the dramatic and humorous effect of the story taken as a whole survives (and perhaps even thrives on) architectural and other incongruities.

The relatively few verses devoted to Rahab in the OT stimulated an amazingly rich exegetical tradition in both Judaism and Christianity. She was widely depicted as a proselyte or convert to the monotheistic faith of Israel. In Judaism, she could then be portrayed as one of the most pious converts—a worthy wife of Joshua and the ancestor of prophets.

A parallel, but distinctly Christian development, is found in Matt 1:5 where a Rahab is identified as the wife of Salmon and the mother of Boaz. This accords to Rahab a prominent position in the genealogy of "Jesus Christ, the son of David, the son of Abraham." Inasmuch as Matthew does not specifically link "his" Rahab with the harlot of the book of Joshua, and while the Greek text of Matthew preserves a distinctive spelling of the proper name (*rachab, raab* elsewhere), it is possible that this is another Rahab. However, the appearance and identity of three other women from the OT (Tamar, Ruth, and the wife of Uriah [i.e., Bath-sheba]) in the genealogy of Jesus make it virtually certain that we are dealing with only one Rahab in both Testaments. This is clearly the case in the other two NT references to "Rahab the harlot": Heb 11:31, where Rahab's survival is credited to her faith, and Jas 2:25, in which Rahab exemplifies the dictum that "man is justified by works and not by faith alone" (so v 24).

The role Rahab plays in Jewish and Christian exegetical traditions (many other examples could be cited) is larger than that attributed to her in the OT itself. This is not to say that she is an unimportant figure in the Bible; by her actions, she both preserved her own family and epitomized the sort of faith that the Israelites themselves would have to display to preserve the land and heritage God had promised them. For further discussion, see *DBSup* 5: 1065–92.

LEONARD J. GREENSPOON

RAHAM (PERSON) [Heb *raḥam* (רַחַם)]. The son of Shema and the father of Jorkeam (1 Chr 2:44).

Raham, a Calebite and a descendant of Judah, is listed among Caleb's progeny by an unnamed spouse (vv 42–45). Within the genealogy of vv 42–50a, the men are often considered to have been the "fathers" of cities rather than of individuals. The name "Raham" may refer to either an individual, or a city, or both. Jorkeam should perhaps be read here as Jokdeam, a city whose location is unknown (Josh 15:56). Shema was the name of another Judahite city of unknown location (Josh 15:26). And other groups associated with Raham in his line of descent occupied such centers as Hebron, Mareshah, and Ziph. Although "Raham" is not a shortened name with respect to form, a deity is possibly semantically implied in the nature of the name—thus, " (God has shown) compassion" or " (the deity has taken) pity" (*TPNAH,* 168–69). Primarily, this would have signified that the divinity had again remembered a person who was in distress, in order to help him or her. The name has also been taken, differently, to equal Heb *rāḥām* and Ar *raḥam,* "carrion-vulture" or "Egyptian vulture" (*Neophron percnopterus*). Certainly, animal terms were commonly used for personal names in Semitic (Nöldeke 1904: 86).

RAHEL, RAMAT. See RAMAT RAHEL.

RAIN. While the giving or withholding of rain is generally seen in the Bible as a sign of God's favor or disfavor, in the OT (Jer 3:3; Hos 6:3; Joel 2:23; Job 29:23—cf. also Jas 5:7 in the NT) the terminology "early/autumn" rain or the "latter/spring" —or in one case "later/spring" (Deut 11:14)—rain appears. The significance of this terminology lies in the fact that for an agricultural society, it is not just the presence or absence of rain that is important, but its timing as well. Thus, Jeremiah says: "Let us fear the LORD our

God, who gives the rain in its season, the autumn rain and the spring rain, and keeps for us the weeks appointed for the harvest" (5:24).

The "early/autumn" rain (*yôreh*) and the "latter/spring" rain (*malqôš,* from the Heb *lqs*, "crops sown late"), are rains which fall in the two transitional periods that mark the beginning and the end of the rainy, winter season in Palestine. The first appreciable rains normally arrive in Palestine in mid-October to early November, with the last significant rains falling in the first half of April. About 70 percent of the rainfall, however, falls from November to February, with January typically being the wettest and coldest month. See PALESTINE, CLIMATE OF.

The early and latter rains are accentuated in the OT because of their critical agricultural role: the early rains preparing the ground for plowing and sowing at the end of the dry season, and the latter rains providing the last bit of moisture which aids the maturation of cereal grains. The critical nature of the timing of these two rains is reflected theologically in the fact that they are seen as one of YHWH's rewards to his people in return for their faithfulness to the covenant: "I will give the rain for your land in its season, the early and the later rain, that you may gather in your grain and your wine and your oil" (Deut 11:14).

FRANK S. FRICK

RAISINS. See FLORA.

RAKEM (PERSON) [Heb *rāqem* (רָקֶם)]. The Manassite son of Sheresh and brother of Ulam (1 Chr 7:16). He is mentioned only in the genealogy for Manasseh in the MT of 1 Chr 7:14–19 (the LXX omits him from the passage). The name itself is the pausal form of "Rekem," which occurs in 1 Chr 2:43–44 as the name for the Calebite son of Hebron; in Num 31:8 and Josh 13:21 for a Midianite king; and in Josh 18:27 for a town in Benjamin.

M. PATRICK GRAHAM

RAKKATH (PLACE) [Heb *raqqat* (רַקַּת)]. One of the fortified towns in Naphtali listed in the book of Joshua (Josh 19:35). It is part of an older town list which has been incorporated into the book of Joshua. The Mishnah and the Talmud locate the site of Rakkath beneath modern Tiberias (M.R. 201242), on the Sea of Galilee, but modern scholarship places it somewhere to the N of Tiberias (Tiberias itself was not settled earlier than the Roman period). One suggestion for the site of Rakkath has been Tell Eqlatiyeh, 1.5 miles N of Tiberias, a small site which has EB, MB, and LB remains. W. F. Albright (1926) has suggested that perhaps the Israelite town was situated beneath the Roman village at the foot of the hill, near the spring called Ain el-Fuliyeh. Another suggestion for the location of the site has been Tell Raqqat (M.R. 199245), which is 24 km N of Tiberias, on the shore of the Sea of Galilee. The exact location of Rakkath remains uncertain.

SIDNIE ANN WHITE

RAKKON (PLACE) [Heb *raqqôn* (רַקּוֹן)]. A village of Dan, which appears in a fragment of a boundary description in the book of Joshua (Josh 19:46). Rakkon must be, according to its descriptions, on or near the river Yarkon, somewhere near the Mediterranean Sea. The place name is omitted by the LXX, suggesting that the word may be a partial dittography of the preceding "waters of the Yarkon" (*mê-hayyarqôn*). If Rakkon is an actual geographical location, it might be identified with Tell er-Reqqeit, which is 1.6 miles N of the mouth of the Nahar el-Auja. Z. Kallai, in fact, suggests that it actually is a river, not a village (translating the phrase as "the waters of Yarkon and the Rakkon") and identifies it as Nahar el-Barideh (*HGB,* 370). The place, whether a village or a river, is certainly meant to be in the area of present-day Jaffa. The exact location of Rakkon is, however, still uncertain.

SIDNIE ANN WHITE

RAM (PERSON) [Heb *rām* (רָם)]. A personal name whose meaning is not clear, but it is apparently related to the Hebrew root *rûm* and so possibly means "exalted." To speculate, it possibly is a hypocoristicon of a longer name with a theophoric element (*rmyhw?*).

1. A descendant of Jacob through the line of Judah and an ancestor of David (1 Chr 2:9, 10; Ruth 4:19). He is listed as a brother of Jerahmeel and Caleb. According to Curtis and Madsen (*Chronicles* ICC, 87) the reference to Ram in 1 Chr 2:9, 10, is suspicious for two reasons: first, the Bible elsewhere knows of no Judean family of Ram coordinate with Jerahmeel and Caleb; second, unlike the cases of Jerahmeel in vv 25–33 and Caleb in vv 42–50, the descendants of Ram are not given in families and cities. The Chronicler possibly added Ram because of the influence of Ruth 4:19. On the other hand, Myers sees no connection between 1 Chr 2:9, 10, and Ruth 4:19. He suggests that both lists go back to a common temple source (*1 Chronicles* AB, 13, 14). At Ruth 4:19, some LXX mss read Arran or Aram. In Matt 1:3, 4, this Ram is listed in the genealogy of Jesus (cf. Arni in Luke 3:33).

2. A son of Jerahmeel and descendant of Jacob (1 Chr 2:25, 27). In the present form of the genealogies of 1 Chronicles 2, he is the uncle of Ram in no. 1 above.

3. The family to which Elihu belongs (Job 32:3). Any identification with the Ram of either 1 Chr 2:9, 10, or Ruth 4:9 is speculative. Nothing in the text of Job necessarily points to an identification. Some LXX manuscripts read Aram instead of Ram.

JAMES M. KENNEDY

RAM (SHEEP). See ZOOLOGY; SHEEP, SHEPHERD.

RAMAH (PLACE) [Heb *rāmâ* (רָמָה)]. Var. RAMATHAIM-ZOPHIM. The word means "height" and was a common place name for elevated towns and villages in biblical times.

1. A town in Benjamin (Josh 18:25), usually identified with modern er-Ram (M.R. 172140), situated 7 km N of Jerusalem, though some plausibly suggest Ramallah (M.R. 170146), 12 km N of Jerusalem. Ramah figures prominently in Benjaminite stories relating to the period before the rise of the monarchy in Israel. The village sat on a low hill astride the Palestinian watershed highway extending N from Jerusalem into the hill country of Ephraim. The earliest notices concerning Ramah seem to relate to its position along this highway.

Judg 4:5 notes that the prophetess Deborah used to sit beneath a palm tree somewhere between Ramah and Bethel (Beitin), which lay in Ephraimite territory 8 km to the N. Later in the book of Judges, a Levite couple traveling N from Bethlehem considered stopping for the night at Ramah (19:13), but instead tragically chose another route leading to Gibeah and a subsequent rape-murder.

The narratives relating Samuel's role in establishing the Israelite monarchy locate the great prophet's birthplace, residence, and burial site at Ramah. Some confusion exists, however, as to whether a site separate from Ramah of Benjamin is implied in these stories.

The Hebrew text of 1 Sam 1:1 identifies Samuel's father, Elkanah, as hailing from "Ramathaim-zophim" in the hill country of Ephraim. If the references to "Ramah" which follow in the Samuel stories (cf. 1 Sam 1:19) are short forms of the proper name Ramathaim ("two heights"), then Samuel's home may have existed somewhere in the tribal territory of Ephraim; indeed, a site in Samaria called Ramathaim is mentioned in 1 Macc 11:34. Eusebius' *Onomasticon* identifies the latter site with the Arimathea of NT times (Matt 27:57; John 19:38) and places the village at Remphis (M.R. 151159), 14 km NE of Lod (*NHI,* 378–80). Others have sought Ramathaim at Beit Rima (M.R. 159160), 21 km NE of Lod.

It is more likely, however, that Ramah of Benjamin (er-Ram) was Samuel's home. 1 Sam 1:1 should probably be emended to read that Elkanah was "from Ramah, a Zuphite from the hill country of Ephraim." The territory of Zuph appears to have been adjacent to the land of Benjamin (1 Sam 9:4–5); Ramah, near the border with Ephraim, may therefore have been inhabited by Zuphi tribesmen. Moreover, Samuel's home at Ramah is closely associated with sites within a rather small area in Benjamin: Bethel,

Gilgal, and Mizpah (1 Sam 7:16); Rachel's tomb at Zelzah (1 Sam 10:2), which is associated with Ramah in Jer 31:15; and Gibeah (1 Sam 10:10; 19:18; 20:1). The stories concerning the relationship between Samuel and Saul thus arise from a very limited geographical area within Benjamin. These two figures seem to have lived a rather short distance from each other at Ramah (er-Ram) and Gibeah (Jaba), respectively.

Elkanah and Hannah resided in Ramah (1 Sam 1:19) while young Samuel remained at Shiloh in Eli's service (2:11). After leading the Israelites to temporary victory over the Philistines, Samuel based himself in Ramah while traveling as a judge on a yearly circuit to Bethel, Gilgal, and Mizpah (7:16–17). It was to Ramah that the elders of Israel traveled to demand that Samuel appoint a king over them (8:4). Apparently in the same city, Samuel eventually anointed young Saul as prince over Israel, and sent the lad on a mysterious mission to nearby Gibeah (10:1–16). After Saul's brief successes against his enemies, an ill-fated attack on the Amelekites reportedly caused Samuel to reject the king and return in mourning to Ramah (15:34).

Shortly thereafter, Samuel's home at Ramah provided a temporary refuge for the newly anointed David as he fled the danger of Saul's court at nearby Gibeah (19:18–24). The mention in this narrative of an area of Ramah called the Naioth, where the pursuing Saul and his men inadvertently fell into prophetic frenzy, might indicate that there existed in the village a special compound or dwelling place for a band of prophetic disciples of the charismatic Samuel. David reportedly fled the Naioth in Ramah in order to rejoin Jonathan before beginning his temporary career as a renegade (20:1). Samuel's role in the remaining David stories then fades rapidly: two notices of his death and burial at Ramah (25:1; 28:3) bring his earthly mission to a conclusion.

Ramah was left inside Judah very near to the N border with Israel after the division of the kingdom. Shortly after 900 B.C., King Baasha of Israel invaded Judah and fortified Ramah, thereby threatening to cut off or control N access to Jerusalem (1 Kgs 15:17; 2 Chr 16:1). King Asa of Judah reportedly responded by bribing Ben-hadad of Damascus to attack Israel's N territory, forcing Baasha to abandon his occupation of Ramah. Asa then dismantled the Ramah outpost and used its stones and timbers to fortify Geba (Jaba) and Mizpah (Tell en-Nasbeh), sites along the two routes leading into the kingdom of Judah from Israel (1 Kgs 15:21–22; 2 Chr 16:5–6).

In the late 8th century B.C., invasion once again threatened Ramah. The Israelite prophet Hosea sounded a war alarm for the Benjaminite towns of Gibeah, Ramah, and Beth-aven (5:8). Probably shortly thereafter, the Judean prophet Isaiah described panic in Ramah and Gibeah as the invader advanced into the area through the nearby Geba Pass (10:29). Both prophetic oracles probably relate to the Syro-Ephraimite invasion of Judah (cf. 2 Kgs 16:5; 2 Chr 28:5–15; and Isa 7:5–7) around 734 B.C. (Arnold 1987:237–59).

Following the destruction of Jerusalem in 586 B.C., Ramah seems to have served as a staging point for Jewish groups leaving for exile into Babylon (Jer 40:1). The prophet Jeremiah, taken to Ramah in chains by the Babylonian captain Nebuzaradan, seems to have been freed there at the last minute. Perhaps the sadness of seeing his comrades' exilic departure from Ramah inspired the prophet's oracle in 31:15, which associates the exiles' lamentations with those of Rachel, whose tomb existed nearby at Zelzah (1 Sam 10:2; cf. Gen 35:16–20 and Matt 2:18).

After the Exile, Ramah is mentioned along with Geba in apparent Persian census lists (Ezra 2:26; Neh 7:30; 1 Esdr 5:20). The town also appears in a postexilic list of Benjaminite villages (Neh 11:33) and in a list of Benjaminite towns, now set in the context of the book of Joshua (18:25).

2. A village near the N border of Asher, in the vicinity of Tyre (Josh 19:29). Any identification with modern sites is hypothetical. One commonly accepted candidate is Ramieh (M.R. 180280), 17 km E of Rosh Ha-Niqra. Some have suggested that the town is in fact identical with the Ramah of Naphtali mentioned in Josh 19:36, but in view of the former's association with Tyre, this proposal is unlikely.

3. A fortified village in Naphtali (Josh 19:36), presently sought at modern er-Rameh (M.R. 187259), 12 km SW of Safed.

4. A village in the Negeb desert in the tribal territory of Simeon (Josh 19:8). This text also identifies Ramah of the Negeb by an alternate name, Baalath-beer. In an account describing David's sharing of Amalekite booty with his Judean tribesmen, 1 Sam 30:27 lists a Ramah of the Negeb, undoubtedly the same site, among the favored cities. Neither biblical account gives specific enough geographical information to provide a modern location for the site; however, Aharoni (*LBHG*, 261, 441) suggests identifying it with Horvat ʿUzza (M.R. 165068).

5. Ramah also occurs as a shortened form of the name for the Transjordanian site of RAMOTH-GILEAD (2 Kgs 8:28–29; 2 Chr 22:5–6).

RAMAT EL-KHALIL (M.R. 160107). This site, associated with the biblical Mamre and with the Jewish Bothnah or Beth Ilanim, is located 2 miles N of Hebron. Many scholars believe this is where Josephus located Abraham's terebinth (*Ant* 1.183; cf. Gen 13:18). See also MAMRE. Other scholars locate Mamre either within Hebron or on the Namra hill N of Hebron.

In the postbiblical period, a multitude of Jewish captives were sold into slavery at Mamre after the Bar Kokhba revolt, but the place was always a thriving market in the Roman and Byzantine periods. Constantine ordered the pagan altar of Mamre to be destroyed and to be replaced by a church, which still existed in the 6th century but was in ruins by the 10th century (see also *EAEHL* 3: 776–78; *DBSup* 5: 753–58).

The enclosure of Ramat el-Khalil was first discovered by H. von Schubertine in 1827; excavations were undertaken in 1926–28 by A. E. Mader. The enclosure, or temenos, covers an area of 7/8 of an acre. Although built by Hadrian, it was preceded by two towers outside the N enclosure. These evidently belonged to a temenos of the 9th–7th centuries B.C.E., i.e., during the Judean monarchy. This enclosure was superseded by a Hasmonean pavement probably to be attributed to Hyrcanus I (128 B.C.E.). Remains of a Herodian temenos wall were found along the later S wall; it was composed of huge blocks and supported by external piers, but seems never to have been completed. The later Hadrianic wall contained reused masonry of the early Roman period, and the area so enclosed contained at its E end a shrine apparently dedicated to Hermes and Dionysus.

The Constantinian church, the oldest-known building of its type in Judea, occupied the eastern third of the temenos. It was a "broad house" basilica, oriented E–W, consisting of a nave and an apse flanked by aisles; small sacristies abutted on the N and S of these (see *EAEHL*, 778). The building was entered by a narthex along the W front of the church. An altar marking Abraham's terebinth stood in the atrium, and his well, found in the SW corner, yielded numerous coins of Constantine's time. Other coins found in the area (1, 331 in number) ranged from the Hasmonean to the Crusader periods, although coins from the periods of Vespasian to Hadrian were conspicuously absent. A later repair of the church took place, possibly the work of the patriarch Modestus after the Persian invasion of 614.

SHIMON APPLEBAUM

RAMAT MATRED (M.R. 118020). A series of prehistoric sites on an extensive windswept plateau some 650 m above sea level in the Central Negeb Highlands, bounded on the N and W by a steep escarpment. Drained to the E by Nahal Avdat, a tributary of Nahal Zin, the plateau filled during the Pleistocene with a mantle of aeolian loess sediments. Vegetation on the plateau is sparse, and there are no perennial sources of water today. Prehistoric research in the region was initiated by T. Noy (Yizraeli) in 1964. In 1979 A. N. Goring-Morris and I. Gilead conducted a systematic survey and excavations in the area.

Occasional scatters of Late Acheulian hand axes were recovered from the S and W edges of the plateau, eroding from the basal loess. These indicate that loess accumulation began at the end of the Lower Paleolithic.

Levalloisian cores and flakes were also found at the margins of the plateau, and at the raised W corner a dense scatter, Ramat Matred VI, was noted on the surface, representing a Mousterian occupation.

Upper Paleolithic occupation of the area is well documented. Ramat Matred I is a large surface site of ca. 150 m^2, located at the N edge of the plateau. The abundant lithic tool assemblage was dominated by burins, especially carinated dihedral types. This flake-oriented assemblage may be assigned to the Levantine Aurignacian culture. Ramat Matred IV, Har Lavan IV, and Har Lavan V are smaller in situ occupations, which were occupied later than Ramat Matred I, but while loess continued to accumulate. The lithic assemblages are blade oriented, and the tools are dominated by retouched bladelets, dihedral burins, and scrapers, which can be assigned to the later stages of the Ahmarian tradition.

Epipaleolithic occupations were confined exclusively to the N corner of the plateau, with two adjacent Mushabian occurrences—one, Ramat Matred II, was large (ca. 150 m^2), while the other, Ramat Matred III, was small (ca. 50 m^2). The only other Epipaleolithic assemblage was a Late Ramonian scatter, designated Har Lavan II. Characteristic microliths dominate the tool assemblages.

Neolithic exploitation of the area comprised a site complex of three scatters, Ramat Matred V, VI, and VIII, located at the S end of the plateau. These can be assigned to the PPN B, the lithic assemblages including arrowheads, borers, and massive denticulates. Many burnt stones littered the sites.

All of the sites investigated are open-air camps with no architectural remains. Although no organic materials have been preserved, the composition of the lithic assemblages and the specific site locations (exposed, providing extensive panoramas across the plateau) imply that hunting was probably a major seasonal (summer?) activity.

NIGEL GORING-MORRIS

RAMAT RAHEL (M.R. 170127). An important archaeological site located on a prominent hill almost midway between the Old City of Jerusalem and Bethlehem.

A. Identification

Initially B. Maisler (Mazar 1935) proposed to identify the site with biblical Netophah (2 Sam 23:28). However, a paucity of material from the time of David prompted Y. Aharoni (1978) to suggest that the site was Beth-haccherem (Neh 3:14; Jer 6:1). Two lines of evidence support Aharoni's identification: (1) Jer 6:1 and Jos 15:59 (LXX only) suggest that Beth-haccherem was a fortified site, S of Jerusalem, and (2) Neh 3:14 indicates that Beth-haccherem was an administrative center during the Persian period. Abundant finds from Ramat Rahel date to this period and indicate that the site could have served such a function.

Avi-Yonah, on the other hand, felt that none of these texts, nor the finds at Ramat Rahel, demanded that the site be equated with Beth-haccherem and continued to maintain that the latter place was best identified with ʿAin Karim, ca. 6.5 km W of Jerusalem (1977: 20, 21). Avi-Yonah preferred to retain Maisler's identification of Ramat Rahel with Netophah, although he offered no compelling reason.

Recently, both G. Barkai and D. Tushingham have independently suggested that Ramat Rahel be identified with the elusive *mmšt,* known from the *lmlk* seal impressions. First, it seems clear that all the names on the *lmlk* seal impressions represent administrative centers of some sort which were involved with the distribution of the *lmlk* jars and/or their contents. It is known that during the Persian period the province of Judah was divided into five districts (*pelakim*). At least three of these five districts were

subdivided into two halves, including the Jerusalem district (Neh 3:9, 12). It is probable that these divisions reflect earlier administrative districts. Both the location and archaeology of Ramat Rahel make it an ideal candidate for the administrative center for the S half of the Jerusalem district (Avi-Yonah 1977: 20). The reason that *mmšt* is not known from the Bible may simply be that the *lmlk* jar handles, on which the name appears, come from the time of Hezekiah (see below), and none of the biblical city lists date from that period (Franz 1984: 19).

B. Archaeology

The initial work at Ramat Rahel was conducted by B. Maisler (Mazar) and M. Stekelis. This excavation was limited to a Jewish rock-cut tomb from the Second Temple period which had been discovered S of the mound in 1931.

The first excavations on the mound, itself, were begun in the summer of 1954 under the direction of Y. Aharoni. Additional excavations were conducted from 1959 through 1962 for a total of five seasons. In 1984 an additional season was conducted by G. Barkai.

Aharoni dated the earliest occupational phase he found to the late 8th/early 7th centuries B.C. Finds from this level (Stratum V–B) included the foundations of a casemate wall (which Aharoni described as part of an "Early Citadel"), the remains of a private house, and 145 *lmlk* jar handles, mostly of the two-winged type. Most of the pottery from this phase came from a fill used to level the ground for the construction of the citadel of Stratum V-A (see below) and was dated to the 8th–7th centuries B.C. Since Aharoni's excavation, G. Barkay has uncovered a phase in which the pottery was idential to Lachish Stratum III (late 8th century B.C.). This would suggest that Aharoni's Stratum V-B may have been *preceded* by an earlier phase which was terminated in the late 8th century B.C., possibly during Sennacherib's 701 B.C. campaign. An occupation during this period makes sense in view of the fact that so many *lmlk* jar handles, now known to date to the time of Hezekiah, were found on the site.

During the next occupational phase (Stratum V-A) a citadel again dominated the site. It was surrounded by a massive outer wall (the "Outer Citadel") 3–4 m thick. Important architectural elements include ashlars, several Proto-Aeolic capitals, crenellation stones, and balustrades, similar to ones depicted in the "lady-in-the-window" ivories. All of these elements would be expected in an important administrative center or palace. Aharoni believed that this citadel was constructed by King Jehoiakim and destroyed during the time of King Jehoiachin (early 6th century B.C.). However, the architectural elements, which are similar to those found at Samaria, would suggest a construction time closer to the fall of that kingdom—perhaps the builders were even refugees from the N. The presence of Assyrian "palace ware" in this stratum also argues for an earlier date in the 7th century B.C., perhaps during the reign of Manasseh, who was known to be an Assyrian vassal. The "Elyaqim steward of Yokhin" seal found in this stratum, and thought by Aharoni to belong to the steward of King Jehoiachin, has now been redated to the late 8th century B.C., removing one of the main arguments for dating this level to the late 7th/earlier 6th centuries B.C.

Stratum IV-B contained remains from the Persian-Hellenistic periods. Most notable were numerous stamped jar handles of various classes, including *Yršlm* (Jerusalem), *Haʿir* (the City), *Yhd* and *Yhwd* (Judah), and *Phw* (Pahva, the title of the governor). Other seals portrayed animals or rosettes. Most of the seals probably date from the 4th century B.C. Although the building remains were poorly preserved, the abundance of seals suggests that Ramat Rahel continued as a subdistrict administrative center.

The Herodian period (Stratum IV-A) was represented by a number of houses with small rooms, workshops, burial caves, and a columbarium. It has recently been suggested that the numerous cisterns which Aharoni reported were actually Jewish ritual baths (*miqwâ*).

After a two-hundred-year abandonment, the site was occupied by the Tenth Roman Legion (Stratum III), indicated by the presence of tiles with the legion's stamp, *LEG (io) X FR (etensis).* A typical Roman villa, a bathhouse, and various cisterns were recovered from this period.

The site continued to be occupied into the Byzantine period (Stratum II). About A.D. 450, a church, a monastery, and other buildings, collectively known as the Church of the Kathisma, were built on the site. The name is derived from the Gk *kathisma* (seat) and refers to the nearby Well of the Seat (Bir Qadismu),

the traditional resting place of Mary, the mother of Jesus, on her way to Bethlehem. The final phase of occupation was during the Early Arab period (Stratum I), during which only a few poorly constructed buildings covered the site.

RANDALL W. YOUNKER

RAMATH-LEHI (PLACE) [Heb *râmat leḥî* (רָמַת לֶחְי)]. An unknown location, mentioned only once in connection with Samson's courageous crushing of many Philistines with an extemporaneous weapon, the jawbone of a dead donkey (Judg 15:17). After singing of his victory with this unique weapon, Samson cast away the "jawbone" (Heb *leḥî*) and named the site *râmat leḥî.* The Vg renders the phrase *elevatio Maxillae,* "lifting of the jawbone"; the LXX *anairesis siagonos* suggests the same meaning, even though it is not definitive; modern translations render "Jawbone Heights" or "Hill of the Jawbone." Some commentators viewed the connection between the "throwing" of the jawbone and the name Ramath-Lehi as incorrect etymology, since there is no connection between *râmat*—derived from the stem *rwm,* "elevate" —and *wayyašlēk,* "he cast away (the jawbone)." However, the verb *wayyašlēk* is identical in meaning with the stem *rmh,* which also means "throw" (cf. Exod 15:1, 21), and this philological explication matches the described event. Indeed, the Targum to Judg 15:17 renders *wayyašlēk* with the biblical Aramaic work *urĕmā›* (cf. Dan 3:24; 6:17, 25), a sense identical to the biblical *rāmāh,* thus supporting the theory that the word *rmt* is derived not from *rwm* but from *rmh,* meaning "casting away." However, the Masoretes preserved the *rwm* tradition through the diacritical marks, suggesting instead that the idea of elevation was intended. See LEHI.

The extraordinary weapon, the jawbone (known to cause fatality), is also mentioned in Islamic tradition where a heathen is killed with a jawbone (Ar *laḥy* = Heb *leḥî*), albeit that of a camel.

Râmat Leḥi parallels exactly the Gk name *Onou-gnathon* ("the ass's jaw"), mentioned by Strabo (*Geog.* 8.5.1–2) as "a low lying peninsula … which has a harbor" N of the island of Cythera. In this regard it is interesting to note that the phrase "donkey's jaw" is found among two seemingly different groups associated with various forms of the name "Dan." Samson descends from the tribe of Dan (cf. Judg 13:2; 15:20), and the Greeks were known as *Danaans* (*Iliad* 2:484–86; cf. Gordon 1969: 287–88). The name thus has an E Mediterranean heritage and developed among communities with a maritime tradition (Judg 5:17; *Iliad* 2) during parallel heroic periods.

MEIR LUBETSKI

RAMATH-MIZPEH (PLACE) [Heb *rāmat* (רָמַת)*hammizpeh* (הַמִּזְפֶּה)]. A border point east of the Jordan River for the land of Jazer, which Moses gave to the families of Gad (Josh 13:26). The exact location is unknown, although Noth (1938) and Gese (1968: 64) guessed that it is *Khirbet eṣ-ṣire* (.5 km NNW of *wadi eṣ-ṣir*), and Kuschke (1965) proposed that it is *Khirbet el-qar'a* (approximately 2.5 km NW of *na‹ur;* M.R. 228142). Wüst (1975: 120–32) was doubtful, and Rowley (1970: 119, 159) speculated that this name is actually a variant upon the Mizpah of Judg 10:17; 11:11, 34; and Hos 5:1 (*Khirbet Jel‹ad*).

Noth suggested that the three place names of Heshbon, Ramath-Mizpeh, and Betonim constitute a N–S boundary line between Reuben and Gad, which was added secondarily to the text. Mittmann (1970: 235–42) dismissed Noth's view as speculative. In a complex literary study, Wüst (1975: 120–32) concluded

that in Josh 13:26, Heshbon and Betonim are additions to the report, which is intended to support the larger territorial claims of Gad.

PAUL NIMRAH FRANKLYN

RAMATHAIM-ZOPHIM (PLACE) [Heb *rāmātayim ṣôpîm* (רָמָתַיִם צוֹפִים)]. See RAMAH.

RAMATHITE [Heb *rāmātî* (רָמָתִי)]. The gentilic identification of Shimei, one of twelve stewards of royal property appointed by David (1 Chr 27:27). His specific charge was oversight of the vineyards. The term is not used elsewhere, and thus it is not known which, if any, of several towns named Ramah might have been his original home.

RICHARD W. NYSSE

RAMESES (PLACE) [Heb *raʿamsēs* (רַעַמְסֵס)]. Var. RAAMSES. The region of Egypt in which Joseph settled his father and brothers (Gen 47:11), and the name of one of the Egyptian store cities (presumably in the same region) subsequently built by the Hebrew slaves (Exod 1:11). As such, Rameses figures as the starting point for the Exodus trek out of Egypt and into the promised land (Exod 12:37; Num 33:3, 5). According to the book of Judith, when Nebuchadnezzar made war against Arpaxad, he summoned military assistance from various places throughout his empire, including "Tahpanes and Raamses and the whole land of Goshen" (Jdt 1:9).

The biblical city of Rameses/Raamses should be equated with Egyptian Piramesse, the great delta residence of pharaohs of the 19th and 20th Dyns. It is only recently that the location of Piramesse has been clearly established at Khatana-Qantir in the NE delta on the E bank of the Pelusaic arm of the Nile. Earlier attempts to locate Piramesse at Tanis or in the region of Bubastis must be rejected, despite apparent support from biblical evidence. The problems faced by biblical scholars in trying to pinpoint the location of Rameses stem from the nature of the destruction of Piramesse after the New Kingdom, when rulers of the 21st and 22d Dyns. plundered Piramesse for building materials to be reused in constructing edifices at their residences in Tanis and Bubastis. The wholesale deportation of temple blocks, colossal statues, obelisks, and steles from Piramesse was of such magnitude that very little of the grandiose Ramesside temples and palace survives in situ at Qantir. So impressive were the monolithic remains that were transported to Tanis and Bubastis from Qantir that in the Late Period, when there was a conscious attempt to glorify Egypt's past, the Egyptians created anew independent cults to the gods of Rameses at Tanis and Bubastis, quite unaware where Piramesse once lay. As a result, postexilic Jewish scholars in Egypt, seeking to localize events of the Exodus, were mislead about the location of Piramesse in assuming that the newly created cults of the gods of Rameses at Tanis and Bubastis could serve to identify the site of the Ramesside capital.

The ancient Egyptian designation of Piramesse in its full form was "The Domain of Ramesses-meramon, great in victories," containing the name of Ramesses II, whose imprint on the development of this large city as a residential capital is unmistakable. He was, however, not the first king to build in this area. In the neighborhood of Qantir there was already considerable building activity in the Middle Kingdom. At the beginning of the Hyksos Period, Avaris at Tell ed-Daba, just S of Qantir, came into prominence as the Hyksos capital. Here, the cult of Seth, an Egyptian god associated with foreigners and adopted by the Hyksos invaders as equivalent to their own god Baal, thrived and continued into the Ramesside Period, when his temple was rebuilt and magnified. Avaris, itself, became incorporated as a

part of greater Piramesse. The Ramesside rulers were especially devoted to the cult of Seth, and the Four-Hundred-Year Stele from Ramesses II's reign commemorates the anniversary of the establishment of Seth's cult by the Hyksos.

Although at Qantir there is evidence of building activity by Horemheb and by Ramesses II's father, Sety I, who was responsible for locating the royal residence there, it was Ramesses II who contributed most to the planning and expansion of this vast urban area, which was oriented according to the cardinal points and sprawled over 10 km^2. This was the residential capital where the Ramesside pharaoh normally resided; thus, the palace complex at the core of the city was extensively supplemented by all manner of administrative quarters, and official residences surrounded the palace inner city. The palace area even included a royal zoological garden, as shown by lion and elephant bones found there.

Piramesse was strategically situated, providing excellent defense against possible invasions through the narrow land pass between the Pelusaic branch of the Nile and the Bahr el-Baqar drainage-overflow lakes, and it was an ideal spot for mustering the troops to launch a campaign into Palestine, being relatively close to the beginning of the military road into Asia. To the E of the palace area where extensive military barracks, and some distance to the S was a basin-harbor with easy access to the Mediterranean and to parts of Egypt further S.

In its buildings, Piramesse rivaled Thebes and Memphis. Large temples with huge statues and obelisks were dedicated to the major state gods: Amon, Ptah, Re, and Seth, as well as to Asiatic deities like Astarte, who possessed a temple in the military quarter. The four divisions of the Egyptian army were placed under the protection of these four state gods. Although practically nothing survives of the buildings at Qantir, Egyptian papyri provide glowing descriptions of the city and its monumental temples. It was a place, we are told, to which inhabitants of the rest of Egypt came willingly to take up residence, and where all manner of peoples plied their crafts and occupations. Various waterways and lakes intersected the city, providing some relief to the concentration of settlement. The countryside around Piramesse was noted for its good fishing and agricultural productivity, especially in the vineyards, leading to the designation of Piramesse as the "Sustenance of Egypt."

Of significance to biblical scholars is the statement in Papyrus Leiden 348 that Apiru, a term some scholars equate with "Hebrew," were employed in "hauling stones to the great pylon" of one of Piramesse's temples. There must have been a cosmopolitan air about this city, largely resulting from the presence of foreign mercenaries quartered there. Their weapons and parade grounds have recently been discovered by an expedition of the Pelizaeus Museum.

At Piramesse, the cult of the deified king was much in evidence, particularly in the form of colossal statues of the king, several of which were the object of popular veneration. There is frequent reference to the Amon of Ramesses, Ptah of Ramesses, and others, perhaps expressive of a close personal relationship between the king and the gods. These special forms of the state gods seem to have possessed sanctuaries intended for the king's personal devotion.

The demise of Piramesse at the end of the 20th Dyn. was possibly associated with the silting up of the Pelusaic arm of the Nile, necessitating the transfer of the royal residence to Tanis in the 21st Dyn., when there was also a reaction against the god Seth, who had been so favored at Piramesse. Seth's name and figure were frequently expunged from the monuments prior to their eventual removal to other delta sites. See *LÄ* 5: 128–46.

EDWARD F. WENTE

RAMESSES II. King of Egypt from 1279 to 1212 B.C., who is considered by many scholars to be the unnamed pharaoh of the Exodus (Exodus 5–15). If so, then his father, Sety I (1291–1279 B.C.), would have been the pharaoh of the oppression (Exod 1:8–2:23).

Ramesses (or Ramses) II was born into a family of military background. His grandfather, Ramesses I, had been a general and vizier under King Horemheb, who, lacking an heir to the throne, appointed Ramesses I as his successor in a move designed to ensure that the supreme leadership remained in the hands of men trained as warriors. Ramesses I's son, Sety I, was well versed in the art of warfare when he came to the throne after his father's brief reign, and it is probable that Sety I's eldest son, Ramesses II, had already been born during the reign of Horemheb. Ramesses II claimed that during his father's reign he was appointed commander in chief of the army at the early age of ten years. While recent research has shown that Ramesses II's princely participation in the early Asiatic wars of Sety I is highly questionable (Murnane 1985: 168–70), he did acquire military experience in some minor warfare in Nubia in the second half of Sety I's reign.

Eventually Sety I appointed his son as coregent. During this brief coregency, lasting two years or less, building projects were carried out in the names of both co-rulers. The elegant raised relief that characterized the interior decoration of temples under Sety I was continued during the coregency, but shortly after Sety I's death, Ramesses II decided to have new temples decorated almost entirely in incised relief. Although this alteration in the technique of carving permitted a more rapid completion of a monument and might be regarded as a lowering of artistic standards, numerous reliefs in the Great Hypostyle Hall at Karnak underwent recutting from raised to incised relief, so that one cannot conclude that the sole reason for the alteration in style was the desire to finish the monument as quickly as possible. The first several years of Ramesses II's sole rule were marked by extensive building activities both at Thebes and at the delta capital named Piramesse (or simply Rameses).

Ramesses II has often been maligned as a usurper of his predecessors' monuments. While it is true that he did not hesitate to replace a previous king's names with his own on temple walls and statuary, nonetheless there was a prodigious amount of building carried out by Ramesses II throughout Egypt and Nubia. Hardly a site exists in the Nile valley that does not preserve some trace of his activity as a builder and enlarger of temples, so that the modern epithet "the Great" is not entirely misapplied to this pharaoh. Indeed, later kings emulated Ramesses II and his long reign of sixty-seven years. The extraordinary amount of building that characterized his reign reflected a healthy economy that prevailed not only because of the productivity of the land and its natural resources, such as gold, but also because of Egyptian dominance in Nubia and a considerable portion of W Asia.

With regard to the Asiatic empire, the major problem faced by the Egyptians in the early 13th century B.C. was the strong Hittite presence in Syria. Sety I's submission of Kadesh, the vital center on the Orontes river, had only been temporary. Instead of launching a major offensive against the Hittites at the start of his reign, as earlier pharaohs were wont to do in their first year, Ramesses II spent his first several years making preparations for a decisive encounter with the Hittites. Thus, his first campaign of victory occurred in Year 4, when a victory stele was set up on the Nahr el-Kalb on the Lebanese coast after he had secured a strong foothold on the Asiatic littoral, a preliminary to the major event of the following year, the famous Battle of Kadesh. Increasing the number of divisions of the Egyptian army from three to four, Ramesses II led the forces overland on an arduous month's march through Palestine toward Kadesh, where the Hittites had amassed a great coalition of chariotry and infantry. En route, Ramesses II was gullibly deceived by false information provided by two bedouin spies (sent by the Hittites) into believing that the Hittite king Muwatallis was too afraid to come S to Kadesh. Because the Egyptian divisions were drawn out in a long line of file at the time Ramesses II reached Kadesh, it was relatively easy for the Hittites in a surprise attack to break into the leading divisions and effectively cut the pharaoh off from the rest of the army. However, during the battle a force of Egyptian troops from the coastal area to the W suddenly arrived, and their prompt action, as well as Ramesses II's own personal valor and skill at shooting from the chariot, saved him from utter defeat. While doubt has usually been cast upon the veracity of Ramesses II's self-serving account of his heroic performance isolated in the midst of the enemy host, it must be remembered that the Hittite king was relying on the effectiveness of a coalition of troops of diverse origins, and it is just possible that a skilled warrior like Ramesses II could, from his chariot, fire upon the commanders of the coalition at close range, creating panic among the enemy

chariotry. Ramesses II's prayer to the god Amon in the midst of battle is believable for its imploring of divine aid in a tight situation. On the following day, a more normal battle took place with indecisive results, for while the Egyptians had superior chariotry after the event of the preceding day, the Hittites had more infantry at their disposal. A stalemate prompted both parties to accept a temporary truce.

Although the much publicized Egyptian accounts of the Battle of Kadesh on the walls of several temples, including the famous rock-out temple of Abu Simbel in Nubia, give the impression that the battle was an Egyptian victory, in actuality the Egyptians gained nothing permanent and Kadesh remained in the Hittite sphere. The reliefs of the Battle of Kadesh represent a significant advance in narrative art, with large detailed panoramic scenes portraying the details of the battle in progress. The long texts accompanying the scenes serve to convey what could not be depicted, as, for example, the emotions of the pharaoh in the midst of combat.

During the following decade Ramesses II made several attempts to break the Hittite domination of Syria, occasionally gaining a temporary hold over such places as Tunip and Dapur. With the Hittites facing internal problems and threats from both W Anatolia and Assyria, the time became ripe for them to enter into a formal accord with Egypt. In Year 21, a lengthy treaty was drawn up in Akkadian with copies in Egyptian. It is noted for its cosmopolitan qualities, especially in giving recognition to the gods of both lands as guarantors of the accord, whose terms involved a peace binding unto eternity and included reaffirmation of two former treaties, a common alliance against outside attack and possible internal rebellion, and the extradition of fugitives, who were to be treated humanely (*ANET,* 199–203). In that age of international diplomacy, members of the royal families, including Ramesses II's mother and his wife, exchanged letters of greetings.

Thirteen years later, this peace was further cemented by Ramesses II's marriage to a Hittite princess. This event was treated in Egypt as though Ramesses II's power forced the Hittites into surrender, but lack of rainfall in Anatolia and incipient troubles with the Sea Peoples may have been important factors in this diplomatic marriage, for the Hittite king is made to say, "Our lord Seth (that is, the Egyptian storm god) is angry with us. The sky does not give water before us, and every foreign country is at war fighting us." Later, under King Merenptah, Ramesses II's son and successor, grain was actually sent from Egypt to the Hittites in time of famine.

For Egypt, the second half of Ramesses II's reign was a sort of *pax Aegyptiaca.* The indications are that Egypt maintained a relatively firm control over its Asiatic provinces, where Egyptian garrisons saw to the continued delivery of yearly dues from vassal principalities. A literary text, known as Papyrus Anastasi I, written for a military scribe, demonstrates considerable familiarity with the topography of areas in Syro-Palestine, and there is little doubt that forceful action would have been taken by Egypt to quell insurrection. At home, the king was concerned for the welfare of the Egyptian population, boasting of how well he provided for his artisans and laborers. It is not surprising then that Ramesses II's treatment as a god was accentuated, for he was regarded as the earthly manifestation of the sun-god. For popular worship, there were large statues of the king before which people might address their prayers. Since in theory the king was the sole officiant in the ritual, Ramesses II was even occasionally depicted making offerings to his own image. Beginning with his 13th year, and periodically thereafter, he celebrated a long series of jubilees, with ceremonies designed to reaffirm his vitality as pharaoh.

Ramesses II had a tremendously large number of offspring (45 sons and 40 daughters at least) by his several wives. Prince Khaemwase, who predeceased him, acquired a considerable reputation as a scholar and antiquarian, seeing to the restoration of ancient monuments. Although in the first half of his reign Ramesses II carefully exercised his power of royal appointment of clergy and officials, toward the end of his reign the seeds of inheritance of office are discernible, especially in the Theban priesthood. The rise of powerful families holding important civil and ecclesiastical positions would eventually impinge upon the centrality of royal authority, and the economic strength of the Amon temple at Karnak would come to rival royal wealth. Indeed, the very length of Ramesses II's reign and the size of his family inevitably contributed to problems in the succession of rulers in the second half of the 19th Dyn.

Ramesses II is commonly associated with events of the Exodus and often regarded as the pharaoh of the oppression. Given the fact that already in Year 5 of his son and successor Merenptah, the Israelites are mentioned in a context that indicates their presence in Palestine, it is unlikely that Merenptah was the pharaoh of the Exodus. Since the city of Rameses was already in existence under Sety I, there is the possibility that he was the pharaoh of the oppression and that Ramesses II was ruling when the Exodus occurred, sometime after his Year 15 (Kitchen 1982: 70–71). If, however, the Exodus account contains vague memories of the expulsion of the Hyksos at the beginning of the 18th Dyn., Ramesses II's involvement may have been rather peripheral, perhaps limited to the departure from Egypt of a small group of Apiru Asiatics, who somehow contributed to the collective experience of the Hebrews.

The mummy of Ramesses II, discovered at Thebes, is that of a red-haired octogenarian, who died a natural death at his delta residence, where his body was mummified.

EDWARD F. WENTE

RAMIAH (PERSON) [Heb *ramyâ* (רַמְיָה)]. A descendant of Parosh and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:25 = 1 Esdr 9:26). According to M. Noth, the name Ramiah means "Yahweh is exalted" (*IPN,* 145). Ramiah was a member of a family that returned from Babylon with Zerubbabel (Ezra 2:3; Neh 7:8). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

RAMOTH (PLACE) [Heb *rāʾmôt* (רָאמוֹת)]. A town of the tribe of Issachar, reportedly granted to the sons of Gershom (1 Chr 6:58—Eng 6:73). The city listed at the same point in the parallel levitical town register in Josh 21:29 is called Jarmuth (*yarmût*); the LXX supports "Ramoth" as the probable original reading. Ramoth is also probably identical with Remeth (*remet*) of Issachar (Josh 19:21).

The location of Ramoth is purely a matter of conjecture. W. F. Albright suggested Kokab el-Hawa, the Crusader castle Belvoir (M.R. 199221), 11 km N of Beth-shean (1926: 231). Its lofty position (over 300 m above sea level) may relate to the possible meaning of Ramoth, "heights."

PATRICK M. ARNOLD

RAMOTH-GILEAD (PLACE) [Heb *rāmōt gilʿād* (רָמֹת גִּלְעָד)]. A fortress-city of Gilead located in the E portion of Gad's tribal territory. Ramoth-gilead is first mentioned in the Bible (Deut 4:43) as a city in Transjordan which Moses set aside for the tribe of Gad as a place of refuge for perpetrators of unintentional homicide (see also Num 35:6–15 for P legislation regarding cities of refuge). In Joshua 20, the Lord commands Joshua to carry out Moses' legislation, including the establishment of Ramoth in Gilead for Gad (Josh 20:8). Though set in the Wandering/Conquest period, the provision for cities to which perpetrators could flee to escape blood revenge from angry relatives of the victim probably reflects a sophisticated innovation of the monarchical period. The Davidic-Solomonic period might provide the earliest such setting for this role.

Ramoth-gilead also appears in the list of forty-eight cities granted to the Levites by Joshua after the Conquest, and is specifically mentioned again as a city of refuge (Josh 21:38 = 1 Chr 6:65 [—Eng 6:80]). The provision for Levitical cities, though set in the premonarchical period, is also widely regarded by scholars as an administrative act of the Davidic or Solomonic reigns (*ARI,* 121–25; Mazar 1960) or even a much later government. Ramoth-gilead's roles as both a Levitical city and a city of refuge are possibly traceable to the same administrative fiat. It is noteworthy that when Solomon reportedly divided his

kingdom into twelve local districts (1 Kgs 4:7–19), Ramoth-gilead housed Ben-geber, the governor of Gilead and Bashan (1 Kgs 4:13), indicating the importance of the city during that regime.

After the division of the kingdom in the late 10th century, Israel inherited the tribal territories of the N Transjordan, including Gad and its chief city, Ramoth-gilead. A period of military struggles with Damascus followed (1 Kgs 15:20); Josephus (*Ant* 8.14.1) suggests that the city became a point of contention between Syria and Israel, probably during the mid-9th century. The campaign of Ben-hadad of Syria (1 Kgs 20) may have captured Ramoth-gilead from Israel; certainly 1 Kgs 22 presumes that the city lay in Aramean hands. The intriguing account describes how the king of Israel (Ahab? cf. 22:20) implored Jehoshaphat of Judah to join him in an expedition to recover Ramoth-gilead from Aram (22:3). Though the court prophets encouraged such an attack, Micaiah, son of Imlah, prophesied a resounding defeat at the city (22:15–17); the march went on nevertheless. The attempt failed, and the king of Israel died in his chariot.

Twelve years later (ca. 840), Jehoram of Israel and Ahaziah of Judah reportedly attempted to retake Ramoth-gilead from Ben-hadad's Syrian successor Hazael (2 Kgs 8:28–29). The attack may have succeeded (cf. 9:14), though the Arameans wounded Jehoram in the attempt. While the king of Israel lay wounded at Jezreel, the prophet Elisha dispatched a messenger to the Israelite army at Ramoth-gilead to anoint an Israelite military commander, Jehu, as the new king (9:1–13). This action amounted to a fundamentalist coup d'état, because Jehu returned from Ramoth to exterminate the rest of the liberal Omrides, members of the Judean royal family, and most of the Baal prophets (2 Kgs 9–10). Apparently, the Yahwistic revolt so weakened Israel that Hazael of Aram succeeded in capturing from it the entire Transjordan, including the disputed Ramoth-gilead (2 Kgs 10:32–33). Though not all these prophetically inspired accounts can be taken at face value (see Miller 1966), there is no reason to doubt that Israel and Syria struggled over Ramoth-gilead itself during this period. It is possible that Amos referred to battles in or around the city a century later when he accused Damascus of war crimes: "They threshed Gilead under threshing-sledges spiked with iron" (Amos 1:3).

The modern identification of Ramoth-gilead is hampered by the relative topographical ambiguity of the OT texts. "Gilead" probably refers to an area in modern Jordan S of the Yarmuk River and N of the Jabbok, but there are many ruins in this area. Albright, following Dalman, proposed Tell el Ḥusn (M.R. 232210), some 16 km SW of Ramtha (1929: 11). But N. Glueck later suggested Tell Ramith (M.R. 244210), 7 km S of Ramtha near the modern frontier with Syria (1943: 11–12), and this identification won scholarly approval in view of Ramith's etymological connections with "Ramoth," its commanding location as a "height" over the surrounding plain, and its Iron Age pottery.

RAPHA (PERSON) [Heb *rāpā*ʾ (רָפָא)]. The fifth son of Benjamin in 1 Chr 8:2. He is not mentioned in the list of Benjamin's sons in Gen 46:21, where Naaman is the fifth.

DAVID SALTER WILLIAMS

RAPHAEL (ANGEL) [Gk *Raphaēl* (Ραφαηλ)]. The angel dispatched to restore Tobit's sight and to free Sarah from the dominance of the evil spirit, Asmodeus (Tob 3:17). His name is a play on words, meaning "God heals" (Zimmerman 1958: 66; Lamparter 1972: 108, n. 6). His role in the narrative underlines the writer's belief in both God's transcendence and his involvement in the life of Israel (Zimmerman 1958: 27–28; Nickelsburg 1981: 34). He acts as God's emissary, but is charged with the

responsibility of caring for the faithful. In fact, so central to the plot of the book is this angelic intermediary that some scholars have described Tobit as an "extended angelophany" (Nickelsburg 1981: 40, n. 41). Raphael is also described in the book of *1 Enoch* as the second in the hierarchy of the angels (20:3) and, specifically, as the one who bound Azazel and cast him into a pit (10:4). Together, both books reflect the impact of Iranian beliefs upon those of Judaism. The emergence of an angelic hierarchy, the view of angels as servants of men as well as God, and the assignment of names determined by function provide evidence of that influence (Gaster *IDB* 1: 132–34). The interest of both writers in the angelic establishes that the gap between the OT and NT on such matters is not as great as it would appear (Metzger 1957: 38; cf. *IDB* 4: 12).

FREDERICK W. SCHMIDT

RAPHAH (PERSON) [Heb *rāpâ* (רָפָה)]. Var. REPHAIAH. Son of Binea, a descendant of King Saul from the tribe of Benjamin, according to the genealogy of 1 Chr 8:37. The name is an abbreviated form of names such as Rephael, "God has healed" (1 Chr 26:7), and Rephaiah, "YH (WH) has healed," which is a common biblical name in postexilic sources (e.g., 1 Chr 3:21), although the name Rephayahu (*rpyhw*) is attested to in the preexilic bulla corpus (Avigad 1986:78; Shiloh 1986:29). The element *rpʾ,* "to heal," is common in biblical names of all periods (Noth *IPN,* 179). The genealogy parallel to 1 Chr 8:37 in 9:43 gives Raphah's name in the form Rephaiah (*rĕpāyāh*); most LXX manuscripts read this longer form in 8:37 as well. The usual shortened form is Rapha (*rāpāʾ*), which is attested to in the Bible (e.g., 1 Chr 8:2), in the Samaria ostraca, and on a preexilic bulla (Avigad 1986:49), but it is not unusual for a final *ʾalep* to interchange with a final *he* in personal names (Fowler *TPNAH,* 165). Thus, neither the form Rapha of 8:37 nor Rephaiah of 9:43 should be seen as preferable. Raphah's name appears in the section of genealogy (v 37b) using the term *bĕnô,* "his son," in contrast to the preceding section (vv 36–37a), which uses the verbal form *hôlîd,* "begot"; it is therefore possible that they come from different sources and might have been mechanically combined, in which case Raphah is not actually the "son" or "descendant" of Binea. This genealogy is from the end of the First Temple period (Demsky 1971: 20) and was preserved by Benjaminite families that survived the Babylonian Exile (Williamson 1979: 356). The existence and preservation of the Saulide genealogy probably reflect the continued prominence of Saul's family, and perhaps even their hope that they would return to power (Ackroyd *Chronicles, Ezra, Nehemiah* TBC, 42; Flanagan *PWCJS* 8: 25). See MELECH. On the repetition of the genealogy in 1 Chronicles 8 and 9, and its structure within the genealogies in Chronicles, see AHAZ.

MARC Z. BRETTLER

RAPHAIM (PERSON) [Gk *Rhapain* (Ῥαπαιν)]. A name given as part of the genealogy of Judith (Jdt 8:1). It should be noted that the Gk text reads Raphain. If this reading is correct, then the name occurs nowhere else in the biblical text. It is often emended, as in RSV, to Raphaim (this follows the Vulgate), or to Rephaiah. If the emendation to Rephaiah is correct, then it is most likely that the author of Judith had in mind the occurrence of the name in 1 Chr 4:42. There, Rephaiah is a leader of the tribe of Simeon, which is, according to the author, the tribe of Judith. The purpose of the genealogy in the book of Judith is to prove the purity of Judith's Jewish descent and to give the story verisimilitude.

SIDNIE ANN WHITE

RAPHIA (PLACE) [Gk *Rhaphia* (Ῥαφια)]. The site of the battle between Ptolemy IV Philopater and Antiochus III (*3 Macc.* 1:1; 217 B.C.; see *CAH* 7/22/8: 728–31). It is associated with modern Tel Rafah (M.R. 077079), a city located about 20 miles SW of Gaza and 30 miles N of the Wadi el-ʿArish. This site was important throughout antiquity because of its strategic location on the frontier between Palestine and Egypt. It served as a border station on the main military road which ran from Egypt to Palestine. This road, called the "Way of Horus" by the Egyptians, the "Way of the Land of the Philistines" in the OT (Exod 13:17), and the "Way of the Sea" by the Romans, was the most direct route linking Asia and Egypt and was thus used throughout history for the movement of armies (see *LBHG,* 41–49; Gardiner 1920).

Although Raphia is not mentioned in the OT, there is ample evidence that it dates back to that period. The name is found in both Mesopotamian and Egyptian sources. A Neo-Assyrian annal of Sargon II (721–705 B.C.) claims that "Hanno, King of Gaza and also Sib'e, the *Turtan* of Egypt set out from Rapihu against me to deliver a decisive battle. I defeated them …" (*ANET,* 285). Esarhaddon (680–669 B.C.) also passed through Raphia on his way to Egypt: "I removed my camp from Musru and marched directly towards Meluhha (i.e., Egypt)—a distance of 30 double-hours from the town of Apku which is in the region of Samaria as far as the town Rapihu (in) the region adjacent to the 'Brook of Egypt' …" (*ANET,* 292).

In Egyptian texts, Raphia is found in the Papyrus Anastasi, a satirical letter dating to the time of Seti I (1294–1279 B.C.). The name (spelled *r-p-h*) is mentioned following *n-h-s* and preceding Gaza (*ANET,* 478; Gardiner 1920: 103). In another list of toponyms from the same period, Raphia follows Hazor (*LBHG,* 166). Ramesses II (1279–1213 B.C.) mentions *r-p-h* in a geographical list preceding Sharu[hen] (Tell el-Farʿah; *ANET,* 292), while in a geographical list from the time of the pharaoh Shishak I (945–924 B.C.), *r-p-h* is associated with Laban (*LBHG,* 290; for a complete listing of Raphia occurrences in Egyptian texts and corresponding bibliography, see *CTAED,* 161–62).

Raphia is next attested in the literature of Hellenistic times. Polybius mentions Raphia as the site of the battle between Ptolemy IV and Antiochus III in 217 B.C. (*Histories* 5.80). Strabo the Geographer, while describing the region, states: "After Gaza one comes to Rhaphia, where a battle was fought between Ptolemaeus the Fourth and Antiochus the Great" (*Geog.* 16.2.31). In the writings of Josephus, Josephus relates how Alexander Jannaeus captured and destroyed Raphia in 97 B.C. (*Ant* 14.5.3) and how it was rebuilt by Gabinius in 55 B.C. (*Ant* 14.5.3; *JW* 1.8.4). Later, Titus passed through Raphia on his way from Nicopolis in Egypt to Jerusalem (70 A.D.; *JW* 4.11.5).

The Talmud (*t. Šeb.* 4.10) mentions the name Raphiah deHagra "Raphia of the wall" as a name of a province located on the border between Egypt and Palestine (*GP* 1: 308–10). For further discussion, see also *IDB* 4: 13; *ISBE* 4: 46; *LÄ* 5: 147–48.

BRIAN E. KECK

RAPHON (PLACE) [Gk *Rhaphōn* (Ῥαφων)]. A city in Gilead on the banks of a tributary of the Yarmuk River. It is identified with er-Rafeh, 13 km NE of Sheikh Saʿad (Karnaim). It may be the city *nw-r-p-i* in the list of Canaanite cities of Thutmose III.

The Maccabean Revolt met with early success, including the recapture of the temple in 164 B.C., which led to gentile reprisals. Many Jews in Gilead fled to a stronghold at the city of Dathema and sent to Judas for help (1 Macc 5:10), while Jews in other cities were attacked by the gentile citizens (5:26–27). Judas embarked on a highly successful campaign to liberate all of them. The campaign reached its climax when the Ammonite military commander, Timothy, gathered a huge army opposite Raphon (5:37–39), and Judas crossed the wadi swollen with spring rains (Goldstein *1 Maccabees* AB, 303) to attack and defeat him (5:43). Timothy's army retreated to the Temple of Ashtoreth at Karnaim (5:43–44), which Judas captured and burned. Meanwhile, according to 2 Macc 12:24, the retreating Timothy was captured by two

Jewish brothers, Dositheus and Sosipater. He persuaded them to free him, thereby avoiding death at Karnaim.
PAUL L. REDDITT

RAPHU (PERSON) [Heb *rāpû* (רָפוּא)]. A man from the tribe of Benjamin, known only through association with his son Palti (Num 13:9). Palti was one of the twelve tribal representatives who left Kadesh to spy out the land of Canaan.
TERRY L. BRENSINGER

RAS ET-TAHUNA (M.R. 170147). See ZEMARAIM.

RAS SHAMRA (PLACE). See UGARIT.

RASSIS (PLACE) [Gk *Rhassis* (Ῥασσις)]. A site mentioned in the book of Judith as one of the scenes of Holofernes' victories (Jdt 2:23). The name occurs only here in the Bible. The author seems to locate the site somewhere in the region of Cilicia, given the context of the passage. The OL text and the Vg give the name as Tharsis (Lat *Tharsis*), leading some to suggest that Rassis is a corruption of the name Tarsus. However, it is much more likely that the Latin is a corruption from the unknown "Rassis" toward the easily identified "Tarsus." Others suggest an identification with a "Rossos" mentioned by Strabo (14.5.19; 16.2.8) and Ptolemy (*Geog.* 5.14). Stummer (1947) thinks this is the most likely identification, and believes it refers to Mt. Rossus (modern Arsus), which was the site of the Battle of Issus in 333 B.C.E. This is possible; the name may have been known to the author of Judith and used to give his story verisimilitude. This identification would also partly depend on the date assigned to the book of Judith; that is, whether or not the author would have been aware of the Battle of Issus.

RAT. See ZOOLOGY.

RATHAMIN (PLACE) [Gk *Rhathamin* (Ῥαθαμιν)]. An administrative district ceded to Maccabean control by Demetrius Nicator of Syria ca. 148 B.C. (1 Macc 11:34). The three "nomes" of Aphairema, Lydda, and Rathamin had formerly been a part of the larger district of Samaria, although their population was largely Jewish. Rathamin, like the other "nomes" associated with it, bordered Judea and had already come effectively under the control of the Maccabees. Demetrius formally annexed Rathamin and other territories to Judea and made further concessions in an attempt to retain Jewish allegiance. This treaty was reported in a letter of Demetrius to Lasthenes concerning affairs in the S portion of the Seleucid empire.

Rathamin is clearly included as one of the three nomes mentioned in the record of Demetrius' earlier attempt to sway Maccabean allegiance from his rival Alexander (1 Macc 10:30, 38). Later, in peace time, Demetrius broke his promises, and his rival Tryphon, in the name of his child-king Antiochus, granted Jonathan Maccabeus control over "the four nomes," which would have included Rathamin (1 Macc 11:57). Josephus uses the toponym Ramatha in his description of these events (*Ant* 13.14.9; cf. LXX ASV Rhamathaim). The change of spelling in early mss may represent a change to a sound more aesthetically pleasing to the Hellenistic ear.

The district of Rathamin is widely accepted as the district surrounding the home of Samuel. This region in the hill country of Ephraim lay along the N approach to Judea. The location is also known as Arimathea (M.R. 151159) and was the hometown of Joseph, one of Jesus' followers (Matt 27:57; John 19:38). The etymological root of this name is Ramah, which refers to a high place. This location is only 11 km N of Modein, the home of the Maccabees. No excavations of the site are reported in current summaries of

archaeological activities. According to Avi-Yonah's cartography, the region of Rathamin included ca. 140 square miles and stretched from the foothills near Arimathea in the W to Bethel in the E.
ROBERT W. SMITH

RAVEN. See ZOOLOGY.

RAZIS (PERSON) [Gk *Rhazis* (Ῥαζις)]. One of the elders from Jerusalem who in 2 Macc 14:37–46 is said to commit suicide rather than permit Nicanor to arrest him and use him as an example to the Jews in Judea. While most major translations (RSV, NEB, JB) for the sake of clarity insert the name Razis into the story two or more times, the Gk mss only mention it once at the very beginning (v 37). The mss vary considerably in the spelling of the name, raising questions about its origin. While most commentators accept its Semitic origin, Grimm thinks the Syriac *Ragaš* may preserve the original name (1853: 199). Abel accepts Grimm's other proposal, *Razy,* and argues that it is probably of Persian background (1949: 467), while Goldstein sees the influence of Isa 14: 16–18 on *Razy* (*2 Maccabees* AB, 492).

Our knowledge concerning Razis is confined to this account. He is described as one of the *presbyterōn* (elders) from Jerusalem with a good reputation and a love for his fellow citizens. Most commentators think that he must have been among a group of elders assembled by Judas after the revolt (Habicht 1976: 275). While the extent of their power cannot be ascertained (Goldstein *2 Maccabees* AB, 491–92), the use of the title is rather common in 1 and 2 Maccabees. This text also informs us that earlier in the time of *amixia* (separation), risking body and soul Razis had incurred the judgment of Judaism, an apparent reference to the prohibitions under Antiochus IV described in 2 Macc 6:1–6 and elsewhere.

The story of Razis is an independent unit in 2 Maccabees with a limited connection to its surrounding literary context. While in the sequence of events in 2 Maccabees the Razis incident seems to have occurred in the temple, many believe the references in the story are to the courtyard of a house (Grimm 1853: 200; Abel 1949: 469). Since this account seems to stand as an independent literary unit in 2 Maccabees 14, it is very difficult to determine the precise setting.

While the story of Razis is an obvious case of suicide, its parallels with the martyrdoms described in 2 Macc 6:10–7:42 (Goldstein *2 Maccabees* AB, 491) provide some justification for those who regard this story of noble resistance to foreign exploitation as a martyrdom (Schiffman in *HBC* 914).

RE (DEITY). The Egyptian sun-god; a cosmic deity of the greatest importance in the expression and development of Egyptian religious thought. Although the ideogram for the sun—a circle with a central dot—is found in the late Predynastic period (ca. 3000 B.C.), scholars have no solid evidence upon which to date the introduction or development of solar worship in Egypt. What can be determined, however, is that by the end of the Archaic period (ca. 2700 B.C.), the worship of Re was solidly entrenched in mainline Egyptian religion, since the name of Re has been found as a constituent of human names at that time, as was the title "Son of Re," which was to be used in the full titulary of pharaohs from the Old Kingdom through the Roman period.

Re's primary cult center was the city of *Iwnw* (Heliopolis), situated at the apex of the delta, where he was worshipped in the form of a hawk-headed human, and where his most sacred icon—the conically shaped benben stone—was long an object of veneration (Bonnet in *RÄR,* 626). It is from this city that the priests of Re are believed to have developed the highly complex speculative system which influenced much of Egyptian culture, from religious belief and ritual practice to religious and secular literature (Barucq and Daumas 1980: 115; Assmann 1969), and even to architecture, this last providing some of the most stereotypical images of ancient Egypt—the pyramid, obelisk, and sun temple (David 1980: 36).

The three most significant qualities of the sun-god are apparent from his earliest occurrences in the Old Kingdom. Re is a creator god, he is the divine king, and he is the paradigm for the cycle of birth-life-death-rebirth. The sun-god's aspect as a creator god is best described in the Instruction to King Merikare:

"Mankind, god's cattle, is well tended. He created the sky and the earth for their sake … He made breath for their noses to live … He shines in the sky for their sake. He made plants and cattle for them, fowl and fish to feed them … He makes daylight for their sake" (Volten 1945: 131; *ANET*, 417).

In this regard, the sun-god is also the dominant creator in many of the various priest-developed cosmogonic systems, such as that of Heliopolis, where Atum-Re generates the first male-female pair through masturbation; Hermopolis, where Re arises from the cosmic egg on the Island of Flames (Brandon 1963: 14); and Edfu, where Re is connected with the origin of sacred places (Reymond 1969: 33).

Perhaps Re's most important characteristic is that he is the king of the gods. This is his most common depiction in the Old Kingdom Pyramid Texts. Re crosses the sky in his great boat which is crewed by the gods who perform various scribal and personal functions, inspecting various districts of his realm, making regal pronouncements (Anthes 1958: 77–89). All of this is so transparently a borrowing of the earthly actions of the pharaoh that, lacking substantial descriptions of pharaonic activities of state during the Old Kingdom, descriptions of Re can be used to supplement our general understanding of royal activities (Firchow 1957: 34–42). We even have one text where Re's royal prerogatives are so unqualified that he is able to call for the destruction of mankind (Piankoff 1955: 26).

As mentioned earlier, one of the standard elements of the pharaoh's titulary was his "Son of Re" name. Some scholars speculated that this was an indication that the primary position of the pharaoh in the Egyptian pantheon was compromised by the rising power of Re and his priesthood during later Old Kingdom times (David 1980: 60). That this Re-king connection was taken seriously throughout the rest of pharaonic history is confirmed by the fact that almost every pharaoh from Dynasty 4 through Dynasty 30, the last native Egyptian dynasty, selected a royal name which was a compound using Re; for example, Khafre, Menkaure, Sahure, Meryre, Kheperkare, Menkheperre, and Usermaatre. Indeed, to the Egyptians, the "Son of Re" title was quite literal, as the Westcar Papyrus relates how the initial kings of the 5th Dynasty were the offspring of the wife of a priest of Re and the sun-god himself (*AEL* 1: 215).

The third major characteristic of Re is that he is the god of resurrection: the paradigm of the birth-life-death-rebirth cycle. The sun is the most dominant of all celestial phenomena, and its daily rising and setting led the Egyptians to regard it as being born each morning and dying each sunset. Connected with this is the vision of the sun sailing across the day sky along the body of the sky-goddess Nut, being swallowed by her at sunset, and traveling through her body by boat at night, to be born again in the morning (Westendorf 1966).

The most commonly held theory is that an afterlife and the otherworld were royal prerogatives in the earlier periods. The best description of this is rendered in the Pyramid Texts, which are thought to represent beliefs originally prepared for and pertaining to pharaohs and the royal bloodline. After death, and through the performance of certain rituals, the pharaoh either became identified with Re or became a member of his official entourage and was, therefore, pulled into the sun's cycle of daily rebirth.

Standard scholarship holds that even in the Pyramid Texts, however, we can detect more "popular" afterlife expressions revolving around the god Osiris, who begins to usurp or at least share in some of Re's prerogatives (Breasted 1933: 109). This process became more pronounced during the First Intermediate Period, when the power of the pharaoh waned substantially and the afterlife became accessible to everyone. This is a very debatable interpretation which is based on the lack of nonroyal funerary literature from the older periods. Even so, the solar influence remained strong in later funerary literature—for example, the Coffin Texts and the Book of the Dead—and was the primary inspiration behind the numerous highly pictorial "books" of the New Kingdom and later, such as the Book of the Day, the Book of the Night, the Book of Gates, the Book of Caverns, and the Book of What Is in the Underworld (Piankoff 1957). All of these texts have as their leitmotiv the inexorable movement of the sun-god through the otherworld, culminating with his rebirth.

Re's influence on the general Egyptian pantheon was profound. As early as the 2d Dynasty, with the occurrence of Re-Horakhty, Re was such a fundamental aspect of the Egyptian religious perspective that he became closely linked with numerous other deities to form new gods, e.g., Re-Atum, Re-Horakhty,

Amon-Re, Khepre-Re, and Re-Osiris. Re was easily the most frequently occurring god in these syncretistic associations (Hornung 1982: 86), and one text, the Litany of Re, contains 75 examples of alternate and compound names of Re, many of which are the names of other gods, under which Re's power was manifest (Piankoff 1964: 22 ff.).

This syncretistic technique of Egyptian religious thinkers, particularly as it applied to Re, was responsible for expanding and enriching the character of many originally nonsolar divinities, to the point where, in the New Kingdom, the Egyptian pantheon had a substantially solar flavor.

———

A. Definition

The communication process by means of texts can be described in terms of the basic relationships between sender, message, and receiver. Historical studies as a general rule tend to concentrate on the relationship between sender and message, structural studies on the text itself, and Reader Response Theory (hereafter RRT) on the interaction between text and receiver(s). Although the approach developed by RRT has its origins in the field of general literary studies, it is becoming increasingly prominent in the interpretation of biblical material.

B. Background and Formative Influences

The interest in reception forms part of a much wider movement toward pragmatics, i.e., the study of the effect of language in use. While syntax has to do with the structure of and the relationship between the different elements of the text, and semantics deals with the meaning of the text, pragmatics is interested in language in action and the effects that can be achieved by language. Because language functions on various levels and in a variety of contexts, pragmatics covers a broad spectrum of investigation. It does not proceed from a unified or universally accepted theory, but draws its inspiration and concepts from

diverse methods and traditions. RRT, as a smaller segment within the wider field of pragmatics, reflects the same multifaceted background, and a number of influences can be traced in its development.

In terms of origins, a distinction can be made between RRT and reception theory. The former is a concept prevalent in North America; the latter was developed in a European context. RRT is an umbrella term which brings together literary critics from diverse backgrounds. The common denominator is their opposition to the New Critical emphasis on the "text itself"; that is, on the autonomous status of the text as text, and the concentration on the ways in which the text interacts with readers. In RRT, there is no coordinated attempt to develop a uniform methodological approach; in fact, one of the strengths of RRT claimed by its adherents is that it can accommodate a variety of techniques and methods. Reception theory, on the other hand, is a much more coherent movement, most prominently represented by the so-called School of Constance, with Robert Jauss and Wolfgang Iser as its principal exponents. During the late 1960s and early 1970s, their work was seminal for the exchange of ideas at the biannual colloquia held at the University of Constance in the Federal Republic of Germany. The results of those discussions were eventually published in the series *Poetik und Hermeneutik.*

The rise of reception theory or the "aesthetics of reception" (Jauss) was preceded by four other related developments. First, studies in the sociology of literature emphasized that not only is the production of a work of art or the value of its inherent qualities worthy of investigation, but also, and especially, is its effect on society. Similar ideas came from a second quarter, that of philosophical hermeneutics, where Gadamer developed his concept of the "effective history" (*Wirkungsgeschichte*) of a text. In this concept, an individual does not exhaust the meaning potential of a text, but his or her interpretation is relativized and complemented by other readings of the text. In fact, these different readings form a history of their own which will influence the predisposition of the individual reader even before he or she actually encounters the text—whether the reader is aware of this influence or not. The concept of "effective history" prepared the way for the third influence, namely the idea of writing a history of literature in terms of the reception of texts. Jauss, the major exponent of this concept, understands such an undertaking to be the prerequisite for an "aesthetics of reception." The aim is to provide some explanation for the success or failure of certain texts during certain periods in history, and in doing so to establish a basis for the evaluation of texts. A fourth and very powerful influence came from the ideas of the Prague structuralists. In developing and revising certain concepts of Russian formalism, they maintained a clear distinction between the text as stable structure and the realization of that structure by the reader. They believed that by seeing the work of art as a complex sign which mediated between the artist and the receiver, the social dimension of reception became prominent. This line of thought was taken up and explored further by the School of Constance. From quite a different angle, reception was also influenced by insights deriving from speech act theory. Here, too, the focus was on the effect achieved by language usage.

In its turn, concepts developed by reception theory proved to be fruitful for many other related areas of research, including the following most prominent ones. Theoretical studies have been complemented by a vast amount of empirical work in which the actual reception of texts by various types of readers is monitored under controlled conditions. This has developed into a specialized field of research. Sociology of knowledge has emphasized the historical relativity of knowledge; that is, the effect which the position of the observer—the observer's place in history and in the social network—has on the observer's perception of reality. Critical hermeneutics gave rise to the development of "materialistic" readings of texts, where both production and reception are understood in terms of the interaction of socioeconomic forces. Psychological studies of the reading process have made use of reception insights, while communication theory as a whole has benefited from this interchange. In the earlier stages of development, the work of Iser represented the only significant link between RRT and reception theory. However, as a result of the ongoing exchange of ideas, the different schools and traditions can no longer be separated so easily.

C. Basic Concepts

1. The Implied and Other Readers. Pivotal for all types of reception theory or RRT is the role of the reader. The basic assumption is that every text presupposes a specific reader, whether this is a concrete

person or only a hypothetical receiver. This reader influences the way in which the text is structured and framed, and the author of the text assumes that the reader has the ability required to decode and understand what is written.

The reader or readers may be explicitly identified, even addressed by name (for example, Theophilus in Luke 1:3), or their presence may be only assumed. In the course of time a wide variety of readers has been listed, but it was only with the introduction of Wolfgang Iser's concept of the "implied reader" that the reader became an important feature of the methodology for the interpretation of texts. Iser intended this "reader" to serve as a theoretical construct, to account for the presence of the reader in the text without having to deal with the additional complications posed by a real reader. The "implied reader" was devised as a counterpart to the concept of the "implied author." The reason for these distinctions was the recognition that whoever the real author of a literary text might be, the text itself is written from a specific point of view and addressed to a specific reader who shares a certain minimum amount of knowledge with the author, if any communication is to take place via the text.

However, the implied author and the implied reader are not the only participants. Within the text itself, a further set may be introduced in the form of a narrator and an addressee. For example, in the gospel of Mark, the author presupposes that his readers will have a reading knowledge of Greek and will understand references to tax collectors, the book of Isaiah, the Pharisees, and so forth. But within his story he introduces Jesus as a narrator of parables, with Jesus' disciples as audience. On still a further level of embedding, the owner of the vineyard communicates with his servants, who form yet another audience (Mark 12).

Because of this complexity of textual structures, it is important to distinguish between the various receivers. Some are present only "inside" the text—not as real readers, but as possible roles which the real reader might adopt. Examples are the so-called mock reader whose role the real reader is invited to assume, if only temporarily; the addressee who is often explicitly identified; the implied reader who is in possession of the minimum qualities necessary to make sense of the text; and the ideal or model reader who has the competence to follow all the nuances and to realize the potential of the text to its fullest. On the other hand, some readers are clearly "outside" the text. These are real readers like the first or original readers of a text, the past readers who constitute the history of the reception of the text, the composite or communal reader who has accumulated the critical experience of a specific community or of previous generations, or the present reader of the text.

In the long run, however, it becomes problematic to keep intratextual and extratextual readers neatly separated. The "implied reader," as such, illustrates the problem. Although originally conceived as a means of accounting for the presence of the reader without having to deal with a real reader, the implied reader does become the point of entrance for the real reader by representing the stance which the latter attempts to adopt. Iser is therefore forced to define the implied reader both as a textual structure (*Textstruktur*) and as a structured act *Aktstruktur*). This dual definition of the concept of the implied reader enables Iser to move to and fro from text to reader, but it has also given rise to the criticism that he can do so only because the relationship between these two aspects remains vague. A clearer understanding of the interaction between the real and the implied reader remains one of the areas in RRT that needs further methodological refinement.

2. Gaps and the Indeterminacy of the Text. Exponents of RRT point out that clues are offered to the reader on various levels of the text. These can come in the form of linguistic indicators, like second-person pronouns, vocative forms, and direct commands. On the rhetorical level, rhetorical questions or other strategies can be used to elicit sympathy or arouse aversion. In the world created by the text, a specific value system can be introduced, offering the reader new possibilities for self-understanding. In Gal 3:28, the "status" of the believer is redefined in contrast to existing norms of the social system. Petersen (1985) has shown how kinship relations play an important role in the symbolic universe developed in the letter to Philemon. Whether the actual reader accepts the role(s) offered by the text is a matter of the appropriation of the text.

Despite these indicators which guide the reader in a certain direction, RRT insists that indeterminacy is a basic characteristic of the literary text. What is revealed in the text is at the same time accompanied by what remains concealed. It is this dialectic between what is explicit and what is implicit, between the known and the unknown, which sets the reading process in motion. According to Iser, the text contains certain deliberate "gaps" or "open spaces." These structured blanks spur the reader to action and entice the reader to supply the missing information in order to make sense of what is said. In this way, the text requires an input from the reader and makes the reader co-responsible for the creation of the text as meaningful communication.

3. The Wandering Viewpoint. The introduction of readers other than the present reader is one way in which the mediating potential of the text comes to the surface. Instead of confronting the reader with only one possible role, the text offers a variety of options. The reader can therefore be present in the text in more than one way. This is what Iser means by the so-called "wandering viewpoint" of the reader. Various textual perspectives are open to the reader—that of the narrator, the characters, the plot, and the implied reader. In moving backwards and forwards between these perspectives, the reader will find that different segments of the text are brought into the foreground, while others become marginal. In presenting these different options to the reader, the text is in fact mediating between the reader's position and where the text would like the reader to be.

4. Criticism. Criticism of both the theory and practice of RRT comes from two opposing quarters. Some maintain that the method destabilizes the text, ignores its constraints, and opens up the gates for all forms of subjectivism. Others object (especially from a deconstructionist perspective) that RRT is not prepared to accept the consequences of its own position. Having recognized the creative input of the reader, it stops halfway by still insisting that the text exercise a decisive control over the reader. RRT proponents have tried to counter this by distinguishing between two stages of reading—the first recognizing the text as a closed system of signs (text-immanent), the second taking the reader's sign system into account (text-transcendent). Even so, the paradox between the constraints of the text and the freedom of the reader remains a methodological challenge.

D. Reader Response Theory and Biblical Literature

Because of the persuasive nature of biblical literature, which presupposes a response from its readers, RRT is of special significance for this type of material. Even before reader reception became a focal point in literary theory, biblical scholars had already addressed many of the issues raised by RRT, even if this did not form part of an overall methodological system. The work already done may be conveniently discussed under the heading "audience criticism" (D.1.). However, recent developments in general literary theory have brought the problems of reception in biblical texts sharply into focus (see section D.2.).

1. Audience Criticism. The question of who the addressees of the various books of the Bible are has always been an important theme in biblical interpretation. Most classical introductions to biblical literature include a standard section on the intended receivers of a prophetic book, a gospel, or a letter. The underlying assumption is that this material is dialogical in nature, and an adequate understanding of the text is therefore dependent on having sufficient information about the circumstances and viewpoints of the receiving party.

It is therefore not surprising that various forms of *audience criticism* have been practiced by biblical scholars. This term was first used in a biblical context by Baird in his study on the Corinthian Church (1969), but as in the case of RRT, it is a concept which has its origin in general literary studies and which in essence is a synonym for RRT (cf. Suleiman 1980: 6).

In the study of biblical literature, a variety of methods, ranging from form criticism to sociological analyses, have been employed to obtain information regarding audiences. A classic example is the case of Paul's opponents, where studies by Schmithals, Wilckens, and Georgi on the Corinthian situation continued along some avenues opened up by the historical-religious work of Bousset and Reitzenstein, and even reached back to the work of F. C. Baur. Techniques employed in this process include the gathering of data from direct and indirect historical references; the use of references based on rhetorical,

epistolographic, or sociological grounds; and the application of mirror readings—that is, assuming that the adversaries' viewpoint is the opposite of what is stated in the polemical sections of the writings.

Studies of a sociological nature, exemplified by the work of Theissen, Kee, Malherbe, Scroggs, and others, have further stimulated the investigation of audiences. Many independent studies of individual books have been made, for example John (Brown 1979), Mark (Kee 1977), Hebrews (Jewett 1981), and 1 Peter (Elliot 1981).

2. New Developments. Audience criticism discussed so far remains by and large part of a historical undertaking. The aim has been to obtain reliable data about the real receivers and their circumstances as an aid to a better understanding of the texts. The frequent lack of such data and other methodological problems have led recent researchers to employ RRT primarily as a literary technique. Examples are the work of Crossan (1980) and Du Plessis (1985) on the parables, Culpepper (1983) and Staley (1985) on John, Fowler (1981) on Mark, Petersen (1985) on Philemon, Wuellner (1977) on Romans, and McKnight (1985) on general theory. The text is understood as a literary entity in the first place, with strict adherence to intratextual categories. The focus, inter alia, is on the reader as textual construct and on the world or symbolic universe created by the text. Both narrative and nonnarrative material have been analyzed in this way—the latter analyzation resulting in an interest in rhetorical strategies. The importance of historical issues is not denied, but a literary approach is preferred as the primary means of gaining an understanding of the text. With the growing interest in RRT and its application on biblical material, the challenge remains to clarify the referential potential of these texts and their relationship to extratextual reality.

BERNARD C. LATEGAN

READINGS, CONFLATED. See CONFLATE READINGS IN THE OT.

REAIAH (PERSON) [Heb *rĕʿāyâ* (רְאָיָה)]. The name given to three men in the Hebrew Bible.

1. A Judahite, the second generation removed from Judah. He was the son of Shobal and the father of Jahath (1 Chr 4:2).

2. A Reubenite, of the family of Joel. He was the son of Micah and the father of Baal (1 Chr 5:5).

3. The name of a family of temple servants who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian Exile. The name appears in Ezra 2:47 in the phrase "the sons of Reaiah" (Gk *Reēa*), where the temple servants are distinguished from the people of Israel, the priests, and the Levites. The parallel passage (Neh 7:50) also lists "the sons of Reaiah" (Gk *Raaia/Raea*), as does the later parallel 1 Esdr 5:31 (Gk *Iairos*).

STEVEN R. SWANSON

REAPING. See HARVESTS, HARVESTING; AGRICULTURE.

REBA (PERSON) [Heb *rebaʿ* (רֶבַע)]. A Midianite king (Num 31:8; Josh 13:21). Historically, the five Midianite kings or chiefs in Numbers 31, also mentioned in Joshua 13, are difficult to date and locate. Albright (1970) assumed that the Midianite war described in Numbers 31 antedated the domestication of the camel (an observation which would now lead into the 3d millennium B.C.; Knauf 1988: 9–10). Knauf suggested interpreting these five "kings" as a list of place names that form an itinerary through N Arabia and S Transjordan in the Persian period (Knauf 1988: 166–67). As a personal name, Reba has parallels in Hadramitic, Lihyanite, Safaitic, and classical Arabic *Rabîʿ* and *Rubaiʿ* (Knauf 1988: 90), i.e., from the 5th century B.C. onwards. For Reba as a place name, Râbiġ, a port city of the Ḥijâz, and, more likely, Naqb Rubâʿî, the main access to Petra from Wadi ʿArabah, provide possible identifications.

ERNST AXEL KNAUF

REBEKAH (PERSON) [Heb *ribqâ* (רִבְקָה)]. Var. REBECCA. Wife of Isaac, mother of the twins Esau and Jacob, daughter of Bethuel (Abraham's nephew), and sister of Laban (Gen 22:23). She is thus also Isaac's cousin once removed, since her grandfather Nahor was Abraham's brother. See Fig. REB.01.

Older etymologies derive the name from the root *rbq,* "to tie fast" (cf. the Heb *ribqâ,* "a looped cord for tying young animals"). It may also constitute a wordplay on the Heb *baqar,* "cattle" (note the metathesis of the *reš*), thus making it analogous to other names in the patriarchal narratives, such as Rachel ("ewe"), or Leah ("cow"), and Zilpah ("short-nosed animal").

The story of Rebekah, beautifully narrated in high literary style, forms the conclusion of the Abraham saga. In his old age, Abraham decides that Isaac, the bearer of Yahweh's promise, should not intermarry with the daughters of the Canaanites (Gen 24:3). This act of securing a bride for Isaac is Abraham's last deed, which is carried out by his most trusted servant. While the servant is not named in this chapter, it is often suggested that he is Eliezer of Damascus, named as Abraham's majordomo in chap. 15. It is noteworthy that the betrothal is to take place by proxy, since Isaac never leaves home. Abraham won't allow Isaac out of his sight, as it were, for several reasons: the lateness of his birth after years of promise, coupled with the strange story of his near-sacrifice (chap. 22). In addition, Abraham has just buried Sarah, his wife, in the cave of the field of Machpelah and is mourning her death. Abraham's reluctance to send Isaac himself on the journey back to the Mesopotamian homeland (24:8–10) is an interesting contrast to Rebekah's later treatment of Jacob: she only too willingly parts with her favorite son and is actually eager to send him back to her homeland because of Esau's anger over the stolen blessing (27:41–45).

Abraham's servant arrives outside the city of Nahor with his retinue of ten camels, laden with choice gifts for the future bride. It is a princely scene that awaits the maiden as she approaches the well at evening time. Rebekah is beautiful but not passive. She becomes the focal point of purposeful activity.

She addresses the servant, draws water, fills her jar, gives drink, draws water for the camels (Gen 24:16–20). She gives consent and determines that she will go with Abraham's servant without delay (Gen 24:58). In later years, she will again become the focal point of purposeful activity in securing the paternal blessing for her favorite son, Jacob. She manipulates the action, devises the plan to fool Isaac, and prepares the savory food. She is the most clever and authoritative of the matriarchs, and yet she epitomizes womanly beauty and virtue, in her conduct (her virginity, her actions at the well), in her energetic speech, in her thoughtful courtesy, and in her self-assurance.

The story assumes that Rebekah has been appointed by the Lord to be Isaac's wife, since events seemingly unfold according to divine providence (Gen 24:11–21, 50–51). Even though Rebekah has never met Isaac, she agrees to the marriage because, in a sense, they are not strangers: both are aware of common family ties and history. The betrothal scene (vv 34–51) is elaborately described in ceremonial language as a formal treaty between two branches of the Terah clan. The bestowal of gifts upon the future bride (v 53) is rendered in detail, and negotiations are couched in diplomatic language (vv 49, 54–58). Laban, keenly conscious of his sister's newfound favor, blessings, and gifts, takes sudden cognizance of her (Gen 24:30–31) as he will also later note that Jacob's herds have multiplied by divine providence and blessing (Gen 30:27–36). Her farewell from her father's household is accompanied by a shower of blessings: "Our sister, be the mother of thousands of ten thousands; and may your descendants possess the gate of those who hate them" (Gen 24:60). The symbolism of the doubling of fertility motifs in the farewell blessing and the offering of life-giving water at the well is intentional. Upon her arrival at her future husband's dwelling place (vv 63–64), their first encounter is poignantly rendered and leaves a powerful visual impression on the reader.

> And Isaac went out to meditate in the field in the evening; and he lifted up his eyes and looked, and behold there were camels coming. And Rebekah lifted up her eyes, and when she saw Isaac, she alighted from the camel.

It concludes (v 67) with the statement:

> Then Isaac brought her into the tent, and took Rebekah, and she became his wife; and he loved her. So Isaac was comforted after his mother's death.

Rebekah is barren for the first 20 years of her marriage, and it is only after Isaac's intercessory prayer to God that she conceives (25:21). Barrenness, although exceptional, is a recurrent element in biblical birth stories, and the Bible concentrates on these exceptions. Frequently, barrenness and a son born in advanced age are viewed as proof of divine purpose, such as in the cases of Sarah (mother of Isaac), Rachel (mother of Joseph and Benjamin), the unnamed mother of Samson, Hannah (mother of Samuel), and Elizabeth (mother of John the Baptist). In each case, the offspring is destined to fulfill a special role in the history of Israel. In the case of Rebekah, Yahweh indicates a special purpose concerning the destiny of the two boys who struggle within her: "And the Lord said to her, 'Two nations are in your womb, and two peoples, born of you, will be divided, the one will be stronger than the other, the greater the lesser will serve' " (Gen 25:23). This is purposely ambiguous, like the Delphic oracle, and it sets the stage for discord not only between the boys who are to become the eponymous ancestors of two nations, but also between the nations themselves, for Esau is also called Edom and is considered the forefather of the Edomites (Gen 36:8–9), while Jacob is renamed Israel and becomes the forefather of the Israelites (Gen 35:10–12). In point of fact, the prophecy is not fulfilled in the lifetime of either Jacob or Esau, although most scholars think the reference is to the subsequent history of the two peoples, Edom and Israel. Rifts in the family unity are foreshadowed in the womb and are borne out in the selling of the birthright and the stealing of the blessing. The result is that Esau, the father's favorite son, is deprived of his status as firstborn and principal heir. Jacob, who is called "the supplanter," obtains the patriarchal blessing from his aged and blind father, Isaac. It is Rebekah who takes the initial and decisive action by instructing Jacob in deceiving his father, her husband, for in spite of such deception she wants the blessing for her favored son. However, this action is foreshadowed by Esau's abrupt selling of his birthright to his twin brother for a portion of pottage (Gen 25:30–33), and it can be interpreted to demonstrate that Esau is not fit to fulfill divine destiny as the one through whom God's promise to Abraham will move toward fulfillment. The

bestowing of the blessing is formulated in legalistic terms and is intended to be a binding pact (Gen 27:28–29). Esau's agonized cry is mitigated by the separate "blessing" which Isaac pronounces upon him (Gen 27:39–40), but which results in his homicidal hatred of Jacob (Gen 27:41), causing the latter to seek refuge among Rebekah's kindred, with her brother Laban, in Haran. Here we have a schematic repetition in Rebekah's charge to seek a wife for Jacob from among her own kindred, just as Abraham had charged his servant to seek a wife for Isaac among his kindred. See RACHEL.

There is no mention that Jacob ever saw his mother again after his sojourn in Haran; rather, he found comfort with Rachel just as Isaac had found comfort with Rebekah. Nor is there mention of Rebekah's death, although Gen 49:31 reports her burial in the family cave at Machpelah, together with Abraham, Sarah, Isaac, Jacob (but not Esau), and Leah. She is revered as the second of the four great matriarchs of the patriarchal age. In the NT, Paul refers to Rebekah to demonstrate God's divine elective purpose and grace, mercy, and compassion (Rom 9:10–11).

A. Biblical Evidence
B. "Nomadic Ideal" and Guilds
C. Rechabite Discipline and Metallurgy
D. Genealogical Lists in Chronicles

———

A. Biblical Evidence

Biblical references concerning Rechab and the Rechabites are quite limited. There are two individuals named Rechab in the Bible. One of these is Rechab, a Benjaminite, son of Rimmon, who together with his brother, Baanah, was a leader of a raiding band under Saul's son Ishbosheth. Following the death of Abner, Rechab and Baanah killed Ishbosheth and brought his head to David, from whom they expected a reward. Instead, David had them both executed (2 Sam 4:1–3, 5–12). The other biblical Rechab appears either as the father or ancestor of one Jehonadab (Heb *yehônādāb;* or Jonadab [Heb *yônādāb*] in Jeremiah) ben Rechab in 2 Kgs 10:15–17, where he allies himself with Jehu's coup. It is apparently this latter Rechab who became the patriarch of a group who called themselves Rechabites, a group which came to Jerusalem to escape Nebuchadnezzar's invasion and are mentioned in relation to Jeremiah in Jeremiah 35.

Rechabites also appear in genealogical lists in 1 Chronicles. In 1 Chr 2:55, the "house of Rechab" (Heb *bêt-rēkāb*) is associated with the Kenites: "These are the Kenites (or smiths) who came from Hammath, the father of the house of Rechab." In 1 Chronicles 4, which is more than a genealogy in the strict sense of the word, in a part of a list of the sons of Caleb and Ephrathah, who apparently lived in the region between Bethlehem and Hebron, there is the following notice: "Chelub (or Caleb), the brother of Shuhah, was the father of Mehir, who was the father of Eshton. Eshton was the father of Bethrapha, Paseah, and Tehinnah, the father of Ir-nahash. These are the men of Rechab" (reading Rechab with the LXX

Vaticanus and the Lucianic text instead of Recah, Heb *rēkâ;* 1 Chr 4:11–12). Here, the Rechabites appear in a list which refers to the founders of various guilds whose names were associated with localities where they pursued their trade.

It is in Jeremiah that the unique discipline of the Rechabites is described. Here, Jeremiah brings the entire "house of the Rechabites" into a single chamber of the temple in order to use them as a test case in obedience. In response to an offer of wine from Jeremiah, they respond: "We will drink no wine, for Jonadab (= Jehonadab), the son of Rechab, our father, commanded us, 'You shall not drink wine, neither you nor your sons for ever; you shall not build a house; you shall not sow seed; you shall not plant or have a vineyard; but you shall live in tents all your days, that you may live many days in the land where you sojourn' " (Jer 35:6–7). The Rechabites are then used by Jeremiah as an example of a people which has remained faithful to commandments, in contrast to the people of Israel.

B. "Nomadic Ideal" and Guilds

Because of their peculiar discipline, the Rechabites have often been described as a puritanical, clanlike association which lived a nomadic existence in celebration of a supposed "nomadic ideal" and as a religiously motivated protest against the prevailing way of life in the cities of the divided monarchy. The labeling of the Rechabites as nomads has rested on several assumptions, based on their unique regimen: (1) that abstention from intoxicants is a distinctive trait of a nomadic society; (2) that tent dwelling necessarily suggests nomadism; and (3) that the disdaining of agriculture is a sure sign of nomadism. It is, however, questionable whether these cultural traits can justifiably be interpreted as characteristics peculiar to nomadic groups. The same traits can also fit the description of the way of life of an itinerant guild of craftsmen, probably here a guild of metalworkers involved in the making of chariots and other weaponry.

In the introduction of the group's patriarch, Jehonadab ben Rechab in 2 Kings 10, there is no indication whatsoever that he represented a supposed "nomadic ideal," or even that he lived a nomadic existence. The fact that Jehu met Jehonadab somewhere between Samaria and Jezreel can hardly be used as evidence for the existence of an otherwise unmentioned group of Rechabites. Jehonadab's name (Jonadab in Jer 35) combines a variant of the divine name Yahweh with the triliteral Hebrew root *n-d-b.* The noun *nādîb,* formed on this root, is used in the Bible to denote a member of the ruling class, an administrator or head of a prominent family—in short, a person of position, a member of the urban nobility. All biblical names containing this root belong to such persons, and there is no apparent reason for considering Jehonadab to be an exception (cf. Amminadab [Exod 6:23; 24:19; 28:1]); Nadab, son of Jeroboam [1 Kgs 14:20; 15:25]; Nadab, king of Israel [1 Kgs 15:25]; Nedabiah [1 Chr 3:18]; Abinadab [1 Sam 31:2]; and Ahinadab [1 Kings 4:14]).

There is no way of determining whether the designation of Jehonadab as *ben rēkāb* refers to a actual father-son appellation, or whether *ben* should be understood here in one of the other ways in which it is commonly used in the Bible. It could, for example, mean simply a descendant of Rechab. The designation *ben,* like the Akkadian terms *māru* and *aplu,* could also mean that the person in question is a member of a certain occupational group or guild. Guilds followed the model of the family system from which they originated. The heads of such guilds were given the familial designation "father," while the apprentices were called "sons" (Mendelsohn 1940: 18–19). Prophetic guilds are sometimes designated this way in the Bible (cf. Amos 7:14; 2 Kgs 2:3, 5, 15). In the economic and administrative texts from Late Bronze Ugarit, there is a group in the royal service called *ḥrš-mrkbt,* "chariot makers or wainwrights" (Rainey 1962: 167), and the designation *ben rēkāb* may indicate that Jehonadab was a member of such an occupational group.

One further possibility is to understand *ben rēkāb* as suggesting that Jehonadab was a native of a place called Rechab, which in turn may have derived its name from that of a clan. If Rechab is to be understood as a place name, it could be Beth-marcaboth (Josh 19:5; 1 Chr 4:31), which according to Cohen derived its name from the fact that Solomon selected it as a suitable location for the manufacture and storage of chariots (*IDB* 3: 220; cf. 2 Chr 9:25).

C. Rechabite Discipline and Metallurgy

In his comprehensive study of *Metallurgy in Antiquity* (1964: 64–68), Forbes makes several observations about the smith in antiquity which are pertinent to an assessment of the Rechabite discipline. In a preindustrial society, the smith had to be familiar with many technical procedures, the knowledge of which was handed down and guarded jealously from one generation to the next. When the smith was among agriculturalists, there was emphasis on the guild form of organization, which implied initiation into the technical traditions of the craft, and which in turn retained traits of the original clan organization. Metallurgists in antiquity, as a rule, formed proud endogamous lines of families with lengthy genealogies, which could account for the staying power of the biblical Rechabites, who apparently maintained their discipline at least from the 9th to the 6th centuries B.C. While the smith was characteristically a social outcast among nomads and pastoralists, his social status among agriculturalists was just as typically an honored one.

The nature of his work prevented the smith from establishing a permanent domicile or from engaging in agriculture. Smiths would stay in one general locale from a few months up to several years, or until the supply of ore and/or fuel at that place was exhausted. Whereas other craftsmen might engage in part-time agricultural work, the smith's work required such skill and long practice that he could not farm. The Rechabite discipline might thus be seen as one appropriate to smiths.

The Rechabites' avoidance of intoxicants has often been interpreted as a survival of the nomad's contempt for unnatural fermented beverages. It is, however, questionable whether this is a trait of nomads (Albright 1963: 11–12). Like other measures which were designed to guard the secrets of the trade, such as living apart from urban centers, so too might abstention from intoxicants be yet another safeguard to prevent "loose lips" from "sinking ships." It might also be observed that in the perilous times of Nebuchadnezzar's invasion, the Rechabites, who have commonly been characterized as "antiurban nomads," fled to the "hated" city for protection. If they had been nomadic pastoralists, it seems unlikely that they would have fled to the city rather than move to the desert fringe with their flocks, where they might escape the enemy attack which would focus on the urban centers.

D. Genealogical Lists in Chronicles

The supposition that the Rechabites were a guild of metallurgical craftsmen is also supported by genealogical references in 1 Chronicles 2 and 4. 1 Chronicles 4 is part of a preexilic Judahite list which provides elements missing from the list in 1 Chronicles 2. In the genealogy which can be reconstructed by combining information from these two chapters, the sons of various clans (or members of guilds) are mentioned along with the names of their respective settlements in such a way that one clansman becomes the "father" of a site (cf. *LBHG,* 225–26) In the branch of the list which records the sons of Caleb and Ephrathah, the "men of Rechab" are associated with an Ir-nahash [Heb *ʿîr nāhāš*], which can be translated either as "the city of Nahash," "the city of copper," or even "the city of smiths or craftsmen," which Myers identifies with Khirbet Nahas, a site at the northern end of the Arabah (1 Chronicles *AB,* 26).

Besides this mention of an Ir-nahash with which the men of Rechab are associated, 1 Chronicles 4 also contains several other references which associate Rechabites with other craftsmen such as Joab, a Kenazite, who is called "the father of Ge-harashim," (i.e., "valley of craftsmen," 4:14); "the families of the house of linen workers at Beth Ashbea" (4:21); and "the potters and inhabitants of Netaim and Gederah," who "dwelt with the king for his work" (4:23).

In 1 Chr 2:55, there is the following notice connected with the sons of Hur who lived in the vicinity of Bethlehem and the northeastern Shephelah around the valley of Elah: "… the families (or guilds) of the Sepherites (i.e., inhabitants of Kiriath-Sepher) who dwelt in Jabez: the Tirathites (cf. 1 Chr 4:16), the Shimeathites (cf. 1 Chr 4:17), and the Sucathites (cf. 1 Chr 4:18). These are the Kenites (or 'smiths') who came from Hammath, the father of Beth-rechab." The significance of this verse is that here the name Rechab, or to be specific, Beth-Rechab, "the house of Rechab," is connected with a given location and with a branch of the Kenites, who as early as the 13th century appear to have made their livelihood as metal craftsmen and may well have introduced metallurgical technical skills to the Israelites. Forbes suggests that the Kenites were a group of ironsmiths who came out of the Hittite empire when it was

destroyed, and he observes that "the despise in which these 'townsmen' were held by … nomads is well expressed in the story of the shepherds and the daughter of Reuel the Kenite" (1964: 98).

It does not appear that the Rechabites can be adduced in evidence of the existence of a "nomadic ideal" in ancient Israel. The lifestyle of the Rechabites does not have to be seen as an idealization of desert life. The nonagricultural mode of life of the Rechabites can just as well be seen as an occupational pattern, not a religiously motivated way of life.

FRANK S. FRICK

RECHABITES, HISTORY OF. This apocryphon is extant in numerous languages, including Ethiopic, Syriac, and Greek. A 12th-century Syr manuscript in the British Library (BM Add. 12174) may well accurately indicate the transmission of this document: "The History of the Blessed Ones, the Sons of the Rechabites … It was Translated from Hebrew into Greek and from Greek into Syriac by the Hands of the Reverend Mar Jacob of Edessa" (fols. 209r–210v).

A holy man, named Zosimus in chapters that appear to be later additions, for forty years prays to God to show him the abode of the Blessed Ones, the Rechabites, who departed from Jerusalem in the time of Jeremiah (Jeremiah 35). His prayer is answered, and with the assistance of an angel, an animal, and two trees he succeeds in crossing over land and sea to the island of the Blessed Ones who recount to him their history.

Despite noting that the Jewish work apparently underlines the extant Greek text, M. R. James (1893), who brought the work to the attention of modern scholars, concluded that the document is Christian and dates from the 6th century C.E. In its present Greek form, the document is clearly Christian; vv 12:9a–13:5c mention the virginal conception of the Word and Lent. Chap. 16:1b–8 is also clearly Christian, as are chaps. 19–23, but the latter are found only in the Greek version. Although it is clear that the document in its present form is Christian, the origin of the work is far from certain. It may be a Christian reworking of Jewish traditions or legends; but most specialists rightly see behind the Christian version an original, and partly preserved, Jewish apocryphon, which is an exegetical expansion of Jeremiah 35 (*OTP* 2: 444–45). If this conclusion is valid, the *History of the Rechabites* contains portions of an otherwise lost Jewish document; it is then similar to the *Ascension of Isaiah*, the *Testaments of the Twelve Patriarchs, 4 Ezra*, and the *Hellenistic Synagogal Prayers.*

It may well be that 3–15 are originally Jewish. Obviously they are heavily influenced by Jewish traditions. It is conceivable that the original Jewish document, without the redactional and Christian alterations, antedates the 2d century C.E. This apocryphon shows links with numerous non-Jewish cultures, including Roman, Greek, Syrian, Persian, and Egyptian (Charlesworth 1986). The Greek version frequently contains the name of Zosimus in chaps. 3–16; each of these occurrences, except for 7:11, are conspicuously absent in the Syr version (which appears to be earlier and more reliable). Even if the name Zosimus is original, an interest in him is replaced by a preoccupation with the Rechabites in chaps. 7–9 in all versions. These chapters, the core of the document, are an expanded exegesis of Jeremiah 35 and were probably composed by a Jew. Particularly noteworthy are the words the Rechabites write on tablets of stone: "We are called sons of Rechab, we are from you; and behold we departed from your world to this place in which we (are) today. For in the time when Jeremiah, the prophet, announced and prophesied the ravaging and devastation (of) Jerusalem, because of the sins of the sons of Israel, then behold shortly (thereafter) the destroyer came to slay them … we lamented with a great lamentation … he (God) accepted our petitions, and turned back his fierce anger … King Josiah died and another king ruled after

him … we answered him, 'We are from your people, and from the city of Jerusalem. We are sons of Jonadab the son of Rechab.' … The king raged against us and charged (that) all of us be imprisoned in prison … and angels of God … appeared to us. They led all of us out of prison … brought us to this place (in) which you (now) see (us) …" Here we confront interesting traditions often paralleled in early Jewish traditions and documents like the *Lost Tribes.*

RED HEIFER. See HEIFER, RED.

RED SEA (PLACE) [Heb *yam šp* (יַם שׁוּף)]. This NW arm of the Indian Ocean, ranging in width from 100 to 175 miles, separates the African continent from the Arabian peninsula and is the reputed body of water through which the Hebrew slaves, led by Moses, escaped from Egypt (book of Exodus). At its northernmost end it splits into two gulfs. The Gulf of Suez, whose width ranges between 20 and 30 miles, separates the Sinai peninsula from Egypt (and Africa) to the W. The Gulf of Aqabah, ranging 10–20 miles in width, separates the Sinai peninsula from the Hijaz (and Arabia) to the E. This entry will focus on two separate aspects of the Red Sea: (1) its appearance in the OT in connection with Israelite traditions about the Exodus from Egypt; and (2) its history of commercial exploitation in antiquity (see Fig. RED.01).

OLD TESTAMENT

The term *yam sûp,* usually translated "Red Sea," occurs over 20 times in the Hebrew Bible. It has traditionally been linked to at least three geographical locations: the Gulf of Aqabah, the Gulf of Suez, and the body of water associated with the Exodus crossing. The precise location of the latter—whether sea, lake, or marsh—has been especially problematic for biblical scholars and Egyptologists, both of whom have appealed to extrabiblical evidence (both Canaanite and Egyptian) in support of their positions.

In order to understand more clearly the various issues associated with locating the sea of the Exodus, it is important to examine first those texts that mention *yam sûp* within a context not directly related to the crossing. It should be noted at the outset that certainty of identification is not always possible; thus, some passages must remain ambiguous.

G. Conclusion

———

A. Gulf of Aqabah

More than a half dozen passages seem to identify *yam sûp* with the Gulf of Aqabah (Exod 23:31; Num 14:25; 21:4; Deut 1:40; 2:1; Judg 11:16[?]; 1 Kgs 9:26; Jer 49:21). Scholars generally agree that the *yam sûp* of 1 Kgs 9:26 refers to the Gulf of Aqabah. Here the sea is said to be "in the land of Edom" and marks the southernmost border of the territory under Solomon. In the same fashion, the idealized description of the land in Exod 23:31, intended to reflect the Solomonic period, sets its southernmost boundary at the *yam sûp* (cf. 2 Chr 8:17 ["the sea"]), which makes sense only as the Gulf of Aqabah (e.g., Simons *GTTOT*, 96, 237; Noth *Exodus* OTL, 193; Childs *Exodus* OTL, 193–94; Davies 1979: 112; Aharoni *LBHG*, 277). With the exception of Jer 49:21, the remaining five passages all relate to the period following the Exodus from Egypt, when the Israelites were instructed by Yahweh to proceed E by way of the *yam sûp* in order to avoid confrontation with the inhabitants of S Canaan and the Transjordan. Judges 11:16 is less clear in this regard, and a case can be made for either of the other two options, i.e., the Gulf of Suez or the Exodus crossing (Davies 1979: 82–83). However, since the immediate context of this episode (11:12–22) concerns Israel's bypassing of Edom and Moab, the Gulf of Aqabah may better suit the geographical situation (de Vaux *EHI*, 377 [tentative]; Bietak in *LÄ* 5: 630). In his oracle against Edom, the prophet Jeremiah (Jer 49:7–22) asserts that, at their destruction, the cry of its inhabitants shall be heard as far away as the *yam sûp*. The most logical choice here (geographically speaking) would be the Gulf of Aqabah (e.g., Noth 1947: 188; de Vaux *EHI*, 377; Bietak in *LÄ* 5: 630; Sarna 1986: 107). The translation "Sea of Reeds" in this verse (even if that should be the original meaning of the phrase) and its identification with the sea of the Exodus (e.g., Bright *Jeremiah* 331; followed by Thompson *Jeremiah* NICOT, 719, 722, and Caroll *Jeremiah* OTL, 805) is thus not necessary. Bright's apparent assumption that *yam sûp* must in all cases refer to the "Sea of Reeds," i.e., the sea of the Exodus, lacks textual support in the light of passages such as 1 Kgs 9:26 examined above (unless of course one contends that the Gulf of Aqabah was the site of the Exodus event, as was done, for example, by earlier scholars; see Davies 1979: 70, 112 for references). Sayce (1894: 257–59) concluded that all occurrences of *yam sûp* referred to the Gulf of Aqabah, to be distinguished from references to "the sea," which he interpreted as the sea of the Exodus.

B. Gulf of Suez

A few passages (Exod 10:19; 13:18; Num 33:10–11) seem to refer to the Gulf of Suez, although the identification of *yam sûp* in these passages has been a matter of some debate among biblical scholars (general discussion in Simons *GTTOT*, 77–78, 234–64; Davies 1979; and de Vaux *EHI*, 376–81). In Exod 10:12–19, the plague of locusts is brought into the country by an east wind and subsequently removed from it by a strong west wind that had been "turned" (Heb *hāpak*) by Yahweh for that purpose (for interpretations of Heb *rûaḥ-yām*, lit. "wind of the sea," see Simons *GTTOT*, 238; Cassuto 1967: 128; Har-El 1983; Anati 1986: 187). Since the narrator wishes the reader to understand that "not a single locust was left in all the country of Egypt," he probably has in mind a suitably large body of water that borders the country. Thus, the internal logic of the narrative (assuming of course that the writer was concerned with such matters; the question of historicity is irrelevant) may favor either the Gulf of Suez (e.g., Snaith 1965: 396; Hubbard in *ISBE* 4: 59) or even the Mediterranean (note Gardiner 1922: 211, who, for other reasons, identified this *yam sûp* as Lake Menzalah). Cassuto (1967: 129) suggested that this verse "may be a preparatory allusion" to what is later said of Pharaoh and his army in Exod 14:28b ("… not so much as one of them remained") and thus could refer to the sea of the Exodus; although he admitted that the parallelism would be valid regardless of which sea is meant (note also Bietak 1975:136, who argues for the sea of the Exodus). Although Simons (*GTTOT*, 238) inclines toward the Red Sea as a possibility, he wisely concludes that the passage as it stands is too vague to support any specific theory on the location of *yam sûp*.

In Exod 13:17–19, traditionally assigned to the E source (e.g., Noth *HPT*, 204, and *Exodus* OTL, 106–8; Childs *Exodus* OTL, 218–21; de Vaux *EHI*, 376–78), the narrator offers an explanation as to why the

fleeing Israelites did not take the expected (and most direct) route into Palestine, the "Ways of Horus" in Egyptian texts (see Gardiner 1920; Oren in Rainey 1987: 69–119). While it is true that the Egyptian presence in this area would have been deterrent enough (assuming a 13th-century date for the event), the later writer/redactor instead cites the Philistine threat, a more familiar motif within Israel's early history and one to which his readers could relate. (One may question whether he was even aware of Egyptian presence in this area during this earlier period.) In order to avoid such confrontation, the people are led by Yahweh "around by the Way of the Wilderness (that leads to?) the *yam sûp*" (13:18a). Precisely how *yam sûp* is to be understood here in relation to the "Way of the Wilderness" (Heb *derek hammidbār*) is a problem (see, e.g., Childs *Exodus* OTL, 217). The syntactical apposition of the former phrase has led some to conclude that it is a later addition, possibly for geographical clarification (e.g., Noth 1947: 187; Simons *GTTOT*, 236, 241–42; de Vaux *EHI*, 377). If so, could this addition have been influenced by the similar phraseology in those texts cited above, i.e., Num 14:25, Deut 1:40, and Judg 11:16? The rather vague nature (geographically speaking) of this passage—in contrast, for example, to the P source in 14:1–4—and the lack of any mention of this *yam sûp* as the one crossed by the Israelites would allow the location of *yam sûp* to be at the Gulf of Aqabah or the Gulf of Suez (e.g., Simons *GTTOT*, 242; Snaith 1965: 396; de Vaux *EHI*, 377–78). Walsh's translation (1977) "*Yam Sup* Road" may capture the intended sense here, i.e., that the Israelites took the way named for its ultimate destination. Considering the importance of both gulfs in antiquity, this route could have been named for either one. If one follows the more traditional view of a southern route out of Egypt (e.g., Beit-Arieh 1988), which proceeded along the eastern coast of the Gulf of Suez, then the latter body of water would be the more likely choice. However, this identification depends more upon one's view of the route in general and especially the location of Mt. Sinai (for which there are numerous proposals; see Anati 1986: 161–80; Beit-Arieh 1988: 36–37, for the options).

The list of stations preserved in Numbers 33 is generally considered a late text, attributed to P (Cross *CMHE*, 308–9; Budd *Numbers* WBC, 350–53) or in part a post-JEP redaction (e.g., Noth *Numbers* OTL, 242–46). However, all agree that the creator of this list or itinerary as we now have it made use of another document that included place names not found in the traditional pentateuchal sources. The relevance of this other earlier source to P's placement of *yam sûp* (vv 10–11) *after* the Israelites' passage "through the midst of the sea" (v 8)—thus implying that the sea of the Exodus is not the *yam sûp*—has been debated. Noth (*Numbers*, 243–44) considered the mention of the passage through the sea in v 8 a later addition and the placement of *yam sûp* in v 10 after Elim "an erroneous inference" based on a "misunderstanding" of Exod 15:27b, where the Israelites "came to Elim" and "encamped there by the water." Cross (*CMHE*, 309) has also raised the possibility of corruption in Num 33:10, based on P's omission of *yam sûp* in Exod 16:1. Others, however (e.g., Budd *Numbers*, 253–54; Batto 1983: 28–29), accept vv 10–11 as a valuable independent witness (predating P) attesting to the distinction between the sea of the Exodus and the *yam sûp* later reached by the Israelites. If this is the case, then the most likely location of *yam sûp* according to this itinerary would be the Gulf of Suez. Ezion-Geber and the land of Edom, which would indicate the Gulf of Aqabah, are cited only later in v 36. According to Batto (1983:29–30), P has deliberately telescoped these two sites in Numbers 33 (the "sea" and the "sea of *sûp*") into one in the Exodus narrative (Exod 14:2 ["the sea"] and 15:22 [the "sea of *sûp*"]), and thus intentionally located the crossing at the Red Sea. (Note also the independent source critical analysis of these narratives by Walsh [1977: 32–33], who reaches similar conclusions concerning the late location of the miracle crossing at the Red Sea [Suez]).

C. The Sea of the Exodus

In a number of passages (Exod 15:4, 22; Deut 11:4; Josh 2:10; 4:23; 24:6–7; Pss 106:7–12, 22; 136:13–15; Neh 9:9–11) *yam sûp* refers to the sea of the Exodus. With the exception of Exod 15:4, the location of the sea crossing at the *yam sûp* in the above passages is thought to represent a later tradition (e.g., de Vaux *EHI*, 377). To be sure, not all have accepted an early date (i.e., pre-10th century) for the "Song of the Sea" in Exod 15:1–18 (e.g., Noth *Exodus*, 123–26; see discussion in Childs *Exodus*, 243–48, and Kloos 1986:130–35), but even with a 10th-century date (e.g., Day 1985:100), the poem may contain the earliest textual witness to the *yam sûp* as the sea of the Exodus.

1. Character of the Exodus Event (Exodus 13–15). Much of the debate over what happened at the "crossing" of the sea and the location of the event centers upon the accounts, both narrative and poetic, preserved in Exodus 13–15. In spite of disagreement over the assignment and extent of sources (particularly the role of E and P), scholars have generally recognized the composite nature of Exodus 13–14 and isolated two basic versions within the chapters (discussion in Hay 1964: 398–99; Noth *Exodus,* 102–20; Childs *Exodus,* 215–24; de Vaux *EHI,* 381–88; Ottosson in *TWAT* 5: 797–800). (The dispute over details in this analysis need not imply that the enterprise *as a whole* is faulty or that it should be abandoned, as does Hubbard in *ISBE* 4: 59.)

According to the account normally attributed to J (following the summary of Childs), Yahweh is the main actor: he leads Israel by a pillar of cloud and fire (13:21–22); when the people catch sight of the pursuing Egyptians and cry out to Yahweh, they are instructed by Moses to "stand firm" and "be still" because Yahweh will fight for them (14:5b–6, 10b*a*, 11–14); the pillar of cloud then moves behind the Israelites, cutting off Egyptian pursuit (14:19b). During the night, Yahweh drives back the sea with a strong E wind that blows all night (v 21a*b*); in the morning, the pillar of cloud/fire (= Yahweh) hinders the movement of the Egyptians who, in their panic, flee into the sea as the waters return to their normal course; Yahweh literally "shakes off" (Heb *nāʿar*) the Egyptians into the sea (24–25b, 27b). The Israelites see the dead Egyptians on the seashore and affirm their faith in Yahweh and his servant Moses (30–31). The important element of this account is the passitivity of the Israelites; they are simply witnesses to Yahweh's victory over the Egyptians. No mention is made of their crossing the sea.

The P (E) version, on the other hand, emphasizes the role of Moses; the people are active participants, and precise (for the ancient writer, but difficult for the modern interpreter) geographical locations are provided in the text (e.g., 13:20; 14:1–4, 9b). Yahweh hardens the heart of pharaoh so that the latter might pursue the Israelites, and thus obtain glory (vv 4, 8); at the approach of the Egyptian army, Moses raises his staff over the sea and the waters divide as walls on either side, allowing the people to pass through on dry ground (vv 15–19a, 21b, 22–23). When the Egyptians attempt pursuit, the waters return under Moses' staff and the enemy is engulfed (25a, 26–27a, 28–29). (Certain passages in this account may also point to an actual military encounter; see Hay 1964 for discussion.)

Scholars have long noted the virtual absence of *yam sûp* in this Exodus narrative as a designation for the sea where the deliverance of Yahweh occurred; instead, the writers refer only to "the sea" (Heb *hayyām;* 14:2, 9, 16, 21–23, 26–29). Similarly, Exodus 15 prefers "the sea" to *yam sûp* (vv 1, 4a, 8, 21). As a result, many view the few references to *yam sûp* (= Red Sea) as later additions—attempts to find a body of water suitable (in proportion) to the magnitude of Yahweh's glorious act (such as the Gulf of Suez or Aqabah). A grand miracle deserves a grand setting. However, the mention of *yam sûp* in Exod 15:4—within what many consider to be one of the oldest poems in the Hebrew Bible—is problematic for this view. The parallel position of *yām* and *yam sûp* would seem to indicate that the two are identical. While some view this *yam sûp* as a later Deuteronomistic addition (e.g., Norin 1977: 94), others (e.g., Snaith 1965; Batto 1983; Ahlström 1986) propose another reading (*sôp* instead of *sûp*) in keeping with the mythological language of the poem (see below for discussion).

2. Other Texts. Unlike the account of P presented above, Exodus 15:1–12 lacks any explicit mention of the splitting of the sea or of the Israelites passing through on dry ground (e.g., Cross *CMHE,* 131–32). The poem's relationship to the J account is problematic and largely depends upon the date assigned to the former (see, e.g., Cross *CMHE,* 121–25, and Childs 1970: 411–12 for opposing views and further bibliography). The later prose tradition of the Exodus event tends (with some exceptions) to emphasize these motifs (the splitting of the sea and the Israelite passage through it). Josh 2:10 recounts the drying up of the waters of *yam sûp,* but does not explicitly mention the crossing. The preceding verse (v 9) clearly reflects Exod 15:14–15, but this portion of the Exodus poem relates to the conquest, not the defeat of the Egyptians. Josh 4:24 likens the crossing of the Jordan unto the earlier passage through the *yam sûp.* The close parallels between the two events have produced arguments that the details of the Exodus crossing have been influenced by the Jordan tradition (cf. also, e.g., Pss 66:6; 114:3, 5; Coats 1967: 261; Childs 1970: 414–15; see discussion in de Vaux *EHI,* 384–88). In the speech of Joshua to the tribes of Israel

gathered at Shechem (Joshua 24), neither the drying up nor the crossing of the *yam sûp* are mentioned. Verses 6–7 echo for the most part J 's version of events (and some portions of E), and the parallel placement of *yam* ("sea") and *yām sûp* may point to a conscious imitation of Exod 15:4. Other passages containing *yam sûp* (Neh 9:9–11; Pss 106:9–12, 22; 136:13–15) generally reflect the tradition of P (but note Neh 9:11b and Exod 15:5).

D. Origin and Meaning of Hebrew *Sûp*

1. Scholarly Views. Particularly since the 19th century, scholars have discussed and debated the meaning of Heb *sûp* (as used in the name *yam sûp*) in the hope that the word's origin may shed light upon the location of the sea miracle. The rendering *eruthra thalassa* could encompass not only our English "Red Sea" (the narrow body of water dividing the NE coast of Africa from the Arabian peninsula) but also the Indian Ocean as a whole, including the Persian Gulf (LSJM 693). The LXX translators apparently intended the term to apply to the two gulfs (Aqabah and Suez) of the Red Sea. This translation is in turn reflected in the Vulgate's *Mare Rubrum,* whence we derive our Red Sea. Earlier exegetes and commentators, both Jewish and Christian, offered varying explanations for the word. Jerome (*Ep.*78.9; see Labourt 1954: 62–63) resolved the difficulty in Num 33:8, 10–11, by positing two meanings for *sûp:* "red" (Lat *rubrum*) and "rush/bulrush" (Lat *scirpus*). (The latter meaning is attested for *sûp* in Exod 2:3, 5, and Isa 19:6.) Thus, "the sea" (*hayyām*) of v 8—although it lacked *sûp*—indicated, according to Jerome, the "Red Sea," i.e., the sea of the Exodus, while *yam sûp* of 10–11 denoted a "marsh/swamp (*palus*) or lake (*lacus*) where sedge (*carectum*) and rushes (*iuncus*) were plentiful." The famous medieval Jewish commentator Rashi (A.D. 1040–1105) explained the *yam sûp* of Exod 13:18 as a "marsh (Heb *ʾăgam*) wherein reeds (*kānîm*) grow," while his near-contemporary Ibn-Ezra (A.D. 1089–1164) interpreted this same *yam sûp* as the name of a place (*hûʾ šēm mākôm*), derived from the fact that reeds grow around it (cf. Deut 1:1 and LXX^{B} *ziph* in Judg 11:16 [a variant reading which appears to understand Heb *sûp* as a proper name]). All three scholars based their exegesis on other occurrences of *sûp* apart from its use with *yām;* thus, the interpretation of *yam sûp* as "Sea of Reeds" predates later appeals to Egyptian evidence (although this does not imply that this interpretation must be the correct one, only that it has a very long history).

The majority of biblical scholars favor the view that Heb *sûp* is a loanword from Egyptian *ṯwf (j)* "papyrus (-plant)" (Gauthier 2: 43, 139; *AEO* 2, 201*–202*; Lesko 1982–89, 4: 107; see discussion of Egyptian texts in Ward 1974: 339–43). This position is often traced to the 19th-century Egyptologist Heinrich Brugsch's lecture *L'Exodus et les monuments égyptiens,* delivered in London in 1874 (e.g., Cazelles 1955: 323; Batto 1983: 29; see Brugsch 1881). However, a close reading of this lecture reveals that Brugsch in fact believed Eg *ṯwf* was borrowed by the Egyptians from Hebrew *sûp* (Brugsch 1881: 372–73, 376). For him, the meaning of Heb *sûp* as "weeds, reeds, rushes, papyrus-plant" was clear without reference to Eg *ṯwf* (376). Instead, *sûp* was a *translation* of another Egyptian word, *idḥ (w),*"marshes (of the Delta)" (*WbÄS* 1: 155; Lesko 1982–89, 1: 64):

> "… this word [Heb *sûp*], I say, contains simply the translation of the Egyptian *Athu* [*idḥ (w)*], which signifies the same as the Hebrew Souph … and was applied as a general term to denote all the marshes and lagoons of Lower Egypt … The Egyptians, on their part, knew so well the meaning of the Hebrew word [*sûp*], that they frequently adopted the foreign name of Souph, instead of the word *Athu* in their own tongue …" (Brugsch 1881: 376).

In a later extended discussion of the question of *yam sûp* and its location, Brugsch (1879: 890–919) further developed his view that the "lakes or marshes of the N Delta" were indicated in Eg texts by both *idḥ (w)* (a "purely Egyptian word") and *ṯwf (j)* ("of Semitic origin") and that the Heb *sûp* represented "the exact translation" of Eg *idḥ (w)* (pp. 906–7). While he did propose translating *yam sûp* as *lac de papyrus,* the origin of the term was for him Semitic, not Egyptian.

In his additions and notes for the second English edition of the lecture (1881) Brugsch cited with approval the conclusion of Schleiden (in his *Die Landenge von Suez*) that the *yam sûp* of Exodus 14 was a "later interpolation" and reiterated his position that "the sea" (Heb *hayyām*) of the Exodus narratives

referred to the Mediterranean, particularly Lake Sirbonis (1881: 394–97, 429–30; a position later developed by Eissfeldt 1932).

Others maintained that Heb *sûp* was a loanword from Eg *ṯwf* (e.g., Erman 1892: 122; *BDB* [1st ed., 1907], 693; Gardiner 1918: 186; Naville 1924: 34; Albright 1918: 254; 1934: 35; Lambdin 1953: 153). However, not all have accepted this view (e.g., Simons *GTTOT*, 78, 240). Like Brugsch, some have defended movement in the opposite direction, i.e., Semitic *sp* was borrowed by the Egyptians (e.g., Müller 1893: 101 [modified his view in 1903: 4022–23]; Helck 1971: 525; Wright 1979: 60), while others (Copisarow 1962 and Ward 1974) have posited an earlier Hebrew or Canaanite *sp* (Copisarow: **s[o]p*, "end," with origins in the "patriarchal vernacular"; Ward: biconsonantal Semitic **sp*, "reach, arrive"), whence the various Egyptian and Hebrew meanings ultimately derive. (Ward's article is the more credible of the two and avoids the somewhat naive approach to Israel's early history displayed by Copisarow.) Ward in particular has questioned the validity of Eg *t/č* as Heb *s* in *ṯwf* > *sûp*, contending that Eg *ṯ* was normally reflected as *z* in Semitic (1974: 346–47), but the equation *ṯ* = *s* has been defended by Rainey (1982) with various examples, although he does not mention Heb *sûp*.

2. Egyptian *Ṯwf*. In a number of Egyptian texts, Eg *ṯwf* is found with the definite article *p€* . Of particular interest in this regard are a number of model letters (late 13th century B.C.E.), the first of which is an encomium on Pi-Ramesses-mri-Amun ("House-of-Ramesses-Beloved-of-Amun"), the Delta residence of the Ramesside period (generally equated with the "Raamses" of the biblical text; see discussion below). The texts cited most often are as follows:

Papyrus Anastasi III.2, 11–12 (Gardiner 1918: 185–86; 1937: 22, lines 13–14; translations in Caminos 1954: 74, 79, and Uphill 1968–69: 15–18). In his description of the natural wonders of the Delta residence of Ramesses II (Per-Ramesses, probably Tell el-Dabʿa—Qantir), the scribe asserts that "the papyrus-marshes (*p€ -ṯwf[j]*) come to it (the residence) with papyrus reeds (*mnḥw*), the Waters of Horus with rushes (*jsw*)." When taken in context, this passage must be viewed against the numerous references throughout the text to various bodies of water (ponds, lakes, marshes, etc.) and the aquatic plants/marine life that thrive in such habitats. While the writer does not hesitate elsewhere to use the determinatives characteristic of lakes, rivers, seas, etc. (see Gardiner *EG*, Sign-list N 35–36), he avoids these determinatives in the various terms for reeds, rushes, marshes, etc., where one finds either the herb or papyrus determinative (or both, as with *p€ -ṯwf;* Gardiner *EG*, Sign-list M 2, 15–16).

Papyrus Anastasi IV.15, 6 (Gardiner 1937: 51, line 16; translation in Caminos 1954: 200, 210). In this letter, which lists in general detail the numerous supplies necessary for pharaoh's arrival (e.g., various types of breads, oils, fish, etc.), the recipient is instructed to obtain "*qnj*-birds of the papyrus marshes *p€ -ṯwf[j]*)." Here *ṯwf* carries the herb determinative plus the sign denoting a specific place, whether village, town, or city, etc. (Gardiner *EG*, Sign-List O 49), again in contrast to the various waters mentioned in the lines that immediately follow (Gardiner 1937: 52, lines 1–5).

Papyrus Sallier I.4, 9 (Gardiner 1937: 81; translation in Caminos 1954: 307). In his report concerning the upkeep of the royal residence, the scribe states that the pharaoh's chariot teams (*ḫtrw*) are well taken care of and are fed only with the best grass (*jsw*?) from the *p€ -ṯwf*. Here, the term is followed with both the herb and papyrus determinatives, plus the place sign mentioned above.

It is not possible to isolate all occurrences of *p€ -ṯwf* in Egyptian texts to one specific area in the Delta; rather, different passages point to varying locations. The use of the city or town determinative may indicate that the scribe had a particular marshy area in mind whose identification and placement were directly relative to the city or town under discussion, e.g., the marshes of or near city X or city Y, etc. Thus, as Ward (1974: 342–43) has shown, *p€ -ṯwf* "was a general word for 'marshes' wherever these might occur, a specific marshy area being indicated only when *p€ čwf* is located at or near a particular place." Indeed, other occurrences of the term indicate that it was not restricted to the NE Delta area (Ward 1974:342), although its placement in the *Onomastica* (*AEO* 2, nos. 417–19) between Tanis (*Ḏʿnt)* and Sile (*Ṯ€ rw*) may point—at least in this instance—in this direction (but note Ward 1974: 341, n. 6). Uphill (1968–69: 18), however, has questioned the validity of using such idealized descriptions as geographic guides. In his comments on the first of the above cited texts (Anastasi III.2, 11–12), he remarks, "Any of

these items [papyrus marshes, reeds, orchards, etc.] could have been found almost anywhere in the Delta, west as well as east, and are not therefore safe to be used as guides without further details … this is a poetical description, and the writer has extended his field far and wide to include all the products that were brought to Per Ramesses or were to be found in the great estates attached to it." In general, the attempt to establish detailed geography based on determinatives is a precarious one, since Egyptian scribes were not always consistent in their employment of these signs.

Even if one accepts Heb *sûp* as a loanword from Eg *ṯwf,* this need not imply that the word must in all respects reflect the precise usage—geographical or otherwise—of the original. Indeed, given the sometimes unpredictable nature of loanwords, it would be unwise to assume such. The question of *yam sûp = p€ -ṯwf* must be kept separate from *sûp = ṯwf.* While the occurrences of *sûp* alone in passages such as Exod 2:3, 5 contextually allow the meaning "reeds" or the like, *yam sûp,* as a proper name, contains no inherent clue as to its (nongeographical) meaning. Proper names may carry a literal meaning that is totally unrelated to their point of reference.

E. *Yam Sûp* and Mythology

In a note on the name *yam sûp,* J. A. Montgomery (1938) expressed dissatisfaction with the then-accepted translation "Sea of Sedge," and called attention to the one passage (1 Kgs 9:26) where the LXX departs from its usual rendering of Red Sea and reads instead *tēs eschatēs thalassēs* "the uttermost sea" or "the sea at the furthermost region," apparently reading *sôp* instead of *sûp.* This translation, which Montgomery referred to as the *Ultimum Mare,* was, he thought, well suited to the Red Sea proper, which, as an arm of the Indian Ocean, could be seen as the *Ultimum Mare* (1938:131).

As already discussed, Copisarow (1962) rejected the Egyptian derivation of *sûp,* citing passages within the Bible and later versions (e.g., *Tg. Onq.*) which he believed pointed to *yam sôp* as the "End or Border Sea" (1962: 8–11). The *sôp* question assumed new dimensions with the article of Snaith (1965), who introduced the mythological element in his examination of the Song of the Sea in Exodus 15. According to Snaith, terms such as "deeps" (Heb *tehōmōt*) and "depths" (Heb *meṣôlōt*) in v 5 indicated a destruction or annihilation within the mythological primeval sea/chaos known from other biblical texts as having been subdued by Yahweh (e.g., Isa 51:9–11). Thus, the *yam sôp* of v 4 signified the "sea at the end of the land" … "that distant scarcely known sea away to the south, of which no man knew the boundary" (1965:398), which, in mythological terms, represented total destruction or annihilation (in this case for pharoah and his army). Snaith contended that the crossing of "the sea" tradition was later "interwoven with the great Creation-myth" and its *yam sôp* (1965: 398), and he identified the earlier "sea" of the Exodus narratives with the Mediterranean.

The most eloquent spokesman for this interpretation of *yam sûp* has been B. F. Batto (1983), who, like Snaith and others, believes that the presence of *yam sûp* in Exodus 13–15 is the result of the latest redaction, a conscious attempt "to historicize and localize the sea miracle at the Red Sea" (1983: 30). The one exception in the Song of the Sea (Exod 15:4b), which Batto acceps as "one of the most ancient pieces in the Hebrew Bible," is treated as mythological due to its parallel position with *yām,* a word used in other biblical passages (e.g., Ps 74:12–15; Isa 51:9–10) with reference to Yahweh's battle with the sea-dragon/chaos at creation, the so-called *Chaoskampfmythos* (see discussion in Cross *CMHE,* 112–44; Day 1985: 96–100; Kloos 1986:139–57; and note especially Eakin 1967, who explained the water-separation motif as a reflection of Baal's combat with Yam in Canaanite mythology). Thus, for Batto, "traditional mythical language is used to express the belief that the emergence of Israel as a people during the exodus was due to a creative act by Yahweh equal to that of the original creation of the cosmos itself" (1983: 35). To support his reading of *yam sôp* in Exodus 15, Batto cites the problematic *sûp* of Jonah 2:6 (traditionally rendered as "seaweeds" or the like), where the overall mythological context of the psalm (evident in terms such as the "deep" and the "abyss") makes the reading *sôp* more likely (1983: 32–34; note also his comparison with Psalm 18, esp. vv 4–5). Batto concluded that all references to *yam sûp* fit into either one of two categories: the geographical/historical Red Sea (whether Aqaba or Suez), or the mythological Sea of Extinction or Nonexistence (1983: 35). Thus, he concludes, the existence of a second

historical body of water—in addition to the well-known Red Sea—often referred to as the "Reed Sea" is without foundation.

While some have accepted the mythological understanding of *yam sûp,* at least in Exodus 15 (e.g., Eakin 1967; Ahlström 1977: 287; 1986: 49 ["Sea of Destruction"]; de Vaux *EHI,* 377), others have been less than receptive (note especially the critique of Kloos 1986: 153–57). But as scholars have long been aware, one need not assume that the Exodus was either "myth" or "history," as though the two were incompatible, although the precise relationship between these troublesome concepts in the narration of the Exodus—whether "historicized" myth or "mythologized" history—has been a much-discussed topic (see Kloos 1986: 158–214 for summary).

Still others have sought to explain the crossing of the sea in terms of Egyptian mythology (e.g., Towers 1959; Wright 1979; Wifall 1980). According to Towers, the passage through the "sea of reeds" echoes the mythical lake of reeds (Eg *ŝ j€ rw*) of the Pyramid Texts. He further contends that this term has survived, albeit corruptly, as *ša (i)ri* in the Coptic (Bohairic) version's *phyom n ša (i)ri* for Heb *yam sûp* (1959: 150–52). However, leaving aside the questionable interpretation of *ša (i)ri* (q.v. Brugsch 1879: 909–12 and Černý 1976: 251 for differing interpretations), the rather large chronological gap between the 3d millennium B.C.E. Pyramid Texts and a later (ca. 4th century C.E.) Coptic version of the Scriptures raises a number of methodological problems, not the least of which is the question of access, especially in the light of recent studies on literacy in ancient Egypt. For example, Towers must assume that the writer "was conversant with the theological terminology of ancient Egypt" (1959:151), but he offers no explanation as to how (where or when?) the biblical writer may have obtained this information. While he did acknowledge (in a footnote) the parallel *sḫt j€ rw* "Field of Reeds" (1959: 151, n. 6), he ignored its occurrences in later Underworld texts such as the Coffin Texts and the Book of the Dead (for the latter, see Allen 1974: 6, 13, 65, 74, 87, *passim*; illustrations in Faulkner 1985: 105, 110–11; and discussion of Leclant in *LÄ* 1: 1156–60). Despite the attempts of Towers and Wright, the overall context of *š/sḫt j€ rw* within Egyptian mortuary texts is totally lacking in the imagery or symbolism of the biblical account of the Exodus. The issue of Israel's "passing over" the sea as purification (taken largely from Paul's interpretation in the NT) is not present in those passages mentioning *yam sûp,* and the significance of water as a purifying element is so common that one hesitates to trace its origin here to Egyptian mythology. One might also inquire as to why, in this instance, the biblical writer chose Egyptian over (more easily explained) Canaanite symbolism. Did he have reason to believe that his non-Egyptian readers (or listeners) would correctly perceive the veiled Egyptian reference behind *yam sûp*?

Wifall (1980: 329) escorts the reader through a rather convoluted series of equations in order to demonstrate that lying behind the term *yam sûp* is the biblical concept of Sheol (analyzed as *š el* "Lake of El," which he connects with the mythological "Lake of Reeds" and the geographical "Lake of Horus" [Eg *š Ḥr*]): "Thus, as the geographical *yam sûp* and *Shi-Hor* and the mythological or theological 'lake' and 'field of reeds' and 'Sheol' all seem to be interrelated, so also, perhaps, are the terms *Shi-Hor* and 'Sheol.' " The parallels cited by Wifall concerning the Israelite and Egyptian views of death and afterlife are unfortunately too general to be of any serious use in tracing the influence of particular ideas. Like Towers, he draws attention to what appears to be possible parallels, but he lacks the methodological means to differentiate between broad similarities, which may be common to the ANE as a whole, and specific ideas or motifs that would indicate influence in one direction. While the possibility cannot be ruled out completely, there is no evidence that would identify the *yam sûp* of the Exodus specifically with the Egyptian Lake/Waters of Horus of the NE Delta (for its location, see discussion in Gardiner 1918: 251–52; 1924:93; Bietak 1975: 129–32 and his article in *LÄ* 5: 623–26; see also Kloos 152–53 for further discussion of Towers and Wifall).

F. Location of the Sea of the Exodus

For over a century, biblical scholars and Egyptologists have been obsessed with the quest of identifying this body of water; virtually every possible site within or near the Delta—and some beyond it, e.g., the Gulf of Aqabah—has at one time or another been proposed as the setting for the grand miracle. The most commonly cited objection to one of the two gulfs of the Red Sea has been the lack of reedy vegetation

near these large bodies of salt water (as opposed to the freshwater marshes of the Delta), a necessary element for the *yam sûp* = "*Reed* Sea" position (e.g., Brugsch 1881: 430; Gardiner 1922: 212; Bietak in *LÄ* 5: 630; Anati 1986: 187; Sarna 1986: 107). Those who favor a location within or E of the Delta tend to isolate the area extending N from the tip of the Gulf of Suez up to the coastal site of ancient Pelesium (Tell el-Farama) as the most likely region for the event. Candidates (both past and present) for the sea have included the Gulf of Suez or the Gulf of Aqabah (the older traditional view, see Davies 1979:70, 112, for references); the Bitter Lakes region (e.g., Davies 1979: 82; Kitchen in *NBD*, 1014; Har-El 1977: 72–73; note also Butzer in *LÄ* 1: 824–25); the Ballah Lakes (e.g., Bietak 1981; 1987; Wilson 1985: 131); Lake Menzalah (Gardiner 1922; Goedicke [as presented by Shanks 1981]); and the Mediterranean/Lake Sirbonis (Sabkhet el Bardawil) (e.g., Brugsch, Eissfeldt, Herrmann, Aharoni *LBHG*, Oren 1981, and Anati 1986). Yet the fact that *yam sûp* clearly refers to the Gulf of Aqabah in at least one case (1 Kgs 9:26) demonstrates that the origin or etymology of the term may be irrelevant to its geographical application. Indeed, context and usage are often much more reliable indicators of a word's meaning, and the older obsession with etymology as the determining factor has largely been abandoned by modern scholars. While some (e.g., Kitchen *NBD*, 1014; Sarna 1986: 107–8) see no problem with the multiple reference of *yam sûp* (i.e., as simultaneously designating the two gulfs, the lakes within the NE Delta region, or even the Mediterranean), others (e.g., Simons *GTTOT*, 237–38; Davies 1979: 74) view such a solution as too ambiguous and thus reject the traditional "sea of reeds" interpretation.

Fortunately, the biblical account does provide the interpreter with a rather precise description of the sea's location in Exod 14:2, where the people of Israel are instructed to "turn back and encamp in front of Pi-hahiroth, between Migdol and the sea, in front of Baal-zephon; you shall encamp over against it, by the sea." Unfortunately, none of the sites mentioned in this text can be identified with certainty, and the various theories concerning their placement are to a great extent determined by one's own view of the general route taken by the fleeing Israelites out of Egypt, whether northern, central, or southern (see Wilson 1985: 154–55 and Beit-Arieh 1988: 37 for the options). The best that one can do is to outline the different proposals for the above-mentioned sites (Pi-hahiroth, Migdol, and Baal-zephon), including also the biblical Raamses, the apparent starting point of the journey. See also EXODUS, THE.

1. Raamses (Exod 1:11; Num 33:5). This biblical name is usually interpreted (with a few notable exceptions; see Redford 1963; 1987; Goedicke [Shanks 1981]; and Oren 1981) as the Egyptian *Piramesses*, the Delta capital of the Ramesside period, generally located at Tell el-Dab‹a—Qantir on the ancient Pelusiac branch of the Nile (Uphill 1968–69; Bietak 1975: 179–220; 1981; and his article in *LÄ* 5: 128–46; for earlier views concerning the Delta residence, see esp. the articles of Naville and Gardiner; a detailed review of the relevant Egyptian texts may be found in Gardiner 1918). See also RAMESES (PLACE).

2. Baal-Zephon (Exod 14:2; Num 33:7). Attempts to locate this site center upon Egyptian cities where the Canaanite deity of this name was worshiped and thus could have been referred to by the name of the deity. In a highly influential monograph, Eissfeldt (1932) equated Baal-zephon with the later Zeus Kasios and his temple at the Egyptian Mt. Casios, which he placed at *Moḥammedîyeh* on the W edge of Lake Sirbonis (Sabkhet el-Bardawil) facing the Mediterranean, ca. 15 km E of Pelusium. While generally agreeing with Eissfeldt, Cazelles (1955:333) placed Mt. Casios at *Râs Kasrûn*, ca. 40 km E of *Moḥammedîyeh* between Lake Sirbonis and the Mediterranean (see also Herrmann 1973: 60–64; Aharoni *LBHG*, 196–97; Anati 1986: 186–87; and Redford 1987: 143–44, who favor the Eissfeldt-Cazelles view). (See esp. Simons *GTTOT*, 237–39, 249–50, for criticism of Eissfeldt's theory.) Either site could point to Lake Sirbonis (or even the Mediterranean) as the *yam sûp* of the biblical account, but this N location is rejected by many because the biblical text specifically states that the Israelites did not leave Egypt via this region (Exod 13:17). This objection raises the larger issue of two biblical traditions, a N route (the Elohist) and a S/SE route (the Yahwist). Some have explained these as two different exodoi (e.g., the tribes of Leah followed by the tribes of Rachel; de Vaux *EHI*, 380–81), while others (e.g., Cazelles 1955: 358–61) have raised the possibility that the N route (through later redaction) has been influenced by or constitutes a later reflection of the well-known tradition of the expulsion of the Hyksos (see also Gardiner

1922: 204; Redford 1987: 148–51). This N location of Baal-zephon poses serious problems for advocates of a S crossing somewhere between the Gulf of Suez and the Bitter Lakes, which, according to some, were physically connected in antiquity (e.g., Finegan 1963: 86; Hubbard *ISBE* 4: 60; Wilson 1985: 131; see Albright 1948: 15–16; Simons *GTTOT*, 247–48; and Davies 1979: 73–74 for discussion and further references; regarding canals in the Delta in the 1st millennium, see Bietak 1975; Butzer in *LÄ* 3: 312–13; Shea 1977; Holladay 1982: 1–3.) This led Davies (1979: 116) to conclude that Baal-zephon was not "an original part of the itinerary" and thus could not be used to reconstruct the earliest route of the Israelites.

Others (following esp. Aimé-Giron 1940; Albright 1948: 15–16; 1950) locate Baal-zephon at Taḥpanḥes (Tell Defenneh [Daphnae]), W of Sile on the S edge of Lake Menzalah (e.g., Bietak 1987: 167; Goedicke [Shanks 1981: 46]). This identification is based on a Phoenician letter (6th century B.C.E.), which mentions "Baal-zephon and all the gods of Taḥpanḥes." According to Bietak, the Ballah Lakes, SE of Tell Defenneh—which he identified with the *p€ -ṯwf* of Egyptian texts (1975: 136–39 and maps 23, 45) and Heb *yam sûp* (1975: 217; 1981: 280; 1987: 167)—provided the setting for the sea miracle. Goedicke isolates Tell Hazzob, just S of Tell Defenneh and W of the above Lakes, as the elevated site from which the fleeing Israelites witnessed the destruction of the Egyptian army, due to a massive tidal wave that flooded the low-lying area (following presentation of Shanks 1981 and Wilson 1985). Textual evidence also exists for the worship of Baal-zephon at Memphis (Pap. Sallier IV verso, 1, 6; Gardiner 1937: 89, line 7; Albright 1950: 6–8; Caminos 1954: 333, 337–38). Still others have located the site just N of the Gulf of Suez (e.g., Montet 1968: 49; Finegan 1963). See also BAAL-ZEPHON.

3. Migdol (Exod 14:2; Num 33:7; Jer 44:1). This name occurs a number of times in Egyptian texts, often in compound place names designating forts along the overland route to Palestine. A demotic geographical papyrus (Cairo 31169, iii.20–23) lists four such Migdols, the first of which stands alone (Gardiner 1920:108; Redford 1987:143, 154) and was identified by Gardiner as Tell el-Heir (the Magdolo of classical sources), ca. 12 km S of Pelusium (his earlier choice for the Delta residence, which he later abandoned for Tanis; see *AEO* 202*; note also Redford 1987:143, 153–54). This identification has been used to support a N route for the Exodus, with Lake Sirbonis as the *yam sûp* (e.g., Aharoni *LBHG*, 196–97).

Probably the most widely cited passage mentioning Migdol—and one used to support the early stages of the biblical journey from biblical Raamses (e.g., de Vaux *EHI*, 378, 380; Hubbard *ISBE* 4:60)—is Papyrus Anastasi V.19, 2–20.6 (Gardiner 1937: 66–67; translations in Gardiner 1920:109; Caminos 1954: 254–58; *ANET*, 259). This late-13th-century B.C.E. text concerns the pursuit of two escaped slaves and their eventual passage through or around the Migdol (Eg *mktr*, "stronghold, fortification") of Sety I. In addition, their pursuer stops at *ṯkw* (Tell el-Maskhuta of the Wadi Tumilat region, a frequent candidate for biblical Pithom or Sukkoth) and another "fort" (Eg *ḫtm*, often incorrectly equated with Heb *ʾētam;* e.g., Finegan 1963: 84; Montet 1968: 62). But, as Gardiner (1924: 90) and Caminos (1954: 257–58) have noted, this text is difficult and geographically obscure, and thus is of limited use (if any) in identifying the relative placement of these biblical sites. Oren's own archaeological work in the region confirms the identification of Tell el-Heir with the classical Magdolo (1984: 34–35), but he denies that this site was the Migdol of the Exodus, since no evidence of New Kingdom occupation was found. Unlike Redford (1987), Oren and others are not open to the possibility that the biblical writers drew their geographical knowledge from a later period (e.g., the 7th or 6th century B.C.E.), and thus they automatically exclude from consideration any site lacking evidence of a 12th- or 13th-century B.C.E. occupation (the traditional time period associated with the Exodus event).

Others point out that Migdol, the common Semitic word for "tower" or "fortress" (borrowed into Eg as *mktr*), could easily apply to any number of New Kingdom forts along the overland passage to S Palestine (assuming, contra Gardiner and others, that the biblical author was not referring to the Migdol of the prophets), and thus its precise location cannot be established (but note Goedicke [Shanks 1981], who equates both biblical Etham and Migdol with the Egyptian border fortress at *ṯ€ rw* (classical Sile, Tell Abu-Seifeh) on the N edge of the Ballah Lakes. See also MIGDOL.

4. Pi-hahiroth (Exod 14:2, 9; Num 33:7). This place name is especially problematic, and no satisfactory site for it has been proposed, although a location in the E Delta is assumed. The name is interpreted in various ways by the one of which may point to a variant underlying Hebrew text (Exod 14:2, 9; see discussion of Lambdin in *IDB* 3: 810–11). While some (Albright 1948:16, de Vaux *EHI*, 379) have proposed a type of folk etymology of the Hebrew (e.g., "the mouth of the canals"), others have sought appropriate Egyptian equivalents, e.g., *Pr-Ḥtḥrt*, "House of Hathor," mentioned in Pap. Anastasi III.3,3 and the Nikotris Adoption Stela, somewhere between Tanis and Bubastis (Gardiner 1918: 186; 1922: 213; Caminos 1954: 74, 80; Montet 1968: 64). Another suggestion has been *p€ -ḥ€ -rti*, a place name in the Wadi El-Arish Naos, apparently interpreted as "Place of the Widow" (Redford 1987: 142, 153, for further possibilities; see also the general discussion of Egyptian derivations in Cazalles 1955: 350–52). See also PI-HAHIROTH.

G. Conclusion

Over the past decade or so, some Egyptologists (e.g., Redford and Bietak) have drawn attention to the question of the biblical writers' geographical sources (note in this regard the earlier comments of Noth 1947 on Eissfeldt's citation of classical sources). According to Redford (1987), the attempt to localize the site of the Exodus in the biblical narrative has drawn heavily from later tradition and represents, for the most part, the writers'/redactors' own knowledge of Egyptian geography as they understood it: "… whoever was responsible for the topographic material which now informs the stories of the Sojourn and the Exodus, be it P or even J, the configuration of the eastern Delta known to them was essentially that of the 26th Dynasty [664–525 B.C.E.] and the early Persian period" (1987: 144). While Bietak is admittedly less pessimistic with regard to the Exodus/Numbers account, he does, however, point to the later attempts of the versions (e.g., and Targum Neofiti), Psalm 78, and the traditions preserved in Manetho, which derived their geographical knowledge from secondary cults of Ramesses at Tanis and Bubastis: "They depended in their search for localization on the Egyptian contemporary opinion" (1987: 164).

Neither scholar, however, is totally pessimistic with regard to a historical event behind the Exodus account. Although Bietak questions the geographical veracity of later texts, he apparently accepts the basic outline of the Exodus account and, based on his own work in the Delta, contends that the Ballah Lakes (as the *p€ -ṯwf* of Egyptian texts, 1975: 136–39; 1981: 280; 1987: 167) provided the most likely means of Israelite passage out of Egypt. Redford, on the other hand, traces the ultimate inspiration for the biblical account to the tradition of the occupation/expulsion of the Hyksos (1987: 148–51; for this tradition, see Redford 1970). See also HYKSOS. While the parallels between these two traditions have long been noted (e.g., Gardiner 1922, clarified in 1924), Redford's own exilic/postexilic date for the final version of the biblical account (geographical additions/clarifications at the hands of a later redactor) takes into account the later development and pervasiveness of the Hyksos tradition in the 1st millennium.

As the above evidence illustrates, no consensus has yet emerged on the location of the sea of the Exodus, although the majority opt for an E Delta location. If one contends that *yam sûp* must refer *only* to one of the gulfs of the Red Sea proper, either Aqabah or Suez (e.g., Simons *GTTOT*, 238), then—assuming a Delta site for the crossing—its presence in Exodus 13–14 would constitute a later attempt to connect the miracle at "the sea" with a suitably large body of water such as the Gulf of Suez; while the more frequent references to "the sea" would reflect the earliest tradition (with possible mythological overtones in Exod 15:4). In this case, the question of *yam sûp* as Eg *p€ -ṯwf* becomes largely irrelevant, since the biblical writers/redactors did not themselves locate the crossing in the Delta. The now nearly canonical term "Reed Sea" derives ultimately from the modern interpreter's inability to reconcile the geographical problems inherent in the biblical account. Likewise the ancient redactors, perceiving the difficulties within the text, provided geographical roadmaps for their contemporary readers.

On the other hand, if Heb *sûp* and Eg *ṯwf* continue to be correlated, respectively, with *yam sûp* and *p€ -ṯwf* as a specific body of water—the "Sea of Reeds"—in the E Delta of Egypt, then the geographically ambiguous nature of *yam sûp* will no doubt occasion further scholarly discussion, and, to be sure, the onomastic quest will continue.

RED SEA TRADE

The Red Sea has been used as a source of food and maritime transportation since prehistoric times despite the lack of a coastline having good natural harbors and anchorages and the existence of enervating prevailing northerly winds N of 20° N latitude. This has been attested by the discovery of numerous lithic tools (Montenat 1986: 239–55; Prickett 1979: 280–92), a predynastic burial (Murray and Derry 1923: 129–31) along the Red Sea coast of Egypt and lithic tools along the Saudi Arabian Red Sea coast at various points, the existence of numerous prehistoric petroglyphs in the Wadi Hammamat (*LÄ* 6: 1099–1113), dipinti and graffiti elsewhere in the Eastern Desert (Winkler 1938: 18–41; Redford and Redford 1989) and other prehistoric sites (Sodmein Cave), between the Nile and the Red Sea coast (Prickett 1979: 292–93).

In historical times, interest in the Red Sea littoral initially was primarily commercial in nature. Since the desert bordered the entire littoral, few people actually resided on the coast in sizable concentrations except for commercial maritime purposes. Literary sources attest the earliest known exploitation of the Red Sea for commercial purposes in the Egyptian Old Kingdom period (*AESH*, 136; Murray 1950: 14). Literary sources (*AESH*, 137), epigraphic evidence (Tregenza 1958: 181), and archaeological excavation of a Middle Kingdom port at the Red Sea terminus of the Wadi Gawasis (Sayed 1978: 69–71) and of a galena mine at Gebel Zeit (Castel et al. 1984: 45–57) attest activity along the coast at that time. This continued into the Egyptian New Kingdom (Empire) period and was made famous by the expedition sent by the pharaoh Hatshepsut to Punt (*AESH*, 270–71), the precise location of which has been greatly debated. Details of this journey are depicted on Hatshepsut's funerary temple at Deir el-Bahri near Thebes.

Commercial interest persisted in the late pharaonic period (*AESH*, 254; Schweinfurth 1885: *passim*) under Necho II (610–595 B.C.) and after the Achaemenid Persian conquest of Egypt in 525 B.C. under Cambyses (530–521 B.C.) and his successors, especially Darius I (521–486 B.C.). The Ptolemaic dynasty (323–30 B.C.) in Egypt under Ptolemy II Philadelphus (283/282–246 B.C.) and his successors continued and expanded this maritime commerce in the Red Sea and beyond into the Indian Ocean (Thapar 1987:15–19) by the construction of a number of ports and trade stations on the W coast of the Red Sea to the Bab el-Mandeb (entrance to the Indian Ocean) and, perhaps, beyond (Murray 1967:24–33; Scullard 1974:129, fig. 13; Strabo 16.4.7ff.; Pliny *HN* 6.34.170–75). However, Ptolemaic interest in the Red Sea was primarily military (the acquisition of war elephants and gold for the army); commercial considerations were, in the early Ptolemaic period at least, secondary.

The annexation of Egypt by Rome in 30 B.C. brought Rome for the first time into direct contact with the Red Sea. The nature, volume, intensity, and diversity of Roman commerce was different from and greater than that of the Ptolemies (cf. Desanges *ANRW* 2/10/1: 3–43). Roman trade in the Red Sea was motivated

by commercial and political interests, not, primarily, by military considerations. Most of the ports the Romans used on the Red Sea had been built earlier either by the Ptolemies or by the Nabateans. Apparently these were subsequently repaired and enlarged (Sidebotham 1986: 48–57)—and one, Leukos Limen on the Egyptian coast, was founded *de novo*—by the Romans (Whitcomb and Johnson 1979; 1982a; 1982b). Egyptian emporia included (1) Clysma-Arsinoë-Qolzoum (near modern Suez; Bruyère 1966: *passim*); (2) Myos Hormos (Diodorus Siculus 3.39.1–2; Strabo 2.5.12; 16.4.5; 16.4.24; 17.1.45; *Periplus Maris Erythraei* 1; 19; Pliny *HN* 6.33.168; Tait 1930: 108–25; Ptol. *Geog.* 4.5.8; Sidebotham 1986: 50–51); (3) Philoteras (Ptol. *Geog.* 4.5.8; Murray 1925: 142; Meredith 1953: 101–3); (4) Leukos Limen (Sidebotham 1986: *s.v.* index "Leukos Limen"); (5) Nechesia (Ptol. *Geog.* 4.5.8; Murray 1925: 142–43; Meredith 1953: 103); and (6) the largest and most important, Berenice (Strabo 17.1.45; *Periplus Maris Erythraei* 1; 19; 21; Pliny *HN* 6.26.103; Tait 1930: 108–25; Ptol. *Geog.* 4.5.8; Murray 1925: 143; Meredith 1957: 56–70; Murray 1968: 49–53; Sidebotham 1986: *s.v.* index "Berenice"). There was a late Roman/Byzantine military installation at Abu Sha‘ar, an area long considered (inaccurately) to have been the location of Myos Hormos (Sidebotham 1989a). Trans-desert routes marked with forts, towers, and cairns joined these ports to various emporia on the Nile, such as Edfu (Apollonopolis Magna) in the Ptolemaic period (Bagnall 1976: 35) and Qift (Coptos), Denderah (Tentyris), and Antinoe/Antinoopolis in Roman times (Bernand 1984: *passim*; Bingen 1984: 359–70; Sidebotham 1986: 48–71; Sidebotham 1989c; Sidebotham et al. fc.; Zitterkopf and Sidebotham 1989).

Present scholarship suggests that the economic instability, political chaos, and military turmoil of the 3d century A.D. led to a decline or cessation of this Red Sea commerce. However, literary evidence (*Codex Theodosianus* 12.12.2; Philostorgius *h.e.* 3.4–6; cf. Dihle 1989: 461–68; Procopius *History of the Wars* 1.19.1; 1.19.24–26; 1.20.4; 1.20.9; 1.20.12; 2.3.40; Cosmas Indicopleustes, *top.* I and II; Theophanes *chron.* 6123; cf. Johnson and West 1949: 137–51; cf. Letsios 1988: *passim*) and a growing body of archaeological evidence (Zitterkopf and Sidebotham 1989; Sidebotham 1989b: 222–23) indicate a revival of diplomatic and commercial contacts in the 4th through 6th/early 7th centuries (though this renaissance does not seem to have had the same intensity as activity in the late 1st century B.C.–2d century A.D.).

Red Sea commerce was so important to Egypt that at least as early as the Middle Kingdom period a canal was dug linking the Nile to the Red Sea. Its existence is attested both by ancient writers (Hdt. 2.158–59; 4.39; 4.42; Arist. *Mete.* 1.14.352b25; Agatharchides in Diod. Sic. 1.33.7–12; Strabo 17.1.25–26; Pliny *HN* 6.33.165–66; Ptol. *Geog.* 4.5) and by archaeological evidence (Sidebotham 1986: 67–68, 146, 176). Later rulers—including Necho II, Darius I, Ptolemy II, and Trajan (ruled A.D. 98–117)—were all credited with digging such a canal, and, according to the 9th-century Arab writer al-Maqrizi (Sidebotham 1986: 68), this canal continued to be used in the 9th century. It cannot be determined when it fell out of use or what its exact course was, but remains can still be seen (Redmount 1986: 20).

Less is known about how other regional powers exploited the Red Sea. Solomon's commercial contacts with the Queen of Sheba (Saba) in SW Arabia (Yemen) in the 10th century B.C. are well known (1 Kgs 10:10; Isa 60:6); yet the precise locations of his port of Ezion-Geber and its counterpart in Saba on the Yemeni coast still elude scholars. See EZION-GEBER.

One of the Ptolemaic monarchs (either Ptolemy II or III) is said to have joined the city of Miletus (in Asia Minor) in founding a colony on the Red Sea coast at Ampelone (Pliny *HN* 6.32.158–59; Tarn 1929: 21–22). This city, undoubtedly established for commercial purposes, has never been located. Perhaps it was the site of the later Nabatean/Roman port of Leuke Kome mentioned in the *Periplus Maris Erythraei* (19) as a Red Sea port important enough to warrant stationing there a *hekatontarches* (centurion) and a garrison of unknown nationality. A *paralemptes* collected a 25 percent *ad valorem* customs tax on merchandise imported there (*Periplus Maris Erythraei* 19). Research now suggests that Leuke Kome was located in the Kuraybah-'Aynunah region of NW Saudi Arabia near the Strait of Tiran (Ingraham et al. 1981: 76–77; Kirwan n.d.: 55–61; Sidebotham 1986: 120–26). The nearby island of Iotabe may have superseded Leuke Kome as a customs post later in the Roman/Byzantine period (Abel 1938: 510–33; Letsios 1989: 530; Procopius *History of the Wars* 1.19.3).

Other ports existed along the Red Sea coasts in antiquity, though the dates of their foundation and abandonment are unknown. There was an important port at Aila, near Aqaba (Procopius *History of the Wars* 1.19.3; 1.19.20; 1.19.24), the Islamic section of which is now under excavation (cf. Whitcomb 1988: *passim*; Whitcomb 1989). There were other ports in Sinai (possibly Tor; Murray 1950: 136–38; cf. Gatier 1989: 499–523) and on the African coast (Adulis; Casson 1984: 199–210; Procopius *History of the Wars* 1.20.4) and, undoubtedly, on the Saudi Arabian, Yemeni, and Sudanese Red Sea coasts. The present state of archaeological research has yet to reveal much on pre-Islamic ports in these regions (cf. Crone 1987: *passim*).

STEVEN E. SIDEBOTHAM

REDACTION CRITICISM.This entry surveys the method of "redaction criticism" as it is applied to the Old and New Testaments.

OLD TESTAMENT

Redaction criticism is a method of biblical study which examines the intentions of the editors or *redactors* who compiled the biblical texts out of earlier source materials. It thus presupposes the results of source and form criticism, and builds upon them.

A. History and Development

Marxsen in his study of Mark's gospel (1st German ed., 1956) appears to have been the first to use the *term* "redaction criticism," but redaction-critical analysis of OT texts is considerably older than this. The discovery of "redactors" in the OT belongs to classical source criticism, as a side effect of the analysis. Once it became clear that the Pentateuch, for example, was compiled from several disparate sources, it followed that someone must have compiled it. But to most source critics of the 19th and early 20th centuries, redactors were not seen as creative editors, still less as literary artists. Redactional *additions* to the text were naturally identified as part of the process of literary analysis, but the redactional *arrangement* of the text was seldom the subject of much interest. This point is sometimes made by saying that redaction was seen in older scholarship as a matter of "scissors and paste." In fact, the picture is less uniform than this suggests. Although the redaction criticism of the Pentateuch attracted much less interest than the study of its original sources, with regard to some other books there has always been more concern among biblical scholars for the finished form of the text and hence for the principles on which it must have been assembled. Even in the 19th century it was common to read Job and Chronicles, for example, from what can now be called a "redaction-critical" point of view.

It was in the years after the Second World War that redaction criticism began to appeal widely to OT scholars. This appeal sometimes resulted from a sense of weariness at traditional source and form criticism, and was part of a desire to move away from what was increasingly thought to be an excessive tendency to fragment the text instead of to read it as it stood. The sense of a renewed respect for the text in its finished shape, and hence for the editors who had worked it into this shape, was often combined with a theological commitment to the Bible in its canonical form (sometimes under the influence of Barthian theology). Gerhard von Rad pioneered this new approach to the OT in a series of articles and books (esp.*PHOE*). In his work on Genesis (*Genesis* OTL), von Rad sought to show that the Yahwist in particular should be seen as a highly creative religious and literary genius, who utterly transformed the materials he used. Beyond that, von Rad even hinted at a possible reading of the Pentateuch as a whole which would attribute a comparable importance to the *final* redactor(s) of the entire work—citing with interest (though not complete approval) a remark of Franz Rosenzweig's to the effect that "R" (see below) ought to be rendered *rabbenu* (in Hebrew, "our Master"), because it is to the redactor that we owe the Bible as it now lies before us (von Rad *Genesis*, 40–42). This may at least serve as a memorable pointer to the renewed respect in which redactors are now held by biblical scholars.

After von Rad, Martin Noth also contributed important works on the redaction of the "Deuteronomistic History" (Joshua-2 Kings) and the work of the Chronicler (Chronicles-Ezra-Nehemiah; see *NDH*, NCH, and *HPT*). Both of these scholars referred to their own work as "traditio-historical." Nowadays, however, this term is more commonly reserved for their contribution to the history of Israel's religious and historical traditions, and the more literary side of their interests would be called redaction criticism.

In Noth's work one can see both the strengths and the weaknesses of redaction criticism. Its strength lies in its minute attention to details of the text, which might strike more casual readers as trivial—small link-passages, tiny changes in wording; and its success lies in explaining puzzling features, such as the sequence in which incidents are related. Noth's work represents what in literary studies is sometimes called a "close reading" of the text, where the reader constantly asks why the particular words or phrases

have been chosen in preference to others, and where it is assumed that the authors (or editors) of texts always had a reason for the choices they made. The characteristic weakness of Noth's method is the reverse side of this: a tendency to exaggerate the importance of small details and to foreclose the possibility that some features of the biblical text may be the result of accident or inadvertence. Redaction criticism easily lays itself open to the charge of reading too much significance into the text. Some biblical books may in fact owe much to "scissors and paste" techniques of composition. Though readers should be open to the possibility of finding meaning and theological insight in the way material has been arranged or altered during redaction, they should also not forget that we know very little about the anonymous editors of the OT, and that we do not have the raw materials with which they worked. Redaction critics normally have to reconstruct the redactor's sources from the text as it now stands, and then discover why the redactor changed these (hypothetical) sources to produce the present form. It can easily be seen that it is impossible to check the accuracy of this whole reconstruction against any external controls. This is why the redactional study of Chronicles has always been easier than (and antedates by far) the redaction criticism of the rest of the OT, because we do possess most of the sources with which the redactors of Chronicles worked—namely, the books of Samuel and Kings. Where such external points of reference are lacking, redaction criticism is inevitably rather speculative.

To some extent redaction criticism has been overtaken in the 1980s by newer movements such as canonical criticism and structuralism, which share its interest in the "final form" of biblical texts but are less concerned to derive this from the deliberate intention of one or more redactors and more concerned to read the text as an entity in itself. The "canonical" approach does, however, ask questions about the intentions of the communities responsible for the present form and compass of the entire OT, and so may be said to represent a kind of redaction criticism of the canon as a whole. Thanks to the work of B. S. Childs (e.g., *IOTS*) and others, questions are now asked not only about the significance of the way individual books are arranged but also about the arrangement of whole sections of the OT, such as the Torah (Pentateuch) or the Prophets, and even about the overall organization of the canon. There are still a number of books of the OT, however, which have not been extensively studied by more conventional redaction criticism, and it is therefore probable that the method will continue to be practiced despite these newer approaches.

The history and practice of OT redaction criticism may be studied with the aid of Perrin (1970), Wharton (*IDBSup*, 729–32) and Barton (1984).

B. The Elements of Redaction-Critical Analysis

Strictly speaking, it makes sense to practice redaction criticism only when it is certain that a book is composite in character. For the majority of OT texts, this assumption is fully justified: for example, the Pentateuch and most of the prophetic books are certainly the result of a long process of editing or redaction. Where a text seems to have been composed freely by a single writer, criticism seeks to discover the intentions of this writer, who is an "author" in something like the modern sense of the word, rather than a redactor. Nevertheless, in practice the distinction may be hard to maintain. For example, Ecclesiastes (Qoheleth) has probably undergone several stages of redaction, but the intentions of an original author still shine throughout the whole book; some of the Psalms seem to be freely composed lyrics with no prehistory as a collection of older fragments; and some narrative books (e.g., Ruth, Jonah) probably had a single author from the beginning. Conversely, some of the biblical editors have reshaped the material at their disposal so freely that we might call *them* "authors" rather than mere redactors. For example, the "J" material in Genesis is said by von Rad (see above) to represent such a thoroughgoing reworking of its underlying source materials that "the Yahwist" should no longer be called a redactor at all, but an author, an original writer. See YAHWIST ("J") SOURCE. However, much of the OT is more than a mere assemblage of unrevised fragments, but less than a complete reshaping of old materials into a completely coherent new whole, and it is precisely in relation to such texts that redaction criticism is an appropriate critical tool.

1. Link Passages and the Siglum "R." Source-critical analysis frequently reveals the existence of short passages, individual sentences, or even individual words that cannot be assigned to any of the main

sources of a particular passage (J, E, D, or P), but must be assumed to have come into being as part of the process of editing. For example, in Exodus 3:14–15 there are two versions of God's words to Moses at the burning bush: "Say this to the people of Israel, 'I AM has sent me to you,' " and "Say this to the people of Israel, 'The LORD, the God of your fathers, the God of Abraham, the God of Isaac, and the God of Jacob, has sent me to you.' " So that these appear to be successive, rather than alternative, words of God, they are linked by v 15a: "God also said to Moses …," which was not required by either of the original sayings but is needed once they are juxtaposed. Material like this can be ascribed to the redactor, and represents an attempt (sometimes not a very successful attempt) to make the text read smoothly, integrating the original separate sources into a smooth narrative. Source critics use the letter "R" to designate this kind of redactional material.

Sometimes a redactional addition can be identified by the way it integrates into a wider biblical framework a section, for example of narrative, that had an independent existence but in its present context appears to contradict or be inconsistent with something else in the text. For instance, in Genesis 26 there is a story about Isaac and Rebekah at the court of the Philistine king, Abimelech. This story is clearly a version of the same incident related twice of Abraham and Sarah (see Gen 12:10–20 and Genesis 20). Whoever wove together the sources that make up the book of Genesis appears to have realized that the reader might be disturbed if such similar incidents were related without explanation, and accordingly began the story as follows: "Now there was a famine in the land, *besides the former famine that was in the days of Abraham*" (26:1). These words were not required so long as the story formed an independent unit, but they became necessary once it was placed in a continuous narrative containing also the earlier, suspiciously similar story or stories. The effect of the insertion is to make the narrative flow more smoothly than it would otherwise do—though, again, the redactor has been only partially successful, for most readers will feel that the chapter still reads rather awkwardly and will soon suspect that it is in origin an alternative version of one of the other similar incidents, and not genuinely a fresh occurrence.

2. Interpretative Additions. In the examples just discussed, the redactional elements have a minimal function: they merely avoid an awkward break in the text. But redactional additions, even of a few words, can have a profound effect on the meaning of the passage in which they stand. Thus, both Hosea and Ecclesiastes end with what seems to be a proverbial saying. In Hos 14:10—Eng 14:9: "Whoever is wise, let him understand these things; whoever is discerning, let him know them; for the ways of the Lord are right, and the upright walk in them, but transgressors stumble in them." And in Eccl 12:13–14: "The end of the matter: all has been heard. Fear God, and keep his commandments: for this is the whole duty of man. For God will bring every deed into judgment, with every secret thing, whether good or evil." It may be argued that both sayings have an important retrospective effect on the whole book to which they form the conclusion. They tell the reader that the foregoing words (the sayings of Qoheleth; the prophecies of Hosea) are to be read as wise advice on how to please God, and that anyone who does not will suffer punishment. In both cases these redactional additions do not merely serve to shape the book into a finished whole, but they have an *interpretative* function as well. They tell the reader how to understand the book. The redactional addition to Ecclesiastes makes the overall effect of the book much less skeptical and unorthodox than it would otherwise seem, while the addition to Hosea converts a collection of prophecies into a kind of "wisdom" book of generalized advice.

3. Explicit Insertions. So far we have considered types of redactional addition in which there is no question of the redactor addressing the reader in person, but in which the additional material is integrated into the text as though it were original. The OT also contains passages, especially in the narrative books, in which the narrator turns from his source to face the reader directly. For example, twice in the historical books from Joshua through 2 Kings there are summaries of a section of the story that is being told, with comments on its significance from a theological point of view: Judg 2:6–23 and 2 Kgs 17:7–41. Here the compiler of the history offers comments of his own on the story he is telling—for example, "This was so, because the people of Israel had sinned against the LORD their God" (2 Kgs 17:7).

In a similar way, the editors of the prophetic books added headings and indications of the occasions and dates when particular oracles were delivered: e.g., "The words of Jeremiah, the son of Hilkiah … to

whom the word of the LORD came in the days of Josiah, the son of Amon, king of Judah, in the thirteenth year of his reign" (Jer 1:1). The way in which this is done can sometimes help us to reconstruct the stages by which a book came into its present form. Thus, for instance, the book of Isaiah has *two* redactional "headings," in 1:1 ("The vision of Isaiah the son of Amoz, which he saw concerning Judah and Jerusalem") and in 2:1 ("The word which Isaiah the son of Amoz saw concerning Judah and Jerusalem"). This makes it probable that there was once an edition of Isaiah which began with 2:1, to which chapter 1 was subsequently added, with the result that a fresh heading was needed for the whole book. Here redaction criticism contributes to source criticism and helps it in its task of literary analysis.

4. Changes to the Original Source Material. Ancient editors often had great respect for the material they were assembling and changed very little in it. That is why there are so many inconsistencies in the biblical text. Indeed, it is this that makes it possible for us to reconstruct the sources with which the editors worked, for if they had successfully eliminated all the inconsistencies between the sources, we would not be able to distinguish the sources anyway. The very possibility of source criticism depends on the fact that the redactors so often left alternative versions of incidents unreconciled. Nevertheless, this respect for the original sources did not mean that the redactors *never* changed their raw materials. As well as introducing link passages, marginal comments, and headings, biblical redactors often also make substantial alterations to the documents which they incorporated into their work. In prophetic books, for example, it is common to find comments updating the original prophetic oracles (e.g., Isa 16:13–14), and it is probable that the desire to apply the prophet's words to the editor's own situation led to frequent changes in the wording of the original oracles, though this is often hard to prove. The mixture of an extreme respect for an old text and a great freedom in reshaping it to contemporary needs and ideas is one of the most puzzling features of the growth of the Bible for a modern reader, who is used to quite different conventions about the treatment of historical sources. Redaction criticism seeks to clarify how ancient editors went about their work.

5. The Arrangement of the Text. Besides adding new material, the redactors of biblical books also *arranged* existing material into the order in which we now find it. This invisible contribution is probably more important than the individual longer or shorter passages to which we can attach the siglum "R." The effects of arranging older material can be quite varied and may be regarded as forming a sliding scale.

At one end of the scale stands redactional work of a purely *anthological* character. For much of the book of Proverbs, for example, there does not appear to be much significance in the order in which old sayings have been arranged. In the Psalter, there is evidence that some psalms have been grouped together by theme (for instance, Psalms 145–50 form a continuous sequence of psalms of praise) or by form (Psalms 103 and 104 both begin "Bless the Lord, O my soul"); but in many places the order appears random, and in any case the meaning of the individual psalms is not affected by their juxtaposition with each other.

In many prophetic books, there is an element of anthological arrangement, but it is often possible to detect a definite intention in it. For instance, it has been suggested that in placing the particular oracles that form Isaiah 1 at the head of the whole book (see above), the final redactor was providing a short compendium of salient themes from the book as a whole: judgment, mercy, the election of Zion, the remnant, Yahweh's attitude toward sacrifice, and hatred of social injustice (see Jones 1955).

A still more deliberate interpretative intention can be seen in the redaction of the Pentateuch, where material from a wide range of sources, often originally inconsistent with each other, has been arranged so as to tell a single, coherent story running from the creation of the world down to the death of Moses. One may, indeed, speak of many stages in the redaction of the Pentateuch, at each of which such interpretative arrangement must have occurred. Before the four (or more) major sources were combined, each source was itself composed from a variety of older units of tradition. If, as many traditio-historical studies maintain, the stories of the patriarchs (for example) were originally separate stories about unrelated heroes, each used as the cult legend of a particular sanctuary, then the editor we call "J" was already a creative writer who integrated them into a single narrative framework and made each relate to all the others.

Finally, a book such as Judges manifests a highly schematized arrangement of its basic source material where one can scarcely doubt that a redactor is responsible for most of the effect the book now makes on the reader. The stories about various (originally purely local) tribal heroes are arranged schematically, so that each illustrates the same pattern: the Israelites sin, are subjugated by their enemies, cry to God, and are saved by the intervention of a "judge," after which they enjoy a period of "rest" lasting twenty, forty, or eighty years. Indeed, redaction criticism of the other historical books suggests that the same redactor may also have worked on the material in all the books from Joshua to 2 Kings, even though evidence for schematic arrangement is somewhat less marked elsewhere than it is in Judges.

JOHN BARTON

NEW TESTAMENT

Redaction criticism is the study of NT texts that concentrates on the unique theological emphases that the writers place upon the materials they used, their specific purposes in writing their works, and the *Sitz im Leben* out of which they wrote. The term is a translation of the German *Redaktionsgeschichte*, which has also been translated "redaction history." Another German term sometimes used to describe this method of study is *Kompositionsgeschichte* or "composition criticism."

A. Origin of the Discipline

Although some scholars had in the past sought to investigate the NT writings from the aspect of their use of various sources, redaction criticism came to the forefront in the mid-1950s with the publication of two major works. The first was Hans Conzelmann's *Die Mitte der Zeit* (*The Theology of St. Luke*), which appeared in 1954, and the second was Willi Marxsen's *Der Evangelist Markus* (*Mark the Evangelist*), which appeared in 1956. Conzelmann argued that Luke, in writing his gospel, superimposed over the traditions a "salvation history" scheme in which history was divided into three distinct stages: the period of Israel, the period of Jesus (the "middle" of time), and the period of the Church. He believed that, in so doing, Luke sought to solve the problem of the delay of the Parousia by placing a greater emphasis on realized eschatology. Conzelmann's thesis, which was warmly received at first, has received some telling criticisms, but the interest he generated in the study of how the Evangelists used the gospel traditions was lasting. Marxsen's major contribution lies in his discussion of the relationship of form and redaction criticism. Whereas the form critics spoke of two *Sitz im Leben*s (that of the historical Jesus and that of the early Church), Marxsen pointed out that there existed a third *Sitz im Leben* as well, and this was the situation in life of the Evangelists themselves. In contrast to the interests of form criticism, which were primarily sociological in orientation and sought to discover everything possible about the *Sitz im Leben* of the early Church during the oral period, Conzelmann and Marxsen focused upon the Evangelists and their individual contributions to their works. Whereas form criticism ignored the Evangelists and minimized their contribution in the writing of the gospels, Marxsen pointed out that the Evangelists were not simply collectors or editors of the traditions; they were, on the contrary, theologians. As a result, their works were not to be viewed simply as "Jesus-material collections" but as gospels, and they should be investigated from the perspective of these individual writers. It should not be assumed that before Conzelmann and Marxsen no one had emphasized the theological contribution of the Evangelists to the gospel tradition. Men like W. Wrede, E. Lohmeyer, R. H. Lightfoot, J. M. Robinson, and G. Bornkamm

had alluded to this earlier, but it was with the works of Conzelmann and Marxsen that redaction criticism came into its own, and the decades following their works saw this new discipline dominate gospel studies.

B. The Method of Redaction Criticism

Since redaction criticism is primarily interested in investigating how authors used their sources and their unique theological contribution to their sources, it is not surprising that most redaction critical studies of the NT texts have involved the gospels. Whereas at times sources can be discerned in the NT epistles (e.g., Col 1:15–20; Phil 2:6–11; Rom 1:3–4, etc.) or Acts (e.g., the "we sections"), the clearest use of sources is found in the gospels and in particular in the Synoptic Gospels. It is understandable, therefore, that the majority of redaction critical investigations have involved the gospels of Matthew, Mark, and Luke, for behind them lie both written and oral sources of the dominical tradition.

Most redaction critics assume in their investigation of the Synoptic Gospels that Matthew and Luke in composing their gospels used both Mark (or something very much like our present Mark) and a common source or sources which can be designated as Q. The results of most such investigations have tended to support this "solution" of the Synoptic Problem. On the other hand, redactional studies based upon other suggestions of how Matthew, Mark, and Luke are related have tended to be far less successful. Assuming the use of "Mark" by the other two Evangelists, the simplest way of proceeding in the investigation of a Matthean or Lukan redaction criticism is to investigate how they used their source, Mark. Here a synopsis of the gospels is most helpful. By a careful comparison of the additions, the modifications, and the omissions of their Markan source we can detect the theological interests and concerns of Matthew and Luke. Besides investigating the material in the triple tradition, we can also investigate the common material of Matthew and Luke that is not found in Mark and observe the differences we find in the double tradition. By the use of literary and form criticism, we can often determine which of the two traditions is more primitive, i.e., more original, and thus ascertain how the other Evangelist has used the tradition and what this reveals concerning the particular theological emphasis which he seeks to make.

Concerning Mark and the unique material in Matthew and Luke ("M" and "L"), redactional investigation is more difficult, for whereas in the triple and double traditions we either possess their source (Mark) or can reconstruct it (Q) with a reasonable degree of certainty, in the case of Mark, M, and L we have much more difficulty in reconstructing what their sources were like. In the latter instances, we must first—by form critical analysis—attempt to reconstruct what the sources used in these instances were like. This is more difficult, but it is not impossible. With regard to Mark, it would appear that the best areas of investigation for perceiving his redactional emphases are the seams (the "cement" Mark uses to join together different traditions); the explanatory and theological insertions found at various times in the texts (these are often introduced by a *gar,* "for"); the summaries (these are not simply traditions which Mark used but summaries he constructed using various traditional materials); various modifications of individual pericopes and sayings; the selection of the material included; the arrangement of the material; the introduction; and the typical vocabulary of the Evangelist. If we possess the original conclusion of Mark, and if we knew which materials Mark chose not to include in his gospel, this would also be helpful in the investigation of a Mark redaction criticism; but the debate as to the ending of Mark is far from settled, and it is impossible to know what materials Mark possessed but chose to omit. Many of the areas mentioned above are also helpful in the investigation of the M and L materials.

C. The Practice of Redaction Criticism

An example of how a comparison of the triple tradition can lead to insights into the theological emphases of an Evangelist can be found in Luke 4:14. After the baptism and temptation accounts, we read in Matthew and Mark that upon the arrest of John the Baptist, Jesus returned to Galilee. Luke alone, however, states, "And Jesus returned in the power of the Spirit into Galilee …" In comparing the accounts, it becomes clear by this addition to the narrative that Luke wants to emphasize the role of the Spirit in the ministry of Jesus (and, of course, in Acts, in the ministry of the disciples of Jesus). We find similar allusions to the Spirit's ministry in Luke 5:17, where Luke adds to his Markan source the words "and the power of the Lord was with him to heal" (note the connection of the Spirit with "power" in Acts 1:8; 10:38), and in 4:1, where Luke adds to his Markan and Q sources that Jesus, "full of the Holy Spirit,"

proceeded into the wilderness to be tempted. By carefully observing how Luke handled his sources, it becomes clear that the coming of the Spirit upon Jesus and the disciples and the power to heal associated with this are important Lukan emphases.

In a similar way, when one compares Matt 8:16–17 and 12:15–21 with their parallels in Mark and Luke, and when one compares Matt 13:34–35 with its Markan parallel, it becomes clear that Matthew gives to his source a particular theological emphasis. This is clear in that Mark and Luke never have the expression "This was to fulfill what was spoken by the prophet …" When we compare similar Matthean insertions into his Markan source in Matt 13:14–15; 21:4–5; and 26:54, as well as the frequent occurrence of this theme in the M material (1:22–23; 2:15, 17–18, 23; 4:14–16; 27:9–10) it becomes clear that this is an important theological emphasis on the part of the Evangelist. This is seen most clearly, however, when we compare the occurrences of this emphasis in the material of the triple tradition and note that this emphasis is lacking in Mark and Luke.

With regard to Mark, one of the clearest examples of his redactional activity is found in Mark 8:31–10:45. Assuming the form-critical presupposition that the material in this part of Mark originally circulated as isolated units and that it was Mark who arranged it in its present form, we find a threefold recurring pattern. In this pattern we find a passion prediction on the part of Jesus (8:31; 9:30–32; 10:32–34), followed by an error of some sort by one or more of the disciples (8:32–33; 9:33–34; 10:35–41), which is in turn followed by a collection of teachings on the meaning of discipleship (8:34–9:1; 9:35–10:31; 10:42–45). We also can note the presence of a typically Markan vocabulary throughout this section. It seems quite clear that Mark has arranged this section in order to demonstrate that discipleship involves crossbearing. Even if the situation which caused Mark to emphasize this theme as strongly as he does is uncertain, the emphasis is nonetheless quite clear.

D. The Limitations of Redaction Criticism

The goals and aims of redaction criticism must always be kept in mind. They are in fact quite limited. Redaction criticism is not concerned with the total theology of the biblical writers. A Markan redaction criticism is not concerned with all that Mark believed about God, the authority of the OT, the canon, eschatology, angels, etc. Rather, it is concerned with Mark's unique theological contribution to the gospel traditions he used and his ultimate purpose in writing his gospel. As a result of this emphasis upon the unique element of the Evangelists' writings, there has resulted a strong interest in the "diversity" of the Gospels and a corresponding loss of interest in their "unity." If one mistakenly equates these unique theological emphases with the theology of the Evangelists, this problem is further aggravated. Seen in their totality, the theology of the Evangelists possesses a great unity. This is witnessed to by the fact that the early Church incorporated the Evangelists' work side by side into their canon. Placed alongside such works as the Quran, the Vedas, the Tipitaka, the Sayings of Confucius, and the Avesta, the Gospels have a tremendous unity. The aim of redaction criticism—which seeks to understand the unique contribution of each Evangelist to the gospel traditions and the *Sitz im Leben* out of which they wrote—is clearly focused upon the "diversity" of these works. The legitimacy of such investigation is undeniable, but it is clearly erroneous to assume that the redactional emphases of the individual Evangelists represent their total theology or to lose sight of their "unity."

E. The Value of Redaction Criticism

Redaction criticism has brought a number of important insights into the study of the NT texts. With regard to the gospels, these insights have shown us that the Evangelists were not mere collectors of the traditions but interpreters of them. As a result, the gospels can and should be studied as wholes in light of the situation of each author. This does not mean that the study of the gospels for the purpose of learning about the *Sitz im Leben* of Jesus or the early Church is illegitimate. It means rather that any study of the gospels is incomplete if it does not take into consideration the unique theological contributions of the Evangelists. Only if redaction criticism is included in the study of the gospels will we be dealing with the total history of the gospel traditions. Another contribution of redaction criticism is that it focuses the attention of the exegete upon the actual meaning of the text. Whereas form criticism and the quest for the historical Jesus used the gospels as sources for their investigations, redaction criticism is concerned with

what each author sought to teach and proclaim by his writings. Redaction criticism is therefore concerned with investigating the final canonical product for its own sake, and not simply as a means of gaining historical information about the historical Jesus or the early Church. Redaction criticism sees the meaning of the present canonical text as the final goal of its investigation.

Another value of redaction criticism that can be mentioned is the hermeneutical insight that is gained from such an investigation. By observing how the Evangelists used their sources, we are assisted both in interpreting difficult texts and in grasping their significance for today. An example of the former is seen in Luke 14:26, where Jesus states that to follow him one must "hate" his father, mother, wife, children, brothers, and sisters. By observing the parallel in Matt 10:37, we understand that the Evangelist knew that "hating" was an idiomatic expression for "loving less." Thus, his redactional work enables us to understand better what Luke 14:26 means. With regard to the application of biblical texts, we might refer here to the famous "exception clause" found in Matt 5:32 and 19:9. It is clear that the Matthean sources (Mark and Q) lacked this exception clause. This is also true of the Pauline version of the saying in 1 Cor 7:10–11. By his addition of this exception clause, Matthew reveals that he did not understand Jesus' teaching on divorce as a legal prescription to cover all circumstances but rather as an example of Jesus' use of overstatement. This Matthew clarified for his readers by his addition of the exception clause. How one evaluates this interpretative comment will, of course, vary, but by his redactional activity Matthew reveals his interpretation of this dominical teaching for his reader.

The final contribution of redaction criticism which will be mentioned involves the Synoptic Problem. In seeking to understand the literary relationship which exists between Matthew, Mark, and Luke, redaction criticism has demonstrated that the redactional work of Matthew and Luke can be easily understood if both Evangelists used Mark as their source. On the other hand, the redactional work of Mark and Luke cannot be understood on the basis of their having used Matthew. One of the strongest arguments today for the priority of Mark lies in the success of redactional critical studies based upon this presupposition. Future discussion of the Synoptic Problem will no doubt involve more such redactional investigation.

REDEMPTION. This entry examines how the notion of redemption is articulated in OT and NT texts.

OLD TESTAMENT

The word "redemption" is the accepted translation of the literal derivative of two Heb roots, *gʾl* and *pdh.* In context, it may have particular nuances. It is also a prophetic, eschatological concept. In the Hebrew Bible, God's interrelationship with nature, humanity, and especially Israel is expressed in metaphors drawn from observable natural and social phenomena (including politics, family, law, etc.). For example, the God-Israel relationship is variously depicted as analogous to that of a king-subject, of a father-son, of a husband-wife, etc. Likewise, the theological dimension of the redeemer-redeemed relationship is also built upon a social and legal foundation.

   7. The Blood Redeemer
   8. Ransom
   9. Summary
B. Metaphorical Meaning: The God-Israel Relationship
   1. Redeeming Individuals or Groups from Adversity
   2. Redeeming Israel from Slavery in Egypt
   3. Future Redemption from Destruction and/or Exile
   4. Conclusions
C. Conceptual Meaning: The Eschatological Age of Redemption
   1. Characteristics of the Age
   2. Role of Repentance

———

A. Literal Meaning: Sociolegal Redemption

In sociolegal contexts, redemption generally refers to the rescue of an individual from a difficult obligation by means of a monetary payment.

1. Land and Houses. Physical property such as land and houses could also be reclaimed through monetary payment. The Israelites were considered tenants on God's land, with the right to produce. Therefore, transfer of property always reverted to the original tenant or his heirs at the jubilee (Lev 25:8–23). If an impoverished Israelite (termed "brother" in Leviticus 25) was forced to sell his land to raise cash, his near redeemer (i.e., kinsman) was supposed to redeem it (v 25, Heb *gʾl*). If the Israelite did not have a redeemer, but had subsequently gained enough wealth, then of course he himself could redeem it (vv 26–27); otherwise, the land would automatically return to him at the jubilee year (v 28). In contrast, Eshnunna #39 states that a man only had the right to redeem his house when the purchaser wished to sell it.

A house in a walled city was not considered "land." If not redeemed within a year, it became the buyer's permanent property (vv 29–30). However, houses outside of walled cities were considered to be redeemable as fields (v 31). Only houses in Levitical cities were always redeemable by the Levites (vv 32–33). Levites were never permitted to sell their land to non-Levites (v 34).

By implication, perhaps, one could sell land in perpetuity to one's own relative. Accordingly, Jeremiah, a priest (and therefore, a Levite), was able to buy the fields of his first cousin Hanamel in the extended family territory of Anathoth (Jer 32:6–15). Jeremiah had the right of redeemer and heir (vv 7–8; cf. Ezek 11:15). Similarly, Boaz was one of Naomi's relatives and redeemers (Ruth 2:20); however, a nearer redeemer-kinsman existed whose claim therefore took precedence over his (3:12–13). Only when that redeemer surrendered his right was Boaz permitted to buy Naomi's land (4:1–9).

It is interesting that if a person was defrauded and then died, the criminal would be required to pay the *ʾāšām* ("guilt") penalty to the *gōʾēl* of the deceased. If there was no redeemer, then the penalty would be paid to the sanctuary (Num 5:8).

2. Indentured Servants. Also, persons could be rescued from servitude by a monetary payment. An impoverished Israelite (again, "brother") who was forced to sell himself into indentured servitude to a resident alien had the same rights of redemption (*gʾl*) as existed with relationship to land. Indentured servitude was not slavery—the resident alien was not allowed to oppress the indentured Israelite (v 53). Israelites could not serve in perpetuity since they were ultimately God's servants whom He had removed from Egypt (v 55). Verses 48–49 indicate that the obligation of redeemer devolved upon the nearest relative.

In the case of a daughter sold to an Israelite as a maidservant/concubine, her master had to permit her to be redeemed (Heb *pdh*) if he was not pleased with her (Exod 21:8; cf. Lev 19:20; for a somewhat similar situation, cf. Hammurabi #119). In Ps 49:8 (—Eng 49:7) notes the refusal of a man to redeem (*pdh*) his brother; perhaps a lamentable reference to those who had the financial means (vv 7, 11, 12) but not the moral inclination to ransom their relatives from servitude.

3. Cultic Offerings. A cultic offering could be reclaimed by substituting a monetary payment. The offering of an unclean animal (Lev 27:9–13, 27), a house (vv 14–15), a field (vv 16–25), and a tithe of the land (vv 30–31) was redeemable by the owner at full monetary value plus 20 percent. Perhaps the case of Jonathan, who was unaware that he was disobeying his father's oath (1 Sam 14:27), is similar. The people redeemed (*pdh*) him (i.e., rescued him) from the death penalty (v 45). In Leviticus 27, redemption (i.e., substitution) of a tithe of animals (vv 32–33) or of a banned object or person was forbidden (vv 28–29).

4. The Firstborn. In commemoration of the tenth plague, all firstborn were sanctified, subject to being sacrificed to God (Exod 13:15). However, under prescribed circumstances, substitutions could be made. Firstborn asses (as unclean animals) were to be redeemed (*pdh*) by sheep (13:13; 34:20; Num 18:15), but the firstborn of unclean animals could not be redeemed (Num 18:17). At the age of one month, all firstborn male Israelites were to be redeemed (*pdh*) by five shekels (vv 15–16; cf. 3:46–51), apparently by the father (Exod 13:13, 15).

5. The Wife of a Deceased Relative—*gʾl*. In an incident with similarities to the law of levirate marriage (Deut 25:5–10) and related to the redemption of land, the book of Ruth assumes that a near kinsman-redeemer was supposed "to raise up the name of the deceased upon his property" by legally acquiring "the wife of the deceased" (Ruth 4:5, 10, with Deut 25:5–6) and siring children who would inherit the property of the deceased. When the near kinsman refused, he signaled this by removing his sandal (Ruth 4:7–8 with Deut 25:9). However, it may also be that the episode in Ruth is connected to the case in Exod 21:8 (*pdh*) of the daughter sold as a maidservant/concubine. In both Exod 21:7–8 and Ruth 3:9 the term *ʾmh* is used. Thus, when Boaz called Ruth "my daughter" in 3:10–11, he may have been saying that "I am adopting you as my daughter, and I will redeem you as one redeems his daughter from servitude." Another perhaps more remote possibility is that Boaz may have been protecting the widow Ruth in consonance with the law in Deut 24:17–18, which emphasizes God's redemption (*pdh*) of Israel from Egypt (see below).

6. The Owner of a Goring Ox. When an ox with a reputation for goring killed a person, its owner was subject to the death penalty. However, the owner was permitted to redeem (*pdh*) himself from the death penalty if a "ransom (*kpr*) is laid upon him" to be given to the deceased's next of kin (Exod 21:29–30). This law may be related to that of the "blood redeemer" below.

7. The Blood Redeemer. The blood redeemer (*gōʾēl haddām*) was the closest male relative of a murdered person, as is indicated by the stories of Gideon's killing of his brothers' slayers (Judg 8:18–21; cf. 1 Kgs 16:11); of Joab's killing of Abner, his brother's slayer (2 Sam 3:27); and of Absalom's killing of Amnon, his sister's rapist (2 Sam 13:28–29). In her parable of Absalom's act, the wise woman of Tekoa specifically used the term "blood redeemer" (Heb *gōʾēl haddām;* 2 Sam 14:11). The case of Absalom is important, since it illustrates broadened parameters of the blood redeemer, who avenged not just murder but severe harm (in this case, rape) inflicted upon a close relative.

In the case of a homicide (Num 35:12–28; Deut 19:4–6, 11–13; Joshua 20; 2 Sam 14:11), the victim's blood redeemer was responsible for putting to death the person who had committed premeditated murder (Num 35:19); the murderer was handed over to the blood redeemer by the elders of his city (Deut 19:12). The accidental murderer found safety in the designated cities of refuge (Num 35:12–15, 22–25; Josh 20:4–6). However, if the blood redeemer killed the accidental murderer before he could reach a city of refuge, or after the accidental murderer had left the city of refuge prior to the death of the high priest, the blood redeemer was guiltless (Num 35:26–28; Deut 19:5–6). In contrast, the Middle Assyrian Laws (A10, B2) proclaimed that the "owner of the life" (parallel to the biblical "blood redeemer") could take compensation in lieu of execution.

8. Ransom. Although not strictly understood as redemption, the Heb root *kpr* ("ransom") is equated to *pdh* in Exod 21:29–30 (see above); thus, "redemption" and "ransom" are not unrelated concepts. The severity and extreme economic cost of ransom, which would at least on occasion be the ransom for a life, is attested by Prov 13:8, "The ransom of a man's life (*kpr npš*) is his wealth" (*EncMiqr* 4: 231–33; cf. Hammurabi #32). The inability to ransom life from the death penalty is reflected in the laws of (a) the murderer, "Do not take ransom for the life of the murderer" (Num 35:31); (b) the blood redeemer, "Do not take ransom from him who has fled to his city of refuge" (v 32); and (c) in the wisdom statement on the husband's reaction to his wife's adulterer, "He will not accept any ransom" (Prov 6:35, see vv 32–34). Of course, there is no ransom which can avert God's decree (Ps 49:8–9—note the connection to *pdh;* Job 36:18), although God can redeem from death (Job 33:24). "Ransom" is paralleled to judicial bribery (*šḥd*) in 1 Sam 12:8 and Amos 5:12. It may be to the latter text that Prov 21:18 relates, "the wicked is the ransom for the righteous." The purpose of the half-shekel ransom given by each adult Israelite in Exod 30:12 was to save their lives from a divinely sent plague (cf. the plague caused by David's census in 2 Samuel 24).

9. Summary. The *gō'ēl* ("redeemer") was always the nearest adult male relative, responsible for the economic well-being of his kin, inasmuch as the latter lacked sufficient means to redeem his own property. As blood redeemer, the *gō'ēl* avenged murder and, by extension, all severe harm inflicted upon a relative. The passages in Exod 21:8 and Ps 49:8, and the redemption of the firstborn son in Exod 13:13, 15, all indicate that *pdh* is also used primarily in reference to a near male relative (usually the father), or to one's redemption of one's own property (such as firstborn unclean animals). The one exception is the case of Jonathan, who was redeemed from the death penalty by the people. However, it may be argued that the relationship of a people to their prince-leader is here modeled on the familial context. Unlike *g'l*, which can take an inanimate object, the object of *pdh* is always an animal or human (*TDNT* 4:328–35). Concerning ransom (*kpr*), one usually paid it to rescue oneself from an extreme penalty.

B. Metaphorical Meaning: The God-Israel Relationship

1. Redeeming Individuals or Groups from Adversity. The concept that God was the ultimate redeemer-rescuer of the individual and of the collective body from adversity was deeply entrenched in Israelite thought already during the preexilic period. Jacob's blessing of Ephraim and Manasseh (Gen 48:16) provides a good illustration in its reference to "the angel who redeemed (*gō'ēl*) me from all evil" (cf. Isa 29:22, "The Lord who redeemed [*pdh*] Abraham"). God redeems (*pdh*) from unspecified "troubles" (Heb *ṣrh*, 2 Sam 4:9; 1 Kgs 1:29; Ps 25:22).

Specifically, people prayed to God concerning redemption from (a) enemies (*pdh*: Ps 31:5–6 [—Eng 4–5]; 44:27 [—Eng 26]; cf. v 11 [—Eng 10]; 55:19 [—Eng 18]; *g'l* parallel with *pdh*: 69:19; *g'l*: 107:2; Job 19:25); (b) the wicked (*pdh*: Ps 26:11; cf. vv 4–10; 34:22–23 [—Eng 21–22]); (c) oppressors (*pdh*: Jer 15:21; Ps 119:134; Job 6:23); (d) death (*pdh*: Ps 49:16 [—Eng 15]; Job 5:20; 33:28; cf. v 24, where *kpr* is paralleled probably to the root *pdh*; *g'l*: Ps 103:4); and (e) punishment for sin (*pdh*: Ps 130:7–8).

Furthermore, God redeems (*g'l*) by prosecuting (Heb *ryb*) enemies (Ps 119:154; Lam 3:58) and those who would steal land and orphans' fields (Prov 23:10–11). Similarly, in Psalm 72, the ideal king, appointed by God and recipient of divine righteousness (vv 1–2), will redeem (*g'l*) the lives of the poor and needy for their oppressors (vv 12–14; cf. Deut 24:17–18; see below).

2. Redeeming Israel from Slavery in Egypt. The archetypical act of divine redemption was God's saving of Israel from Egyptian bondage. In Exodus, God redeems (*gʾl*) the Israelites from the suffering of Egypt and saves (*nṣl*) them from slavery (6:6) in order to make them His people (v 7) and to bring them to the promised land. In the Song of the Sea, the redeemed (*gʾl*) people are led to God's pasture (Exod 15:13).

In Deuteronomy, *pdh* is always used to indicate redemption from Egypt. The context of 7:8, 9:26, and 13:6 is opposition to idolatry. In 15:5, 21:8, and 24:18, the rescue from Egypt is mentioned in contrast to inhumane behavior. Deut 9:26 and 21:8 are parts of petitions to God to forgive the people, while the other four occurrences are motivations for obedience to the associated laws.

Outside of Exodus, the only place in which *gʾl* is used in reference to the redemption from Egypt is in Psalms. Ps 74:2 ("Remember your community which you acquired long ago, the tribe of your inheritance which you redeemed, Mount Zion, where you dwell") is a call for God to defeat Israel's destroyers as in days of old. Verse 2 probably hearkens back to Exod 15:13, 16–17. Ps 77:16 ("you redeemed your people by your arm") is in the midst of a passage recounting God's mighty acts (vv 12–21). Psalm 78 is a history from Egypt to David; in v 35 God, the *gōʾēl*, is paralleled to "rock," and in v 42, God is said to have redeemed (*pdh*) Israel from Egypt, described as the "enemy." Finally, Ps 106:10, again part of a history, parallels *gʾl* with "save" (*yšʿ*) and refers to the Egyptians as "hating" and "enemy."

Aside from Ps 78:42, *pdh* in the Psalms refers to redemption from Egypt only in Ps 111:9 where it parallels the covenant. *Pdh* in 2 Sam 7:23 (= 1 Chr 17:21) is Deuteronomistic. Mic 6:4 reminds Israel of the redemption from slavery as part of a rebuke; *pdh* is paralleled to *ʿlh*, God's "bringing up" Israel out of Egypt. Finally, in Neh 1:10, Nehemiah mentions the redemption from Egypt in order to beseech God's mercies to permit the return to Zion (vv 4–12); the verse emphasizes Israel as God's people and "servant."

3. Future Redemption from Destruction and/or Exile. The beliefs that God had redeemed Israel from Egypt, and that God had redeemed and would continue to redeem the individual and the group from present distress, were succeeded by the faith that God would redeem Israel from exile at the "end of days." All eight eschatological uses of *pdh* and, with the exception of Ps 107:2, all twenty-eight such uses of *gʾl* (24 of which appear in later portions of Isaiah) occur in prophecy (as is the case with the one such use of *kpr*).

The earliest prophetic intimation of eschatological usages of *pdh* and *gʾl* occur in Hosea. In Hos 7:13, *pdh* indicates God's readiness to redeem the northern Israelites from the destruction that awaits them due to their idolatry (vv 1, 4). Similarly, in Hos 13:14, God would redeem (*pdh* paralleling *gʾl*) Ephraim from death, except for the obstinacy of Ephraim's idolatry (vv 1, 2, 9, 12). In Isa 1:27, the redemption (*pdh*) of Zion from its sinful state will take place through justice and righteousness, i.e., the death of the sinners (v 28; cf. Prov 21:18) and the institution of a just leadership (v 26). The eschatological use of *gʾl* as "return from exile" first appears in Mic 4:10. *Pdh* and *gʾl* are used together in this sense in Jer 31:11 (from one of Jeremiah's prophecies of redemption to Judah). However, Jer 50:34, in which *gʾl* appears, is inauthentic and late exilic (Unterman 1987: 149). The first half of v 34 is nearly identical to Prov 23:11, pointing perhaps to the roots of God's redemption of Israel here in God's care for the unprotected in society.

The exilic and postexilic portions of Isaiah, focusing as they do on the concept of redemption, house the vast majority of the eschatological usages of *gʾl* and *pdh,* and the one such occurrence of *kpr* (43:3, in reference to the redemption of Israel from Egypt). In truth, Isaiah 34–35 and 40–66 draw upon many different themes and images which attached themselves to *gʾl* and *pdh* (and to the general concept of redemption) over the course of time. Some of these elements, such as creation and Israel as God's servant, are distinctive to this collection (Stuhlmueller 1970). These themes and images interweave, overlap, and defy separation—sure testimony to the ability of the author's mind to contain simultaneously a multitude of related images concerning the idea of redemption. Thus, it is extremely difficult, if not impossible, to isolate in this material specific sociolegal roots for the various usages of both *gʾl* (35:9; 41:14; 43:1, 14; 44:6, 22–24; 47:4; 48:17, 20; 49:7, 26; 51:10; 52:3, 9; 54:5, 8; 59:20; 60:16; 62:12; 63:4, 9, 16) and *pdh* (35:10 = 51:11; 50:2).

Some of these themes and images which play significant roles and occur with some frequency are (a) God/parent–Israel/child (Isa 43:1, 6; 44:24; 49:15; 63:16; 64:7; 66:9, 13); (b) God/master–Israel/servant (41:14; 43:10; 44:21; 48:20; 49:3, 5); (c) God/husband–Israel/wife (50:1; 54:5–8; 62:5); (d) God as a furious, vengeful warrior (often with *nqm*) on behalf of Israel (34:1–8; 40:10; 42:13–15; 49:25–26; 51:9; 59:16–20; 62:1–5; 66:15–16); (e) Israel as God's chosen (*bḥr;* 41:8–9; 43:10; 44:1–2; 48:10; 49:7); (f) the new Exodus (35; 40:3; 42:16; 43:2–3, 16, 19; 48:21; 49:9–12; 51:10–11; 52:12); (g) God's saving Israel (primarily, *ys‹*; 35:4; 43:3, 11, 12, 13; 44:17; 45:8, 15, 17, 21, 22; 46:13; 47:3; 49:8, 25, 26; 50:2; 51:5, 6, 8; 52:7, 10; 59:1, 11, 16, 17; 60:16, 18; 62:1, 11; 63:1, 5, 8, 9); (h) God caring for His poor and needy people (41:17; 49:13; 51:21; 54:11; 58:7; 66:2); (i) God comforting (*nḥm*) Israel (40:1; 49:13; 51:3, 12, 19; 52:9; 54:11; 61:2; 66:13), having mercy (*rḥm*) upon them (49:10, 15; 54:7, 8, 10; 60:10; 63:7, 15), and loving (*›hb*) them (41:8; 43:4; 63:9); and (j) God prosecuting (*ryb*) Israel's enemies (41:11, 21; 49:25; 50:8; 51:22) and helping (*‹zr*) Israel (41:10, 13, 14; 44:2; 49:8; 50:7, 9), so that Israel need not fear (*l› tyr›*; 35:4; 41:10, 13, 14; 43:1, 5; 44:2; 51:7; 54:4, 14).

The latest prophetic eschatological use of *pdh* is in Zech 10:8—return from Exile. The same meaning appears in Ps 107:2.

4. Conclusions. As time passed, the usages of the roots *g›l* and *pdh* as verbs and objects (in reference to the Israelites) became theologically synonymous, so that *g›l* and *pdh* are parallels in Hos 13:14; Isa 35:9–10 (cf. 51:10–11); Jer 31:11; and Ps 69:19. These parallels indicate that lines of distinction between the meanings of the two roots had become blurred in the thinking about God's relationship with Israel. Yet, certain facets of the social and legal roots remained.

(1) The *gō›ēl* was still always the nearest adult male kinsman with the right and the ability of redemption. Thus, God as *gō›ēl* at the very least points to God's close relationship to Israel, probably as father (Isa 63:16) or husband (Isa 54:5–8).

(2) It should be remembered that the enslavement of Israel by Egypt and other oppressions are not comparable to the indentured servitude of Leviticus 25 (vv 3, 53; cf. Deut 15:12–15). In the case of the indentured servant, the redeemer has no animosity toward the temporary master of his kinsman, but rather has the duty to pay off his kinsman's debt or hire (Israel's redemption "without money" from unnecessary enslavement in Isa 52:3 may be in conscious opposition to the circumstances of Leviticus 25; cf. Isa 50:1). Thus, the conditions of Leviticus 25 are not mirrored in the concept of redemption from Exile.

(3) It seems obvious that the divine redemption from Egyptian slavery in order to bring Israel to Canaan became the model for the return from the Babylonian Exile (Jer 16:14–15 = 23:7–8). The most plausible sociolegal root for God's redemption of Israel, whether from Egyptian slavery, Babylonian Exile, or anonymous oppressors and enemies, is the law of the blood redeemer. The *gō›ēl haddām* comes with a sword (Num 35:19, 21) and fury (Deut 19:6) to avenge his beloved relative, a portrait which is similar to the depiction of God as the redeeming, vengeful warrior in Isaiah (e.g., 49:25–26; 51:9–11; 59:16–20).

(4) All sociolegal cases of *g›l*, with the exception of cultic offerings, concern an impoverished Israelite (Leviticus 25) or one who is severely abused (requiring the intervention of the *gō›ēl haddām*). It is a logical step to include all the deprived members of society. Thus, it is not surprising that God is portrayed as the redeemer of the oppressed, the widow, the stranger, and the poor (Deut 24:17–18; Ps 72:12–14; Prov 23:10–11).

(5) Ultimately, the association of God's redemption with rescue and mercy gives the individual hope that God will redeem one from punishment for sin (Hos 7:13; Isa 44:22; Ps 130:7–8), and even from death (Hos 13:14; Ps 49:16; 103:4; Job 5:20; 33:28).

C. Conceptual Meaning: The Eschatological Age of Redemption

1. Characteristics of the Age. The Hebrew prophets understood destruction and exile as divine punishment for Israel's obstinate, rebellious sins. However, God's love for Israel would eventually compel Him to bring about the age of redemption, which included certain minimal components (cf. *EncMiqr* 2: 388–91): (a) the entire people would be gathered from all the lands of exile in a new exodus which would return them to the land of Israel (e.g., Jer 30:3); (b) once in the promised land, the people would enjoy miraculous agricultural harvests (e.g., Amos 9:13) and increased flocks (e.g., Jer 31:28); (c)

the people would dwell securely (e.g., Amos 9:15; Ezek 37:25) and would increase (e.g., Jer 31:27); (d) the Davidic monarchy would be restored (e.g., Amos 9:11; Ezek 37:24) and under just rulers (e.g., Isa 11:1–5; Jer 23:4–5); (e) the cult and priesthood would be reconstituted (Jer 33:18; Zech 3); and (f) all Israel would obey God's Torah—an exilic idea (Jer 31:34; Ezek 36:27).

2. Role of Repentance. Lev 26:40–41 (a confession), Deut 4:29–31, and Deut 30:1–10 all presuppose repentance as a condition for redemption. However, the prophets differed on the significance of Israel's repentance in the redemption process (Unterman 1987).

Amos, the first prophet to predict national destruction and exile, regarded redemption in the context that the sinners would die, leaving a righteous remnant (9:8–10). In this scheme of redemption, repentance is superfluous. Hosea, however, vacillated between prophesying a redemption dependent upon repentance (3:5; 14:2–9) and one that was not (2:16–25; 11:8–11). Sometimes Hosea seems to have felt that Israel did not deserve the benefits of God's love unless it repented, and sometimes it seems that God's love simply overwhelmed His senses. Hosea, more so than Amos, was the first prophet to live on the edge of national disaster. Thus, the need to relate repentance and redemption was more critical with him than with Amos, especially since, unlike Amos, Hosea conceived of no innocent remnant. With no prophetic models to follow, and given the tempestuous times in which he lived and how they must have played upon his psyche, it is not surprising that Hosea's views of the redemptive process fluctuated. It appears that First Isaiah viewed repentance as a prerequisite for redemption (Milgrom 1964: 169).

Jeremiah's thoughts on the relationship of repentance to redemption progress through three stages. First, during Josiah's reign, the young Jeremiah believed that Israel's repentance and God's mercy were the determining conditions for redemption (3:6–13; 3:19–4:2; 31:2–9, 15–22). Second, between 597 and 587 B.C.E., in prophecies of redemption to the Jehoiachin exiles, a subtle shift occurred as the element of divine mercy outweighed that of human repentance (24:4–7; 29:10–14). Jeremiah had begun to despair of the people's ability to return to God of their own accord. Finally, at the time of the destruction of Jerusalem, the aged prophet abandoned the principle of free will and the attendant demand for repentance. On the basis of his tragic experience, yet consumed by his belief in God's eternal love of Israel, Jeremiah concluded that redemption would be solely the work of God, as permanent as creation itself (31:27–37; 32:37–41; 33:1–26; 50:17–20).

Ezekiel never prophesied that repentance was the determinant of national redemption. In 11:17–20 (date 592? cf. 8:1), God promises repentance as part of the redemptive process, reminiscent of Jeremiah's second stage. In later prophecies (chaps. 36–37), much like his model Jeremiah, Ezekiel did not mention repentance. Rather, he said that God would redeem Israel for His name's sake (36:21–23).

The only clear call for repentance in exilic Isaiah is in 44:22c, which is mitigated by the surrounding verses. The main theme in Isaiah 40–54 is unconditional redemption due to God's mercies. The call to repentance in 55:6–7 may refer to individual, not national, redemption, or it may be spurred by the immediacy of the return under Cyrus. In chaps. 56–66, postexilic Isaiah clearly states that God will redeem the repentant (59:20; see also 56:1–2; 58:1–14; 59:9–13; 64:4–6). It appears that the return to the land, presumed in Isaiah 56–66, rejuvenated the old preexilic concept of obedience to God in order to ensure national success.

If Jeremiah, Ezekiel, and Isaiah 40–66 are taken as forming a continuous line from the latter part of the 7th century B.C.E. to the latter part of the 6th, a pattern emerges. As long as destruction had not overtaken Judah, prophecies of redemption still contained the precondition of repentance (dovetailing with the standard prophetic calls for repentance to avoid divine punishment). However, once Jerusalem has been destroyed and the full Exile is under way, redemption is seen as totally dependent upon God's beneficence. It appears that the effect of the cruelty of destruction and the harshness of exile served in large measure to wipe out the need for repentance (e.g., Jer 30:5–17; Isa 47:6). The manifestation of the punishment is a motivation for divine forgiveness and purification of the people. In the exilic situation, the very demand to repent in order to effect national redemption might have been more than the people could have borne.

With the Persian defeat of Babylon and the advent of the actual restoration to the land, the requirement of repentance begins to reappear. Finally, with the people again in their homeland, the demand to return to God regains its preexilic prominence.

JEREMIAH UNTERMAN

NEW TESTAMENT

In the NT, the notion of redemption carries two meanings. First, it is regarded as the work of God in delivering His people from spiritual bondage unto Himself, usually said to be at the expense of Christ's death. Second, it is also associated with the eschatological deliverance and resurrection of God's people at the Parousia of Christ.

F. The Doctrine of Redemption in History

———

A. Terminology of Redemption

There are two word groups which are commonly used to speak of redemption in the NT. Warfield has done a close study of the vocabulary involved (1929: 328–41). It is not possible to assign any particular word to the domain of one author; both word groups are popularly used throughout the literature.

Agorazō is the common word for "to buy" (see Matt 13:44); "to buy" or "to redeem" may also denote the act of redemption (1 Cor 6:20). The compounded form *exagorazō* was taken by Chrysostom with its full etymological force—"to buy away from." This has been taken to unwarranted lengths by those who define the verb, itself, as "to buy out of the agora, never to return." Its etymological roots seem not to have affected its meaning, although in context "redeem" usually implies that God redeems people away from something (Morris 1965: 40).

The other word group, popular in the LXX, is represented by *lytroō* ("to redeem," Titus 2:14; always in the middle or passive in the NT). Its cognates are *lytron* ("ransom," only in Mark 10:45 = Matt 20:28), *antilytron* ("ransom," only in 1 Tim 2:6), *lytrōsis* ("redemption," Heb 9:12), and the popular NT word *apolytrōsis* ("redemption," Rom 3:24). In his commentary on Romans (col. 531), Chrysostom wished to invest *apolytrōsis* with an intensive force based on the compounding of *apo* ("away from") with *lytrōsis.* This led him to conclude that the "redemption of the body" in Rom 8:23 was not merely *lytrōsis*,but being redeemed never to return to the original captivity. The actual use in the NT does not indicate that *apolytrōsis* in itself is an intensive form.

In the OT, redemption normally implies redeeming at a price, although there are exceptions (Marshall 1974: 153 n.1; Murray 1955: 41–42). At times it means generally "to deliver." Leon Morris, therefore, goes a bit too far when he says that OT redemption always comes at a price, even if it is merely the cost of Yahweh's power (Morris 1964: 24). There is no price of redemption in Isa 52:3—"You were sold for nothing, and you shall be redeemed (*lytroō*) without money." The NT writers often used the rare word *apolytrōsis*,which in extant literature almost always signified "obtaining release by payment of ransom" (Morris 1964: 41); an exception is Dan 4:34 LXX.

B. Conceptual Background

The language of redemption was, for the original readers of the NT, familiar and evocative.

The LXX undoubtedly has the weightiest influence on the NT concept of redemption (Warfield 1929: 341–52). *Apolytrōsis*,which is used ten times in the NT, is used only in Dan 4:34 to mean "release." But *lytron* was payment which served as a substitute for a person's life (*TDNT* 4:329). The cognate verb *lytroō* translated the two Hebrew verbs for redemption, *gā'al* and *pādâ.* The firstborn was to be redeemed from God by sacrifice (Exod 13:11–16). Family property which had been sold could be redeemed by a near relative (Lev 25:25–34), as could people sold into bondage (Lev 24:47–55). In Exod 15:13, *lytroō* denotes the epitome of God's redemptive work was in the Exodus—"Thou hast led in thy steadfast love the people whom thou hast redeemed" (see also Exod 6:6; Deut 9:26; Neh 1:10). As Warfield notes, "Here there is at least no emphasis placed on the deliverance being in mode a ransoming. The stress is thrown rather on the power exerted in it and the mind is focused on the mightiness of the transaction" (1929: 345). It is "redemption by price and power" (Murray 1955: 78).

The Jews also foresaw that God would redeem them in the future. Isa 52:3 speaks of liberation by the mighty power of God; such hopes also find expression in Luke 24:21—"But we had hoped that he was the one to redeem Israel."

David Hill has suggested that martyr theology has directly affected Paul's theology (1967: 41–48). In *4 Macc.* 17:21, it is speculated that the Jewish martyrs acted as a "ransom" for the whole nation and thus brought about divine deliverance. But this parallel is too remote to serve as the matrix of the whole NT doctrine.

On the other hand, the social background of slave redemption provides a useful key to understanding the NT imagery. The practice of manumission—buying slaves in order to give them their freedom—was extremely widespread. Deissmann (1927: 318–20) went further to locate redemption in the practice of sacral manumission—the emancipation of slaves by a deity. He maintained that Paul drew from that background to contextualize redemption for a Hellenistic audience. A slave would save his earnings and remit to the temple the price of his freedom. The slave owner would then take the slave to that temple, whereupon the "god" would redeem the slave and give him his freedom (although it should be noted that the NT vocabulary of redemption never appears in such transactions; see Lyonnet and Sabourin 1970: 108). The freedman was then the "slave" or devotee of the god. In the record of the transaction the slave was said to have been bought "with a price" (cf. 1 Cor 6:20; 7:23) and given "liberty" (Gal 5:13). Many times, warnings and penalties were attached to the record in the event that the slave was brought again into bondage (Gal 2:4; 5:1).

Deissmann's approach has been criticized by Lyonnet and Sabourin (1970: 107), who claim that the differences between redemption and manumission are more striking than the similarities. We may conclude that if divine manumission was the particular background for some of Paul's teaching on redemption (notably in 1 Corinthians 7), then modifications have been made: God's role in the purchase is active, not symbolic; the "slave" has nothing to contribute to his release; the attachment of the freedman to God is real. Crawford's caution on rooting the NT picture strictly in sacral manumission is against "attempting to trace in the work of Christ an exact conformity to everything that is done in human acts of redemption" (1954: 62).

It is clear that the NT writers used imagery both from the Exodus and from the redemption of slaves (Lyonnet and Sabourin 1970: 110–12). Exodus imagery predominates in Col 1:14; 1 Pet 1:18–19; and Rev 5:9 and 14:3–4. On the other hand, the picture of the redemption of slaves underlies 1 Cor 6:20; 7:23; and Gal 4:5.

This is not to say that there are two or more kinds of redemption in the NT; but the authors were free to choose from two images of liberation to describe the saving action of God in Christ.

C. Redemption and Salvation

Morris (1965) rightly perceives that "redemption" was much more narrowly defined in the 1st century than it is today. While moderns may speak of redemption as a metaphor for the entire saving act, the NT writers used it precisely in the context of well-known social customs.

The first reference to the redemption of the cross is also the most controversial: "For the Son of man also came … to give his life as a ransom (*lytron*) for many" (Mark 10:45 = Matt 20:28). The

commentaries attest the difficulties that NT scholars have had in attributing this saying to Jesus: it is omitted in the Lukan account, it contains a *hapax legomenon,* it may be based on the *antilytron* saying in 1 Tim 2:6, and it attributes atoning merit to Jesus' death. Marshall (1974: 168–69), on the other hand, cites several arguments to demonstrate its primitive origin, and perhaps its authenticity.

Paul's understanding of the death of Christ as redemption seems to come closest to the custom of manumission. The old man was a slave to a number of masters: sin (Rom 7:14; Titus 2:14), the Law (Gal 3:13; 4:1–7), death (Rom 8:21, 23), false gods (Gal 4:8–9), and Satan's kingdom (Col 1:13; also Heb 2:14–15). Under these deceitful masters, most slaves believed themselves to be truly free—in reality they walked within a limited circle of behavior, which in 1 Pet 1:18 is called "the futile ways inherited from your fathers."

The bare fact of Christ's instrumentality in redemption is brought up in 1 Cor 1:30: "Christ Jesus, whom God made our … redemption" and in Titus 2:14: "who gave himself for us to redeem us from all iniquity" (see also *Ep. Barn.* 14: 8). Normally, the cross is central to soteriological redemption. Thus, in Rom 3:24 Paul states that "they are justified by his grace as a gift, through the redemption (*apolytrōsis*) which is in Christ Jesus." While this redemption is not explicitly either "deliverance" or "ransom through Christ's blood," the context shows that justification is made possible through his substitutionary death.

The connection between redemption and the blood of Christ is developed in Colossians, Ephesians, and other non-Pauline literature. Col 1:14 says that the past liberation from the dominion of darkness is "redemption," which in part means "the forgiveness of sins." According to its parallel in Eph 1:7, "In him we have redemption through his blood, the forgiveness of trespasses." Col 1:14 does not contain the phrase "through his blood"; Eph 1:7 is best regarded as its expansion. Colossians certainly regards redemption as taking place in Christ's death, God "making peace by the blood of his cross" (Col 1:20).

According to the author of Hebrews, Christ "entered once for all into the Holy Place, taking … his own blood, thus securing an eternal redemption" (*lytrōsis;* Heb 9:12). The new covenant means release from legalism and sin: "… a death has occurred which redeems (*apolytrōsis*) them from the transgressions under the first covenant" (Heb 9:15). In 1 Pet 1:18–19, it is indicated that redemption is bought with the blood of Christ, who is compared to the Paschal lamb. Revelation also bases redemption in the blood of the Lamb (Rev 5:9; 14:3–4).

If the blood of Christ is the price of redemption, then to whom was the price paid? While the NT does not dwell on the details, it is implicit that Christ offered himself to God to atone for sin. According to Heb 9:12, Christ's work is typified by the priest, who takes the blood of atonement into the Holy Place. Rom 5:10 shows that it is God who must have sacrifice in order to allow people into his fellowship (Marshall 1974: 156). Modern abhorrence of the concept of divine wrath and reconciliation should not allow us to be blind to the NT understanding of Christ's death as atonement.

There are other passages which teach redemption but do not have either of the two word groups for redemption: Acts 20:28—"the church of the Lord which he obtained with his blood" (see also Gal 1:4; 2:20).

In the gospel, the slave is redeemed to serve another master. While Deissmann (1927) has pointed out that sacral manumission bound the freedman only in a loose allegiance to his god, the NT teaches that bondage to God is quite real and exists at one and the same time with Christian liberty (see Rom 6:18).

Bondage to God is more than service; Christian leaders are referred to not only as *diakonoi* but also as *douloi,* a word to which Deissmann (1927: 319) insists we give its full force. Note Paul's insistence on this point in 1 Cor 6:19–20: "You are not your own; you were bought (*agorazō*) with a price. So glorify God in your body."

Paul naturally has an interest in redemption from bondage to the Law, and this is why he tells the Galatians, "For freedom Christ has set us free; stand fast therefore, and do not submit again to a yoke of slavery" (Gal 5:1). But legalism is not the only threat to emancipation: "for you were called to freedom, brethren; only do not use your freedom as an opportunity for the flesh" (Gal 5:13).

Turning away from the freedom of redemption may lead one to false doctrine and abominable moral apostasy. 2 Peter says that Christians "may escape from the corruption that is in the world" (1:4); it

describes the false prophets who are "even denying the Master who bought (*agorazō*) them, bringing upon themselves swift destruction" (2:1).

Paul can also describe redemption as adoption. In Gal 4:1–7 he uses *exagorazō* and demonstrates that God has freed us from slavery to be adopted as full-grown children, and thus as heirs. Meanwhile, Revelation describes the redeemed as being freed to participate in God's royal priesthood: "for thou wast slain and by thy blood didst ransom men for God … and hast made them a kingdom and priests to our God, and they shall reign on earth" (Rev 5:9–10; also Rev 14:3–4).

D. Eschatological Redemption

The Jews often used *lytroō* to speak of the eschatological deliverance by God or the Messiah. In human history, Israel was delivered from servitude by human instruments; in the future, the people will be delivered by God alone, and undergo servitude no longer (*TDNT* 4:349–51). This thought appears several times in the NT, and once again the idea of a ransom price does not seem to be present. The final deliverance is analogous to the Exodus from Egypt, which was carried out without payment but through the power of God. Luke, in particular, favors this facet of redemption: "for he has visited and redeemed (*lytrōsis*) his people" (Luke 1:68). The same word appears in Luke 2:38, when Anna speaks "to all who were looking for the redemption of Jerusalem."

Only the Lukan version of Jesus' eschatological message shows a continuity with Jewish convention, in Luke 21:28: "look up and raise your heads, because your redemption (*apolytrōsis*) is drawing near."

Since Deissmann (1927) approached the NT doctrine through its Hellenistic background, he did not appreciate that there is an eschatological aspect of redemption. This side appears most clearly in Eph 4:30: "And do not grieve the Holy Spirit of God, in whom you were sealed for the day of redemption" (cf. Eph 1:13–14; see also *2 Clem* 17:4). Paul relates this eschatological redemption first to creation in Rom 8:21: "because the creation itself will be set free from its bondage to decay." This liberation will take place at the resurrection, otherwise known as "the redemption (*apolytrōsis* of our bodies" (Rom 8:23) and the "revealing of the sons of God" (Rom 8:19). Here, redemption seems to have the meaning of deliverance from mortal decay rather than of God paying a price to ransom our bodies.

E. "Redeem the Time"

Both Col 4:5 and Eph 5:16 contain the exhortation to redeem the time, using *exagorazō* to describe how Christians should live in this evil age. The opposite of redeeming time seems to be wasting time or letting all the good opportunities go to the devil. The RSV rendering, "making the most of the time," captures the sense of these verses.

F. The Doctrine of Redemption in History

One of the more extreme of ancient theological ideas is that God redeemed his people by paying Satan for their release. Advanced by Irenaeus and developed by Origen, the theory was that the devil possessed the human race by right, but was deceived by taking Christ as a ransom; Christ arose from the dead, thus redeeming the lost and escaping Satan's grasp (Lyonnet and Sabourin 1970: 207–11). This "Ransom to Satan" idea was enormously popular for centuries, but in the 11th century Anselm successfully laid it to rest in his *Cur Deus Homo.* Christian orthodoxy since Anselm has generally held to some form of satisfaction theory of the atonement.

Liberal theology has rejected the idea of Christ's death as a payment for sin (Warfield 1929: 358–61). Redemption becomes deliverance from cosmic alienation (Carré 1914: 100–167) or, in some cases, the redemption of societal structures (Barton 1934: 139–40).

REED. See FLORA.

REELAIAH (PERSON) [Heb *rĕ‹ēlāyâ* (רְעֵלָיָה)]. Var.RAAMIAH; REELIAH;RESAIAH. One of the leaders of the group of returnees from Babylonian Exile who is listed along with Zerubbabel in Ezra 2:2 (= Neh 7:7 = 1 Esdr 5:8). One name has apparently been dropped from the Ezra list, for those in Nehemiah and 1 Esdras include twelve leaders in what is probably a symbolic representation of all Israel. The form of the name in Neh 7:7 is Raamiah (Heb *ra‹amyâ*), and in 1 Esdr 5:8 it is Resaiah (Gk *Rhēsaias*). The form Reeliah (RSV, 1 Esdr 5:8; Gk *Rheelias*) apparently originates out of confusion between forms of the name Bigvai in various mss of 1 Esdr 2:2 (including *boroliou* and *rheeliou*) and the reading *rheelias* for Reelaiah in the LXX of Ezra 2:2. For discussion concerning the list in Ezra 2, see AKKUB.
CHANEY R. BERGDALL

REFUGE, CITIES OF. Six cities are set aside within Israel as Cities of Refuge (Heb *‹ārê mīqlāṭ*). These are places of sanctuary or asylum where a person who unintentionally kills someone may reside, without fear of blood revenge, until a trial can be held. These cities are discussed in Exod 21:13; Num 35:9–15; Deut 4:41–43; 19:1–13; Joshua 20; and 1 Chronicles 6.

The idea of asylum is not unique to the Hebrew tradition. Several ancient peoples, in the ancient Near East and elsewhere, had the idea that fugitives could gain sanctuary by proceeding to or fleeing to certain designated places. Often these places were cultic centers. In the Hebrew Bible we see this tradition in 1 Kgs 1:50–53 where Adonijah, fearing Solomon, seeks sanctuary by holding on to the horns of the altar. In this instance, Solomon observes the idea of sanctuary and allows Adonijah to remain alive, at least for a while (see 1 Kgs 2:23–24). However, in another instance (1 Kgs 2:28–34), Solomon ignores the idea of sanctuary and has Joab, a supporter of Adonijah, killed, even though Joab is clinging to the horns of the altar.

The legislation for the designation of Cities of Refuge is found in Exodus, Numbers, and Deuteronomy. In Exod 21:12–14, which is part of the Covenant Code and thus probably reflects an early tradition, a distinction is made between intentional and unintentional murder. The perpetrator of an intentional murder shall be dealt with immediately, but the person who kills accidentally, or at least without intention, shall have a place to flee. This distinction is continued in Num 35:9–15. Here, the cities are specifically called Cities of Refuge *‹ārê mīqlāṭ* (Num 35:11). They are to be places where the unintentional murderer may wait until he can stand for judgment before the community (Num 35:12), without fear from an avenger (see Gen 9:5–6; Num 35:16–21, esp. v 19). In addition, the passage specifies that there will be six Cities of Refuge (Num 35:13), three of which shall be E of the Jordan River and three W of the Jordan (Num 35:14), and that these cities shall be available for the people of Israel, for sojourners and for those who dwell in their (Israel's) midst (Num 35:16).

The passages in Deuteronomy continue the same legislative perspective, with the added specification of particular cities as Cities of Refuge. In Deut 4:41–43, the cities E of the Jordan are mentioned. These are Bezer for the Reubenites, Ramoth in Gilead for the Gadites, and Golan in Bashan for the Manassites (Deut 4:43).

Deut 19:1–13 is concerned with the cities W of the Jordan. While they are not named, three cities are to be set up once the land of Canaan is possessed. This passage also provides an illustration and further specification of the usage of the Cities of Refuge. The example is the accidental slaying of someone with an ax (Deut 19:5). The Cities of Refuge are to be used to prevent the shedding of innocent blood (Deut 19:10), trying to avoid an instance where an "avenger of blood" slays someone who kills unintentionally

(Deut 19:6). Furthermore, should someone who hates and then kills intentionally seek asylum in a City of Refuge, the elders of the city are to hand that person over to the "avenger of blood" for execution.

Another explanation of the idea of sanctuary and the actual listing of the Cities of Refuge are found in Joshua 20. Here, after a reference to the prior discussion of Cities of Refuge with Moses, Yahweh explains the idea of Cities of Refuge to Joshua. In addition to repeating the general theory of sanctuary, a procedure for admission to a City of Refuge is mentioned in Joshua 20:4. The killer must explain his case to the elders of the city in the gate of the city. Also, there is an obscure comment that the slayer may return home after a trial or after the high priest has died (Josh 20:6). The reasons behind this amnesty after the death of the high priest are not fully understood.

After this discussion of asylum in general, Joshua sets up the Cities of Refuge themselves (Josh 20:7–9). Kedesh in Galilee, Shechem in Ephraim, and Kiriath-arba (Hebron) in Judah are the three cities W of the Jordan (Josh 20:7). They go with the three cities E of the Jordan—Bezer, Ramoth-Gilead, and Golan (Josh 20:8)—which are also mentioned in Deut 4:43. These cities are for the people of Israel as well as for the sojourner (Josh 20:9).

The Cities of Refuge are also listed among the Levitical Cities in Joshua 21 and 1 Chronicles 6. In the list of Levitical Cities in Joshua 21, all of the Cities of Refuge are mentioned as Levitical Cities (Josh 21:13, 21, 27, 32, 36, 38), and all but one are also specifically designated as Cities of Refuge. This lone exception is that of Bezer; it is listed among the Levitical Cities, but not as a City of Refuge (Josh 21:36). In 1 Chronicles 6, all the Cities of Refuge are also listed as Levitical Cities (1 Chr 6:42, 52, 56, 57, 63, 65—Eng 6:57, 67, 71, 72, 78, 80); however, unlike the list in Joshua 21, only two cities are identified as Cities of Refuge—Hebron (1 Chr 6:42—Eng 6:57) and Shechem (1 Chr 6:52—Eng 6:67). It is thus obvious that some connection was perceived between the Levitical Cities and the Cities of Refuge. Perhaps the Levites were to administer the Cities of Refuge as part of their overall responsibility for the Levitical Cities.

In attempts to date the lists of Cities of Refuge, this connection with the Levitical Cities has often been exploited, and similar arguments for dating have been offered. However, while there is considerable debate over whether the Levitical Cities are historical or utopian, such a debate rarely surfaces in discussing the Cities of Refuge. They are generally seen as historical, reflecting an actual tradition in ancient Israel. It follows then that if the lists represent actual practice, their historical context must be a period when all of the Cities of Refuge fell within the boundaries of ancient Israel. Thus, the dating of the Cities of Refuge is generally argued to be in one of three periods: during the monarchial period of David and Solomon; during the 8th-century expansion of Jeroboam II (2 Kgs 14:23–29); or during the 7th-century reforms of Josiah, when he restored the nation (2 Kgs 23:1–25). However, given the antiquity of the practice of asylum, the long tradition of asylum in ancient Israel, and questions about the arguments which place the city lists in the 8th and 7th centuries, the most likely time period for the origination of the lists is the United Monarchy (10th century). How much earlier the practice of asylum operated is impossible to ascertain.

JOHN R. SPENCER

REGEM (PERSON) [Heb *regem* (רֶגֶם)]. One of the six sons of Jahdai (1 Chr 2:47). See JAHDAI.

Jahdai was evidently the head of a Calebite family, but the relationship of him and his offspring to Caleb

is not actually given. Regem and his brothers should perhaps be included with Caleb's descendants through his concubine Ephah (v 46) on the basis of the overall form of the unit and the occurrence of the name Ephah also among Jahdai's children (Braun *1 Chronicles* WBC, 41). Caleb's line in vv 42–50a is followed through a wife and two concubines, which means that from the writer's point of view it consisted of a main stem with two branches (Myers *1 Chronicles* AB, 15). Some of the names in this unit are those of cities known from the lists of cities allotted to Judah in Joshua 15. The town Beth-pelet of Josh 15:27 may be related to Regem's brother Pelet. The attempt to see in the name Regem the meaning "friend" (namely, of God) seems to be not well founded, relying almost solely on a possible (but if so, rare) significance of the Arabic word *rajm*.

EDWIN C. HOSTETTER

REGEM-MELECH (PERSON) [Heb *regem melek* (רֶגֶם מֶלֶךְ)]. One of two leaders of a delegation that inquired at the rebuilt temple about the continuation of fasting in the fifth month (Zech 7:2). This fast is widely interpreted by scholars to be a commemoration of the destruction of the temple and Jerusalem by the Babylonians.

Melek (melech) is Hebrew for "king." The name Regem is found in 1 Chr 2:47. Other names using "melech," including compounds, occur in the OT; e.g., Ebed-melech (Jer 38:7); Nathan-melech (2 Kgs 23:11); Abimelech (Judg 8:31); and Elimelech (Ruth 1:2).

Meyers and Meyers (*Haggai Zechariah 1–8* AB, 383–84) argue that Regem-melech's part in leading the delegation indicates his high status in the community at Bethel, whence the delegation came, but they deny that he had any royal connections. They find the evidence insufficient to determine whether or not he was an exile returned from Babylon.

Some have questioned whether the name "Regem-melech" is the correct reading for the Hebrew text here. Thomas (*Zechariah 1–8* IB, 1082) and others suggest that the preferred reading—based on the Peshitta—is not a name but a title, "the Rabmag (i.e., the chief officer) of the king" (*rab māg hammelek*). See RABMAG. If this reading is adopted, the title must refer to Sharezer, who is then characterized as a high royal official (see Ackroyd 1968: 209). Since Sharezer's name is Babylonian, such a reading would contribute to the possibility that the delegation was of Babylonian rather than Palestinian origin, although this depends principally on other factors in the verse. See SHAREZER.

Nevertheless, Rudolph (*Haggai Zechariah Malachi* KAT, 138–39) and Meyers and Meyers (*Haggai Zechariah 1–8* AB, 383) correctly argue, albeit along different lines, that the MT (i.e., the name Regem-melech) is the better reading here.

RICHARD D. WEIS

REGENERATION. The final stage of creation when God's purposes are fully realized. Regeneration signifies a renovation of all visible things.

A. Extrabiblical Usage

Individual, national, and cosmic regeneration are found in extrabiblical sources. Two examples are Cicero's return from exile (*Att.* 6.6) and Plutarch's writing of "the dismemberment of Osiris and his revivification." Here, regeneration is the "divinity's" return to life (*De Is. et Os.* 35).

The Stoics used the concept to denote cosmic regeneration following the cyclic cosmic conflagration. Philo uses the concept of regeneration to tell about the restoration of Abel after the birth of Seth (*Post* 36) and about renewal after the flood (*Vita Mos* I 11.65). Josephus speaks of "the recovery and rebirth of their native land" in reference to the Jewish return from Babylonian Exile (*Ant* 11.3.9), and Philo speaks of "the conflagration and rebirth of the world" (*Aet* 3.9). Philo also speaks of rebirth following death (*Cher* 32.114).

The Greek mystery religions view the concept of regeneration as the initiate's sharing in "the renewing power of their deity" (Guhrt *NIDNTT* 1: 184). For as the fertility cults became mystery religions, focusing more on the individual, regeneration came to designate salvation through initiation (Robinson *IDB* 1: 25).

B. OT Insights

Though the word *palingenesia* does not occur in the LXX, the concept of regeneration is central to the OT, as circumcision of the heart (Deut 30:6; cf. "changed heart" in 1 Sam 10:9; "pure heart" in Ps 51:10), in Ezekiel's restoration of dead bones (Ezek 37:1–14; cf. Nuelsen *ISBE* 4: 68, 69), and in God's promise to raise Israel from spiritual death (Jer 24:7; Ezek 11:19; 36:26–27) and to return the people from captivity (Ezek 36:24, 25; Mic 4:6, 7; cf. Keil and Delitzsch 1986: 119, 123). This restoration motif is found in the promise of a new covenant (Jer 31:31–34; Ezek 34:25), a new Jerusalem (Zech 14:10ff., 16), and a new heaven and earth (Isa 65:17). It would seem that regeneration is both personal and national in the OT. Nuelsen sees it as eschatological in the earlier portions, becoming personal only after the captivity and Diaspora (*ISBE* 4: 68).

Yet, there is evidence of personal responsibility from Israel's inception. On Passover night of the Exodus from Egypt, each household had to apply the blood on the doorpost and lintel to protect their firstborn from the destroying angel (Exod 12:12, 13). The subsequent tabernacle/temple sin offerings included those for individuals (Leviticus 1–7) as well as those for the nation (evening and morning, 2 Chr 2:4; 13:11; and the day of atonement, Leviticus 16). Personal accountability for sin is seen from the beginning (Gen 3:1–19), and classically in David's plea for renewal (Ps 51:10). It seems that the need for individual regeneration in the OT is given within the context of the need for national regeneration.

C. NT Insights

The noun "regeneration" (Gk *palingenesia,* from *palin,* "new," and *genesis,* "origin, birth") occurs only twice in the NT (Matt 19:28; Titus 3:5). Matthew speaks of "*en tę̄ palingenesią*" or "in the regeneration." This is a synonym for the Gk word *basileia*, or "kingdom." Literally, it means, in the coming kingdom, after the *parousia,* "at the renewal of all things." The regeneration is the new heaven and new earth (Isa 65:17–25; 2 Pet 3:13; Rev 21:1). "Behold, I make all things new" (Rev 21:5, RSV). Here, regeneration is eschatological.

Titus 3:5 speaks of salvation through the washing of rebirth or renewal by the Holy Spirit. In this instance, regeneration is rebirth/renewal by the Spirit, equivalent to a "new creation" (2 Cor 5:17) or a "new" self (Eph 4:22, 23; cf. Col 3:9, 10). Here, regeneration is existential.

Though these two different aspects of regeneration are given in Matt 19:28 and Titus 3:5, they present individual renewal as but a part of cosmic renewal—the regenerated person is not at the goal but moves toward the goal (cf. Guhrt *NIDNTT* 1: 186). Both terms "new birth" and "new creation" evoke an image of regeneration. Creation of new life or a new world are acts of God. These are acts beyond humanity's capability. Regeneration is the work of God.

The classical definition of regeneration is found in the Johannine pericope—Christ's discourse with Nicodemus (John 3:1–21). Just as proselytes entering Judaism were considered "re-born," so Nicodemus, although a Jewish leader, had to be "re-born" to enter Christ's kingdom. Born "again" (Gk *anōthen,* John 3:3; cf. John 3:31; 19:11, 23) means not only "anew" but also "from above." Nicodemus' birth as a Jew did not count (cf. Ps 87:5, 6): "Neither circumcision nor uncircumcision means anything; what counts is a new creation" (Gal 6:15).

The new-birth discourse (John 3) includes comment on Christ's birth (John 3:13–16). Christ was born of the Spirit (Matt 1:20)—so must be others (John 3:5). Although no one can be born of the Spirit as was Christ (He was *monogenēs*,"one of a kind"; John 1:14, 18; 3:16, 18; 1 John 4:9), yet in the Nicodemus discourse, there is a parallel between these two births—of Christ and of others—by the Spirit. Both are from above (John 3:7, 17), and both are necessary for salvation to take place (John 3:3, 16). For just as Christ entered the world through the Spirit to become the Savior, so each person must be born again to enter heaven and be saved (John 3:3).

To be born again (John 3:3) and to become childlike (Matt 18:3; Mark 10:15) are parallel preconditions for entrance into the Kingdom of God. Being childlike includes receiving and believing in Christ (John 1:12, 13; cf. 3:16). This is effected "through the living and enduring word of God" (1 Pet 1:23). Regeneration is then through the Spirit and through the Word (cf. 2 Pet 1:21). The function of both (Spirit

and Word) is to lead individuals to Christ (John 14:26, 15:26; John 5:39; cf. Luke 24:27). These persons are made a "new creation" (2 Cor 5:17) and are referred to as "created in Christ Jesus" (Eph 2:10).

This Christ-centered function of the Spirit finds him in the NT with a new title—"the Spirit of Christ" (Rom 8:9; 1 Pet 1:11; cf. Gal 4:6; Phil 1:19). Regeneration is not a separate work of the Spirit added to the salvific work of Christ; it is the subjective actualization of Christ's work. That actualization includes the dying and rising with Christ (Rom 6:3–14; 1 Cor 15:20–23; Col 3:1), so that the regenerated are spoken of as begotten by Christ's resurrection (1 Pet 1:3, 21).

In summary, as the concept of regeneration passed from Stoicism into Judaism it was "filled with a new religious content" (Büschsel *TDNT* 1:688). The new meaning had to do with messianic and christological hopes for a final restoration. Renewal was not just a rebirth (return) within a reincarnational cycle, but a historical *telos* at the *eschaton,* with even a "firstfruits" (Rom 8:23) or "deposit" (2 Cor 1:22; 5:5; Eph 1:14) of it in the present. So, regeneration, on the one hand, is the future new eternal life coming into present experience (John 3:36). On the other hand, this existential experience (Titus 3:5) reaches out to its eschatological completion in the coming cosmic renewal (Matt 19:28).

NORMAN R. GULLEY

REHABIAH (PERSON) [Heb *rĕḥabyāh (û)* (רְחַבְיָהוּ)]. Grandson of Moses and father of Isshiah according to 1 Chronicles 23–26, which outlines David's organization of the Levites. Rehabiah is described as *rō›š* in 1 Chr 23:17. This designated him as a clan leader with respect to levitical duties. His son, Isshiah, is the object of the same term in 1 Chr 24:21. In the larger context, the Levites are grouped according to the families of the three sons of Levi: Gershom, Kohath, and Merari. Rehabiah belonged to the family of Kohath. Kohath's son, Amram, was the father of Aaron and Moses. Moses was the father of Eliezer. Eliezer was the father of Rehabiah. Rehabiah was the grandfather of Shelomoth who, with his brothers, was responsible for the temple treasury kept for maintenance (1 Chr 26:25–26). The duties of Rehabiah and his family are not spelled out in 23:17, although it seems likely that the general responsibilities fell under the heading "charge of the work in the house of the LORD" (23:4). Some specific responsibilities given to this group are listed in 23:28–32: cleaning, assisting with the shewbread, assisting with grain offerings, praying twice daily as well as during burnt offerings, and caring for the temple and the tent of meeting.

It seems unlikely that the name *rĕḥabyāh,* or *rĕḥabyāhû* in its older form, would bear a direct relationship to the office involved. The most likely root of the name—from *rāḥab*, "to be or grow wide"—could be associated with Rehabiah's "many sons," but without further support this association is unconvincing. It is better to consider Rehabiah as a proper name rather than an appellative. It carries the causitive sense of the *Hip‹il*, "Yahweh increases," or "enlarges," although not *Hip‹il* in form (*IPN*, 193).

DONALD K. BERRY

REHOB (PERSON) [Heb *rĕḥōb* (רְחֹב)*; rĕḥôb* (רְחוֹב)]. **1.** The father of Hadadezer, king of Zobah (2 Sam 8:3, 12). However, it is possible that Rehob here is actually a place name, and that the Heb *ben-rĕḥōb* identifies Hadadezer as a native of the town of Rehob, being translated loosely as "the Rehobite."

In 2 Sam 10:6–8, the Ammonites hire Syrian mercenaries from Zobah and Rehob/Beth-rehob, suggesting that there may have been a preexisting connection between these two cities; indeed, Malamat (1963: 2–3) suggests that Hadadezer first ruled in Beth-rehob and subsequently incorporated Zobah into his domain (just as the Judean David subsequently incorporated Israel). See also BETH-REHOB.

2. One of the Levites who set his seal on the covenant, pledging to walk in God's law (Neh 10:12—Eng 10:11). Rehob and the others mentioned in this verse are not listed in the LXX.

GARY A. HERION

REHOB (PLACE) [Heb *rĕḥōb* (רְחֹב)*; rĕḥôb* (רְחוֹב)]. Var.BETH-REHOB. The place name Rehob appears seven times in the OT. At least two separate places, both in Galilee, shared this name. The name "Rehob" also appears in Egyptian documents, suggesting the possibility that in the Galilee-Jezreel region there may have been as many as three (or even four) places by that name (see *CTAED*, 163–65).

1. A town in the extreme N of Canaan, near the entrance to Hamath (Num 13:21). It was probably the same as Beth-rehob (cf. 2 Sam 10:6, 8). See BETH-REHOB.

2. The fourth city in Asher assigned to the Levites (Josh 21:31 = 1 Chr 6:60 [—Eng 6:75]), but at the time of the conquest Asher was unable to drive out its inhabitants (Judg 1:31). The problem of locating Rehob is compounded by the fact that it is also mentioned *twice* in connection with the border of the tribe of Asher (Josh 19:28, 30). The first citation (v 28) implies that Rehob was in the N of Asher (associated with Cabul, Ebron, Hammon, Kanah, and Sidon), while the latter (v 30) suggests a location in the plain of Accho ("Ummah," *ʿmh*, is probably a corruption of "Accho," *ʿkh*; cf. and Judg 1:31). This has raised the possibility that there may have been two places named Rehob in Asher.

On that assumption, Aharoni (*LBHG*, 162) associated the N Rehob with *rḥb* (no. 87) in Thutmosis III's list (*ANET*, 243), and identified it with Tell el-Balaṭ (M.R. 177280), 10 miles E of Rosh Haniqra and inside the modern border of Lebanon. However, it could also be identified with Tell er-Raḥb (M.R. 180275), 4 miles SE of Tell el-Balaṭ and inside the modern border of Israel (*CTAED*, 164). Because the two sites are almost 20 miles W of the valley of Huleh, neither should be associated with the Rehob/Beth-rehob of Num 13:21 and 2 Sam 10:6–8 (#1 above).

The S Rehob is apparently mentioned in the second group of Execration Texts (*ʾrḥbm*, no. 14); its location in the plain of Accho is supported by its listing after Aphek (no. 9), Achshaph (no. 11), and Mashaal (no. 13). However, because it is also listed immediately before cities further E—Hazor (no. 15), Kedesh (no. 16), and Ijon (no. 18)—Alt (*KlSchr* 3: 166) and Albright (1941: 33) equated this *ʾrḥbm* with Raḥabu (no. 17) in Shishak's list (*ANET*, 243), a town located S of Beth-shean and identified with Tell eṣ-Ṣarem (M.R. 197207; *CTAED*, 164–65; *MBA*, no. 120). Thus, it is unclear whether the *ʾrḥbm* of the Execration Texts refers to a Rehob in the territory of Asher or to yet another one near Beth-shean, although the Raḥabu in Shishak's list is clearly not in the territory of Asher and is apparently not mentioned in the OT.

A topographical list of Ramesses II mentions a Raḥabu in connection with Dor (Mazar 1963), reinforcing a S location for Rehob in the plain of Accho. Thus, the *ʾrḥbm* of the Execration Texts (see above) should probably be identified with the Raḥabu in this Ramesses II text, not with the one in the Shishak text (*CTAED*, 163). Kallai (*HGB*, *362–66) has suggested identifying it with Kh. Dauk, 8 km SE of Accho, a site settled from the MB to the Iron II periods, and again during the Hellenistic period. Most scholars, however, have followed Albright (1921–22: 22–27) and have identified Rehob with Tell el-Bir el-Gharbi (or Tell Birwe; M.R. 166256), located near the edge of the coastal plain of Accho next to the foothills of Galilee. The site had been visited by early-19th-century biblical geographers, including E. Robinson (1841: 88). There have been many surveys and small excavations at the site, and pottery from MB, Iron I–II, Persian, and Hellenistic periods has been recovered.

In summary, it remains unclear whether there were one or two towns named Rehob in Asher, although the biblical and Egyptian records perhaps favor one Rehob located in the Accho plain. Although Tell el-

Bir el-Gharbi cannot be identified absolutely with the Rehob listed in connection with the border of Asher (Josh 19:28, 30; cf. Judg 1:31) and with the Levitical cities of Asher (Josh 21:31 = 1 Chr 6:60 [—Eng 6:75]), the evidence in support of this association is strong (Peterson 1977: 56–65).

JOHN L. PETERSON
RAMI ARAV

REHOBOAM (PERSON) [Heb *rĕḥab·ām* (רְחַבְעָם)]. The son of Solomon and Naamah, an

Ammonite (1 Kgs 14:21, 31), who succeeded his father to the throne in Jerusalem but failed to win the support of the N Israelites (who formed their own separate nation). Rehoboam ruled the S kingdom of Judah, consisting of the tribe of Judah and the contested territory of Benjamin. His counterpart in the N kingdom of Israel was Jeroboam I.

The chronology of Rehoboam's reign is somewhat uncertain. The claim of a 17-year rule (1 Kgs 14:21; 2 Chr 12:13) is difficult to reconcile with other chronological notations about the early monarchic period. Albright (1945) dated his reign to 922–915 B.C.E., but Thiele (1984) has argued that the full 17 years can be placed in the years 931/30–913. Several other chronological systems have been worked out which also allow for a 17-year reign. Hayes and Hooker, for example, date Rehoboam's reign to 926–910 B.C.E. (1988: 16–20).

A. Sources

The Deuteronomistic Historian (DH) presents the primary account of Rehoboam's reign in 1 Kgs 12:1–24 and 14:21–31. The Chronicler provides a parallel, and somewhat expanded, version in 2 Chronicles 10–12. Each of these accounts is based on sources which contained reliable historical data. The Kings account is drawn, in part, from the annals of the kings of Judah (1 Kgs 14:29), while the latter cites the chronicles of the prophet Shemaiah and Iddo the seer (2 Chr 12:15). Other unnamed sources were perhaps used as well, but it is clear that each biblical historian has stamped his own ideology on the accounts he rendered.

B. The Schism

The dissolution of the United Monarchy began before Solomon's death. The Arameans and the Edomites, both of whom had been conquered by David, successfully rebelled against Solomonic rule (1 Kgs 11:14–25). The N Israelites, unhappy over Solomon's oppressive policies, attempted a rebellion which Solomon was able to crush. Solomon tried to kill the leader of the revolt, Jeroboam ben Nebat, who fled to Egypt where Pharaoh Shishak gave him asylum (1 Kgs 11:26–28, 40). After Solomon's death, Jeroboam returned to become king over the N Israelites, who rejected the rule of Rehoboam.

According to 1 Kgs 12:1–20 (cf. 2 Chr 10:1–19), the rejection of Rehoboam's claim to sovereignty over the N tribes occurred at a gathering of Israelite leaders in Shechem. Both accounts state that Rehoboam had gone to Shechem for all Israel to make him king. What this indicates about the nature of kingship in the early monarchic period is not clear. Alt (1951: 4–9) maintained that the N Israelites had a charismatic notion of kingship which made them reluctant to follow a principle of dynastic succession when Solomon died (see also Donner, *IJH*, 383–84), and Soggin (1984: 193) proposed that strong democratic tendencies existed in the N to which Rehoboam attempted to answer. But Miller has suggested that Rehoboam's appearance in Shechem may simply have been due to urgent political problems which the new king faced in the N (*HAIJ*, 229–30).

The N Israelites offered to submit to Rehoboam's rule on the condition that he remove the "heavy yoke"—taxation and forced labor—which Solomon had placed upon them. Rehoboam consulted groups of elder and younger advisers (*zĕqēnîm* and *yĕlādîm*), who gave him vastly different counsel. The elders

counseled him to offer significant concessions in order to show his intention to serve the people—the language has been compared to royal grants of exemption from taxation and corvée offered to important and sacred cities by various Neo-Assyrian kings (Weinfeld 1982). The younger advisers, however, suggested that he show strength and threaten to increase the burdens which Solomon had placed upon them. When Rehoboam announced that he would pursue the course advised by his younger counselors, the N Israelites broke away from his rule and elevated Jeroboam ben Nebat to kingship over them.

Malamat's proposal (1963) that Rehoboam's two sets of advisers at Shechem point to the existence of "formal bodies of official standing in the kingdom," somewhat parallel to the "bicameral" assembly in the Sumerian epic *Gilgamesh and Agga,* may stretch the evidence, as Evans has cautioned (1966). The two groups of advisers may simply represent a difference of opinion within a single circle of advisers (Evans 1966). It would be natural for the elders (*zĕqēnîm*), who are said to have "stood before Solomon," and the young men (*yĕlādîm*), who are said to have grown up with Rehoboam and "stood before him," to give contradictory advice simply because of the differences in age, experience, and therefore perspective.

In any case, Rehoboam chose to follow the advice given by the younger counselors. The N Israelites responded by declaring their freedom from the rule of Davidic kings. Their cry of independence (1 Kgs 12:16; 2 Chr 10:16) echoed the words of the Benjaminite Sheba, son of Bichri (2 Sam 20:1), who had led an unsuccessful N Israelite revolt against David. Thus the N Israelites, from David's time on, sought opportunities to free themselves from Davidic rule, particularly when policies emanating from Jerusalem became especially burdensome (as they had under Solomon). Apart from the onerous demands of inequitable taxation and forced labor, Solomon's offer of twenty villages in the land of Galilee to Hiram, king of Tyre, to satisfy his indebtedness to the Phoenician king for materials used in the construction of the temple and royal palace in Jerusalem (1 Kgs 9:11), undoubtedly alienated the northerners all the more and precipitated the rebellion (Halpern 1974). Solomon may have used some of these materials for the repair of S fortresses, given the potential for trouble from Pharaoh Shishak, who had come to power in Egypt.

Rehoboam sent Adoram, the commander of the labor forces, to put down the rebellion. The N Israelites displayed their determination by stoning Adoram to death, and Rehoboam hastily returned to Jerusalem. According to 1 Kgs 12:21–24 (cf. 2 Chr 11:1–4), a Judahite prophet, Shemaiah, counseled Rehoboam not to attempt to recapture control of the N, on the grounds that the schism was Yahweh's will. This tradition further claims that the tribe of Benjamin supported Rehoboam along with the tribe of Judah. But the reference to continual warfare between Rehoboam and Jeroboam (1 Kgs 14:30; 15:6; 2 Chr 12:15) no doubt pertains to frequent fighting along their shared border a short distance N of Jerusalem. At stake in these skirmishes was control of the territory of Benjamin.

C. Shishak's Invasion

Shishak, the founder of the 22d Lybian dynasty in Egypt, brought an end to the friendly relations Solomon had once enjoyed with Egypt. This pharaoh displayed hostility toward Solomon by supporting the Edomite and N Israelite rebellions mentioned in 1 Kgs 11:14–25 and 11:26–28, 40. And then, in the fifth year of Rehoboam's reign, Shishak invaded Judah and Israel (1 Kgs 14:25; cf. 2 Chr 12:2). According to Mazar, this campaign was undertaken "to enhance the prestige of his monarchy" and "to enrich his kingdom with spoils" taken from the cities in the path of invasion (1957: 57).

The account in 1 Kgs 14:25–28 mentions only Shishak's attack on Jerusalem. It states that he took the treasures of the temple and the palace and seized the gold shields made by Solomon. The more expansive account in 2 Chr 12:2–12, which is amplified by a prophecy of Shemaiah's, attributes the invasion to Rehoboam's disloyalty to Yahweh. This account claims that Shishak, supported by innumerable troops of Libyans and Nubians, captured the fortified cities of Judah before attacking Jerusalem. The Shemaiah prophecy attributes the sparing of Jerusalem from destruction to the submission of Rehoboam and his officers to Yahweh. Nonetheless, the account allows that Shishak escaped with the spoils mentioned in 1 Kings 14.

Fortunately, the sparse biblical information about these events is augmented by Shishak's hieroglyphic inscription found on the S entrance to the Temple of Amon at Karnak, listing the places he had conquered

(*ANET*, 263–64; also 242–43). Mazar (1957) recognized that when the first four lines of place names are read boustrophedon (i.e., the first line should be read left to right; the second line right to left; the third line left to right, etc.), the route of the campaign can be reconstructed. The line of march went from Gaza, to Gezer, to Aijalon, to Beth-horon, and to Gibeon, as Shishak's troops passed N of Jerusalem. From Gibeon, the invading forces moved to Migdal (identification uncertain), then Zemaraim in the S Ephraimite mountains. The troops then proceeded to the Jordan Valley and crossed the Jordan River, where they marched on Adam, Succoth, Penuel, and Mahanaim. They then turned back toward the Jordan and attacked Hapharaim (identification uncertain) before crossing the Jordan and proceeding to Tirzah (reading uncertain). The Egyptian army then turned N and marched on Reḥob, Beth-shean, Shunem, Taanach, and Megiddo before returning to Philistia by the Via Maris.

Curiously, this part of the list does not mention any places in Judah and shows that Shishak's campaign was waged against the cities of the N kingdom of Israel. Mazar suggests that "the rich areas of the Kingdom of Israel were the main object of the expedition" and conjectures that "Shishak intended also to punish Israel, perhaps because after seizing power Jeroboam refused to admit the suzerainty of the Pharaoh, contrary to what he had consented during his revolt and the days he had spent in Egypt" (1957: 62–63).

The second part of the list, actually much longer than the first section, names sites, forts, regions, and families in the Negeb vicinity. Among the sites are Ezem and Arad. Many of the names are difficult to identify, but several names of regions are composed of the Egyptian determinative *pa* (in place of the Heb *ha*-) plus, in some cases, *ḥgr* or *ḥqr* (= fort) and various family or clan names known from the genealogical lists in Chronicles—such as Shuhah (1 Chr 4:11), Hanan and Tilon (1 Chr 4:20), and Peleth (1 Chr 2:33). This concentration of names in the region of the Negeb probably means that Shishak sent a phalanx of his army into this area to protect the troops who were conducting the main campaign into the N from a surprise attack by nomadic or seminomadic tribes from the S desert region (Mazar 1957: 64–66); or perhaps Shishak sought to distract Rehoboam as the main troops advanced N of Jerusalem (Gray *Kings* OTL, 344–45).

D. Rehoboam's Fortresses

The Chronicler supplies a list of 15 towns in Judah and Benjamin (2 Chr 11:5–10; no mention is made of this in the DH) whose defenses were strengthened by Rehoboam. Shishak's campaign probably explains why Rehoboam made the fortifications, although the Chronicler's narrative sequence places Rehoboam's building activity in these towns *before* the account of Shishak's invasion. The list mentions Bethlehem, Etam, Tekoa, Beth-zur, Soco, Adullam, Gath, Mareshah, Ziph, Adoraim, Lachish, Azekah, Zorah, Aijalon, and Hebron. Aharoni observed that these locations "form a logical and continuous line for the defence of [Rehoboam's] kingdom from the West, the South, and the East, with additional forts located at the important road junctions" (*LBHG*, 330). He noted, however, that the southernmost fortifications—at Lachish, Mareshah, Adoraim, Hebron, and Ziph—left the S Shephelah, the Negeb, and even much of the S hill country outside the line of defense. This either means that these regions were taken from Judah by Shishak or that Rehoboam had other fortifications in S Judah which did not need repair at this time and are thus not mentioned in this list.

The Levitical cities in Judah, many of them located in the S hill country, were probably part of Rehoboam's defense system. Many scholars have argued that these cities (cf. the lists in Joshua 21 and 1 Chronicles 6) were established during the period of David and Solomon, and fortified by them, to serve as administrative centers to enforce royal policies and to keep the kingdom secure, especially in regions annexed by David. The cities probably served as cultic centers as well. Rehoboam would have used these strongholds that lay within Judah's borders in addition to the 15 fortresses mentioned in 2 Chr 11:5–10, making for a stronger defense system in the southernmost parts of Judah.

E. Religious Practices

The DH charges that the people of Judah engaged in much religious apostasy during Rehoboam's reign (1 Kgs 14:22–24). The accusations that the people built shrines (*bāmôth*), sacred pillars, and sacred poles, and that cult prostitutes were in the land, are typical of the DH style and polemic and thus must be

dismissed or taken with extreme caution. The Chronicler omits these charges, but to explain Shishak's invasion includes a more general accusation that Rehoboam forsook the *tôrāh* of Yahweh (2 Chr 12:1). Perhaps the only hard historical data pertaining to religion under Rehoboam are in the Chronicler's report that priests and Levites came to Judah from the kingdom of Israel when Jeroboam dismissed them and appointed non-Levitic priests (2 Chr 11:13–17). These developments would make sense, assuming that the Levites were administrative and cultic state officials, appointed by David and Solomon, who remained loyal to Rehoboam.

F. Rehoboam's Family and Administration

The Chronicler claims that Rehoboam had 18 wives (only Mahalath and Maacah are named) and 60 concubines and was the father of 28 sons and 60 daughters (2 Chr 11:18–21). The Chronicler further states that Rehoboam appointed Abijah, a son by Maacah, chief (*nāgîd*) among his brothers and designated him as his successor. Rehoboam also assigned his sons to take charge of the fortified towns and granted them generous provisions (2 Chr 11:22–23). When Rehoboam died, he was succeeded by his son Abijah.

REHOBOTH (PLACE) [Heb *rĕḥōbôt* (רְחֹבוֹת)]. The name of three places mentioned in the OT.

Literally, the name means "plazas"; as a toponym it means "spacious place" (Borée 1968: 48–49; 49, n. 5).

1. A well in the Negeb, dug by Isaac (Gen 26:22). The location is mentioned within a narrative sequence that could serve as a paradigm for the relationship between agriculturalists and pastoralists, or nomads and the state, in the 2d and 1st millennia B.C. (Matthews 1986: 123–24). Since Robinson and Smith proposed an identification of the site (1841: 289–91), this well has generally been located in Wadi Ruḥaybeh, SW of Beersheba.

2. Rehoboth-Ir, a "place" in Assyria, between Nineveh and Calah (Gen 10:11). The name seems to be based on a mistranslation of Assyrian *rebīt Ninua* ("the streets, or quarters, of Nineveh"; e.g., in Esarhaddon's Nineveh A inscription, III 38; cf. *AHW,* 964). See REHOBOTH-IR.

3. Rehoboth ha-Nahar (RSV "Rehoboth on the Euphrates"), the hometown of the Edomite "king" Shaul (Gen 36:37; 1 Chr 1:48). See SHAUL. The identification of this Rehoboth depends on the interpretation and dating of the "Edomite King List" (Gen 36:31–39). Assuming that this list refers to Edom at the end of the 2d millennium B.C., Zwickel (1985) identifies Rehoboth Nahar with Râs er-Riḥâb (M.R. 208038), overlooking Wadi al-Ḥasâ from the South. Knauf (1987), deriving the "Edomite King List" from the 5th century B.C., interprets Rehoboth ha-Nahar as the designation of a landscape, not a town, and suggests the catchment area of Wadi al-Ghuwayr for an identification. Lemaire (1988) maintains that the "Edomite King List" actually is a list of Aramean kings from the 11th century B.C. This assumption would place Rehoboth ha-Nahar in Syria or Lebanon. In this case, it could well have been the capital of the state of Beth-Rehob. See also REHOB (PLACE).

REHOBOTH-IR (PLACE) [Heb *rĕḥōbōt ʿîr* (רְחֹבֹת עִיר)]. The name of a city mentioned in Gen 10:11. The name is a Hebrew phrase meaning "city squares" (the same phrase appears in Lam 2:12). The Yahwistic fragment of the Table of Nations seems to include it in the kingdom of Nimrod, although the translation of the first clause of Gen 10:11 is very unclear. Perhaps the best understanding (although syntactically awkward) is "From that land (Shinar, v 10) he (Nimrod) went to Assyria." (Cf. the RSV; for similar constructions of the verb *yaṣaʾ*,"to go out," with the accusative in the sense of entering a place, see Gen 27:3 and Jer 14:18.) If this interpretation is correct, then Nimrod is to be understood as the builder of Rehoboth-Ir.

The name Rehoboth-Ir is unknown from cuneiform sources. It is probable that it referred originally not to a separate city but rather to some district or attribute of Nineveh. One possibility is that it is an interpretive translation of *rêbīt Ninua,* "Nineveh square," a suburb on the NE side of Nineveh (Cassuto *Genesis* 2: 203). However, the correct reading may be *talbit Ninua,* in which case the comparison must be dropped (Sasson 1983: 96). Alternatively, Rehoboth-Ir may be an epithet describing Nineveh as a city of broad streets. E. A. Speiser (*Genesis* AB, 68) compares it to a similar phrase found in the Gilgamesh epic, *Uruk rêbītu,* "Uruk of the spacious markets." T. Jacobsen (*IDB* 4: 31) has compared it to the cognate Assyrian phrase *rêbīt āli,*"open spaces in a city," used to mean "unbuilt areas on the periphery of Nineveh." J. M. Sasson (1983) proposes that it is a superlative construction meaning roughly "broadest city" (cf. Jonah 3:3; 4:11). In any case, it is generally agreed that Rehoboth-Ir was not a city but rather some appellative or area of Nineveh. At some point in the transmission of the traditions about Nimrod, this descriptive term was misunderstood as a city name itself. See RESEN.

JAMES R. DAVILA

REHUM (PERSON) [Heb *rĕḥûm* (רְחוּם)]. Var. NEHUM. The name of several different persons mentioned in the OT.

1. One of the leaders of the group of returnees from Babylonian Exile who is listed along with Zerubbabel in Ezra 2:2 = Neh 7:7 (where the form is Nehum) = 1 Esdr 5:8. One name has apparently been dropped from the Ezra list, because those in Nehemiah and 1 Esdras include twelve leaders in what is probably a symbolic representation of all Israel. For further discussion concerning the list in Ezra 2, see AKKUB.

2. A Persian civil official (Heb *bĕʿēl ṭĕʿēm* = commander, commissioner) of the province "Beyond the River" who, along with Shimshai and others in Samaria, wrote to Artaxerxes I regarding the Jews' repair of the walls of Jerusalem. When authorized by a return letter to stop the building activity, they did so by force (Ezra 4:8–23 = 1 Esdr 2:16–30). This episode is out of chronological order with the other events of Ezra 4–6. It is inserted there in an apparent summary of incidents in which persons opposed the rebuilding efforts of the Jews.

3. A Levite who assisted Nehemiah in rebuilding the walls of Jerusalem (Neh 3:17). That the list of builders in Nehemiah 3 is a partial one is evident from the references to "second" portions in 3:11, 19, 20, and 30 without previous notations of corresponding first portions (compare 3:4 and 21; 3:5 and 27). There is widespread agreement that the list came from independent archives, perhaps in the temple, and was incorporated into the Nehemiah memoirs by Nehemiah himself or by some other editor. (See Batten *Ezra and Nehemiah* ICC, 206–7; Clines *Ezra, Nehemiah, Esther* NCBC, 149; Williamson *Ezra, Nehemiah* WBC, 199–202.)

4. Head of a clan whose leader affixed the family name to the covenant document of Nehemiah in Neh 10:26—Eng 10:25. Many do not regard the list and covenant of Nehemiah 10 as belonging originally in this context. Williamson (ibid., 325–30) surveys various views about the origins of this list. He concludes that it was compiled from other lists in Ezra and Nehemiah in order to be attached to the terms of an agreement drawn up by Nehemiah following his reforms of Nehemiah 13. This document was then kept in the temple archives until it was inserted into its present position. (See also Clines, 199–200; Myers *Ezra-Nehemiah* AB, 174–75; Jepsen 1954: 87–106.)

5. An alternate form of Harim. See HARIM #3.

CHANEY R. BERGDALL

REI (PERSON) [Heb *rēʿî* (רֵעִי)]. Mentioned with Shimei and others who did not support Adonijah's claim to David's throne (1 Kgs 1:8). The lack of a title or patronym for either Shimei or Rei is unusual. It is possible that the text is corrupt. Lucian reads "Shimei, and his friends, David's mighty men"; Josephus explains the text as "Shimei, the friend of David" (*Ant* 7.14.4). Little is known of the structure of the court in the time of David, but "friend" may have been a title for an official whose role was that of counselor of the king (cf. 2 Sam 15:37; 16:16). See Jones *Kings* NCBC; Gray *Kings* OTL; and DeVries *1 Kings* WBC.

PAULINE A. VIVIANO

REKEM (PERSON) [Heb *reqem* (רֶקֶם)]. The name of three persons in the OT. In all three cases it can be argued that the "persons" were actually places, paralleled by the toponym Rekem in Josh 18:27. See REKEM (PLACE).

1. A "king" of Midian (Num 31:8; Josh 13:21). The names of the five "Midianite kings" in these passages seem to have been taken from an itinerary that led through S Transjordan and NW Arabia and that was composed in the Persian period. See also EVI; HUR; REBA; SUR. Both in the Targum and the Peshitta, Reqem/Rqem renders Kadesh-barnea, which was identified with Petra since, at least, the 1st century B.C. (possibly as early as by the time Gen 14:7 was composed; Knauf 1989: 46, n. 212). *Raqmu (in Nabatean, *rqmw*) was the indigenous name of Petra. Josephus (*Ant* 6.7.1 §161) derives the place name from the Midianite king's name. It is more likely, however, that *Raqam or *Raqm, "the striped one," is a genuine place name, although it does occur as a personal name in Thadmudic and Arabic (it is, however, rarely attested; Knauf 1988: 89 and n. 409). Nor was Petra the only place called Raq (a)m (Knauf 1988: 166 and n. 705).

2. A "son" of Hebron (1 Chr 2:43). In 1 Chr 2:43–44, Rekem is the brother of Tappuah, Shema, and Korah; the son of Hebron, the nephew of Ziph, and the grandson of Mareshah. All of the names of his relatives are also places (Shema recalls *as-Samûʿ*,the present name of Eshtemoa; the abridged form without the *t*-infix may well have originated in the postexilic period), with the only exception being Korah, who was an Idumean clan (a son of Esau [Gen 36:5], and a son of Eliphaz [Gen 36:16]; for Idumean clans among the "sons of Caleb," see MANAHATHITES). Whereas this leaves the possibility open that Rekem was another Idumean family or clan in postexilic S Judea, an interpretation as a place name finds more contextual support.

3. The "grandson" of Gilead and Maachah, both of which are geographical names (1 Chr 7:16; cf. 1 Chr 19:6). The name of his father, Peresh "Fissure," is attested as both a personal and a place name. Because place names frequently lead to the names of clans, and vice versa, and because there is not any external evidence, it cannot be decided whether this Rekem was a Gileadite clan, or a town, or both.

REKEM (PLACE) [Heb *reqem* (רֶקֶם)]. A settlement in Benjamin (Josh 18:27). The exact location remains unknown, though the list in which it appears (vv 25–28) generally contains places located in the W half of the territory. Rekem is also the ancient name for Petra. This site is actually never named Rekem in the Bible, though it is possible that the name was somehow associated with the Midianite prince so named in Josh 13:21. See REKEM (PERSON).

RELEASE, YEAR OF. See JUBILEE, YEAR OF; SABBATICAL YEAR.

RELIGIO LICITA. A term conveniently coined by Tertullian to designate a religion officially sanctioned by the Roman state. Throughout the Roman world there flourished a rich cultural and ethnic pluralism, and there naturally flourished, alongside this pluralism, an equally rich diversity in cultic practices (often localized in adherence). Roman religion throughout its long history was itself remarkably assimilative and adaptive (and hence showed astonishing powers of survival), and from time to time it might formally absorb by ceremonies of *evocatio,* or by official incorporation into ritual calendars and pageants, the rites and rituals of other nations (cf. Min. Fel. *Oct.* 6.1–3; North 1976: 1–12; 1979: 85–102). But by and large, the Romans were content, with passive acquiescence, to leave others to their own indigenous cultic activities so long as they did not disturb the established boundaries and controls within imperial society, and so long as they did not impinge on imperial policy and security. But there, however, the limits of toleration for the Romans were severely set (Garnsey 1984: 1–27): if in their perception the established social or political order was threatened, the guardians of that social and political order could show themselves fearsomely jealous for the gods of their empire (e.g., Tac. *Ann.* 2.85 [Isis devotees], 14.30 [Druids]; cf. Livy 39.8–19 [Bacchanalians in 186 B.C.])—though what constituted "the gods of the Empire" was an extremely porous list of divinities.

In the case of the Jews, it is clear that religious and ethnic privileges were hard won as *concessions* and needed constant vigilance—as well as polemic—and repetition if they were not to be eroded in practice (Rajak 1984: 107–23): the series of rescripts and edicts as recorded by Philo and Josephus (Philo *Gaium* 309–20, Joseph. *Ant* 14 §185–264, 301–23; 16 §160–73; 19 §280–91) are basically the results of Jewish initiative and efforts to secure for particular cities or provinces the simple rights to pursue without harassment their ancestral laws and customs—and to have, in their perception, what other subject nations enjoyed. (These concessions included the right not to have to appear in court on the Sabbath, to collect and despatch the temple tax, and to congregate and perform the customary ceremonies on the Sabbath and other feast days.) But social friction was inevitable with adherents of a monotheistic religion which could not be assimilated into or be accommodated within the prevailing pluralist religious system. Nevertheless, the Romans fully appreciated the strength of the bond which linked a people to its ancestral cultic traditions and customs, and so, under pressure from Jewish activists who were protecting their coreligionists against social and religious discrimination, the Romans found themselves politically obliged to make formal religious concessions to Jews. Judaism thus became a *religio licita* (= an authorized religion), to use Tertullian's coinage (*Apol.* 21.1). Most nations had no need of such legal sanction in order to maintain their religious observances.

Christians, however, right from their earliest penetration into the Greco-Roman world, found themselves liable to fall foul of official authorities, whether these were local city magistrates or imperial functionaries: charges of magic, of disturbing the peace, suspicion of subversion, or disorder could be leveled at Christian minority groups, some of whom might be given to secret meetings marked by prophetic enthusiasm, who might in millenarian expectation of the Parousia opt out of the routine duties of civic life, or whose vocally expressed views might grate on pagan sensitivities and traditions or outrage Jewish sects and practices. By the time historical evidence from non-Christian sources is specific (e.g.,

Tac. *Ann.* 15.44 [on events of A.D. 64, written early in the 2d century A.D.], Pliny *Ep.* 10.96, 97 [written ca. A.D. 110]), Christians had already come to belong to a group liable to sporadic and local punishment simply for their general Christian allegiance, based ultimately on the criminal charges that might cohere to their name but which need not be proved in any particular case (de Ste Croix 1963: 6–38; 1964: 28–33). Christians, now including many gentiles, had neither the ancestral traditions nor the racial integrity to which Jews themselves might effectively appeal. The result was (as Tertullian wryly makes much of in his *Apol.* 2.10–18) that Christians might, paradoxically, escape punishment simply by abjuring their present religious adherence—actions of their Christian past were thereby rendered, illogically, irrelevant. No specific legislation against Christianity as such can be established until the time of the emperor Valerian (A.D. 257; Barnes 1968: 32–50), but there is nonetheless ample evidence of rescripts and edicts issued by emperors and provincial governors dealing with particular inquiries or individual provinces (Ulpian could gather such imperial rescripts together in the early 3d century; Lactant. *Div. Inst.* 5.11.19 [listing penalties inflicted upon Christians]).

The tactic in much apologetic Christian writing in the 2d and 3d centuries was therefore to seek tolerant treatment for Christianity similar to that granted other philosophical *sectae,* with emphasis placed on the philosophical pedigree of many of the issues it dealt with and endeavouring to clear the Christian communities of the criminal odium which had come to hover over their religious practices. In effect, in many parts of the Roman Empire Christians enjoyed lengthy periods of that laissez-faire which Rome allowed other cults and alien religious traditions. But unlike those other cults, monotheistic Christianity (like Judaism) laid universal claim to the truth and an exclusive access to the divine (the corollary being rejection of all other gods and all other religious traditions). The orders of the emperor Decius (A.D. 250) for all inhabitants of the Empire to make sacrifice to the gods brought into public view widespread civil disobedience on the part of many Christians (Clarke 1984: 21–39); thus, they could not be left as tolerable religious deviants. The emperor Valerian (A.D. 257–58) followed with more specific attempts to suppress Christian assemblies and clerical leaders, but his capture and death prompted his son Gallienus to rescind those orders and to release sequestered Church properties (Eus. *Hist. Eccl.* 7.13). The effect was to go some way toward decriminalizing Christianity and giving it a quasi-legitimate existence which it had not enjoyed previously.

But it was not until after the bloody persecutions in the first quarter of the 4th century that Christianity won anything like a formally recognized right to coexist, first with the edict of the dying Galerius (A.D. 311: Lactant. *De mort. pers.* 34; Eus. *Hist. Eccl.* 8.17), then with the issuing of the so-called Edict of Milan (A.D. 313: Lactant. *De mort. pers.* 48; Eus. *Hist. Eccl.* 10.5.2–14), and finally after the eventual defeat of Licinius in the east (A.D. 324: Eus. *Vita. C.* 2.56). At long last Christianity had become in fact a *religio licita,* an authorized religion.

RELIGION. Articles relevant to the study of religion and religions in the biblical world include CANAAN, RELIGION OF; EGYPTIAN RELIGION; HITTITE RELIGION; MEMPHITE THEOLOGY; MYSTERY RELIGIONS; PHOENICIAN RELIGION; ROMAN RELIGION; SOUTH ARABIA, RELIGION OF—as well as CHRISTIANITY; JUDAISM; and THEOLOGY.

REMALIAH (PERSON) [Heb *rĕmalyāhû* (רְמַלְיָהוּ)]. Father of Pekah, who was the next to last king of Israel, ca. 736–731 B.C.E. (2 Kgs 15:25). The name appears seven times in 2 Kgs 15:25–16:5 and once each in Isa 7:1 and 2 Chr 28:6 in the phrase "Pekah the son of Remaliah." In Isa 7:4, 5, 9, and 8:6 Pekah is referred to only by the patronym "the son of Remaliah," apparently with derogatory intent. The Bible gives us no other information about Remaliah himself. Pekah, and hence Remaliah, was apparently a native of Gilead (2 Kgs 15:25; Naʾaman 1986: 77–79). See PEKAH. No satisfactory meaning for the first element of Remaliah's name has been found (*IPN*, 257), since the verbal root *rml* does not appear in Hebrew. Two old Hebrew seals contain a name which has been read by some as *rmlyhw* (Diringer 1927: 178–79, 217). However, Diringer (Crowfoot et al. 1957: 21) has argued strongly in favor of reading these seals as *dmlyhw*. One possible explanation of the name depends on a different form of the name than we have in theMT. In the Qumran scroll 1QIsa[a], three passages spell the name *rwmlyh* (Isa 7:1, 5, 9). Since the LXX appears to back up the Qumran text by transliterating the name in these same passages as *Romelia* or *Romeliou,* Beegle (1951: 28) has understood the first element of the name to be derived from the verb *rwm* plus a predicative *la.* Hence, the name would mean "May Yahweh verily be exalted."

JOHN H. HULL JR.

REMEMBER, REMEMBRANCE. The Scriptures provide no theoretical account of memory, no reflections concerning the nature or psychology or functions of remembering, nothing to compare, for example, with Aristotle's *De Memoria.* J. Pedersen's interesting attempt to construct such a theoretical account of memory based on the so-called "primitive" psychology of the Hebrews (*PI* 1: 99–139) has been rejected by J. Barr (1961: 30–33, *et passim*) and criticized by B. Childs (1962: 17–30).

There may be no theory of memory, but there surely is remembering; indeed, the Scriptures are full of references to memory and remembrance. And it is clear that it will not do to define memory as "the preservation of perception" (Pl. *Phlb.* 34a) or "the permanence of an image regarded as the copy of the thing it images" (Arist. *Mem.* 451a). Such definitions do not do justice to the scriptural usage of Heb *zākar*, Gk *mimnēiskomai,* and their cognates by confining memory to things of the past. In Scripture, things in the present (e.g., Col 4:18)—and even in the future (e.g., Eccl 11:8; Heb 11:22)—can be "remembered." More importantly, such definitions distort the scriptural usage by construing memory as the neutral apprehension of images. In Scripture, however, memory is typically constitutive of identity and determinative of conduct.

A. God Remembers

In great hymns of faith Israel gave praise to God, and a fundamental reason for that praise was that God remembers "his covenant" (Ps 105:8 = 1 Chr 16:15; Ps 106:45; 111:5; also Luke 1:72). The covenant is presupposed when God is said to remember "his steadfast love and faithfulness" (Ps 98:3; cf. 136:23), "his promise" (Ps 105:42), or "his mercy" (Luke 1:54). The covenant is not just something from the past, and remembering it is not merely the neutral apprehension of an image from the past. In the covenant and in remembering the covenant, God establishes an identity and is faithful to it, determines a cause, and acts in accordance with it.

Psalm 105:8 stands at the opening of a long recital of the "wonderful works" which God has done, but it gives this significance to that past: God remembers his covenant "forever" and "for a thousand generations." God's remembering determines conduct and not only the great deeds of the past but also God's works of judgment and mercy in the present and future. That God has remembered the people stands in parallel to the claim that God "will bless" them (Ps 115:12).

God's remembrance of covenant finds its way from the hymns into narrative and especially into the covenantal history of the Priestly narrative, where again and again it is observed that God "remembers" covenant (Gen 9:15, 16; Exod 2:24; 6:5; Lev 26:42 [3×], 45; cf. also Gen 8:1; 19:29).

If the hymns celebrate God's remembering, the laments—and other prayers—plead for it (Ps 25:6; 74:2, 18, 22; 106:4; 119:49; 137:7; also Exod 32:13; Jer 14:21; Lam 5:1; Hab 3:2; Neh 1:8; with respect to the king, cf. Pss 20:3; 89:47, 50; 132:1; 2 Chr 6:42; note also the prayers of Samson, Judg 16:28; of Hannah, 1 Sam 1:11; of Hezekiah, 2 Kgs 20:3 = Isa 38:3). Often the covenant provides the basis for the appeal (e.g., Jer 14:21; Ps 25:6). Sometimes the appeal is simply to the creatureliness and mortality of people (Ps 89:47; Job 7:7; 10:9; 14:13; cf. Pss 8:4; 78:39). Sometimes the appeal is to merit (Ps 132:1; 2 Kgs 20:3 = Isa 38:3; Jer 18:20; Neh 5:19; 6:14; 13:14, 22, 29, 31), but sometimes the plea is simply an appeal to the sheer grace of God, as in the petition that God *not* remember sins, that is, forgive them (Pss 25:7; 79:8; also Isa 64:9).

The prophetic oracles of judgment take this tradition and turn it against the people: God "will remember their iniquity"; that is, punish them (Jer 14:10; Hos 7:2; 8:13; 9:9). The oracles of salvation, however, turn the tradition around again to announce God's mercy on the other side of judgment and repentance (Isa 43:25; Jer 31:20). The astonishing promise of Jer 31:31–34 of a new covenant in which "God will remember their sin no more" is, according to the author of Hebrews, fulfilled in the ministry of Christ (Heb 8:12; 10:17).

B. People Remember

The verb "remember" often has a human subject, and when it does, it can take a wide variety of objects. But whatever the object, memory remains related to the formation of identity and the determination of conduct. David "remembers" Abigail by wooing and marrying her (1 Sam 25:31); he does not "remember" that Shemei was his adversary when he spares his life although he is fully aware of the past (2 Sam 19:19). When the men of Shechem remember that Abimelech is their kinsmen, they are "inclined to follow him" (Judg 9:2, 3). Even Joseph's memory of his dreams (Gen 42:9) is not merely recollection: God's guidance forms him and his conduct.

The most frequent object of human remembering in the OT, however, is God (Deut 8:18; Judg 8:34; Ps 22:7; 42:6; 63:6; 77:3; 78:35; Eccl 12:1; Isa 57:11; 64:5; Jer 51:50; Ezek 6:9; Jonah 2:7; Zech 10:9), including God's works (Deut 5:15; 7:18; 8:2; 9:7; 15:5; 16:3, 12; 24:9, 18, 22; 32:7; Pss 77:11; 78:42; 105:5; 143:5; Ezek 16:22, 43, 61, 63; Mic 6:5) and (less frequently) God's law (Num 15:39, 40; Pss 103:18; 119:52; Mal 4:4; cf. Exod 13:3; 20:8).

Both worship and tradition served this memory. Through the great festivals with their rituals and songs, the people participated in both establishing and remembering the meaningful history of Israel and thus understood themselves better in the light of that meaningful past. Memory provided community and continuity. The Passover, for example, which Israel was to "remember" (that is, observe, Exod 13:3), was itself a "remembrance" (Heb *zikkārôn*, Exod 12:14) of God's deliverance of them from Egypt. By ritual and celebration subsequent generations made that story their own (cf. the Passover Haggadah; *m. Pesaḥ.* 10:4–6). Similarly, the Feast of Unleavened Bread was observed to "remember" the Exodus (Exod 13:8–10; Deut 16:3; consider also the Feast of Booths, Lev 23:43). New Year's Day is also described as a memorial (Heb *zikkārôn;* Lev 23:24), presumably of God's creative activity and sovereignty. Later commemorative festivals might also be mentioned: Purim (cf. Esth 9:28) and Hanukkah (1 Macc 4:52, 59). Even the wearing of phylacteries (Deut 6:8; 11:18; Exod 13:9) and tassels (Num 15:39) served as a memory of God's works and law. Thus Israel "remembered" the Lord. (At the same time, of course, the cultic ceremonies and prayers served to bring the people to God's remembrance.)

The cult was an important context for remembering, but there were others: notably, the instruction of children (Deut 6:20–25; Josh 4:4–7). For the Deuteronomist, memory assumed a special and central importance; the reform depended upon it. There was no greater danger to identity and community than forgetfulness (e.g., Deut 8:11, 19). The remedy for forgetfulness was to tell the old stories, to rehearse the traditions of God's election and grace, to remember. And remembering was never merely "recollecting"; it had the shape of obedience, of covenant faithfulness (8:1, 2; consider also the stereotyped formula in

5:15; 15:15; 16:12; 24:18, 22). The point was not some cultic actualization of the past, already then remote, not some mysterious reliving of it, some of which was painful, but continuity with it, covenant identity and fidelity in a new situation, the reformation of Judah's cult and community.

In the cycles of apostasy, affliction, repentance, and deliverance which the Deuteronomistic Historian used to interpret Israel's history and to call exiles to return, the failure to remember could be used as the equivalent of apostasy (Judg 8:34). The failure to remember was not mere absentmindedness; it was covenant unfaithfulness, the failure to fulfill the obligations of the covenant. Other texts, too, explained God's judgment as being due to Israel's forgetfulness (e.g., Isa 17:10; Jer 3:21; 13:25; 18:15; Ezek 22:12; 23:35; Hos 2:13; 4:6; Pss 78:42; 106:7; Neh 9:17).

Again, however, the prophets finally turned the words of judgment around—but none quite so completely around as Deutero-Isaiah. Alongside the expected admonition "Remember the former things of old" (Isa 46:8) Deutero-Isaiah put the quite astonishing "remember not the former things" (43:18). The eschatological perspective of the prophet looked to a future sovereignty of God over Israel and the cosmos that would completely overshadow the past and provide a new identity, a new community, and a new creation. This "new thing" (Isa 43:19) would stand in both continuity and discontinuity with Israel's memory, and it was done, according to the NT, in Jesus the Christ (e.g. Rev 21:4, 6).

A "new thing" it may have been, confounding as well as fulfilling memories and expectations, but the resurrection of Jesus (or the conviction that he was raised) prompted believers to remember Jesus in tradition and worship.

The tradition of Jesus' words and deeds was by no means merely objective recollection of historical data, and the gospels which gave the oral tradition literary expression were hardly simply retrospective historical accounts. Both were highly interpretive. It was, after all, a living Lord who was remembered, and living communities selected and shaped the tradition even while they received it. When Justin Martyr calls the gospels "memoires," (Gk *apomnemonēumata; Dial* 103:8), one may object against the denotation of an ancient literary form which contained episodes from the lives of famous men and against the connotation of a retrospective historical account; but one at least must appreciate the continuity of the gospels with the Church's memory of Jesus (cf. also Papias in Eus. *Hist. Eccl.* 3.39.15; Luke 1:1–4). At the empty tomb, according to Luke, the disciples were told to "remember" (Luke 24:6, 8), and for the first time they understood (cf. John 2:22; 12:16; 16:4). In John's gospel it is said that the Paraclete, the Holy Spirit, will "bring to your remembrance all that I have said to you" (John 14:26). John's gospel may rework the tradition more than the other gospels, but none of them provides either a recollection of the "life of Jesus" or a timeless existentialist revelation; each gospel is a "remembrance," a literary commemoration of the risen Lord, which situated the lives of their readers in relation to the Christ, forging an identity, a community, and continuity, forming character, and determining conduct.

The epistles, too, served the memory of the Church. Paul explicitly says he writes to the Romans "by way of reminder" (Rom 15:15; Gk *hos epanaminēskōn hymae;* cf. 2 Pet 3:1). The epistles bear the tradition and ask readers to remember it (e.g., 1 Cor 15:1; Rev 3:3). They ask their readers to remember their own conversion (e.g., Eph 2:11, 13) and the ministry of their leaders (e.g., Acts 20:31; Heb 13:7). The later epistles, particularly, are intent upon preserving the tradition (e.g., 2 Tim 2:8, 14; Jude 5; 2 Pet 1:12, 13; 3:1). This "early Catholic" development was based on an understanding of the importance of memory from the beginning and was nurtured by the conviction that Christian identity and community had been put at risk within the congregations. Even here, "remember Jesus Christ, risen from the dead, descended from David, as preached in my gospel" (2 Tim 2:8) is not merely a call to preserve historical data, but a call to identity and community, to fitting thoughts and deeds (cf. Phil 2:6–11).

The epistles frequently remind their readers of the worship of the community (e.g., the hymns of Phil 2:6–11 and Col 1:9–15), and especially of baptism (e.g., Rom 6:1–11; 1 Cor 1:12–13; 12:13; Gal 3:27–28; Eph 2:1–7). It is little wonder, for worship was itself remembrance, and baptism in the name of Jesus and "into his death" (Rom 6:3) established identity, initiated one into a community of common memory, and required fitting conduct. Baptism was remembrance—not merely historical recollection—of the death and resurrection of Christ.

The Lord's Supper is explicitly said to be done "in remembrance" (Gk *anamnēsis*) of Jesus the Christ (1 Cor 11:24, 25; Luke 22:19). Jeremias (1966: 237–55) has argued (partly on the basis of Acts 10:4) that "in remembrance of me" should be translated as "that God may remember me" and should be understood as an eschatological petition for the Parousia. But Jeremias' argument begins with a minimal account of remembering as mere recollection and proceeds by way of a false dilemma between a reference to *either* the past or the future. When believers gathered around this table, they remembered the past, to be sure; they remembered the stories of the suffering and death of the risen Lord—but not merely as a historical recollection. In remembering that past, they owned the stories as their stories (including the story of Peter's "remembering," Mark 14:72). This remembering involved a "pleading guilty" to the death of Jesus but also a sharing in that death and in the new covenant (with its forgiveness) which Christ established. This remembering was constitutive of identity and community and determined conduct in the present. It is said that when the rich humiliate the poor, when community is broken (1 Cor 11:22), then "it is not the Lord's supper that you eat" (v 20), it is an "unworthy manner (v 27), and it is not truly "remembrance." Moreover, precisely because the people composed a community of memory, they were a community of hope, for they remembered the Lord's death as an eschatological event and proclaimed it "until he comes" (v 26). To remember Jesus was to hope for God's cosmic sovereignty—and to plead for God's remembrance, for God to act with covenant faithfulness. So Jeremias' affirmations can finally be accepted, but by way of a different argument, without denying what he denied.

Representatives of various liturgical traditions can agree on seeing *anamnēsis* as the fundamental characteristic of the celebration of the Eucharist. *Anamnēsis* neither prohibits nor requires understanding the sacrament as an "actualization" of the sacrifice of Christ, but it will protest against and protect against any diminishing of the sufficiency of the one death of Christ. *Anamnēsis* will welcome understanding the sacrament as a liturgical "memorial," but it will reject any account which reduces memory to recollection. Remembering remains constitutive of identity and community and determinative for character and conduct.

ALLEN VERHEY

REMETH (PLACE) [Heb *remet* (רֶמֶת)]. A border town in the territory of Issachar (Josh 19:21). Most modern scholars would see Remeth (note LXX^{A} *Ramath*) as identical with Ramoth in 1 Chr 6:58—Eng v 73 and Jarmuth (LXX *Remmath*) in Josh 21:29, variants of the name of a levitical town in the territory of Issachar. If this identification is correct (for an opposing viewpoint, see W. F. Albright 1926), it is possible to tentatively identify the site of Remeth as Kokab el-Hawa (M.R. 199221), which is an elevated region W of the Jordan River, E of Megiddo, and NW of Beth-shean, the site of the Crusader castle Belvoir. Woudstra (*Joshua* NICOT) notes that in a stele of Pharaoh Seti I, mention is made of an attack by the Habiru from a Mt. Yarmuta, possibly the same location as Jarmuth.

REMNANT. What is left of a community after it undergoes a catastrophe. The major Heb terms are derivatives of *šʾr, ytr, plṭ*, and *śrd;* the major Gk terms, *leimma, hypoleimma, loipos,* and *kataloipos.*

A. Hebrew Bible

The concept is used most often with reference to Israel/Judah, although sometimes also to other peoples (Josh 12:4; 2 Sam 21:2; Isa 14:30; 17:3; Amos 1:8; 9:12; Zech 9:7), to humankind as a whole (Zech 14:16), or to all living creatures (Gen 7:1–5). It often has a negative connotation: the catastrophe undergone by the community is so great that only an insignificant remnant survives, or none at all (2 Kgs 21:13–15; Isa 17:4–6; Jer 8:3; Ezek 15:1–8; Amos 3:12; 5:3; 9:1–4). In many instances, however, the connotation is positive: despite the greatness of the catastrophe, a remnant survives as the basis for renewed community life (Gen 8:15–19; 45:7; 1 Kgs 19:18; Isa 1:25–26; 28:5–6; Jer 23:3–4; Joel 2:32; Obad 17; Mic 2:12; 4:6–7; Zeph 3:11–13). Because the catastrophe is understood to be an act of divine judgment, the survival of a viable remnant is, correspondingly, an act of divine mercy (Jer 23:3–4; 31:7–9; Amos 5:14–15; Mic 4:6–7). While some passages suggest that a remnant survives despite the fact that all are worthy of destruction (Jeremiah 5, esp. vv 10, 18; Mic 7:18–20), in other places the survivors are described as those who were righteous and faithful (1 Kgs 19:18; Zeph 2:3; 3:12–13). In any case, the catastrophe purges the community of its impurities, and the remnant is called to exemplary life as the people of Yahweh (Ezra 9:13–14; Isa 1:25–26; 4:2–4; 10:20). Thus, the appointment and rescue of the remnant, making possible the continuation of the life of the community, may be viewed as themselves constituting the saving activity of Yahweh (Gen 45:7; Ezra 9:7–9; Isa 1:9). Attention may, however, shift to the future, with the remnant still to be the recipient of new and greater acts of salvation (Isa 11:10–16; 28:5–6; Jer 23:3; 31:7–9; Mic 2:12–13; 4:6–7; 5:7–8; 7:18–20; Zeph 2:7, 9).

Although most often associated with the latter prophets, the concept appears (as already indicated) in some narrative passages as well. It is a motif in Genesis, e.g., the flood story (6:5–8:22), in which the flood is the means of divine judgment on human wickedness, to "blot out … man and beast and creeping things and birds of the air" (6:7). The destruction is not to be total, however; Noah, "a righteous man" (6:9; cf. 7:1), is appointed, along with his household, to preserve representative animals from destruction (6:18–21; 7:1–5). After the flood, they become the agents for the repopulation of the earth (8:15–19; 9:1–7).

In the Joseph story (Genesis 37–50), the catastrophe is a famine. It is the descendants of Abraham and Sarah who are threatened, and it is Joseph, a member of that family, who is appointed as preserver. The famine is not said to be the means of divine judgment; nor is Joseph depicted as especially righteous (although his rescue of his brothers in their time of need contrasts favorably with their earlier treatment of him). But when he reveals himself to them, he articulates the divine purpose: "God sent me before you to preserve for you a remnant on earth, and to keep alive for you many survivors" (45:7).

A further narrative instance of the concept is from the Elijah cycle (1 Kings 17–2 Kings 2). Elijah, having fled to Mt. Horeb, complains to Yahweh that "the people of Israel have forsaken thy covenant, thrown down thy altars, and slain thy prophets with the sword; and I, even I only, am left; and they seek my life, to take it away" (1 Kgs 19:10, 14). Yahweh's reply is to send Elijah to anoint those who are to bring the catastrophe, but he also announces his intention to "leave seven thousand in Israel, all the knees that have not bowed to Baal, and every mouth that has not kissed him" (19:18). In this case, the agents of divine judgment are human (two kings and a prophet), and the survivors are those who have been faithful to Yahweh.

Another narrative reference to a remnant appears at the close of Hezekiah's plea to Isaiah to pray for Jerusalem's deliverance from Sennacherib's attack: "… therefore lift up your prayer for the remnant that is left" (2 Kgs 19:4 = Isa 37:4). Isaiah's response on this occasion is reassuring. Quite the opposite is the later prophetic word provoked by the situation under Manasseh: "… I will cast off the remnant of my heritage, and give them into the hand of their enemies …" (2 Kgs 21:14).

The Chronicler views the returned exiles of the Persian period as a remnant left by Yahweh's favor, in spite of sins that merited total destruction. Should they again break the commandments, they would have to expect that even the remnant would be consumed (Ezra 9:8, 13–15).

Among the latter prophets, Amos contains several allusions to the concept. For the most part, these are threatening: all that will remain of Israel are a few artifacts (3:12); only a tenth of the population will survive (5:3); those who escape the initial onslaught will be hunted down one by one (9:1–4). But there is

also the possibility that, if Israel changes its ways, "it may be that the Lord, the God of hosts, will be gracious to the remnant of Joseph" (5:14–15; cf. the later gloss, 9:8c).

The references in the book of Micah to a restored remnant of Israel are generally ascribed to postexilic editing. They will be gathered like sheep, and the lame and afflicted will receive special care (2:12–13; 4:6–7); Yahweh's anger will give way to forgiveness, compassion, and love (7:18–20). The remnant will be among the nations like dew and like a lion; that is, as both blessing and curse (5:7–8).

The call of Isaiah of Jerusalem refers to a destruction that is virtually total (Isa 6:11–13), but his son is named Shearjashub ("a remnant will return"). That may well be intended as an expression of doom ("only a remnant"; cf. 10:20–22; 30:15–17); certainly those who oppose Yahweh (including Samaria) will be reduced to a handful of survivors (16:14; 17:1–6; 21:16–17). In other oracles attributed to Isaiah, however, the survival of a few is ascribed to Yahweh's grace (1:9). The destruction is to serve a purifying purpose (1:25–26; 4:2–4). Those who have been scattered will be gathered again (11:10–16) and blessed by Yahweh (28:5–6).

Zephaniah announces a day of Yahweh's wrath, but holds forth the possibility that the humble and obedient, who seek righteousness and humility, may escape (2:3). When the "proudly exultant ones" are removed, there will be left "a people humble and lowly. They shall seek refuge in the name of the Lord, those who are left in Israel; they shall do no wrong and utter no lies, nor shall there be found in their mouth a deceitful tongue. For they shall pasture and lie down, and none shall make them afraid" (3:11–13).

Jeremiah professes to find no one in Jerusalem "who does justice and seeks truth," for the sake of whom the city can be pardoned (5:1–6; 6:9). While some will survive the coming destruction, they will find existence intolerable (8:3). Yet the day will come when Yahweh will gather the remnant of his flock from all the countries where he has driven them, and will provide shepherds for them in their own land (23:1–8); the call will go out, "Proclaim, give praise, and say, 'The Lord has saved his people, the remnant of Israel' " (31:7).

In Haggai and Zechariah, "the remnant of the people" is used as a name for those who have returned from Exile (Hag 1:12, 14; 2:2; Zech 8:6, 11, 12).

B. New Testament

The most explicit NT reference to the remnant is in Romans 9–11. Paul's indebtedness to the Hebrew Bible for the concept is attested by his quotation of such passages as Isa 10:22; 1:9; and 1 Kgs 19:18 (cf. Rom 9:27, 29; 11:4). As he struggles with the fact that most of his fellow-Jews have not accepted his gospel, he observes that "not all who are descended from Israel belong to Israel" (9:6b), and that "it is not the children of the flesh who are the children of God, but the children of the promise are reckoned as descendants" (9:8). Those Jews who accept his gospel constitute the remnant. They and the gentiles who believe have been chosen, not by their own will or exertion, but in divine sovereignty and mercy, as were Israel's first ancestors to whom the promise was given (9:6–33). This does not mean, however, that Israel has been deprived of its heritage (9:4–5) or rejected by God (11:1–2a). Even those who have been excluded for a time will eventually be included (11:11–32). Thus, the existence of the remnant is a temporary phenomenon, to be superseded when God's work is complete.

Allusions to the remnant occur in the Synoptic Gospels. Thus, John the Baptist warns of a judgment coming upon the descendants of Abraham that will leave only the trees that bear good fruit, and will gather the wheat into the granary while the chaff will be burned (Matt 3:7–10 = Luke 3:7–9). Jesus speaks of a wide gate and an easy way that leads many to destruction, while only a few find the narrow gate and take the hard way that leads to life (Matt 7:13–14; cf. Luke 13:23–24). He also tells a parable of a field in which a man sows good seed, after which an enemy secretly sows weeds; both wheat and weeds grow together until the harvest, but then the separation will be made (Matt 13:24–30). When asked about his teaching in parables, Jesus distinguishes between those to whom "it has been given to know the secret of the kingdom of God" and the others for whom parables are intended (Mark 4:10–12 = Matt 13:10–17 = Luke 8:9–10). A proverb, "For many are called, but few are chosen," is ascribed to him (Matt 22:14).

The book of Revelation describes the situation in the churches to which it is addressed in terms that sometimes reflect the concept of remnant (2:24; 3:4). Its portrayal of the destruction to accompany the end time involves a remnant that will survive (11:13; 12:17).

C. Origin of the Concept

No consensus has emerged concerning the origin of the concept of a remnant. It has been held that the motif emerged in the context of eschatology derived from Babylonian mythology and cults. Another view is that the concept has its origins in the civil or political sphere; and, more specifically, that it derives from the Assyrian policy of total warfare, reflected in royal inscriptions boasting of successful military campaigns. A third outlook holds that the remnant idea arose out of existential concern over threats to human survival and the desire to secure life and existence in the face of death.

LESTER V. MEYER

REPENTANCE. The notion of repentance follows from the notion of sin. It suggests that sin is an act or attitude which can be corrected by some change in the person.

A. Old Testament

The basic Hebrew word which is used to express this change is *šwb,* the root of which means simply "to turn." It is a particularly instructive word because it reflects the notion of journeying and pilgrimage, which exemplifies in a very fundamental sense the attitude and relationship between Yahweh and Israel (Deut 26:5–11).

The idea of walking in the way of the Lord is a common metaphor in the Hebrew Bible (Ps 1:1). And in a variety of contexts the way of Israel is contrasted with the way of Canaan, the way of the Lord with the way of evildoers, the way of the righteous with the way of sinners. Israel's religious calendar, too, is built on the core of pilgrim feasts: Passover, Booths, and Pentecost all have pilgrim contexts. It is this notion of walking and journeying, then, that illumines the meaning of *šwb* (or the less common *nḥm;* Exod 13:17). The relationship with Yahweh is envisioned as an ongoing journey requiring constant attention and vigilance, and a sense of purpose. To deviate from the way is, at the same time, to lose sight of the objective.

Three classical passages illustrate this sense of repentance-returning: Amos 4:6–13; Hos 5:15–6:5; Jer 3:12–24.

In Amos the prophetic vision of the coming destruction finds powerful expression. His prophecy cuts through the appearances of prosperity and illumines the hypocrisy and idolatry of self-love. The passage in chap. 4 rehearses the chastisements, punishments, and signs that Yahweh has visited upon Israel. Despite this "parental" admonition, "you did not return (*šwb*) to me." This phrase becomes a refrain in the passage. The general tone of Amos is pessimistic and the repentance which is required seems remote. In these passages the emphasis is on "Israel," the people. The dire call "Prepare to meet your God" is directed to the nation which "did not return."

In Hosea the great metaphor of the faithless wife is the key to understanding the sense of repentance (Hosea 2–3). Faithless Israel has become a prostitute and abandoned the relationship with the Lord, forgotten the love God showed, and been ungrateful for the Lord's gifts of plenty and prosperity. But the Lord does not (as in Amos) let go. "I will woo her. I will go with her into the wilderness and comfort her: there I will restore her vineyards … and there she will answer as in her youth" (Hos 2:14–15). There is in Hosea a real sense of the possibility of repentance. "Come, let us return to the Lord; for he has torn us and will heal us. He has struck us and he will bind up our wounds; after two days he will revive us; on the third day he will restore us, that in his presence we may live" (Hos 6:1–2). Following this consolation, the prophet goes on to enumerate the qualities of repentance: humility and knowledge of the Lord (Hos 6:3–

4). And further in chap. 12 he cites "loyalty and justice" (Hos 12:6). Over and over it is the care of the poor, the quality of justice, and the dedication to the Torah that exemplify true repentance.

So in Hosea, while the references are to Israel (2:4–4), the repentance which is required is more personal, more individual than the call to repentance in Amos.

Finally in Jeremiah the prophet's call for a "new heart" provides the context of repentance. In chap. 3 Jeremiah proclaims, "Come back to me, apostate Israel, says the Lord, I will no longer frown on you. For my love is unfailing, says the Lord, I will not be angry for ever" (Jer 3:12). The condemnations of Israel and the apostasy which will bring disaster on the people are offset constantly by the appeal to renewal. "I remember the unfailing devotion of your youth, the love of your bridal days when you followed me in the wilderness, through a land unknown" (Jer 2:2). And the renewal which is required is also specified. "If you will banish your loathsome idols from my sight, and stray no more; if you swear by the life of the Lord in truth, in justice, and uprightness, then shall the nations pray to be blessed like you (Jer 4:1–2).

But one theme that Jeremiah develops more fully than his predecessors is the idea of gleaning out of Israel a faithful few (Jer 6:9). And this faithful remnant may yet survive the disaster if they acknowledge their wrongdoing, confess their rebellion and their promiscuous traffic with foreign gods (Jer 3:13). In this group of confessors, repentant and renewed, the future hope lies because these the Lord loved: "With everlasting Love have I loved you, therefore I have continued my faithfulness to you" (Jer 31:3).

This can only take place, however, when the Lord "will make a new covenant with the house of Israel and the house of Judah." This new covenant will not be external to the faithful, nor a "thing" to be done; rather, the Lord "will write it upon their hearts." The renewed covenant and the renewed heart are essential elements of the future. From the very beginning, the Lord both winnowed and called. And to that call those who heard and repented responded and so became "like a watered garden" (Jer 31:12).

Again in Jeremiah, there is a growing sense of a distinction between the fate of the whole people and the fate of the faithful. So the repentance of the faithful few restores Israel even though the many perish.

It seems clear from the prophetic writings that repentance is eschatological. The final punishment of faithless Israel is withheld. The sword is stayed, the final light is not extinguished, the possibility of repentance remains because the Lord is faithful and full of love and refuses to abandon the covenant (Childs 1986: 226).

Repentance in the prophets, then, is an act of the heart. It is more than mere words. It is defined by clear actions that lead to justice, mercy, and fidelity. But repentance was also a cultic act. It is a liturgical function in Israel. There are a number of passages which point to the liturgical act of repentance (Isa 63:7–64:12; Hos 6:1–3; 7:14; 14:1–3; Joel 2:15–18). These cultic expressions apparently included acts such as rending garments, throwing ashes, wearing coarse garments, and as in the liturgy of the *yôm hakkippurîm,* symbolic acts (Leviticus 16). These cultic acts attest to a widespread belief in both the necessity and the possibility of repentance and forgiveness. Though the prophets often excoriate such rituals because they are performed without a change of heart (Jeremiah 7), they are important indicators of the faith of Israel in the continuous mercy of Yahweh.

Finally, one should note the many references in the Psalms to repentance and forgiveness. Two psalms in particular, Psalm 51 and Psalm 130, express most poignantly the elements of true repentance and its place in the religion of Israel:

> If you, Lord, keep count of sins
> Who, O Lord, could hold up his head.
> But in you is forgiveness
> And therefore you are revered (Ps 130:3–4).
> Create a pure heart in me, O God,
> And give me a new and steadfast spirit …
> My sacrifice, O God, is a broken spirit,
> A wounded heart you will not despise (Ps 51:10, 17).

B. New Testament

The primary Gk term rendered "repentance" in English translations of the NT (*metanoia*) is found 24 times, and its verbal form "to repent" (*metanoeō*) is used another 34 times. In addition, another important word which is sometimes translated "repent" (*metamelomai*) occurs six times. The generally recognized core idea of these words is a "change of mind" (*NIDNTT* 1: 356–57), although *metamelomai* also carries the nuance of "regret" or "remorse" (*TDNT* 4:628–29). The English rendering has perhaps been colored by the Latin background of concepts like penance and penitence.

1. OT Background. In the LXX both *metanoia/metanoeō* and *metamelomai* translate the Heb *nāḥam* a total of 35 times, again emphasizing the elements of a change of thinking and regret. It has been commonly held that the NT concept of "repentance" follows the meaning of the frequent Heb verb *šûb* (*TDNT* 8:989; *NIDNTT* 1: 357). However, such a view cannot be sustained from LXX usage because *šûb,* which is used over 1,050 times, is always translated by *epistrophō* ("to turn, be converted") and its kindred terminology (*TDNT* 8:726–29; *NIDNTT* 1: 354). Thus, any possible shift in meaning took place during the Intertestamental Period, perhaps under Hellenistic influence (*TDNT* 4:989), though such a conclusion lacks fully persuasive proof (Wilkin 1985).

2. NT Usage. The noun *metanoia* and its related verb *metanoeō* occur 26 times in the gospels, though not at all in John. They are found eleven times in Acts, five times in the Pauline epistles, three times in Hebrews, once in 2 Peter, and twelve times in Revelation. The minority term *metamelomai* is encountered three times in Matthew, twice in 2 Corinthians, and once in Hebrews.

In the gospels, John the Baptist burst onto the scene in Israel "preaching a baptism of repentance for the forgiveness of sins" (Mark 1:4; Luke 3:3). His urgent message was "Repent, for the kingdom of heaven is near" (Matt 3:2). Those who came to be baptized by John were warned, "Produce fruit in keeping with repentance" (Luke 3:8). Here the basic flavor of intellectual change in *metanoia* is evident. It is also clear that behavioral "fruit" (i.e., a changed life) is expected to flow from repentance (Turner 1975: 63–64).

In his early ministry, Jesus' own message was expressed in similar ways. Like the Baptizer, he proclaimed, "Repent, for the kingdom … is near" (Matt 4:17). His mission focused on calling "sinners to repentance" (Luke 5:32). What that meant is clarified in Mark 1:15: "Repent and believe the good news." Any conception of repenting (*metanoeō*) not wedded to faith in the gospel falls short of the full biblical message.

On the other hand, the proclamation of Jesus (Jeremias 1971: 152–58) and his apostles sometimes utilized the idea of *metanoia* to include faith (Mark 6:12). In a real sense, "Repentance and faith are two sides of the same coin" (*IDB* 4:34). The issue could be sharpened to "repent" or "perish" (Luke 13:3, 5), "repent" or go to "hell" and "torment" after death (Luke 16:23, 28, 30). For those sinners who do repent, however, there is "joy in heaven" (Luke 15:7, 10). Thus, it can be concluded that, in the gospels, *metanoia* stands for the entire response bringing about eternal life, including faith when it is not stated. Accordingly, the Great Commission statement which concludes Luke's gospel reads, "Repentance and forgiveness of sins will be preached in his name to all nations" (24:47).

At the human level, sincere repentance (*metanoeō*) for interpersonal sin demands forgiveness, according to Christ (Luke 17:3–4). Surprisingly, John's gospel contains no reference to repentance in either dimension, the idea apparently being included in John's concept of faith (*IDB* 4: 34).

The three uses of *metamelomai* in the gospels are instructive. In Matt 21:29, 32, it is similar, but not equivalent, to *metanoeō.* In Matt 27:3 the "remorse" of Judas does not have "the power to overcome the destructive operation of sin" (*TDNT* 4:628). This example "makes it clear that *metamelomai* and *metanoeō* do not have identical meanings in the NT" (*NIDNTT* 1: 356).

Virtually echoing John the Baptist, Peter's sermon at Pentecost in Acts urged, "Repent and be baptized … so that your sins may be forgiven" (Acts 2:38). Further usage links repentance not only with forgiveness (5:31) but also with "faith in our Lord Jesus" (20:21) and with "life," as a result of repentance (11:18). In Acts 17:30–31 Paul on the Areopagus states God's command for "all people everywhere to repent" or be justly judged. Parallel to the phenomena in the gospels (*NIDNTT* 1: 359), repentance in Acts may be complementary to faith (20:21) or include faith (17:30) and leads to forgiveness of sins (2:38; 5:31) and eternal life (11:18).

Two other passages bring *epistrephō* alongside *metanoeō* in noteworthy ways. Acts 3:19 records Peter's offer to Israel: "Repent … and turn to God, so that your sins may be wiped out." Paul's explanation of his apostolic commission to Agrippa in Acts 26:18 clarifies this turning (*epistrephō*): "from darkness to light," from Satan's power to God to receive forgiveness of sins. The apostle's obedience to that commission meant that he preached that his hearers "should repent and turn to God and prove their repentance by their deeds" (Acts 26:20). Here again is the expectation that the one who changes his mind (*metanoeō*) about the gospel and turns (*epistrephō*) to the Lord will display a "converted" lifestyle (cf. Luke 3:8).

The Pauline literature rarely uses the terms for repentance, and the Johannine epistles not at all. For Paul, like John, repentance is included in faith (*IDB* 4: 34). Besides several standard uses (Rom 2:4; 2 Cor 12:21; 2 Tim 2:25), Paul strongly contrasts *metanoeō* and *metamelomai* in 2 Cor 7:8–10 (*TDNT* 4:629).

The writer of Hebrews refers to the God who "will not change his mind" (7:21) and Esau, who could not achieve repentance (12:17). He also speaks of foundational initial repentance (6:1) and the utter impossibility of returning to the point of first repentance (6:6). Peter describes the patient God, who desires "everyone to come to repentance" (2 Pet 3:9), apparently including forgiveness and salvation (See 1 Tim 2:4). Again the basic idea of a change of mind is demonstrated in the epistles.

The letters to the churches in the Roman province of Asia in the book of Revelation contain eight uses of "repent" (2:5 [twice], 16, 21 [twice], 22; 3:3, 19). The glorified Christ's command to repent was directed at a lukewarm church in Laodicea (3:19), but also at the great church at Ephesus (2:5), which had "forsaken its first love" (2:4). All these sinful churches needed to change their minds and bring forth the fruit of repentance (Luke 3:8; Acts 26:20), turning again to Christ.

Sadly, the last mentions of "repent" (*metanoeō*) in the NT picture an unrepentant mass of humankind as God's climactic wrath is poured out on the earth (Rev 9:20, 21; 16:9, 11). Instead of turning to the Lord in repentant faith through his longstanding patience (2 Pet 3:9) or to escape his righteous judgment, these sinners continued with their abominable acts (9:20, 21) and cursed God instead of glorifying him (16:9, 11).

In conclusion it can be said that repentance in the NT is always anchored in a change of thinking (*metanoia*), although the psychological and emotional aspects sometimes color or expand the concept (especially the usage of *metamelomai*) (*ISBE* 4: 136–37). Repentance must not be separated from its flip side of faith (Mark 1:15; Acts 20:21), or from the realization that it sometimes stands for the package of human response to the good news of Jesus Christ (2 Pet 3:9; cf. Acts 2:38). True repentance, whether by an unbeliever or a believer (Acts 26:18, 20; Luke 17:3–4), receives the gracious forgiveness that God continually offers all humankind in Christ (Luke 24:47).

REPHAEL (PERSON) [Heb *rĕpā᾽ēl* (רְפָאֵל)]. Named as the second son of Shemaiah, first son of Obed-edom, Rephael (whose name means "God has healed") is listed among the gatekeepers at the

temple in Jerusalem (1 Chr 26:7). The list in which his name occurs (1 Chr 26:4–8) appears to be the contribution of a reviser of the Chronicler's organization of the gatekeepers (Williamson *Chronicles* NCBC, 169–70; Rudolph *Chronikbücher* HAT, 173).
J. S. ROGERS

REPHAH (PERSON) [Heb *repaḥ* (רֶפַח)]. A descendant of Ephraim (1 Chr 7:25). The only other listing of the Ephraimite clan is in Num 26:35–36, but it has no Rephah. The Ephraimite list in 1 Chronicles 7 is a unit that is interrupted in v 21b and resumed in vv 25–27. The antecedent of "his son" before Rephah is unclear. Perhaps the Resheph that follows is partial dittography of Rephah (Braun *1 Chronicles* WBC, 115). There is a repetition of names in vv 20–21 and 25–27 and perhaps some variations in spelling. Hogg (1900–1901: 149–50) argues that the names in vv 25–27 beginning with Rephah are variations or misreadings of the three sons of Ephraim found in Num 26:35–36.

M. STEPHEN DAVIS

REPHAIAH (PERSON) [Heb *rĕpāyâ* (רְפָיָה)]. The name Rephaiah is held by five persons in the Hebrew Bible. The name may mean "Yahweh has healed."

1. In 1 Chr 3:21 Rephaiah is listed as the son of Jeshaiah the son of Hananiah according to the MT. The genealogy in 1 Chr 3:16–24 lists the postexilic descendants of the Davidic line. The MT as it now stands is corrupt in the second half of v 21. If we follow the text as it is, then there is no connection between the first half of the verse and the second and consequently the last recorded descendant of Zerubbabel is Jeshaiah. If we delete the phrase "sons of" and read instead "and," then the list represents further sons of Hananiah. A final possibility would be to change the phrase in the MT "sons of" to "his son" with partial support of the versions. Scholars are in disagreement concerning these possibilities. The solution which is chosen affects how scholars date the work of the Chronicler.

2. Rephaiah was also the name of a chief of the Simeonites, who with a band of five hundred men went to Mt. Seir and destroyed a settlement of Amalekites. The group then settled there. This occurred during the reign of Hezekiah king of Judah (727–698 B.C.).

3. In 1 Chr 7:2 Rephaiah is named as the son of Tola the eldest son of Issachar. He is described as a mighty warrior (Heb *gibbôr ḥayil*).

4. Rephaiah is given as the name of a descendant of Saul of the tribe of Benjamin in 1 Chr 9:43. He is the son of Binea and the father of Eleasah. The list of Saul's descendants in 1 Chronicles 9 is probably adapted from chap. 8 and is intended as an introduction to chaps. 10 and following. Note the variations from that list, for example, the spelling of the name Rephaiah in 1 Chr 8:37 is Raphah.

5. In Neh 3:9 Rephaiah the son of Hur is listed as ruler of half the district of Jerusalem (Heb *śar ḥăṣî pelek yĕrûšālām*). The context in the text is the reconstruction of the walls of Jerusalem under the direction of Nehemiah. There were five administrative units in the Persian "province" of Jehud. The other districts with their rulers are listed in Neh 3:12, 14–18. The intent in this text in listing the rulers of these districts may have been to show the strong support for the rebuilding of the walls within the community.
RUSSELL FULLER

REPHAIM [Heb *rĕpāʾîm* (רְפָאִים)]. A term in the Hebrew Bible whose uses fall generally into two categories: (1) descriptions of the dead in the underworld, or (2) references to a group or nation of giants or warriors.

A. The Rephaim as the Dead

In the OT the Rephaim are frequently described as dead humans who dwell in the underworld. Ps 88:11—Eng 88:10 sets the Rephaim (RSV "shades") in parallelism with "the dead" (*mētîm*), asking if God's love is declared in the grave and if God's wondrous acts are known in "the darkness" and "the land of forgetfulness" (vv 12–13—Eng 11–12). The psalmist implores God not to consign him to death and the

grave as well as to the underworld where the dead go after life. The same parallelism between the Rephaim ("shades") and the dead occurs in Isa 26:14, 19. Fifth-century Phoenician inscriptions likewise attest to the Rephaim as those whom the living join in dying (*KAI* 13:7–8; 14:8). A Punic-Latin bilingual text renders "the divine Rephaim" with the Lat "the sacred shades," that is, the dead (*KAI* 177: 1; Horwitz 1979: 41; L'Heureux 1979: 112–27; Cooper 1981: 460–67).

References to the Rephaim in the book of Proverbs also indicate that they are the dead dwelling in the netherworld. In Prov 2:18 the house of folly leads (or, sinks down) to death and to the Rephaim. The foolish man does not know that the Rephaim (RSV "dead") are in the underworld, according to Prov 9:18. Prov 21:16 characterizes the Rephaim as a "congregation" or "assembly" (*qāhāl*).

Further specification of the abode of the dead Rephaim comes from Job 26:5. In this verse the extent of God's power reaches down beneath the waters of the oceans, down to the abode of the Rephaim. There in the underworld the Rephaim (RSV "shades") tremble at God's might. (The final passage of the Ugaritic Baal cycle, *CTA* 6.6.46–52, also juxtaposes the sea with the Rephaim in the netherworld).

Unlike the references to the Rephaim in Psalm 88, references in the book of Proverbs, Job 26, and Isa 14:9 describe the Rephaim as dead kings. This latter passage is a genuine reminiscence of the Rephaim as a line of deceased monarchs. When the Lord relegates the king of Babylon to the netherworld, the netherworld and its inhabitants respond in the following way to the latter's arrival:

> Sheol beneath is stirred up
> to meet you when you come,
> it rouses the Rephaim to greet you,
> it raises from their thrones
> all the kings of the nations.

Unlike any other biblical text, this passage preserves vestiges of a 2d-millennium understanding of the Rephaim. For, while other biblical passages as well as the Phoenician inscriptions and the Punic-Latin bilingual know the Rephaim only as the dead in a general sense, the concept of the Rephaim in Isa 14:9 is similar to the Ugaritic notion of the Rephaim as the ancestral line of dead heroes and kings.

2 Chr 16:12 may contain yet another reference to the dead Rephaim. This passage faults the ailing king Asa for consulting "doctors" (*rōpĕʾîm*). It has been proposed (Jastrow 1909: 49 n. 23) that Asa did not consult "doctors" but the Rephaim, perhaps much as Saul asked the witch of Endor to consult the dead (1 Samuel 28). It is difficult to criticize Asa for seeking medical aid unless the help was sought from theologically dangerous sources, such as the dead Rephaim.

B. The Rephaim as Giants

The Rephaim are also described in the OT as a people. In Gen 14:5, Chedorlaomer and his cohorts smite the Rephaim in Ashtaroth-karnaim along with peoples called Zuzim and Emim. According to Deut 2:10, the Emim had once lived in Moab. They were as tall as the Anakim, who were giants (Num 13:33). According to Deut 2:11, they were also known as the Rephaim, but the Moabites called them Emim. Deut 2:20 relates that the territory of Ammon, like that of Moab, was known as the land of the Rephaim, but that the Ammonites called them Zamzummim. From the perspective of Deuteronomy, the Rephaim were a legendary race of giants existing in the distant past. See also REPHAIM, VALLEY OF. Unlike Gen 14:5, which describes the Rephaim, Zuzim, and Emim as distinct peoples, Deuteronomy understands them as different names for the same people.

Gen 15:20 lists the Rephaim with various "ethnic" groups which inhabited the areas between the Nile and the Euphrates. Because the term Rephaim lacks the formal grammatical indicator for a people in biblical Hebrew, the Rephaim were likely not an actual nation or people, but a loosely defined group used to fill out this list. (One may compare Josh 5:1 or Num 13:29, where the Rephaim are omitted [Rosenberg 1980: 204].) The Genesis and Deuteronomy 2 passages transformed old traditions about the Rephaim from legendary giants into a people comparable to other nations. In Deuteronomy, the Rephaim serve part of a further theological purpose. In describing the dispossession of the Rephaim by Moab and Ammon, the Horites by Seir, and the Avvim by Caphtor, Israel's dispossession of the Canaanites is shown to be no less moral (Rosenberg 1980: 208).

Other passages in Deuteronomy and Joshua also have a vague view of the Rephaim. Deut 3:11, 13 as well as Josh 12:4 and 13:12 recall Og of Bashan as a remnant of the Rephaim. All of these passages describe the Rephaim as some type of group or nation living in the distant past.

The Rephaim as a line of warriors is apparently preserved in the epithet "the Raphites" (*hārāpâ;* RSV "giants") found in 2 Sam 21:16, 18, 20 and 1 Chr 20:4, 6, 8 (L'Heureux 1976: 83–85). This expression may have derived from an eponymous ancestor named Rapah or the like (cf. Talmon 1983: 237–41). An Ugaritic text (RS 24.252 = *KTU* 1.108) describes a figure named Rapaʾu (Ug *rpʾu*,the vocalization of which is based on the biblical Hebrew *hārāpâ*). This personage has the same address as Og. Both figures are said to dwell in Ashtarot and Edrei (assuming that the Ugaritic words *ʿṯtrt* and *hdrʿy* are place names). Judging from this Ugaritic evidence and Deuteronomy 3, the biblical traditions regarding the Rephaim may have originated in the area of NE Transjordan.

C. Conclusions

How one reconciles these different views of the Rephaim in the OT has been the subject of much scholarly discussion. Fortunately the Ugaritic texts as well as the later biblical and Phoenician texts clarify the process which led to different presentations of the Rephaim in the Bible. In 2d-millennium Ugarit, the Rephaim were the line of dead kings and heroes, as the Ugaritic text, RS 34.126 = *KTU* 1.161 indicates (Pitard 1979; Bordreuil and Pardee 1982; Levine and de Tarragon 1984). Generally this precise understanding of the Rephaim was lost in the course of the 1st millennium (see Horwitz 1979: 41–43). While Isa 14:9 preserves the older understanding of the Rephaim, in other occurrences the older concept of the Rephaim was fractured, bifurcating into various descriptions of the Rephaim. The Rephaim as a line or group of heroes and monarchs at Ugarit corresponds to the biblical view of them as a people or nation. As heroes and monarchs, the Rephaim survived in the Bible as giants or warriors. The royal aspect of the Rephaim is most evident in Isa 14:9. The Ugaritic view of the Rephaim as a dead group has broadened in the biblical texts describing the Rephaim as the dead in general.

The NT also preserves a reference to the Ugaritic god Rapaʾu. In his defense speech before the Sanhedrin in Acts 7, Stephen contrasts the fidelity of Abraham, Joseph, and Moses with the infidelity of their fellow Israelites. As an example of the latter's unfaithfulness, Stephen cites in Acts 7:43 a version of Amos 5:26:

> And you took up the tent of Moloch,
> and the star of the god Rephan,
> the figures which you made to worship;
> and I will remove you beyond Babylon.

The gods Moloch and Rephan are lacking in the Hebrew text of Amos 5:26, and extant in only a few mss of the LXX of the same verse. The deity Moloch was known in Israel and perhaps in Punic Carthage as the god to whom children were sacrificed in fire. This god is also attested in texts from Ugarit. The name Rephan in Acts 7:43 varies a great deal in NT mss. The origin of the name has been attributed to two scribal errors, since the name of the deity in question in the Hebrew text of Amos 5:26 is Kaiwan (*kywn*). In this case, the Greek form Rephan is assumed to have resulted from the mistaking of Hebrew *kap* for *reš* and the transliteration of Hebrew *waw* by Greek *phi.* With the recent discovery of the Ugaritic god Rapaʾu, it has been suggested as an alternative that Rephan is a vestige of this Ugaritic deity (Pope 1977: 170). Accordingly, Stephen's citation of Rephan with Moloch as examples of Israelite idolatry captures the flavor of Canaanite paganism which the Israelites were said to have enjoyed and the Israelite prophets so zealously condemned.

MARK S. SMITH

REPHAIM, VALLEY OF (PLACE) [Heb *ʿēmeq rĕpāʾîm* (עֵמֶק רְפָאִים)]. A valley, extending SW of Jerusalem, whose N portion formed part of the boundary between Benjamin and Judah (Josh 15:8; 18:16). It is also the scene of one of the famous exploits performed by the mighty three among the Champions of David (2 Sam 23:13; 1 Chr 11:15). This exploit happened during a major thrust by the Philistines against David at Jerusalem (2 Sam 5:18; 1 Chr 14:9). Whether by military or literary design, the Philistines gathered in the Valley of the Rephaim in preparation for attacking Jerusalem. Militarily the Philistines had cut off access to David's base of strength to the S and to the agricultural productivity of the valley. However, certain literary concerns may have led to the location of the battle.

In the LXX, the valley is called (1) "Valley of the Rephaim (Gk *Raphaim*)" (2 Sam 23:13); (2) "Valley of the *Titans* (Gk *Titanōn*)" (2 Sam 5:18); (3) "Valley of the Giants (Gk *gigantōn*)" (1 Chr 11:15; 14:9). This reflects a tradition in which "Rephaim" is the equivalent of "Giants." It may have been a matter of deliberate choice that the text has the descendants of giants (cf. Hesiod *Theog.* 132–60, 207–10), the Philistines (2 Samuel 15–22), outwitted by the mighty three (2 Sam 23:13–17 = 1 Chr 11:15–19) and ultimately defeated by David's army in the "Valley of the Giants" (2 Sam 5:17–25 = 1 Chr 14:8–17). This tradition of the giants may also have been logical outgrowth of the Ugaritic understanding of Rephaim as the dead royal ancestors. See REPHAIM.

Finally the biblical record (Isa 17:5) also describes the valley as a place of fertile farming. Though the metaphor is one of famine, the implication is left that the valley was a place of rich agriculture. The valley's ancient agricultural productivity has recently been examined quite thoroughly by the Ein Yael Project.

The project involves archaeological survey, excavation, experimentation, research, and reconstruction of ancient agricultural technology. Geographically, the Ein Yael Project is situated in the outskirts of Jerusalem in the Rephaim Valley. As part of the Judean Hills, the Mediterranean climate of this region consists of a short rainy season followed by a long dry summer. Due to the lack of water available during most of the year, inhabitants of the area settled near permanent natural water sources (such as Jerusalem, situated near the Gihon spring) or were forced to develop artificial water supplies. Two artificial methods of water collection are observed at ancient sites in the Rephaim Valley. One system involves the cutting and plastering of a cistern which collects and retains water during the rainy season. The second system involves the cutting of a cave and tunnel into the hillside. Rainwater seeps through the hills and collects in the cave during winter months and flows out through the tunnel during dry seasons. Both systems can adequately supply a small population with water throughout the year.

Serving as the border between Israel and Jordan until 1967, the area of the Rephaim Valley has remained, thus far, free from modern development. This lack of development has allowed for a more extensive study of archaeological remains in the area when compared to other regions. Using topographical maps or aerial photography, one can clearly distinguish the remains of ancient farms as well as the roads which connected each unit and provided access to Jerusalem. The farms consist of distinct terraced units divided by boundary walls, giving each farm its unique shape and defined territory. Outside the agricultural units subterranean tombs, lime kilns for the production of plaster, wine and oil presses are found. Stone quarries from which the rocks were hewn are also recognizable in the vicinity. While it is

difficult to date each stone quarry to the time of use, the quarries were undoubtedly used in the construction of the buildings, roads, terraces, boundary walls, and tunnels at these ancient farms.

A major development in the advance of ancient agricultural units in hilly terrain such as the Rephaim Valley is the terrace system of farming. A terrace is an artificial construction used to create a field for farming. Terraces are especially important in hilly areas where erosion of the soil can be problematic. In the Judean Hills, ancient farmers constructed terraces by building a stone wall and filling the space behind it with stones and soil. The terrace system also allows for the retention of moisture throughout the year while the soil is replenished with minerals through the decay of plants. Nutrients provided by plant decay allow the same terrace units to be used for long periods.

Terraces were first used at the beginning of the Bronze Age at sites located near water sources. While the idea of terrace agriculture was known in the EB period, the use of terracing was limited to the spring areas in the valleys, which was sufficient for the limited agricultural needs of a small population. Extensive terracing actually began in the Israelite period as the population increased and continued through the Byzantine period in the 6th and 7th centuries A.D. From the Israelite period onward, the terraced farms in the Rephaim Valley provided Jerusalem with much of its food supply.

The Ein Yael Project—named for a farm in the Rephaim Valley exhibiting remains from the Israelite, Roman, Byzantine, and Ammayad periods—includes an examination and study of agriculture as it developed during the various archaeological periods represented in the valley. Each farming unit in the area depicts a history of occupation exemplifying the varying change in technology over time. Excavation at the site of er Ras, for example, shows that the site was occupied in the Bronze Age (2000–1600 B.C.) before the first terraces were constructed there. The site was later reoccupied in the 8th century B.C. and was rebuilt in the typical size and with installations common to farms of the First Temple period. During this period, the farm at er Ras consisted of four and one-half acres of terraced farmland bordered by stone walls. The site, connected to other agricultural units by a network of paths, exhibits a four-room house and a winepress. The farm at er Ras continued to be used in the Hellenistic, Roman, and Byzantine periods and until 1948, when the area was used as an orchard.

The site at er Ras represents three stages of agricultural development: the first stage of agricultural occupation without terracing in the 2d millennium B.C., the construction of an organized farm unit in the First Temple period, and the reoccupation of the site in subsequent periods through the utilization and reparation of existing terraces and installations.

Aside from the mere excavation and identification of ancient farming units, the Ein Yael Project involves experimentation with raw materials used by ancient inhabitants of the area. Materials to be studied include clay, stone, textiles, and metals. Experimentation is also to be conducted in actual farming practices with the hope that the farm at Ein Yael will be restored and crops will be cultivated in accordance with original technologies.

Connecting biblical descriptions of ancient agriculture to specific farms excavated is difficult. The Bible mentions the organization of the family in several contexts: *bēt ʾab, mišpāḥâ,* and *śĕdê hāʿîr* to name three. While these biblical terms undoubtedly relate to some of the agricultural units found in the Rephaim Valley, we cannot specify which term applies to which farm until further research in ancient agriculture is conducted. The ultimate goal of the project at Ein Yael is a combination of knowledge gained from written sources with knowledge acquired from archaeological excavation and practical experimentation. Only through the study of all three of these aspects can one fully understand the nature of life in ancient times.

GERSHON EDELSTEIN

REPHAN (DEITY) [Gk *Rhaiphan* (Ῥαιφαν)]. A deity whom Stephen claimed that Israel worshipped in the wilderness (Acts 7:43). Greek texts of the OT preserve a variety of transliterations for the name of a deity which appears in the Hebrew text of Amos 5:26 as *kiyyûn* (consonantal text *kywn*). This Greek tradition is the source for the name Rephan in Acts 7:43 where Amos 5:26 is quoted. A common confusion in the text of the OT between the letters *kap* and *reš* accounts for the confusion in the initial

letter, and the Greek letter *phi* points to a pronunciation of the Hebrew *waw* as consonant. Although the final vowel is consistently represented in Greek as *alpha,* there is no agreement as to the first vowel, the following forms being attested in Acts and Amos: *rompha (n), rempha (m/n), raiphan, rephan, raphan.* Since there is no deity known who bears such a name, the Hebrew text should be given priority over the Greek transliterations. The Hebrew consonants in Amos 5:26 correspond to an Akkadian name for the planet Saturn, which was recognized as a deity. See SAKKUTH AND KAIWAN.

SAMUEL A. MEIER

REPHIDIM (PLACE) [Heb *rĕpîdîm* (רְפִידִים)]. A station of the Exodus located between the Wilderness of Sin and the Wilderness of Sinai (Exod 17:1, 8; 19:2; Num 33:14, 15). Dophkah and Alush are also mentioned as encampments between the Wilderness of Sin and Rephidim (Num 33:12–14). The location of Rephidim is unknown and dependent upon the identification of Mt. Sinai. Various proposals have been made following a northern route of the Exodus placing Mt. Sinai and thus Rephidim in the Negeb Highlands, N Sinai, or the land of Midian. (For a summary of these views, see Beit Arieh 1988.) Those opting for a southern Exodus route locate Rephidim in the vicinity of Jebul Musa close to the S tip of the peninsula. Wadi Feiran has been traditionally identified as the location of Rephidim dating back to Byzantine times (Perevolotsky and Finkelstein 1985) but Wadi Refayid has also been suggested and was preferred by Abel (*GP* 2: 435).

Three significant events occur while Israel is situated at Rephidim. The Israelites complain of being in a place where "there was no water for the people to drink" so Moses is instructed to provide water by smiting the rock. Rephidim became known as Massah, "testing," and Meribah, "contention," because Israel determined to test the Lord to see if he was among them or not (Exod 17:1–7). The term Massah is used several other times in warnings to Israel not to prove the Lord as they did at Rephidim (Deut 6:16; 9:22; 33:8). Meribah also refers to an incident near Kadesh-barnea involving a challenge to Moses to provide water (Num 20:13, 24; 27:14; Deut 32:51; Ps 81:7). See MASSAH AND MERIBAH.

At Rephidim Israel, led by Joshua (who is mentioned here for the first time), fought Amalek and only prevailed when Moses, assisted by Aaron and Hur, was able to keep his hands and rod raised (Exod 17:8–16). Afterward Moses built an altar to commemorate the victory. From its position in the narrative, the account of Jethro's instruction to appoint judges to relieve the heavy burden on Moses was given at Rephidim (Exodus 18), although some scholars argue that this took place at Mt. Sinai (see Exod 18:5).

A tradition of the sages connected the name Rephidim to the verb *rph* meaning to "relax, weaken, dishearten," because Israel "cast off the commandments of the Torah" and because of this an enemy (Amalek) rose up against them (Vilnay 1978: 341).

REPOUSSÉ. See JEWELRY.

REPTILE. See ZOOLOGY.

RESAIAH (PERSON) [Gk *Rēsaiou* (Ρησαιου)]. An alternate form of REELAIAH.

RESEN (PLACE) [Heb *resen* (רֶסֶן)]. A town mentioned in Gen 10:11. The Yahwistic fragment of the Table of Nations seems to include it in the kingdom of Nimrod, although the translation of the first clause of Gen 10:11 is very unclear. See REHOBOTH-IR.

No city Resen is known from the cuneiform sources. It is probable that the name referred originally not to a separate city but to a construction work within the city of Nineveh. Some have identified it with Akkadian *risnu,* understood to mean something like "irrigation system" (Lipinski 1966: 85–86). Another possibility is that Resen is derived from Akkadian *rēš ēni,* "fountainhead" or the like (Speiser *Genesis*

68). Again, the original reference would have been to some kind of waterworks found within the city. If either interpretation is correct, at some point in the transmission of the traditions about Nimrod this descriptive term was misunderstood as a city name itself. See REHOBOTH-IR. It is still possible, however unlikely, that the allusion is to an as yet unknown Assyrian town (cf. Sasson 1983: 95 and n. 3).

The final clause of Gen 10:12, "that is the great city," is ambiguous. It could describe Resen (cf. the punctuation of the RSV) or Nineveh, but it more likely refers to the nearest antecedent, Calah. At the time of the Yahwist (ca. 10th century B.C.E.) Calah was more important than Nineveh and thus merited special mention (Speiser *Genesis* AB, 68).

The LXX reads *Dasem* for *resen.* The latter form is the original. In the tradition behind the LXX *reš* has been confused with *dalet* (the two letters are almost identical in all periods) and the *nun* was misheard as a *mem.* Neither Hebrew nor Akkadian suggests a contextually appropriate meaning for *Dasem.*

RESH [Heb *reš* (רֵשׁ)]. The twentieth letter of the Hebrew alphabet.

RESHEPH (DEITY) [Heb *rešep* (רֶשֶׁף)]. The god Resheph is attested in documents and personal names from the middle of the 3d millennium B.C.E. to the end of the 1st century B.C.E. The deity is first attested in Syria among the documents of Ebla. Here Resheph is accorded a quarter of the city with a gate named after him (Matthiae 1979: 566); this demonstrates that the deity was already held in high regard.

In the 2d millennium B.C.E. worship of Resheph can be shown to have expanded through Syria-Palestine and into Egypt. It is from Egypt that most of the mythological information concerning Resheph has survived. Amenophis II appears to have introduced the god to Egypt and to have seen himself as adopted by the god (Grdseloff 1942: 2). During the 19th and 20th Dynasties several steles and literary references appear with Resheph. In these Egyptian sources Resheph is a god of war who will lead them to victory. In Egyptian magical inscriptions Resheph appears as a healing deity. The Egyptians picture the god associated with the gazelle, an animal with somewhat ambiguous connotations (Simpson 1953: 88). Resheph always remained a minor Egyptian deity and was not assimilated into the pantheon as were some Syro-Palestinian deities.

In the tablets from Ugarit, Resheph appears as a major deity in the cult ritual texts; however, the mythological narratives provide almost no information on the god. Resheph appears twice in the Kirta Legend, first as the cause of the king's fifth son's death (*KTU* 1.14.i.18–19) and then as a divine guest at the banquet Kirta holds for the gods (*KTU* 1.15.ii.6). Fragmented texts have suggested that Resheph might have been a gatekeeper for the sun deity (Virolleaud 1951: 25–26) and that he may have aided Baal in his battle with Yam (Day 1979: 354), though both are tenuous. The parallel Ug and Akk god lists found at Ugarit pair Resheph with Nergal, usually taken to be the Mesopotamian god of the netherworld, though whether that is the reason for the association of the deities may be debated (Nougayrol 1968: 57). Recently, using the artifacts from Kition on Cyprus, particularly a statue of a deity standing upon an ingot (Karageorghis 1982: 103, fig. 77), Dalley has posited that Resheph was the West Semitic name given to Nergal as the patron deity of metalworking (1987: 62, 65).

Resheph is attested in the 1st millennium B.C.E. in Syrian, Phoenician, and Judean texts; the last known inscription dedicated to the deity is dated 6 B.C.E. and was found at Palmyra (Teixidor 1979: 111). A series of related terms appear with the god. The Karatepe inscription (*KAI* 26.A.ii.10) refers to *rsp ṣprm,* which has been variously translated as "of the birds," "he-goats," or "stag" (O'Callaghan 1950: 360; Simpson 1953: 88). The use of *ḥṣ* with Resheph has been attested at Ugarit and on Cyprus (*KAI* 32.3–4; Fulco 1976: 49); this term has been taken to mean "arrow," "luck," and "outside street" (Irwy 1961: 31; Caquot and Masson 1968: 302), though "arrow" would fit nicely with Resheph as metalworker. Terms taken as divine names (*mkl* and *miqrt,* not to mention Apollo on Cyprus) and places (*gn*) often appear

with Resheph, and it has been suggested that all such terms refer to locations which revered the god (Dahood 1981: 47).

The sources do not provide much information about the character of the deity. The inscriptions of Zinjirli and Karatepe listed Resheph among the deities who had placed the ruler on his throne and now sustain him; this only means the god was important. It has been suggested that the connection made between Resheph and Apollo on Cyprus (*KAI* 41: 3–4) shows he was a solar deity with responsibilities for justice and law (Conrad 1971: 161–63). Albright (*ARI,* 27) argued that Resheph had to have been a god of the underworld, pestilence, and death; this has become the majority position. The Ugaritic connection with Nergal would seem to confirm this, though it is important to remember the metalworking aspect of the deity as well. The Egyptian vision of a warrior god would fit well with both chthonic and metalworking aspects. The extension of Albright's thesis to see a cult of the dead under the care of Resheph, however, is based on speculation and no data (Spronk 1986: 140, 157, 261); neither at Ebla (Matthiae 1979: 566) nor at Byblos (Gese 1970: 46) is there a temple conclusively dedicated to Resheph upon which such a theory would have to be based (Ribichini 1988: 107).

The biblical references to Resheph have long been taken to be common nouns rather than divine allusions. This may be true in Job 5:7, though, if this is to be taken as "sparks," a clear relation with metalworking may be discerned. However, the poem in Hab 3:5 clearly presents Resheph as an attendant on the God of Judah in a theophanic procession. The context does not define the sphere of the deity, which may, given the rest of the passage, reflect a warrior deity as found in the Egyptian sources or simply describe an attendant deity, such as a smith.

RESHEPH (PERSON) [Heb *rešep* (רֶשֶׁף)]. A descendant of Ephraim (1 Chr 7:25). The MT portrays Resheph, along with Rephah, as the sons of Beriah, a son of Ephraim. However, several other Hebrew mss read *bnw,* "his son," after Resheph and so indicate that he is Rephah's offspring (see RSV). The list in which Resheph's name occurs (1 Chr 7:20–29) is curious and difficult to disentangle. It appears to portray Ephraim as living through seven generations of his offspring, finally to see the eighth killed by the

men of Gath. The MT next mentions the birth of Beriah, whose name embodies the misfortune of the death of the eighth generation. The genealogist is possibly listing Ephraim's descendants as brothers and not offering a chronologically descending list. The pronoun "his" in vv 20 and 21 possibly refers to Ephraim and not to the immediately antecedent name. Whatever the textual or chronological problems, the material in 1 Chr 7:20–29 intends to situate the descendants of Joseph firmly in the territory N of but also including Bethel.

JAMES M. KENNEDY

RESURRECTION. This entry consists of two articles. The first surveys the development and articulation of ideas concerning the resurrection of the dead as these are reflected in the OT. The second surveys the development and articulation of these ideas in early Judaism and in the NT.

OLD TESTAMENT

There is little mention of "resurrection" in the OT; this notion does not appear except in texts that are rare, obscure with regard to their precise meaning, and late. On the whole, resurrection—which could simply express Israel's restoration—concerns the dead in only one or two passages, and only Dan 12:2–3, within the apocalyptic context of the 2d century B.C., clearly proclaims that the dead will be snatched from death to experience either "eternal life" or "eternal damnation." Later on the gospel was articulated in a Jewish milieu in which the reality of the resurrection was still debated, notably between the more traditionalist Sadducees, who argued against it, and the Pharisees, the ardent propagators of newer views (cf. Mark 12:18–27 = Matt 22:23–33; Luke 20:27–38; Acts 23:6–9) who would end up imposing their viewpoint after the Jewish Wars against Rome. According to the Mishnah (*Sanh.* 10.1a), denial of the resurrection excludes one from the world to come (see further *DBSup* 10: 481–84, with bibliography).

A. Life and Death According to the OT

When one reads the OT, one fact is striking: that Israel is attached to life—to this life—and in no way dreams of a marvelous life hereafter. Israel considers the world into which she has been placed as the handiwork of her God, and human existence is a divine gift. The Israelite wishes to see his days prolonged in the manner of the patriarchs (Gen 15:15; 35:29), at the heart of the country entrusted to his people (Deut 30:20). Life, the greatest of gifts (Job 2:4; Qoh 9:4), implies piety, success, fecundity, happiness, and peace, under the protection of Israel's God, as Psalm 128, for example, indicates.

Death is associated with everything that comes to disturb this harmony: a setback, injustice, sterility, war, sickness, misery; it can be introduced prematurely into the destiny of individuals who, as the psalms show, then call upon YHWH, ask his intervention, plead their cause which—in their eyes—is identical with that of their God, cry out and lament, or, once their cry has been heard, make their exclamations of joy and their thanksgivings heard (Psalms 6; 13; 22; 30; 32; 38; 88; 130; etc.). Israel's Psalter simultaneously speaks of the importance and the beauty of a life lived in communion with God and his people and of the threatening and hateful character of death, which signifies a rupture of those bonds which united the believer to YHWH, even calling that rupture "excommunication" (Pss 6:6; 86:6, 8, 11–

13, 19), and of the contagious joy of someone who is rescued from death's power (Pss 22:22b–24; 30:2–4; 116:1–4).

In general, the human person of the OT thought about death in less dramatic fashion and with a balanced realism: it was self-evident that a creature died, for it was of the "flesh," that is, it was fragile, mortal; the creature possessed within itself no spark of anything divine and destined for immortality (Qoh 12:7: at death the divine breath returned to God, who had loaned it; Ps 104:29–30). However, for death not to be an occasion of scandal and for it not to appear as an unacceptable occurrence, three conditions had to be fulfilled, as far as the Israelite was concerned. First, death had to come at the end of a long and rich existence (Gen 15:15; Job 42:17) and not precociously, "in the middle of one's days" (Ps 102:25; Isa 38:10). Then, the deceased had to leave behind descendants or at least a son (cf. the promises made to the patriarchs: Genesis 15; 17; 18); from this conviction, we can understand the problem posed by a wife's sterility (Genesis 29–30; 1 Sam 1), the special mourning occasioned by the death of an only son (Amos 8:10; Jer 6:26; etc.) and the necessity of mitigating the absence of a descendant by the establishment of the levirate law (Genesis 38; Deut 25:5–10). Finally, funeral rites, especially the burial of the corpse, had to be scrupulously observed (2 Sam 1:11–27; 3:31; Jer 16:1–9; Ezek 24:15–17); woe to the one who was deprived of sepulture (2 Kgs 9:16; Jer 8:1–3; Isa 14:19)! Divine punishment against a guilty person was manifested precisely through a shortened life, the lack of progeny, and a corpse abandoned to wild beasts.

Israel shared with other human groups a representation of the world of the dead, which it generally called Sheol (attested 66 times in the OT, especially in the Psalms [16x] and the book of Isaiah [10x]); Sheol consisted of a vast underground region, dark and dusty ("to return to the dust" means to die [Gen 3:19; Pss 90:3; 104:29] and the "dwellers of the dust" are none other than the dead [Dan 12:2; Job 20:11]). What characterized Sheol was that it was peopled by shades (Heb *reápaµ<éÆm*) whose existence—which shares nothing in common with the life that had been led formerly—unfolds without purpose and without communication. The dead are the "forgotten ones" (Ps 88:13; Qoh 3:19–21; 9:5–10); they have no contact with the world of the living and still less with the living God (Pss 6:6; 30:10; 88:6–12).

The world of the dead was a "country of no return" (Job 7:9–10; 16:22), a prison with its own portals and guards (Isa 38:10; Qoh 9:10; etc.); normally one never left it, and although some texts (generally of a sapiential type) affirm YHWH's hold over Sheol (Job 12:2; 26:6; Prov 15:11; Amos 9:2–3), the God of Israel, in general, did not intervene—even on behalf of his own—in this gloomy and pitiful territory, which nonetheless had not yet become a place of judgment and punishment, as hell would become in Christian texts, but rather was the place which awaited the living (Job 30:23).

B. Some Exceptions to the Common Lot

Here and there the OT mentioned the particular lot of individuals who had escaped death not by a resurrection but as the consequence of "translation." First of all, there was the case of the patriarch Enoch (Gen 5:24), whose piety ("he walked with God") brought in its wake an exceptional destiny (a late text, attributed to the Priestly Writer). Another is the prophet Elijah, whose ministry was brought to completion in the same way (2 Kgs 2:1–15). The theme of the transfer of a human creature into the heavenly realms was well known in antiquity; the technical term used in this regard was the Heb verb *lāqaḥ*, which is found in Isa 53:8 where it can have this meaning only with difficulty, as well as in Pss 49:16 and 73:24 where one cannot rule out that it refers to the "transfer/ascension" of a faithful person (see further, *DBSup* 10: 466–68). This theme may perhaps be found also in Hellenistic Judaism, as well as in the book of Wisdom (Wis 2:22–24; 3:1–9; 4:7–11).

C. Resurrection-Healings

Three texts in the books of Kings (1 Kgs 17:17–24; 2 Kgs 4:31–37; 13:20–21) narrate salvific interventions performed by Elijah and Elisha. These were as much instances of resurrections as they were miraculous healings; they served to authenticate the prophetic ministry and to make evident YHWH's power over death: in this way, they confirmed the declarations that one can read in Deut 32:39 and 1 Sam 2:6 about the uncontested sovereignty of the God of Israel (and not of Baal) over the fate of human beings. In the texts from Kings, nowhere is there any mention of a definitive victory over death; the

resurrection effected by the prophet consisted in the restoration to health of a patient, and this was characterized by the reintegration of the breath of life into a child's body (1 Kgs 17:21–22; 2 Kgs 4:34–35; cf. also Ps 23:3).

D. Resurrection-Restorations of the People of God

Some other passages in the OT, through the image of a resurrection, evoke the restoration, hoped for or foretold, of the people of God, following a difficult period or even a national disaster. These well-known and easily datable texts are found in Hos 6:1–3 and Ezek 37:1–14. Some exegetes add to these texts those of Isa 53:10–12 and Isa 26:16, but the bearing of these latter units is still debated.

1. Restoration of Israel. Hosea 6:1–3 is a text contemporaneous with the Syro-Ephraimitic War, about 735 B.C.E., in which Northern Israel imprudently became engaged after being pushed to do so by Damascus. The declaration made by the prophet presupposed that his compatriots had endured certain setbacks. The subject matter of these verses constituted a kind of song of repentance in which they expressed their desire to return to YHWH, since they were certain of his help (v 1); they were already envisaging their removal and restoration to normalcy, through the support of their God (v 2). Verse 3 takes up the same schema: it is an exhortation based on the conviction that YHWH would not delay acting in their favor.

The continuation of the chapter shows that Hosea rejected this prayer, however nice it might appear to be (vv 4–6). The prophet denounced a superficial and presumptuous attitude; he condemned the levity of the Israelites, the inconsistency of their piety, and the lack of deference in their outlook toward their God. They treated YHWH as if his pardon would be automatically granted after a few sacrifices which ought to have satisfied him. Hosea said "No" to such hypocritical worship (v 4); he recalled the divine demands (v 6) and invited Israel to be more serious (v 5).

A careful examination of Hos 6:1–3 reveals that the Ephraimites were impregnated with a Canaanite religiosity that was foreign to the Yahwistic tradition; they were making of YHWH a god in the likeness of Baal, which texts from Ugarit allow us to understand better. Several more or less explicit allusions to the theme of the death and resurrection of the deity, whose destiny regularly followed the course of the seasons, are recoverable in the statement reported by Hosea: the formula "in two days, on the third day" could pick up on a naturalistic kind of mythology, unless it meant nothing more than simply "in a little time, after a short delay" (1 Cor 5:4 perhaps implicitly refers to this text; Tertullian was the first to make good use of it [*Ad Marcionem* 4.42.1–2]; a Targum gave it an eschatological meaning); as if by chance, the dawn (*šaḥar*) and the dew (*ṭal*), accompanied by rain, played a not unimportant role at Ugarit. It seems as if Hosea's interlocutors expressed themselves as if they were worshippers of the forces of nature, thereby giving the prophet one more reason to condemn, along with their prayers and their offerings, their hope.

We should note that the idea of resurrection was already attested in Israel in the 8th century, but that then it was scarcely distinguishable either from healing or from salvation of a political kind. It had to do with the fate of N Israel within its history and not at all to do with the final condition of human beings. Its origin, most likely Canaanite, and its ties to agrarian fertility cults rendered this idea suspect to the faithful adorers of YHWH (*DBSup* 10: 444–45).

2. Restoration of Judah. Ezek 37:1–14 is equally concerned with the restoration of the people of YHWH shortly after the tragic events which had preceded, accompanied, and followed the taking of Jerusalem and which marked the downfall of the kingdom of Judah in 587 B.C. To a nation bruised and quasi-moribund, the prophet foretold a resurrection which consisted concretely in the reconstitution of the "house of Israel." Ezekiel's message is composed of a vision (vv 1–10), which acts as a symbolic prophecy and is similar to those which we come across elsewhere (Ezek 12:1; 21:23–27); his vision is followed by an explanation or, better, by a proclamation (vv 11–14; vv 12–13 form a complementary oracle announcing to the deportees the end of the Exile).

Here Ezekiel promises his brothers, rendered hopeless by the misfortunes of Judah (v 11), a renewal as extraordinary as it was unexpected (vv 1, 10, 11, 14): out of bones from which all life has disappeared, God's spirit creates an immense army! This is not an instance of a resurrection, as later Jewish (Pharisaic)

and Christian traditions would envision it, but rather a case of Ezekiel, unlike Hosea's contemporaries, describing an event which he had witnessed in his vision, grounded not in a naturalistic kind of mysticism but in the traditional Yahwistic teaching as this stands out in bold relief from Gen 2:7 on (Isa 42:5; Ps 104:29–30; Job 33:4). As was the case with man's creation, so the resurrection would take place in two stages: the scattered bones are first brought back together and then flesh and skin are added to the skeletons to form bodies, which lack only the breath of life (vv 7–8; cf. Gen 2:7a); then, at the summons of the "spirit" or of "the breath," the dead rise up, like an acted-out parable, to testify to the renovation of Israel (vv 9, 10, and 14).

To give his answer to the dread events of 587, Ezekiel in this fashion appropriated the notion of resurrection, but did so within a perspective which fully conformed to the YHWH cult (cf. *DBSup* 10: 445–47).

3. A Special Case. Isa 53:10–12 poses difficult problems and there is no clear evidence that this text can be numbered among those which testify in favor of faith in the resurrection (*DBSup* 10: 447–48).

The servant mentioned in Isa 52:13–53:12 is not with any certitude a human individual, whether of the past, the future, or the present; he might represent Israel in its totality, and the Fourth Servant Song in this case would recount the paradoxical destiny of the people of YHWH, condemned to experience the worst humiliations, restraint, and a condition equivalent to death, only to be, in the end, glorified by its God and hailed by the whole of humanity as the one which bore the faults of the multitudes (the pagans) and secured their salvation. In this communitarian perspective, then, the issue is one neither of death nor of resurrection.

If, however, the referent in this text is an individual, some member of the people of Israel who suffers for others and notably for his brothers, the expressions employed in Isaiah 53 do not automatically imply that the servant is to be put to death, and his final victory (evoked in vv 10–12) does not demand that he be snatched from death. The essence of the message in this chapter consists not in the special lot that awaits the servant after his suffering, but in the fact that God's plan is realized through him and that this is recognized as such.

The author of Isaiah 53 thus does not explicitly proclaim the resurrection of the witness of YHWH; instead, he declares that through the destiny of this individual, and contrary to every expectation, the divine design comes to a successful completion. One finds allusions to the Fourth Servant Song in Jewish texts as diverse as Dan 12:2–4 and Wis 2:12–20.

E. Resurrection of the Dead

Two passages deserve to be mentioned in this paragraph, because they envisage a resurrection of the dead that really is a liberation from death. This is clearly the case with Dan 12:1–3, though the meaning of Isa 26:19 remains a debated instance. One should note that these texts belong to the latest levels of the OT tradition (the end of the Persian period, according to some commentators [Isa 26:19]; the 2d century B.C. [Dan 12:2–3]) and reflect milieus influenced to a greater or lesser degree by apocalypticism.

1. Isa 26:19 is part of a larger unit (Isaiah 24–27) that is complex, postexilic, and characterized as the "Great Apocalypse," the interpretation of which is very difficult. Various exegetes even think that this verse is a late gloss without relationship to its immediate context (Kaiser and Lohse 1977) or else an independent proclamation replying to Isa 26:14 (J. Vermeylen). H. Wildberger (*Jesaiah* BKAT), on the other hand, locates this "Apocalypse" in the 5th century B.C. and sees in Isa 26:19 an oracle of salvation that follows up on the lament of the people articulated in vv 7–18 (discussion and bibliography in *DBSup* 10: 448–52).

Isa 26:19 raises many difficulties; as it is, the Hebrew text possesses little clarity and the versions are divergent. Its author expressed either a vow or a promise (if this verse can be understood as a reply to v 14); thus he either desired or foretold the return to life of the "dead-of-YHWH," an occasion for joy and praise.

Some would call attention to allusions in this brief passage to the "dew," already evoked in Hos 6:1–3, which was a Canaanite motif; with the thunder and the rain it was a pledge of renewal, and so we should not be surprised to find it linked in the rabbinic tradition with the theme of the resurrection of the dead

(*Hagiga* 12b). For some specialists, the issue under question, here again, is that of a national restoration after a painful period for the Jewish community during the time of the decline of the Persian period, whereas the majority of critics consider that Isa 26:19 announced a real resurrection of the dead. However, this was not a universal resurrection, but one accorded only to the "dead of YHWH" (cf. v 19, "your dead ones" and dblquote my corpse" understood as "my corpses"; "their corpses" in the Syriac version and in the Targum). Resurrection is promised to those who had died (the martyrs) for the sake of the name of the God of Israel and whom YHWH reclaimed as his own. The resurrection evoked in this passage, when situated in the "Great Apocalypse," was promised not to humanity in general but to those believers who, in an era of troubles and persecutions, had been faithful even to the point of giving their lives for YHWH's cause. This perspective is close to the points of view found in Jewish apocalyptic.

2. Dan 12:1–3 is the one text that precisely points to apocalyptic milieus which came to be expressed at the time of the crisis provoked by the attitude of Antiochus Epiphanes toward Jews opposed to the Hellenization of Jerusalem and of the customs heretofore in effect. Religious persecution was unleashed against the *ḥăsîdîm* (or "Faithful Ones")—from whom the Pharisaic party evolved—in 167 B.C. Dan 12:1–3 can be dated with some precision as part of a complex, a type of historical retrospective (Dan 11:1–45) which antedated by a short time the death of the Seleucid sovereign (in 164 B.C.).

After having evoked the past, the author of the conclusion to the book of Daniel, beginning with 12:1, envisaged the future. In v 1, he foretold a time of anguish that would surpass in horror anything one could have imagined, but simultaneously he promised divine protection to the faithful Yahwists. Then he treated, in vv 2–3, the fate of the dead and in particular that of those who had fallen in the course of the persecutions. No more than was the case in Isa 26:19 do we have here an event that concerns the whole of humanity; the resurrection, as Daniel foresaw it, was a limited one (v 2, with its use of the partitive *min*, suggests the interpretation "many of …" rather than "all of …"); it addressed the concrete situation wherein two parties were set against each other within the Jewish community, the partisans of Antiochus and their opponents. The first group was bound for "eternal shame" and the second group was to receive "eternal life" (v 2b); divine justice was thereby vindicated, since retribution, though long delayed, would have become possible "at that time" (v 1), through the resurrection. Several questions remain unanswered: the identity of the ones "punished" (v 2b) remains unclear, if one can believe the exegetes whose opinion on this point remains divergent: are we dealing with great sinners or with renegade Jews or perhaps with pagans hostile to Israel? Questions are also asked whether the condemned will come back to life (v 2a), then to experience an unending opprobrium (v 2b), or whether, in the end, the resurrection concerns only the "just ones."

Verse 3 brings in a new element, for it looks to a certain category of Jews, namely the "wise," whose attitude—that is, their martyrdom—led their brothers to follow the right path and who are called to glory. Here the author alludes to Isaiah 53, to which he gives a communitarian interpretation (cf. also Dan 11:33–34), making use, moreover, of astral symbolism; it is difficult to say whether this should be taken literally or not (see Cavallin 1974; for an opposing viewpoint, Grelot 1971). It seems clear, though, that the resurrection, as it is envisaged here, does not consist simply in a return to the earthly conditions of the past (*DBSup* 10: 452–58).

We draw attention to the fact that the theme of the resurrection asserted itself in the Jewish milieus at the very moment when apocalyptic views were developing in answer to the distress being undergone by faithful Jews. By the victory over death, as this was understood in the 2d century B.C., justice was rendered to the Yahwistic faithful, and those who gave their lives in YHWH's name could thereafter participate in that new age which the God of Israel was preparing for his own. As E. Renan wrote long ago, "the blood of the martyrs was the veritable creator of belief in a second life" (*DBSup* 10: 457). What counted in the eyes of the biblical authors, in the last days of OT times, was not at all the immortality of the soul or even the salvation of the individual, but the possibility that the "dead of YHWH" (Isa 26:19) or the *rabbîm*, that is, "the many," once they had been instructed in justice by their teachers (Dan 12:2–3), would experience, along with those who had been saved in the hour of torment, the triumph of their God and the glory of the age to come.

F. Conclusion

Texts relating to resurrection in the OT are rare and dissimilar; they come from different horizons and we cannot simply examine them in chronological order to retrace the history of this theme in the mind of Israel. Known before the Exile, since it was attested in Hosea's time in the 8th century—and there within a Canaanite context—the return to life of the dead did not really come to the fore until the 2d century B.C.E., in the days of the Maccabean crisis, and from within those quarters deeply attached to the Yahwistic tradition among the hard-pressed *ḥăsîdîm,* who awaited their salvation in their God's final intervention "on the last day."

Between Hosea and Daniel, the resurrection idea cropped up here and there, but chiefly to point toward the political renewal of the people of Israel (Ezekiel).

As was the case with the OT texts themselves, precise vocabulary in the OT which pointed to the resurrection was limited; such terminology was shaped by the ideas that Israel had fashioned about the condition of those who had died. At a person's death, the breath or spirit of life departed; it had to return later on if there was to be any renewal of life (1 Kgs 17:21–22). The dead lie sleeping in their tombs; at the moment of resurrection, they will rise up again (Heb *qûm:* 2 Kgs 13:21; Isa 26:14, 19; Job 14:12 [Ezek 37:10 uses a different verb]). The dead are sleeping now; they will be awakened (2 Kgs 4:31; Isa 26:19; Job 14:12; Dan 12:2) and, finally, they will come back to life (1 Kgs 17:22; 2 Kgs 13:21; Isa 26:14, 19; Ezek 37:3, 5–6, 9–10, 14; Job 14:14 [cf. also Dan 12:2 and, in the Talmud, the rabbinical expression *teḥiyyat hammētîm,* "the resurrection of the dead," which is attested 41 times]).

If the problem of the Israelite's survival beyond his or her earthly existence was scarcely asked about in Israel over the centuries, this was due in the first instance to the traditional anthropological conceptions by the people of YHWH: the human being was composed of body and soul (or breath [Gen 2:7–8]), that formed the organic unity indispensable for life; the person was not constituted of a perishable element (the flesh) and of an immaterial reality endowed with immortality (the soul). Life ceased at that very moment when the breath loaned by God was taken back (Ps 104:29–30; Qoh 12:7) and the body, henceforth inanimate, was destined to return to the earth (Gen 3:19; Ps 90:3). The existence of the shades in Sheol, mentioned many times, noticeably in the psalms, was the total opposite of life—a kind of "nonlife"—out of which no positive element could arise. For Israel there could be no victory over death except that of a state of existence which called for a complete renewal of the human being. The resurrection of the dead, that is, of the body, is etched within the logic of OT concepts.

Secondly, and this might be the chief issue, death which at times signified the total rupture between the dead and the world of the living and, above all, YHWH (cf. the psalms referred to above) had its sting attenuated when the deceased left behind a son or when his body was buried in the tomb of his ancestors. For the Israelite survived in his or her descendants, and they were kept in contact with their own through burial rites which were celebrated in the midst of YHWH's land; the individual Israelite without question died, but Israel was perpetuated and at the same time a certain continuity with the missing ones was assured.

Little by little, under the pressure of the tragic events that the people of YHWH experienced (the disappearance of the northern kingdom in the 8th century; the fall of Jerusalem and the end of the Judean state in the 6th century; the Exile and the difficult and precarious reconstitution of a Jewish community around Jerusalem under the Persians), the condition of the individual in the midst of a national and religious community came to assume the preponderant place and, from this time forward, questions were asked about the fate of the faithful one and in particular of the ultimate future state reserved for him or her. The problem became especially acute during the crises that the Jewish people lived through under the declining Persian Empire and during the time of Antiochus Epiphanes; factions among the people of God were set against each other with passion, with the object of seizing power in Jerusalem, and persecutions raged against those who wished to remain faithful to the law of their God. The Yahwistic cause seemed a lost one, and the martyrs to have died in vain; the prophecy of the resurrection of the dead then allowed people to address the challenge brought on by the circumstances they endured. With the resurrection doctrine, the last word remained with the God of Israel and, with him, on the lips of the faithful.

Resurrection, which constitutes the determining backdrop of the NT's gospel, was the fruit of Jewish resistance to the Hellenistic world.

We have mentioned that the notion of resurrection is a foreign body within the OT; it was the result of external influences that came into play in various ways over the course of the history of the people of YHWH. Upon examination, the extent of the contribution from outside Israel, without being denied, needs to be qualified, and one could say that, when some Jews declared that the dead (of their God) would revive, they did so by basing their arguments on Yahwistic principles. The Canaanite or Near Eastern world could have furnished Israel, in this sphere as in others, with themes and a language; but a return to life, conceived in a quasi-automatic fashion and lived out within the framework of an agrarian ritual, was rejected by Yahwism (Hosea) and could not be given free play until it had been subjected to a rigorous purification process (Ezekiel). Much later on, Persian teachings may have served as stimulants to the Jewish visions of the afterlife, but the Persians reckoned the resurrection as but one element in the re-creation of the universe, while the OT texts (Isaiah 26; Daniel 12) envisaged it as an event that concerned all faithful Jews; the universalism of some of these texts contrasts with the particularism, or rather, the pietism of other texts.

It is in the Yahwistic tradition itself that are to be found the roots of faith in the resurrection: the OT proclaimed YHWH's power, one which no force could hold in check; God masters death as God masters life (1 Sam 2:6; Deut 32:39; cf. also a late annotation in Isa 25:8a). God has created and thus can re-create (2 Maccabees 7).

God's justice, affirmed everywhere in the OT, sooner or later had to become manifest, and the resurrection allowed this very thing to happen, as we have seen. Finally, the victory over death, that in the first instance concerned the faithful Yahwists, gave Israel's God an occasion to demonstrate his *ḥesed*, "faithfulness, loyalty, solidarity," toward his own and, in this way, to answer the question already raised by the psalmists about the definitive future of those bonds which actually united YHWH to his *ḥāsîd* (Psalms 6; 16; 22; etc.). Thus, belief in the resurrection of the dead is based on YHWH's power, on his justice, and on his love, as these have been revealed in the course of the history of Israel; in the 2d century B.C.E., at the high point of the Maccabean crisis, the *ḥăsîdîm* drew out the ultimate consequences from the experiences that Israel had lived through over centuries.

TRANS. TERRENCE PRENDERGAST

EARLY JUDAISM AND CHRISTIANITY

Resurrection is the eschatological act by which God the judge raises the dead in order to recompense them for their deeds. In the long history of Jewish speculation, the manner of judgment varies:

resurrection of the body; revivification of the soul or spirit; eternal life or assumption to heaven immediately upon death or shortly thereafter. In some cases, eternal life or immortality are the present possession of the righteous, while the wicked are thought to be already in the realm of death. Resurrection and its equivalents function variously as recompense for the lack of divine justice in this world, as reward and punishment for one's deeds, or, in special cases, to exalt and glorify the persecuted leaders of the community. NT beliefs about resurrection and its equivalents reflect the variety of their Jewish counterparts, but differ from them uniformly in their christological orientation.

———

A. Resurrection in Early Judaism

1. Early Developments. Belief in a substantial, meaningful existence after death is a relatively late development in the history of Israelite religion. The usual view expressed in the biblical books is that, upon death, one's shade descends to Sheol, where one remains forever, cut off from God's presence.

Other elements in Israelite religious thought stand in tension with this viewpoint. As creator, God is the Lord of life, who effects and nourishes a covenantal relationship with God's people. As judge, God rewards the faithful and punishes those who rebel against the covenantal commandments. As the Almighty, God can effect what divine justice requires. The tension arises when premature death frustrates this justice.

The origins of resurrection belief are obscure. Authors of the exilic period employ the language of death and resurrection or exaltation as a metaphor for Israel's revival and return from Exile. Although dead in captivity, the people will arise from their Babylonian graves (Ezekiel 37). Kings and nations will view the exaltation of Yahweh's suffering servant (Isa 52:13–53:12). It is doubtful that this metaphorical usage presupposes Jewish speculation on the possibility of substantive life in spite of physical death, but both passages (and Isaiah 65–66) are later used to support such a belief.

At a time and in circumstances that we cannot presently determine, a religious breakthrough occurs. Jews begin to assert that physical death does not nullify God's justice or abrogate the covenantal relationship for individuals. Early texts are ambiguous. Psalms 16, 49, and 73 may point in this direction, but their date and circumstances are unknown. The Isaianic apocalypse (Isaiah 24–27) appears to be the earliest text that envisions a real resurrection of the righteous. God will overcome death forever. The shades of the righteous will arise from Sheol, while their oppressive overlords will remain there (Isa 25:6–8; 26:14–19). Scholars debate this text's precise time and circumstances of origin.

2. Persecution, Oppression, and God's Justice. All of the texts mentioned above deal with the disjunction between human experience and a belief in divine justice. Settings of persecution or oppression trigger further speculation about postmortem recompense.

a. *1 Enoch* 22–27. Chaps. 20–36 of *1 Enoch* (3d century B.C.E.) recount Enoch's journeys through the cosmos. Far to the west, he sees a great mountain with three huge chasms that contain "all the souls of the sons of men," sorted and separated for the purpose of judgment (chap. 22). Dominating the scene is the spirit of Abel, the prototype of the innocent who are persecuted. He accuses Cain "and his descendants" until they are obliterated from the human race. Abel's prominence indicates that violent death and the lack of divine judgment against the perpetrators of this crime are fundamental concerns of this author (cf.

chaps. 6–11). The motif of judgment governs the descriptions of the three chasms. In the first of these, the spirits of all the righteous are refreshed by a bright fountain of water. In the second chasm, unspecified sinners already experience the torment to which they will be subjected during their eternal confinement in this place. In the third chasm, the spirits of persons who have been murdered plead for divine vengeance. For these "companions of the lawless," their violent death was ample recompense for their wicked deeds, and so they do not experience the torment of those in the second chasm, nor will they be raised for judgment (22:13).

According to chap. 22, recompense is experienced by the "souls" or the "spirits" or the "souls of the spirits" immediately after death. Nonetheless, the author anticipates a resurrection of some of the dead. Verse 13 suggests that the sinners in the second chasm will be raised for judgment. Almost certainly the righteous in the first chasm will rise to the blessed new life in the new Jerusalem described in chap. 25.

After viewing the realm of the dead, Enoch is carried to the mountain of God (chaps. 24–25) where he sees the tree of life which "will be transplanted to the holy place," where "its fruit will be given to the righteous and the pious … and its fragrances will permeate their bones," as they "live a long life upon the earth" as their fathers had, free from "torments and plagues and suffering" (25:4–6). In Jerusalem, Enoch views the holy mountain, as well as the valley of Hinnom, where the blasphemers will suffer forever in the presence of the righteous (chaps. 26–27).

1 Enoch 24–27 is directly or indirectly dependent on Isaiah 65–66 with its descriptions of the New Jerusalem and the blessed and fabulously long life of the righteous and the everlasting punishment of the sinners which will take place there (cf. esp. Isa 65:17–25; 66:14, 24). Different from Third Isaiah, *1 Enoch* 22–27 anticipates a resurrection that will enable some of the righteous and wicked dead to participate in the blessings and curses that result from the great judgment. Reference to the "bones" of the righteous (25:6) indicates a resurrection to some kind of bodily life. The bodily or nonbodily state of those punished in the valley of Hinnom is not specified.

b. *1 Enoch* 92–105. Enoch's "Epistle" (2d century B.C.E.) expounds the implications of Enoch's eschatological visions. Injustice pervades the author's world. The rich and powerful prosper as they oppress the righteous poor, who suffer in spite of their righteousness and piety. The repeated announcement of the coming day of judgment anticipates the adjudication of these circumstances.

The treatment of the problem and its solution reaches its climax in 102:4–104:8, a disputation about postmortem reward and punishment. To "the souls" of the righteous and pious who grieve in Sheol, the author promises that they will "come to life" and receive the reward that their fleshly bodies missed (102:4–103:4). As for the sinners who claim that there is no judgment after death, and act accordingly—their souls will descend to the flaming torture of Sheol (103:5–8). In a pastiche of phrases from Deuteronomy, Enoch quotes the complaint of the righteous and pious that they have received the curses of the covenant (103:9–15). His refutation asserts that their cries for justice have been heard by their angelic patrons, who plead their case before God. Their names are written in the heavenly register. Judgment will come, and the righteous will ascend to heaven and to great joy in the presence of the angels (104:1–6).

c. Daniel 12:1–3 Writing between 167 and 165 B.C.E. to encourage pious Jews during the persecution of Antiochus Epiphanes, the author of Daniel 10–12 composed an apocalypse which describes the events of Israel's history from "Darius the Mede" to Antiochus (11:2–45). When the persecution reaches its climax, the divine Judge will intervene, and the persecutor will be destroyed (11:45). The recitation of past history gives way to a brief description of the judgment (12:1–3) that will adjudicate the injustices just recounted. Michael, Israel's angelic patron and defender, will arise. The book that contains the names of the citizens of people who will be delivered will be opened. Those still alive will be rescued from God's wrath. Then "many of those who sleep in the land of dust will awake, some to everlasting life, and some to everlasting contempt." This is not a universal resurrection; only some of the dead will awake. The author has in mind at least the principal characters in the Antiochan persecution. The righteous whose pious behavior has led to their death will be vindicated. Those who apostasized to save their lives will be raised to suffer the divine punishment they escaped in their lifetime. The author probably also expects that other especially righteous and wicked Israelites will be raised for judgment.

Like *1 Enoch* 24–27, the language of Dan 12:2 recalls Isaiah 65–66. "Everlasting life" is the long life referred to in Isa 65:20–22 (cf. *1 En.* 25:6). "Everlasting contempt" is the fate of the rebels whose bodies will suffer outside Jerusalem (in the valley of Hinnom) according to Isa 66:24 (cf. *1 En.* 27:2–3). The resurrection implicit in *1 Enoch* is explicit in Dan 12:2. The problem of the suffering and persecuted righteous emerges in acute form as the catalyst for resurrection as vindication. The righteous dead, whom Enoch saw refreshed by a bright fountain of water in the realm of the dead, are sleeping in Sheol, the murky "land of dust," according to Dan 12:2. The allusion to Isa 66:14 ("contempt") may indicate that Daniel thinks of a bodily resurrection (cf. *1 En.* 25:4–6), but the brevity of the Danielic passage is elusive.

According to Dan 12:3, the wise teachers of the community, who have encouraged many to follow the path of righteousness, will receive special honor by being gloriously exalted among the stars, the angelic host. Here the author draws on a traditional exposition of the last song of the servant of Yahweh (Isa 52:13–53:12; see below under Wisdom 1–6).

d. *Jubilees 23:11–31.* Written perhaps a year or two before the book of Daniel, as a comment on Abraham's age (Gen 25:7–8), these verses describe the bloody struggle between pious Jews and Hellenizers which culminates in the merciless intervention of the Syrian government. The people's sin has greatly shortened their life spans, but when they return to God's commandments, their life spans will increase to the fabulous length of the first patriarchs (vv 27–28). Again the language of Isaiah 65 informs a description of the end time (cf. esp. 65:20–22). As for the righteous who have died during evil times, "their bones will rest in the earth, and their spirits will have much joy …" (v 31). Different from *1 Enoch* 22; 24–25, *Jubilees* contrasts the bones that rest from bodily pain and agony with the spirits that have ascended to the joyous presence of God. The author seems not to envision a future, bodily resurrection; however, vv 30–31 may allude to the righteous viewing the curses that the wicked suffer in the valley of Hinnom.

e. 2 Maccabees 7. This legend about the martyrdom of seven young men and their mother, set in the Antiochan persecution, dates in its present form to the end of the 2d century B.C.E. Central to the story is a conflict of authority and the protagonists' response to it. Pitted against one another are Antiochus Epiphanes, who commands the Jews to eat swine's flesh, and the God of Israel, whose law forbids this. The protagonists choose to disobey the king and obey their God. Condemned to death in a human court, they await vindication in the supreme court of the king of the universe, who will restore the life and limbs that Antiochus has destroyed (vv 9, 11). Bodily resurrection is the counterpart to bodily destruction; vindication is in kind.

To explicate his view of resurrection, this author employs three images from Second Isaiah which originally referred to Israel's return from Exile. (1) The youths are the suffering and vindicated servants of Yahweh. Through their speeches, they are God's spokesmen before the king. They suffer because of this prophetic office, and for this reason they will be vindicated (cf. Isa 50:7–9). (2) God's power as creator, who first gave them life, is the basis of their hope that God will redeem them in the resurrection to a new life (vv 22–23, 27–29). (3) The youths' mother is a personification of Mother Zion, who anticipates the return of her sons, now dispersed in death (v 9).

If the brothers are to be vindicated for their obedience, Antiochus must suffer for his rebellion (vv 14, 17, 19). His judgment is vividly described in chap. 9. The warning that he will have no resurrection to life (7:14) means either that his violent death eliminates the necessity of a postmortem punishment, or that he will be permanently confined to eternal torment immediately after his death.

f. *4 Maccabees.* In this writing from the first half of the 1st century C.E., the stories in 2 Maccabees 6–7 have been transposed into the key of Greek philosophy. In his transformation of the story about the youths and their mother (chaps. 8–17), this author changes the story's eschatology. Future resurrection of the body is replaced by immortality and an eternal life that begins at the moment of death (7:3; 9:22; 13:17; 14:5–6; 15:3; 16:13, 25; 17:12, 18–19). God's creative power is the reason for obedience to the Torah (11:5; 13:13) rather than the guarantee of a resurrection. Eternal life is God's reward for obedience, not the vindicative restoration of the bodies that the martyrs have lost.

g. Wisdom of Solomon 1–6. Written around the turn of the era, Wisdom 1–6 is a disputation on immortality (cf. *1 Enoch* 102–104). The author exhorts kings and rulers to act righteously because the divine judge will hold them accountable for their deeds. By contrast, the rich and mighty comment on the shortness of life and the finality of death (chap. 2). Since death is annihilation, one should enjoy life, even at the expense of others (2:1–11). The special target of abuse is the righteous man who claims to be God's "son" or "servant" and preaches against their "sins." They conspire to bring him to trial and kill him (2:12–20), thus refuting his claims. But the wicked act on a false premise. Death is not the end. The death of the righteous one is an illusion, for "the souls of the righteous are in the hand of God" (3:1–9). The wicked discover this after their death (4:16–5:23), when the exalted righteous one confronts them as judge in the heavenly court. They acknowledge that he stands among the "sons of God" (the angels) and admit that his indictment of their sins was justified. Now they are condemned to the annihilation they had believed in, while the righteous receive the eternal life they had awaited.

In recounting the case of the righteous one, the author of Wisdom 1–6 draws on a type of story found in Genesis 37–45, Ahikar, Esther, and Daniel 3 and 6. See PASSION NARRATIVES. Here, however, the protagonist is exalted and vindicated in the heavenly courtroom, and rewards and punishments are eternal and transcend physical death. The scene of the righteous one's heavenly exaltation has been shaped by Isa 52:13–53:12. As in Second Isaiah (and Genesis 37–45 and Daniel 3 and 6), the protagonist is a spokesman of God. Although his vocation leads to human condemnation, God vindicates him by exalting him to a high position that befits his original status. This Isaianic tradition stands behind Dan 12:3 (see above). In Wisdom 1–6, the case of the persecuted and exalted righteous one is a paradigm for God's judgment of all people, who will be rewarded or punished for their deeds (see esp. 3:10–4:15).

Wisdom 1–6 indicates a belief in immortality, which is not an inherent property of the soul, but God's gift to the righteous. "Death" belongs to the wicked and immortality to the righteous already during their life on earth (see esp. 1:12–16).

3. Reward and Punishment. As postmortem recompense comes to be a fixed topic, it is discussed without particular concern about whether God has rewarded or punished one during one's lifetime.

a. The *Psalms of Solomon.* God's righteous judgment is a repeated theme in this collection of psalms which dates from the 1st century B.C.E. *Pss. Sol.* 3, 13, 14, 15 focus on postmortem recompense. The righteous "will rise to eternal life," while the fate of the sinners is "eternal destruction." Such reward and punishment are dispensed not as compensation for the injustices of this life, but as reward and punishment for piety and sin—apart from one's lot in life. The authors do not indicate whether they anticipate a bodily resurrection or the reviving of one's spirit or soul.

b. *2 Baruch.* Writing in the wake of the destruction of Jerusalem (ca. 100 C.E.), the writer of this apocalypse ponders God's justice and the validity of God's promises. The evils he has experienced are explained by a dualism between the present corrupt age and the incorruptible age to come after God's judgment (21:12–26; 30:2–5; 49–51). He discusses the resurrection in this context (chaps. 49–51). The souls of the dead, presently gathered in the "treasuries" of Sheol (21:23; 30:2–5), will be raised in their original form so that the living may recognize them. Thereafter, the righteous will be freed from the limitations of this age and transformed into glory like the stars and the angels, with whom they will inhabit paradise in the age to come. The wicked will waste away and depart to eternal torment. The heavenly glory that Daniel anticipated for the wise teachers is here the property of all the righteous.

c. *4 Ezra 7.* This writer also writes in response to the destruction of Jersualem. Like his colleague in *2 Baruch*, he discusses postmortem reward and punishment for one's deeds. His focus is on the souls' fate (vv 75–101) as they proceed to the dwellings they will occupy until the resurrection (cf. *1 Enoch* 22). In this universal event of judgment, humanity will enter the glory of paradise and torture of Gehenna, here construed in cosmic proportions rather than as a valley in Jerusalem (vv 26–42).

4. The Presence of Eternal Life and the Two Ways. a. The Qumran Hymn Scroll 3:19–23; 11:3–14. The authors of these hymns give thanks to God for having brought them from death to life. The world outside the sectarian community is described as Sheol. Entrance into the community is construed as resurrection into the realm of eternal life and the presence of the angels. What "traditional" eschatology

ascribes to the end time is said to be the present possession of the member of the sect. Although evil will not be eliminated until the consummation, a major eschatological event has occurred.

b. The Qumran Rule of the Community 3:13–4:26. Right and wrong actions and their rewards and punishments are discussed according to the organizing principle of the two ways. One's conduct is a journey along the way(s) of light or of darkness, guided by the good or evil angel. Lists of good and evil deeds are given, together with lists of the rewards and punishments dispensed in this life and, mainly, afterward.

The Qumran hymns and the *Rule of the Community* do not specify whether the authors anticipated a resurrection. Several facts are noteworthy, however. The Scrolls rarely refer to physical death. Their radicalization of resurrection language mitigates the importance of a future consummation of the fullness of eternal life. The imagery of the ways stresses continuity between present situation and future recompense. This usage seems most consonant with the idea that at physical death one passes directly to eternal life—even if the world is still subject to a final judgment. On the other hand, the uniform orientation of the graves at Qumran could attest a belief in resurrection.

c. Other Texts. Several non-Qumranic texts espouse views similar to those just discussed. According to *Joseph and Aseneth* (1st century C.E.?), when Aseneth repented of her idolatry, Michael the archangel conferred on her the gifts of immortality and eternal life (chaps. 15–16). In Wisdom 1–6 immortality is also conferred during one's lifetime. In the *Testament of Abraham* 11–12 Rec. A; 8–9 Rec. B and the *Testament of Asher* 6, a theology of the two ways is the vehicle for a belief in final recompense immediately after death.

5. Josephus on the Pharisees, Sadducees, and Essenes. Flavius Josephus twice discusses the beliefs that these groups held regarding postmortem recompense (*JW* 2.8.11,14 §§154, 163, 165; *Ant* 18.1.3–5 §§14, 16, 18). According to him, the Essenes espoused something like immortality of the soul, and the Pharisees resurrection of the body, while the Sadducees did not believe in any postmortem rewards and punishments. Similar views are attributed to the Pharisees and Sadducees in Acts 23:6–8 and Mark 12:18–23.

Of the texts discussed above, only the Qumran Scrolls are widely identified with one of these groups (the Essenes). Josephus' attribution of a belief in immortality could fit the Qumran Scrolls, as well as the book of *Jubilees*, which appears to have been composed in circles ancestral to Qumran. The rich opponents of the author of the "Epistle" of *1 Enoch* 92–105 are not identifiably Sadducean. However, behind the author's polemical rhetoric may be the "conservative" view that prosperity reflects piety and requires no postmortem recompense.

B. Resurrection in Early Christianity

1. Foci and Emphases. Jewish beliefs about resurrection, immortality, and eternal life are presupposed throughout the NT, and these early Christian formulations also mirror the variety in Judaism, as this pertains to the functions, time, scope, and mode of postmortem recompense. The major factor that transforms these beliefs, however, is the Church's universal conviction that God has begun the eschatological process by raising the crucified Jesus from the dead. Every writing of the NT presumes Jesus' resurrection, and the topic of postmortem recompense is rarely treated without reference or allusion to it.

Jesus' resurrection is understood from two perspectives. First, it is God's vindication of the persecuted man Jesus. It makes sense of the humiliation, tragedy, and scandal of the crucifixion. Secondly, the resurrection of Jesus has broader implications, as an act of salvation for humanity and the cosmos. It facilitates Jesus' exaltation as Lord and Judge and promises resurrection and eternal life to all the faithful.

2. Texts and Authors. a. Early Creeds and Hymns. The major NT interpretations of Jesus' resurrection are evident already in the earliest strata of the texts—credal formulas, hymns (or hymn fragments), and other traditions embedded in Paul's epistles. The paradigm of persecution and vindication is basic. Condemned in a human court, the crucified Jesus is vindicated when God raises him from the dead. This emphasis on the resurrection as God's means of reversing the evil of the crucifixion appears in the formulaic "the God [*or* him] who raised him [*or* the Lord Jesus] from the dead" (Rom 4:24; 8:11; Gal

1:1; Eph 1:20; Col 2:12; 1 Pet 1:21; cf. Rom 10:9). The expression is likely a reformulation of the OT formula "The God who brought up Israel out of Egypt" (cf. Heb 13:20 and Isa 63:11). The God of the Exodus has been redefined as the God of the resurrection. Thus, the resurrection is not a private act that simply vindicates Jesus, but a new redemptive act with universal import. Following the familiar pattern, vindication is evident in exaltation. That this exaltation exceeds the conception in Wisdom 5 is shown by the frequent occurrence of the title "Lord" and the stem *pist-,* "believe," and the verb *homologein,* "confess." Jesus' resurrection and exaltation constitute a saving event for those who confess and believe in them.

In the traditional hymn in Phil 2:6–11, the pattern of humiliation and exaltation is extended by prefixing the motif of incarnation. Jesus, the servant of Isaiah 52–53, is the incarnation of a heavenly being (possibly Wisdom), and the self-emptying (*or* pouring out) of Isa 53:12 is applied to the first stage of humiliation, that is, to incarnation, rather than death. Although the hymn makes no reference to Jesus' being "raised," resurrection's frequent function as exaltation is central, and the anticipated universal confession of Jesus as "Lord" reflects the traditional formula in Rom 10:9 (cf. 1 Cor 12:3).

Resurrection is defined as exaltation also in Rom 1:3–4. Jesus is designated "Son of God with power by the resurrection of the dead." A careful parallelism contrasts Jesus' divine sonship with his exalted but human status as Davidic Messiah. His death, as in many of the texts cited above, is not cited as an event of positive, saving significance.

Such a positive evaluation of Jesus' death is, however, not lacking in early formulations. In Rom 4:24, the pattern and the language of Isaiah 52–53 are embodied in the double expression "delivered for our transgressions, raised for our justification" which interprets the crucifixion and resurrection as two facets of one saving act. A similar formulation occurs in 1 Cor 15:3–4, where the dying and resurrected Jesus is identified as "Christ" (cf. also 1 Thess 4:14, "believe, died, rose").

b. The Document "Q." It is necessary to qualify the frequent assertion that the "Q" we can recover from Matthew and Luke had no cross/resurrection kerygma. Although Q evidently had no passion narrative or death/resurrection formulas (an assertion from silence), its christology presumed the pattern. The document preserved the words of Wisdom's spokesman, by definition in this period the persecuted and vindicated righteous one, who stood in the line of Abel and the prophets (Matt 23:34–35; Luke 11:49–51). At some point in the history of the document, Jesus was also identified as the coming Son of Man, whose future judicial status would be the result of the exaltative function of his resurrection. Thus the authority of the logia was tied retrospectively to the one who was crucified for his prophetic mission and prospectively to the exalted one who would judge or witness concerning those who confessed and denied him (Matt 10:32; Luke 12:8).

c. The Apostle Paul. The death and resurrection/exaltation of Jesus are the foundation of Paul's theology, as is evident from his citation of the aforementioned formulas, creeds, and hymns. The first corollary of Paul's resurrection belief is his expectation of an imminent parousia, which sets the keynote for 1 Thessalonians (1:10, etc.) and 1 Corinthians (1:7–8) and is referred or alluded to in Philippians (3:20), 2 Corinthians (5:10), and Romans (2:16). As the latter three passages indicate, the future double function of the exalted one is as savior and as judge of human deeds. Although Paul's favorite term for the exalted Jesus is "Lord," in some texts Paul appears to have imposed this title on Son of Man traditions. See SON OF MAN.

The second corollary of Paul's resurrection belief is his conviction that the Spirit of the risen Jesus presently resides in the Church and enables and prompts right conduct. One means of making this point is the literary form and imagery of the two ways (Gal 5:16–6:8; Romans 6–8). According to Galatians 5–6, these ways are the life according to the flesh and the life according to the spirit. Flesh and Spirit are characterized by catalogues of right and wrong deeds, and the two principals war against one another like the two spirits at Qumran. The punishment and reward of one's conduct will be corruption or eternal life. In Romans 6 Paul identifies baptism as the means to the eternal life made possible in Jesus' resurrection. The Law cannot facilitate such life (*pace* Jewish covenantal theology) because it has been disabled by Sin (the functional equivalent of the evil spirit), which holds human flesh captive (Romans 7). God has

resolved the impasse created by this internal battle by sending his Son. Through his incarnation and death, sin is condemned, and through his resurrection his Spirit makes eternal life possible for those who walk according to that Spirit (Romans 8). In 1 Corinthians 15, although he has cited his expectation of the Parousia, Paul cools the Spirit-oriented ardor of some by contrasting one's present fleshly body with the spiritual body that will be a possibility only at the Parousia, which still awaits the final conquering of death.

The third corollary of Jesus' resurrection is the final resurrection of all Christians. Precisely when Paul began to expound this connection is not clear. In both 1 Thess 4:14 and 1 Cor 15:12–19, he argues from traditions about *Jesus'* death and resurrection to the conclusion that *all* will be raised. This suggests that his early preaching in these congregations was oriented around the Parousia. When Christians, who had been given the Spirit and "life" through baptism, began to die, Paul cited the resurrection as God's way of facilitating the continuation of eternal life. Paul's ideas about the state of Christians between death and the Parousia are unclear. In Phil 1:21–25 he speaks of being "with Christ." In 2 Cor 4:16–5:10 he describes the Christian's gradual transformation through the Spirit. He hopes for the Parousia, so that his present body can be "overclothed" with a glorious body, but he seems to anticipate the possibility of death, at which time he would be "naked" (without a body), yet "with the Lord." In both 1 Cor 15:35–57 and Phil 3:21, Paul christologizes Jewish traditions about the eschatological body. Whether one is resurrected or transformed before death, one's body will have the glory of the risen Lord rather than angelic splendor (Dan 12:3; *2 Baruch* 51).

d. The Deutero-Pauline Literature. The resurrection theologies of these texts vary. In 2 Thess 2:8, the Lord will appear as the eschatological messianic antagonist of the Lawless One. Both Colossians and Ephesians stress the present exaltation of Christ. For the latter, Christians already occupy the heavenly realms (2:5–6; cf. the Qumran Hymns), and the Parousia is nowhere evident (contrast 1:22 with 1 Cor 15:25–28), even if sin and temptation are a present reality (6:10–17; cf. 1QH 3). The Pastoral Epistles stress the eschatological character of Jesus' appearing, quoting tradition (1 Tim 3:16; 2 Tim 1:10). Yet they warn against the heresy that the resurrection has already happened (2 Tim 2:18), and they await the Parousia (1 Tim 6:14; 2 Tim 4:8).

e. The Gospel According to Mark. The traditional story of the persecution and vindication of the righteous one probably governed one form of a pre-Markan passion narrative. See PASSION NARRATIVES. The genre still shapes much of the material in Mark 11–16 and is prepared for in the three passion/resurrection predictions, which express the pattern in language drawn from the Isaianic servant songs (8:31; 9:31; 10:33–34, 45). In context, the story of the discovery of the empty tomb (16:1–8) is part of a larger unit (15:40–16:8) which is linked to the centurion's confession. Through the presence of a common set of characters, it attests the death, burial, and resurrection of Jesus (cf. the same elements in 1 Cor 15:3–4). The centurion present at the cross certifies Jesus' death so that Joseph can bury him. The women who see the burial become witnesses of the empty tomb. The young man gives voice to the women's confusion and articulates the fulfillment of the three predictions: "You seek Jesus the Nazarene, who was crucified. He has been raised; he is not here." He then announces a Galilean appearance that Mark will not narrate. The abrupt ending to the story, however, has an equally strange counterpart in 9:2–13. On a mountain in Galilee, after the first passion/resurrection prediction, before Jesus' journey to Jerusalem, the three disciples see Jesus in transcendent glory and are admonished not to speak of the incident until "the son of man is raised from the dead." Mark appears to have displaced an account of the Galilean appearance to which the young man alludes in 16:7. The result of Jesus' resurrection will be his exaltation as Son of Man. As such he will confront his accusers as judge (14:62), and he will gather his chosen ones (13:26–27)—probably an allusion to the resurrection of the dead. This latter is mentioned explicitly only in 12:18–27, which (different from Paul) retains the Jewish idea of an angelic (rather than Christlike) body. In good Jewish fashion, Jesus asserts in 10:17–22 that "eternal life" will be a result of one's obedience to the Torah.

f. The Gospel According to Matthew. In 28:1–10, Matthew combines Mark 16:1–8 with another story about the empty tomb which appears to be independently attested in the *Gospel of Peter* 35–44, which

plays up miraculous elements that Matthew has dampened. Perhaps related to this account is the piece of tradition in Matt 27:51–54, which associates Jesus' coming resurrection with the resurrection of "the holy ones." The little epiphany story in 28:11–15 underscores the commission in 28:7 and may epitomize the tradition in John 20:11–18. The story of the guard at the tomb (27:62–66; 28:11–15), also paralleled in the *Gospel of Peter,* gives final expression to Matthew's emphasis on Jewish unbelief in his own time. The Jewish leaders, concerned that the disciples would fabricate a claim that Jesus rose from the dead, concocted their own lie when they were confronted with evidence of the resurrection. The gospel closes with a scene in which Jesus, already invested with the authority of the exalted Son of Man (cf. 26:64; Dan 7:14), commissions the eleven. As God's exalted vice-regent, the risen Jesus assumes the commissioning role that is normally ascribed to God in Israelite tradition. The content of the prophetlike commissioning is that the apostles instruct and baptize the nations according to the authoritative instructions that are epitomized in the gospel. Those who heed their words will belong to the community which the risen Christ identifies as "my Church" (16:18). As in the earlier creeds, salvation is defined christologically. Developing traditions already in Mark, Matthew envisions the Son of Man's future role as the judge who will dispense eternal life and destruction (25:31–46; 13:24–29, 36–43).

g. Luke-Acts. According to Luke, Jesus is the son of David, born as the Christ and exalted to messianic glory through the suffering that is vindicated in the resurrection. Luke emphasizes this pattern in three insertions in the traditions in 24:7, 26, 46, which reprise and vindicate Mark's three predictions, tying the suffering and resurrection to Scripture (twice by the Greek verb *dei,* "it was necessary"). Like Matthew, Luke elaborates Mark's final chapter by additional stories. Different from Mark 16:7 and Matt 28:16–20, and like John, the appearances are connected with Jerusalem rather than Galilee. The story of the Emmaus disciples has eucharistic overtones (vv 30–31), with the reference to Jesus' body and blood replaced by the disciples' recognition of the presence of the risen Christ. The account of Jesus' appearance in Jerusalem (vv 36–53) allows Jesus to commission his disciples to preach to all nations in his name, as in Matt 28:16–20. Different from Matthew's account, Luke interpolates his pattern of suffering and resurrection and creates or transmits apologetic motifs that emphasize Jesus' bodily resurrection (vv 37–43). Both this story and that of the Emmaus disciples narrate the resurrection appearances in analogy to angelophanies (sudden appearances and disappearances), but the final story breaks with the genre, attributing to Jesus bodily form and functions elsewhere denied to angels in human form. The crucified Jesus must be shown to have risen from the dead. The pierced hands and feet attest the identity of the risen one with the crucified one (cf. 2 Maccabees 7). For Luke the risen Christ has authority to commission apostles. His status as exalted Son of Man is imminent (cf. 22:69 and Stephen's vision in Acts 7:56).

Luke's views on the resurrection of the dead and the intermediate state are not clear. However, he does describe Lazarus enjoying eternal life and the rich man suffering torment immediately after death (16:19–31), and the dying thief will be with Jesus "today" in paradise (23:43). Luke's version of the controversy story in 20:27–40 combines resurrection language with the expression "live to God," used elsewhere of immortality and in two contexts (cf. v 38 with *4 Macc.* 7:19; 16:25; Hermas *Mand.* 1:2; 2:6; 3:5, etc.).

Acts 1:6–11 recounts Jesus' final resurrection appearance to the apostles (but cf. Luke 24:36–51, and esp. v 50). After forty days of instruction, he ascends on the cloud on which he will return as Son of Man (21:27). The apostles return to Jerusalem as witnesses to his resurrection and the forgiveness that is available through repentance and faith in the name of the risen Christ. Repentance is required because the Jewish leaders in particular are guilty of having rejected Jesus. This is emphasized especially in the early chapters of Acts, which are punctuated with formulas that contrast Jesus' persecution by the Jewish leaders and God's vindication of him through the resurrection and exaltation (2:22–24; 3:13–16, 19; 4:10–12; 5:30–31; 10:38–40; cf. 3:27–32, 38). These formulations are epitomized in 2:36. The form and wording of this passage closely parallel 7:35, where the Israelites' rejection of Moses and God's vindication of him are paradigmatic of the kind of rejection and vindication that climax in the crucifixion and resurrection of Jesus and in the persecution of Stephen and his vindicative vision of the exalted Son of Man. In the case of Saul of Tarsus, rejection and vindication take place in Saul's persecution of the

Church and the vision of the exalted One which convinces Saul that Jesus is Son of God (cf. esp. Acts 9:20–21 and Wis 5:1–5). In keeping with gospel traditions and Acts 1, this vision functions as a prophetic commissioning. Three times Saul returns to this vision to emphasize the centrality of the resurrection (23:6–8; 24:21; 26:5–8). Twice he ties the future resurrection to (Jesus') judgment of all humanity (17:31; 24:15).

h. The Gospel According to John. One of the most striking features of this gospel is its tension between future and realized eschatology. The latter predominates and pervades in the author's references to resurrection and eternal life. In the case of Jesus, his death is really his departure, the return of the Logos to the Father who sent him. The moment of his death is the time of his glorification (13:31–32); his being lifted up on the cross is his exaltation (3:14; 12:32). Similarly, those who believe in Jesus "will never die" (11:25–26). Death in the Johannine sense is not a possibility for the believer, who by virtue of faith "*has* eternal life and does not come into judgment, but has passed from death to life" (5:24; cf. 3:18; 3:36; 6:47). This radicalization of eschatology is tied to Jesus' function as the revealer who brings life (1:4 and *passim*, also in the many life-related metaphors, e.g., bread and water) and is dramatized in the raising of Lazarus (see esp. 11:25 and compare the story with 5:25). John's realized eschatology is a christologized version of the theologies found in 1QH 3 and 11 (one has been raised) and the Wisdom of Solomon (the righteous one who has immortality only seems to die when he is taken to heaven).

Two sets of Johannine texts stand in tension with the author's realized eschatology. The farewell discourses notwithstanding, the traditional resurrection stories in chaps. 20 and 21 describe Jesus returning from the dead before his departure to heaven (cf. 20:17 and contrast 20:27). Whatever their precise relationship to their synoptic parallels (Luke 24 and Luke 5; Matt 14:22–33; 16:16–19), John 20:19–23 and 21:1–19 recount the foundational apostolic commissionings typical of most other postresurrection appearance stories. In tension with the texts that posit the presence of judgment and eternal life for believers are other texts that speak of a future resurrection and universal judgment on the basis of deeds, over which Jesus will preside (6:39, 40, 44, 54; 5:27–29). See SON OF MAN. Hypotheses of sources, redaction, and recension best explain the origin of most of these tensions.

i. The Epistle to the Hebrews. As in Phil 2:6–11 and the Fourth Gospel, the christology of Hebrews is governed by a combination of the motif of descending and reascending Wisdom and the pattern of suffering and vindication/exaltation (Heb 1:1–3; 5:5–7). Typical of the latter pattern and in keeping with his dualistic world view, the author applies none of the traditional verbs for resurrection to Jesus (see 13:20; but cf. 6:2 of the general resurrection). Departing from the pattern in a related pair of his own emphases, he sees Jesus' death not as persecution but as obedient sacrifice for sin, and he interprets Jesus' messianic exaltation primarily as his installation to the function of heavenly high priest, following the cue of the oft-quoted Ps 110:1, 4 (cf. also Paul in Rom 8:34).

j. The Book of Revelation. The NT apocalypse begins with a commissioning vision of the resurrected Christ (chaps. 1–3). Presumed throughout the book is not only Jesus' resurrection, but his exaltation as Son of Man, Messiah, and perhaps servant of the Lord. The endurance of the persecuted martyrs is vindicated in their exaltation and reign with Christ (20:4–6). Descriptions of the battle between Michael and Satan, the latter's overthrow, and the great judgment (12:7–9; 20:1–3, 7–15) draw on Jewish judgment and resurrection traditions (*1 Enoch* 10; Daniel 7; 12:1–3), while chaps. 21–22 combine traditional interpretations of Second and Third Isaiah (esp. chap. 65) with descriptions of the heavenly Jerusalem rooted in Ezekiel 40–48. The locus of final salvation is the heavenly Jerusalem come to earth.

3. Historical Problems. The early Church's resurrection faith involves a host of unresolved historical problems which we can only sample here. The first problem concerns the experienced mode of Jesus' resurrection. Stories about the empty tomb presume a bodily resurrection or a bodily assumption to heaven. Earlier traditions about postresurrection appearances are ambiguous. Although in their present form most of these stories posit a bodily presence almost without exception, elements in the stories strain against such an interpretation: Jesus materializes and disappears suddenly; he is mistaken as a mysterious stranger or a gardener; he is thought to be a spirit or ghost; the disciples disbelieve. This suggests an apologetic tendency in the tradition which objectified Jesus' presence by emphasizing bodily features or

functions (or, later, by citing neutral or antagonistic witnesses). The tendency may have been a corrective to stories that were originally narrated in the tradition of angelophanies or divine epiphanies and that may have presumed that the exalted Christ appeared from heaven. This viewpoint is amply documented in 2d-century gnostic sources (Robinson 1982).

A second problem is the place, witnesses, and order of the appearances. The earliest list in 1 Cor 15:5–7 is duplicated nowhere. An appearance to James is not documented in any of the canonical gospels. Only Luke mentions the primary, singular appearance to Peter (24:34), although the tradition seems to be reflected in a number of stories set in the historical ministry of Jesus. The appearances are set variously in Galilee (at the sea or on a mountain) and Jerusalem, with Matthew (except for the brief 28:9–10), Mark, Luke, and the original author of John opting for one tradition or the other. Only an uncritical inclusivism can harmonize these disparate traditions.

Finally, there remains the mystery of the genesis of the NT resurrection faith. The earliest credal and hymnic testimonies to this faith simply assert the traditional pattern of suffering, humiliation, persecution, death—vindication, exaltation. However, it is unlikely that belief in Jesus' resurrection or exaltation arose simply as a reasoned application of the pattern to the tragedy of his crucifixion. Different from all the Jewish texts are the primitive assertions of the universal significance of Jesus' exaltation, which is also implicit, and sometimes explicit in the commissioning functions described in the appearance stories. In the earliest available evidence, Jesus' resurrection means his unique exaltation to status and functions hitherto not ascribed to a historical person. As far back as we can go, belief in Jesus' resurrection is the foundation for the Church's speculations and claims about his unique status and role.

GEORGE W. E. NICKELSBURG

RESURRECTION, TREATISE ON THE (NHC I,*4*). The central teaching of the *Treatise on the Resurrection* (NHC I,*4*) from the Nag Hammadi Library is that "already you (the Elect) have the resurrection" (49,15–16) if you have experienced proleptically death and Christ's resurrection. Such teaching is remarkably similar to that of Hymenaeus and Philetus denounced in 2 Tim 2:18: "that the resurrection is past already." Echoing NT language, couched in a framework of Valentinian gnostic ideas, and revealing the influence of Middle Platonic concepts, the *Treat. Res.* is an important, late 2d-century witness to heterodox development of a key eschatological doctrine outside the mainstream of Great Church teaching.

Treat. Res. occupies only eight pages, 262 lines of text, in Codex I, one of the best-preserved codices in the NHC collection. It is written in Subachmimic, a subdialect of the Coptic language of S Egypt. Its title, found only at the end (50,17–18), seems a composite of statements found in 44,6 ("concerning the resurrection") and 44,11–12 ("let us discuss the matter") and is descriptive of the content of the document.

Though one major study identifies its literary form with the "animated classroom lecture" exhibited in Epictetus' discourses as preserved by Arrian (Layton 1979: 101), most commentators maintain *Treat. Res.* is a didactic letter in which questions raised by a pupil, Rheginos, are answered by an anonymous master (Malinine et al. 1963: 146; Schenke 1968: 125; Krause 1971: 85; Haardt 1969: 1; Peel 1974: 17ff.). Still disputed is whether it is a genuine, personal letter lacking a *praescriptio* (cf. the *Letter of Ptolemy to Flora*), or whether it is a pseudo-epistle whose form was adopted for didactic purposes. Arguments that *Treat. Res.* is either the result of joining two, originally independent letters (Martin 1971: 293ff.) or of a gnosticizing redaction "of an orthodox Christian text" (Dehandschutter 1973: 110) are unconvincing.

Three principal spheres of influence are reflected in the author's teaching. First, Christian belief is manifest in the central conviction that the "Lord, the Savior, Jesus Christ" (43,37; 48,8–10) is the basis of resurrection experience and the ultimate teacher. By raising himself, Christ opened the "way of immortality" (45,14–39), an event in which all believers participate proleptically (45,24–28). Both "Gospel" (48,6–11 = Mark 9:2–8) and "Apostle" (45,24–28 = Rom 8:17 and Eph 2:5–6) attest this truth. Second, the author's Valentinian gnostic background is found in his cosmology, e.g., ideas of a preexistent "Pleroma" of the Elect and "emanations" which fell into a state of "deficiency" when the world was created (46,38–47,1; 45,11–13; 46,35–38; 49,4–5). Third, Middle Platonic ideas are found in the distinction between the heavenly world of immutable realities and this corruptible and changing sphere (48,20–27), in the notion of the preexistence of souls (46,38–47,1; 47,4–6; 49,30–36), and in the exhortation of "practicing" for dying (49,28–33).

Since the Elect have already died and risen to heaven with Christ (49,25–28), the author exhorts the reader to dispel doubt through faith, avoid divisive opinion, and thereby gain certitude about already having the resurrection. Though inevitable, after biological death comes ascension (45,36–38) of one's invisible, inward "members" covered by a new, spiritual "flesh" (47,4–8). Continuity of identity will prevail, as the appearance of Elijah and Moses at Christ's transfiguration attests (48,3–11). This is the "spiritual resurrection" that destroys the "psychic" and "fleshly" forms (45,39–46,2).

Though its place of origin cannot be determined, the text's affinities with later Valentinian, Middle Platonic, late Stoic ideas, as well as with characteristic Christian debates about the resurrection all point toward the late 2d century as its probable time of composition.

MALCOLM L. PEEL

REU (PERSON) [Heb *rĕʿû* (רְעוּ)]. Son of Peleg when Peleg was thirty, father of Serug at thirty-two, Reu lived 239 years (Gen 11:18–21). Unlike many of the figures associated with Abram's immediate family line, Reu cannot be identified with any geographic name in N Mesopotamia (Cassuto 1964: 252; Thompson 1974: 306). The name has the consonants *rʿw,* which may reflect W Semitic *rʿh,* which itself can mean "to pasture," "to associate with," and "to be content." As a noun this expression could mean "shepherd," "friend," and "one who is pleasing" (or adjectival "pleasing"). This element may be compounded with a divine name to describe a characteristic of the deity, or in the case of "friend" to describe the name bearer as "friend of God." See also REUEL. Attestations of this root also appear in extrabiblical Hebrew (*IPN,* 257), Amorite (Gelb et al. 1980: 29, 343), Punic (Benz 1972: 409–10), and possibly in Aramaic names of the 1st millennium B.C. appearing in Akkadian transcription (Zadok 1977: 87, 290). Akkadian personal names with these elements are found in many periods (Clay 1912: 194;

Tallqvist 1914: 305, 306; Stamm 1939: 189, 214, 223). Thus the element comprising the name Reu appears in personal names of Semitic origin from a wide variety of times and places.

RICHARD S. HESS

REUBEN (PERSON) [Heb *rĕ‹ûbēn* (רְאוּבֵן)]. REUBENITE. Firstborn son of Jacob and Leah (Gen 29:31–32; 49:3) and eponymous ancestor of the tribe of Reuben. A number of meanings for the name have been suggested from Arabic, such as "substitute (for another child)" (from Ar *r‹b,* "to restore") or "chief" (Ar *ra‹bān*). However the most commonly accepted meaning is "behold a son"—the reaction in Hebrew to the birth of a male child (Nicol 1980: 536, n. 2). The symbolic explanations for the name in Gen 29:32 are related to the circumstances surrounding Reuben's birth—" (Yahweh) has seen my (Leah's) distress" (*ra‹ā bĕ‹onyî*) and "now, my husband will love me" (*[ye‹ĕha]banî*). Both of these statements refer to Leah's relationship with Jacob and his preference for her sister Rachel (Strus 1978: 62–63).

It was Reuben who collected mandrakes (possibly an aphrodisiac) and gave them to Leah (Gen 30:14ff.). When Rachel demanded the mandrakes, Leah traded them for a night with Jacob, thus leading to the birth of her fifth son, Issachar (also explaining his name "I have hired you," Gen 30:16). After Rachel's death, Reuben had sexual relations with Bilhah, her slave and his father's concubine (Gen 35:22). Using 2 Samuel 16:20–22, in which Absalom takes possession of his father David's ten concubines as a parallel situation, some have seen in this act an attempt on Reuben's part to usurp his father's power and authority. Others have suggested that Reuben's intent was to force Jacob to return to Leah's tent by "spoiling" Bilhah, the last link to Rachel (Unterman *HBD,* 866), and to humiliate his father, which introduced an element of justice into the story (Nicol 1980). Whatever the reason, it was this act which led to Reuben's loss of favor and his birthright to descendants of Joseph and Judah (Gen 49:4; 1 Chr 5:1). In the Joseph story (Gen 37; 42:37), however, Reuben's character was portrayed in a more favorable light and his original position as firstborn was underscored by the role that he played in attempting to save Joseph when the other brothers wanted to kill him and by his offer of his two sons to Jacob as surety for the return of Benjamin from Egypt.

The tribe of Reuben was descended from Reuben through his four sons, Hanoch, Pallu, Hezron, and Carmi (Exod 6:14). The territory assigned to them after the conquest was in the Transjordan, roughly S of Gad/Gilead and N of the Arnon River with the Dead Sea on the W and the Ammonites to the E (Josh 13:15–23). As pastoralists, they and the Gadites coveted this land and were promised it by Moses in return for their assistance in the conquest of Canaan (Numbers 32). There is also some evidence for the existence of a portion of the tribe W of the Jordan (Josh 15:16; 18:17) (Elliger *IDB* 4: 53).

Along with Gad and Manasseh, the Reubenites were accused by the tribes W of the Jordan of setting up an altar for worship in their own territory (Joshua 22). The W tribes were placated and war averted when their Transjordanian brethren swore that this altar was not for cultic use but was a model of the real altar in Canaan symbolizing that the Transjordanian tribes had the right to sacrifice there. Cross (1988: 57), however, sees the story as evidence for "an important and traditional cult and shrine" existing in Reuben's territory.

The subsequent history of the tribe is difficult to construct. In the Song of Deborah (Judg 5:15–16), Reuben was chastised for remaining with its flocks instead of assisting in the conflict with Sisera. In 1

Chr 5:10, 19, however, it was seen as fighting with Gad and Manasseh against the Hagrites in the time of Saul.

There are those who interpret 1 Chr 5:1–10, 26 as indicating that Reuben retained its tribal identity until the deportation of Transjordanian Israelites by Tiglath-pileser III in 732 B.C. Others think that soon after Saul the tribe was absorbed by Gad and Moab. Support for this latter view is derived from new evidence attesting to Ammonite oppressive attacks on the Reubenites and Gadites early in Saul's reign as well as from the fact that in David's census (2 Sam 24:5–6) only Gad is mentioned in the area N of the Arnon (Cross 1988: 48). Also, in the 9th century B.C. Mesha inscription, Gad is described as always having dwelt in that area, but there is no reference to Reuben. Memory of the tribe was retained in Ezek 48:6–7, 31, where it received its portion in the resettlement, and in Rev 7:5, where out of the 144,000 sealed from the tribes of Israel 12,000 were from Reuben.

Scholars assume that the tribe of Reuben must at one time have been extremely important from its eponymous ancestor being Jacob's firstborn and its position of primacy within the various biblical genealogical lists (Cross 1988). The biblical explanation for its weakness and disappearance—Moses' blessing "Let Reuben live and not die" (Deut 33:6)—may be seen either in Reuben's sexual relations with Bilhah or possibly the rebellion against Moses (Numbers 16) instigated by Dathan and Abiram, members of the Reubenite tribe (Unterman *HBD,* 867).

GARY H. OLLER

REUEL (PERSON) [Heb *rĕʿūʾēl* (רְעוּאֵל)]. Var. DEUEL. The name of various tribes and persons in the OT. Outside the OT, the name occurs in Edomite (Tell el-Kheleifeh Ostracon 6043, 1). Names consisting of *rʿw-* or *rʿy-* and a theophorous element are attested throughout NW Semitic and ancient Arabic (Weippert 1971: 249; Knauf 1988). The name means "The Friend of God" or "God is Friend"; *ʾēl* in personal names does not necessarily refer to the God El (Knauf 1989: 38, n. 170).

1. A son of Esau (Gen 36:4, 10, 13, 17; 1 Chr 1:35, 37). If the list of Gen 36:10–14 reflects the structure of the Edomite tribal system in the 7th century B.C. (Knauf 1989: 10, n. 45; 61–63), Reuel was one of the three major Edomite tribes and had four subtribes (Gen 36:13). The remaining references to this tribe are derived from this entry (Weippert 1971: 437–46). Of Reuel's subtribes, Shammah is attested in Egyptian topographical lists from the 14th century B.C. (*TRE* 9: 292); Zerah probably inhabited the vicinity of Udhruḥ (M.R. 207971), a village, town, and fortress site in S Jordan, located 9 km E of Petra and occupied from the 7th century B.C. through the Ottoman period (Killick 1987). See also ZERAH.

2. The name of Moses' father-in-law (Exod 2:18; Num 10:29). According to another tradition, Jethro was the father of Moses' Midianite wife (Exod 3:1; 4:18 [Jether]; 18:1f., 5f., 12). In the most ancient tradition, Moses' father-in-law seems to have been without a name. He is called Jethro first by the Yahwist (J), and then Reuel by the Jehovist (JE) (Knauf 1988). In Num 10:29, Reuel is the father of Hobab, the eponymous ancestor of a Kenite clan that settled in the Negeb among the tribe of Judah (Mittmann 1977). This clan may well have belonged to the Edomite tribe Reuel before it migrated to the other side of Wadi Arabah. Therefore, Reuel as Moses' relative is possibly identical with the Edomite tribe (cf. also Albright 1963).

3. The father of Eliasaph, the Gadite tribal leader (Num 2:14; according to the Samaritan and Greek textual tradition). The historical background of the list in Numbers 2 is difficult to ascertain (Kellermann 1970: 155–59). The RSV, following the MT of Num 2:14 reads DEUEL. Barr (1968: 23–25) argues that this form is original; however, the root *dʿw,* "to call," seems to be restricted to S Arabian and Arabic.

4. A Benjaminite family among the inhabitants of Jerusalem (1 Chr 9:8).

5. In Gen 25:3, the adds Reuel to the "sons of Keturah." It is possible that the authors of the knew of an Arabian tribe of this name. It is more likely, however, that they simply wanted to list Moses' father-in-law in their Arabian genealogies in order to emphasize his prominence.

ERNST AXEL KNAUF

REUMAH (PERSON) [Heb *rĕ›ûmâ* (רְאוּמָה)]. The concubine of Abraham's brother Nahor and the mother of four sons—Tebah, Gaham, Tahash, and Maacah (Gen 22:24). These four were perhaps the eponymous ancestors of Aramean tribes located both N and S of Damascus and related secondarily to the Israelites. Westermann (1985: 367) has drawn attention to the parallel with the Israelite tribes in the division of the names of Nahor's sons: eight were born of the full wife (wives in Jacob's case) and four of the secondary one (again Jacob had two). "Reumah" was evidently a common girl's name, whose meaning nonetheless remains uncertain. Barth (1909: 5) tentatively advocated "Darling," linking it with Akk *râmu* (cf. Ar *ra›ima*), "to love." Building on this idea, Coote (1971: 206–7) saw in "Reumah" a shortened form from something like *ra›ūmat-›ili*, "Beloved of El." In a Palmyrene text *r›wm›* shows up as a masculine name and has been compared to the identically spelled Syr word meaning "foster son" and to the Gk name *rhomeos* (Cantineau; Starcky; and Teixidor 1930–65: 6.14).

A. Title

The oldest textual witness to the opening of the book of Revelation (Codex Sinaiticus) gives "Revelation of John" (*apokalypsis iōannou*) as its title. This title is also found in Codex Alexandrinus (5th century), the best witness, along with Codex Ephraemi (also 5th century), to the text of this work. Other mss contain the titles, "Revelation of John, the one who speaks about God" (*apokalypsis iōannou tou theologou*); "Revelation of Saint John, the one who speaks about God" (*apokalypsis tou hagiou iōannou tou theologou*); "Revelation of John, the one who speaks about God, [the] evangelist" (*apokalypsis iōannou tou theologou kai euaggelistou*); and "The Revelation of the Apostle John, the Evangelist (*hē apokalypsis tou apostolou iōannou kai euaggelistou*). The work may have already been known by the title "Revelation of John" (*apokalypsis iōannou*) in the 2d century. The Muratorian Canon (ca. 200 C.E.) states, "We receive also the apocalyptic works, only [those] of John and Peter" (*scripta apocalypse[s] etiam johanis et petri tantum recipimus;* text cited by Charles *Revelation* ICC, 1:5). In the 2d century, however, the work may simply have been known as "Revelation" (*apokalypsis;* Swete 1909: 1).

It is likely that the work at first had no separate title and that the opening words aroused the appropriate expectations in the audience by designating the nature of its content: "A revelation of Jesus Christ" (*apokalypsis Iēsou Christou*). The meaning is "a revelation given by Jesus Christ," as the following words show ("that God gave to him [Jesus Christ] to show to his servants"). This is the first time that the Greek word "revelation" (*apokalypsis*) was used to describe a written work or even an explicitly visionary experience (Smith 1983: 14, 18). When the book was copied onto scrolls, a brief title was added at the end of the work, probably "Revelation of John" (*apokalypsis Iōannou*). When the work began to be copied on booklike codices with pages, this title was placed at the beginning (Aune 1987a: 226). In the course of transmission, the older, brief title was expanded in various ways.

B. Place in the Canon

The book of Revelation eventually came to be the last book in the NT. It was in use in Asia and in the West in the 2d century (Swete 1909: cviii). According to Andreas, the archbishop of Caesarea in Cappadocia (who wrote a commentary on Revelation, either around 515 or 620 C.E.; Bousset *Die Offenbarung Johannis* MeyerK, 63, 65), Papias knew and commented on the book of Revelation (Swete 1909: cviii). Papias flourished in the first half of the 2d century. Irenaeus knew and used the work as a sacred text (*haer.* 5.30). Justin used the book to support the belief in the resurrection and the thousand years in a restored Jerusalem, citing it along with Isaiah and a gospel saying (*dial.* 81). The Letter of the Churches of Lyons and Vienne cites Rev 22:11 as Scripture (1.58). Although the events described occurred in 177, this portion of the work may have been added ca. 250 C.E. (Musurillo 1972: xxii and 80.12–14).

The first major figure to challenge the authoritative status of the book of Revelation was Marcion, presumably because of its strong ties to the Jewish Scriptures. Another challenge came from an extreme anti-Montanist group (the "Alogi"), apparently because it, along with the gospel of John, was a favorite text of the Montanists. Taking an anti-Montanist stand, Gaius of Rome (early 3d century), insinuated that the book was written by a certain Cerinthus, not by John the Apostle. This controversy did not seriously affect the acceptance and popularity of Revelation.

In the second half of the 3d century, however, the canonical status of the book was substantially threatened in the course of a conflict over the manner of fulfillment of the promises of the Scriptures. One group, reacting to the allegorical interpretation of Origen and his successors, insisted that the promises would be fulfilled in an earthly reign of Christ. This position was opposed by Dionysius, bishop of Alexandria and follower of Origen. He did not directly challenge the inspiration of the book or its claim to

have been written by someone named John, but argued that the gospel attributed to John the apostle and the book of Revelation could not have been written by the same person (Eusebius *Hist. Eccl.* 7.24–25).

The result of Dionysius' work was that the canonical authority of Revelation was greatly weakened in the East. Eusebius did not argue in favor of the book's status as a genuine part of the NT. He simply reported that it was considered genuine by some and spurious by others. Cyril of Jerusalem (also 4th century) omitted Revelation from his list of books in the NT (*catech.* 4.36; cf. 15.13). The Council of Laodicea in Phrygia, held in the mid-4th century, also omitted Revelation from its list of the books of the NT (canon 60; the authenticity of this canon is disputed). Athanasius included Revelation in his list of the books of the NT (*ep. fest.* 39), and Gregory of Nazianzus cited it (*or.* 42.9). Gregory's cousin, Amphilochius of Iconium (ca. 380 C.E.), however, noted that, although some accept the Revelation of John, most call it spurious. The Apostolic Canons, composed in the East in Greek in the 4th century, also omit Revelation from the canon of the NT (canon 85). John Chrysostom, of Antioch and Constantinople (fl. 380), does not cite Revelation. Theodore and Theodoret, also of Antioch, do not cite it.

Athanasius' inclusion of Revelation in his list of books of the NT reestablished it as part of the canon recognized in Egypt (Cyril of Alexandria, for example, accepted it). In Asia Minor it was accepted not only by Gregory of Nazianzus but also by his fellow Cappadocians and contemporaries, Basil the Great and Gregory of Nyssa (so Bousset ibid., 30; but see Swete 1909: cxvi, and Kümmel 1975: 498–99). Epiphanius of Salamis on Cyprus, also of the 4th century, accepted Revelation as canonical.

The book of Revelation was definitively rejected by the Eastern Syrian Church. It was not included in the early Syriac translation of the NT, the Peshitta (Swete 1909: cxvi; Bousset, 26). Ephraem (4th century), Junilius (6th century), and the Nestorians all ignore the book. The Western Syrian Monophysites, however, authorized a new Syriac translation of the NT. It was authorized in 508 by Philoxenus and thus has been known as the Philoxenian version. It was revised in 616 by Thomas of Harkel (Heraclea). The Philoxenian version apparently survives only in the revised form and is now called the Harklean version. This version included Revelation. John of Damascus (fl. early 8th century), who wrote in Greek and admired the Cappadocian fathers, accepted Revelation as Scripture (Bousset, 30). The Peshitta is preserved and revered by the modern Syriac Church in a form lacking the book of Revelation. This version is used by both the Monophysites and the Nestorians (Aland and Aland 1987: 190–93). The older Armenian version, dependent on the Peshitta, lacked Revelation (Bousset, 30). The later Armenian version, dependent on Greek mss, includes Revelation (Aland and Aland 1987: 201).

In spite of the criticisms of Gaius and Dionysius, the support for Revelation in the West never flagged. The oldest complete commentary on Revelation was written in Latin by Victorinus of Pettau (d. ca. 304). Eventually the work was accepted as canonical in the East, but it was a slow process. The Trullan Synod (or Quinisextine [Fifth-Sixth] Council) held by Eastern bishops in 692 affirmed the Laodicean canon that omits Revelation, but they also drew up a list including it (Swete 1909: cxviii; Kümmel 1975: 499). The Byzantine list of canonical scriptures called the Stichometry of Nicephorus (ca. 810 C.E.) omits Revelation. The oldest surviving commentary in Greek was written either by Oecumenius or Andreas (see above). The archbishop of Caesarea in Cappadocia, Arethas, wrote the third surviving Greek commentary ca. 900 C.E. These commentaries apparently won greater recognition for Revelation in the East. In the 10th and 11th centuries Revelation began to be included once again in Greek mss of the NT (Kümmel 1975: 499).

C. Summary of Contents

Revelation opens with a prologue in the third person (1:1–3). It refers to the book as a revelation (*apokalypsis*) that was given through God's angel (or messenger; *angelos*) to his servant (*doulos*) John (v 1). The (content of the) book is also called "the word of God and the testimony of Jesus Christ" (v 2). It is also called "words of prophecy" (*tous logous tēs prophēteias*), and a blessing is pronounced on the one who reads it (aloud in a communal setting) and on those who keep the things written in it (v 3). The prologue ends with the pronouncement, "for the time is near" (*ho gar kairos engus*).

The rest of the book (1:4–22:21) has the framework of an ancient letter. This part of the work is in the first person, except for occasional speeches, that seem to be reports of auditions but are unattributed (e.g.,

22:12–13). Following the prologue is an epistolary prescript (1:4–7), consisting of a salutation, greeting, and doxology. The salutation is from "John" to "the seven congregations (*ekklēsiais*) that are in Asia" (v 4a). The greeting is a wish for grace and peace upon the addressees from God and Christ (vv 4b–5a). The doxology is addressed to Christ (vv 5b–6). Corresponding to the prescript is an epistolary concluding blessing (22:21). It requests that the grace of Christ be with all the addressees. Attached to the epistolary prescript are two prophetic sayings (1:7 and 8).

The body of this unusual letter (1:9–22:5) consists of the report of a single, but highly segmented, visionary experience. Following this account is a kind of epilogue (22:6–20). The epilogue corresponds formally to the two prophetic sayings placed after the prescript and before the report proper. In part it continues the report ("And he said to me," 22:6). In part it reprises the prologue. The reference to the sending of God's angel or messenger *angelos*) to show his servants what must happen soon (22:6) recalls the similar statement in 1:1. The blessing on the one who keeps the words of the prophecy of this book (22:7) recalls 1:3. The narrator's allusion to himself as "John" in 22:8 recalls the prescript (1:4) and the opening of the report (1:9). What he goes on to say in 22:8–9 recalls an incident in the report (19:10). There are other connections between 22:6–9 and 19:9–10. The rest of the epilogue contains various prophetic sayings with links to other parts of the work.

The report of the visionary experience is segmented into two formally different parts. The first is an epiphany of the risen Christ in the form of one like a son of man (1:9–3:22). This visionary experience takes place on earth. The manlike figure commands John to record his visionary experience in a book and to send it to the seven congregations. The focus of this first formally distinct part is a series of prophetic messages to the seven congregations that Christ dictates to John (2:1–3:22). The second main part (4:1–22:5) begins like a heavenly journey or ascent (4:1–2). But this formal introduction is not carried through with remarks about John's journeying from place to place in the heavenly world. Such remarks are typical of the widespread literary form of the heavenly journey. At times John seems to be in heaven. For example, he speaks with one of the twenty-four elders (5:5; 7:13–17). At other times, his vantage point seems to be on earth. For example, the mighty angel of chap. 10 seems to come down to John from heaven. John takes the little scroll from the angel while the angel has one foot on the land and one on the sea. The seer's position and vantage point also seem to be earthly in chap. 12. The implication is the same in 18:1, 19:11, and 20:1. The opening of chap. 4 seems deliberately to evoke the tradition of heavenly ascents, but the author did not seem concerned to make such a journey a structuring principle of the work.

The visionary experience recorded in 4:1–22:5 is itself highly segmented. The plan of this portion of the work will be discussed in the next section. It contains a vision of the heavenly court (chaps. 4–5) that introduces several series of symbolic visions.

D. Plan of the Book

A fundamental issue in discerning the plan of the book of Revelation is how to explain the numerous parallel passages and repetitions within it. The book itself suggests that the number seven is an ordering principle by presenting seven messages, seven seals, seven trumpets, and seven bowls. The parallels between the trumpets and bowls are especially close and seem repetitious. Some commentators have explained the repetition as the result of the use of sources. Others have seen the repetition as part of the author's literary design. The literary design has been seen as describing a linear sequence of events within history, including the past, present, and future. Another theory is that the same historical and eschatological events are described several times from different points of view.

1. The Recapitulation Theory. The theory that the book of Revelation describes the same events several times from different points of view is an old and venerable interpretive strategy. This position was taken by Victorinus of Pettau, the author of the oldest surviving commentary (d. ca. 304). He stated that both the trumpets and the bowls predict the eschatological punishment of unbelievers (Haussleiter 1916: 84, line 14–86, line 7). This approach was adopted by Tyconius in his lost, but heavily cited, commentary and by Augustine. It dominated the interpretation of the book for centuries.

2. The Source-Critical Theory. The recapitulation theory endured as the primary solution to the problem of the structure of the work until the fruitfulness of source-critical studies of the Pentateuch and

Synoptic Gospels led some critics to apply the method to Revelation. The first such analysis was Daniel Völter's study that appeared in 1882 (Bousset, 128–30). The extreme form of this approach is the theory that the author of Revelation was primarily an editor who simply compiled and superficially edited a number of written sources. Friedrich Spitta's study is an example of this extreme source-critical analysis (Bousset, 135–36). He argued that the seals, trumpets, and bowls each reflect a source based on a sevenfold series.

In the 20th century, the source-critical approach has been adopted by M. E. Boismard, J. M. Ford, and U. B. Müller. Boismard used the repetitions in the work to distinguish two sources, one written under Nero and the other somewhat later (Boismard 1949). Müller used differences in messianic ideas to distinguish sources in Revelation from the minimal editorial work of the author. He found Jewish sources in chaps. 12, 14, 19, and 20, that depicted a national Messiah or Son of Man who would judge or do battle against the powers of the world. To the editor he ascribed the passages expressing a messianism focusing on the redemptive Lamb (Müller 1972). Ford hypothesized that chaps. 4–11 constitute a source consisting of the prophecies of John the Baptist and chaps. 12–22 represent another, later source originating from the disciples of the Baptist. Chaps. 1–3 and several verses in chap. 22 were added by a Jewish Christian. The phrases that mention Jesus throughout the work are taken as interpolations (Ford *Revelation* AB).

3. Literary Unity and a Linear Design. The source-critical studies of the 19th century definitively established that the author of Revelation did use sources. But the discernible sources are few and of limited scope. The theories that argued for extensive sources and reconstructed them were heavily criticized because of the overall unity of style in the book (Bousset, 126; Charles *Revelation* ICC, 1: lxxxviii–lxxxix). Most exegetes following Bousset have taken the position that the repetitions and parallel passages in Revelation are due to the literary design of the author. The recapitulation theory was not revived immediately, however, because it had been used in the attempt to demonstrate that the book prophesied history from the time of its composition to the time of the interpreter (see below). R. H. Charles argued that the literary design of Revelation describes a linear sequence of events (Charles, 1: xxii–xxiii). In this sequence, most of the events are in strict chronological order. There are significant exceptions, however. Chap. 12 does not continue the prophecies of the future associated with the seven trumpets but reverts to the past in order to prepare for the events related in chap. 13. Three "proleptic" visions interrupt the orderly unfolding of events to encourage the audience by reference to the more distant future (7:9–17; 10:1–11:13; chap. 14). The adequacy of this theory was called into question, not only by the need to posit these significant exceptions, but also by the related thesis that the text had been disordered by the activity of an editor after the work left the hand of the author (Charles, 1: xxii–xxiii; l–lv; lix).

4. The Revival of the Recapitulation Theory. As Bousset had already indicated, interpretation of the book of Revelation cannot do entirely without the recapitulation theory (121). The failure of the attempt to interpret the literary design of the work as a linear sequence of events led to the scholarly attempt to retrieve the recapitulation theory for historical-critical interpretation. The first such attempt was that of Günther Bornkamm. His starting point was to ask what portion of the book reveals the contents of the scroll with the seven seals that is introduced in chap. 5. He argued that chaps. 6:1–8:1 could not be an account of the revelation of its contents, since the scroll could not be read until the seventh seal was opened (8:1). He also rejected the theory that chaps. 6:1–11:19 reveal the contents of the scroll. His reasoning was that the unfolding of events connected with the seven trumpets does not exhaust the revelation of the scroll, because of the close parallel structure between 8:2–14:20 and 15:1–19:21. According to his interpretation, the former passage describes the same series of events as the latter, but in a mysterious, fragmentary, and proleptic manner. Because of the relationship between these two passages, he concluded that the revelation of the scroll with seven seals continues from 8:2 to 22:6 (Bornkamm 1937). For a retrieval of the recapitulation theory that leads to a different understanding of the plan of Revelation, see Yarbro Collins 1976: 32–44.

5. Structural and Thematic Theories. E. Schüssler Fiorenza discerned a pattern of inclusion or symmetry in the book of Revelation. The first (A 1:1–8) and the last (A´ 22:10–21) units are related to

one another as promise and fulfillment. The second (B 1:9–3:22) and sixth (B´ 19:11–22:9) units correspond because they each have an "inaugural" vision of Christ (1:12–20 and 19:11–16). The third (C 4:1–9:21; 11:15–19) and the fifth (C´ 15:1, 5–19:10) units are related to each other because both evolve out of the scroll with seven seals. The fourth unit (D 10:1–15:4) is the center and climax of the book (Schüssler Fiorenza 1985: 170–75).

C. H. Giblin, building on the work of U. Vanni, argued that the thematic correlations of divine judgment and divine testimony in chaps. 16–22 are articulated in a literary structure of correlated narratives and correlated disclosures (Giblin 1974). The correlated narratives are the seventh bowl (16:17–21) and the elimination of all eschatological adversaries (19:11–21:8). The first describes the negative aspect of divine judgment, i.e., wrath against Babylon. The second is the fulfilled aspect of divine judgment that entails a new creation. The correlated angelic disclosures are the explanation of Babylon (17:1–19:10) and the discourse on the New Jerusalem (21:9–22:6, perhaps extending even further toward the end of the book).

6. A Text-linguistic Approach. David Hellholm has applied methods of text linguistics current in Germany to the structure of the book of Revelation (1986). The analysis has two complementary aspects. The first is the determination of the hierarchy of levels of communication. These levels are of two types, those external to the text and those internal to the text. The external type is between the author and the audience or between a character within the text and the audience. The internal type is between characters in the text. The other aspect is the division of the text into hierarchical text sequences. A shift from one text sequence to another is marked by a change in "world," by indications of or changes in time, by indications of or changes in place, changes in the grouping of characters, reintroduction of a character, or by the use of adverbs or conjunctions.

In the book of Revelation, Hellholm discerned six levels of communication. The lowest level is that between the author and the general Christian audience (Rev 1:1–3 and 22:18–19). The second level is between the author and the more specific group of seven congregations. The third is between otherworldly mediators and the author (e.g., the risen Christ in chaps. 1–3). The fourth is between the "heavenly scroll" and the author (6:1–22:5). The fifth is between the otherworldly mediators and the author within the heavenly scroll. The highest level is communication between God and the author within the heavenly scroll, including the command to write (21:5–8; Hellholm 1986: 43–44). This "highest" level of communication may also be referred to, in text-linguistic terms, as the level of most profound embedment.

Hellholm's preliminary delimitation of the hierarchically ranked text sequences in Revelation indicates that the title (*apokalypsis Iōannou*) is the lowest-ranked text sequence (the double nil grade). The prologue (1:1–3) is the next lowest (the nil grade). On the first grade, he places the epistolary prescript (1:4–8), the visionary part (1:9–22:5), the epilogue (22:6–20), and the epistolary postscript (22:21). The following passages are placed on the second grade: the address (1:4b–5), the doxology (1:5c–6), motto in the form of a prophetic saying (1:7), God's self-predication (1:8), the revelation without an otherworldly journey (1:9–3:22), revelation with an otherworldly journey (4:1–22:5), attestation of the book (22:6–7) including Christ's statement of the book's motto ("Behold, I am coming soon" in v 7a), verification of the seer (22:8–9), paraenesis (22:10–15), Christ's statement of the revelatory transmission (22:16), prophetic saying (22:17), Christ's canonization formula (22:18–19), Christ's final citation of the motto and a prophetic cultic response (22:20). There are nine grades altogether.

The most striking result of this analysis is that the level of communication most profoundly embedded (the speech of God in 21:5–8) also occurs on the highest grade of the hierarchy of text sequences. According to Hellholm, the reason for this hierarchic embedment is the authorization of the message (1986: 45).

7. Outline. The first key to the plan of the visions of the book of Revelation is the fact that they are, to a great extent, organized in series of seven (Yarbro Collins 1976: 13–16). The second major principle of composition is the technique of interlocking. For example, the seven messages (2:1–3:22) have a dual function in the first major section of the work (chaps. 1–3). On the one hand, they are the logical continuation of the epistolary introduction (1:4–6). They fulfill the literary expectations aroused by the

prescript. On the other hand, the messages are part of the account of the epiphanic vision of Christ that begins in 1:9. The seven messages thus contain the personal addresses and remarks that the epistolary prescript leads the audience to expect. At the same time, they are part of a visionary account.

The device of interlocking is used again in the transition from the seven seals to the seven trumpets, this time doubly so. The fact that the appearance of seven angels with seven trumpets is one of the effects of the unsealing of the seventh seal interlocks the entire series of the trumpets with that of the seals. The vision of the angel with the golden censer (8:3–5) also interlocks the seals and the trumpets. It alludes back to the fifth seal ("the altar" is mentioned both in 6:9 and in 8:3) and repeats its action (the praying of the saints) under a different image. At the same time, it foreshadows the trumpets in that the casting of fire on the earth prefigures the catastrophes associated with the trumpets.

The trumpets are not linked to what follows in as clear and firm a manner as the trumpets themselves are linked to the seals. The following series of visions is foreshadowed, however, by the abrupt introduction of the beast from the abyss in 11:7. The audience is not informed about the nature of this beast until chap. 13. Although there is foreshadowing, the compositional techniques seem to indicate a division between 11:19 and 12:1. The unnumbered series of visions beginning in 12:1, however, is again firmly interlocked with what follows, the series of the seven bowls. The last vision of the unnumbered series, the portrayal of the faithful in heaven (15:2–4), is inserted within the introduction to the seven bowls (15:1, 5–8).

The series of the seven bowls (chap. 16) is interlocked with the unnumbered series of visions that closes the visionary report (19:11–21:8) by the parallelism between the explanatory revelations that follow each of these series. The seventh bowl is directly followed by a brief report of the fall of Babylon (16:19). The nature of Babylon and its fall is elucidated in the following vision interpreted by one of the seven angels who had the bowls (chap. 17). The revelations of 18:1–19:10 elaborate on this theme. Similarly, the last vision (21:1–8) of the series that begins in 19:11 includes a brief mention of the new Jerusalem (21:2). The nature of the holy city is then elucidated in a visionary tour of the city led by one of the angels who had the seven bowls (21:9–22:5). The introductions to the two explanatory visions are virtually identical (*mutatis mutandis*). The visions are also linked by antithetical parallelism. Both involve symbolic women, but one is a harlot clothed in scarlet and the other is the pure bride of the Lamb (cf. 21:9 with 19:8).

A final structuring device to be mentioned is the use of two scrolls. The scroll with the seven seals (5:1) characterizes the first half of the book (chaps. 1–11) as mysterious and veiled. A second scroll is introduced in chap. 10 in a way that suggests that it is parallel to the scroll of chap. 5. The angel who appears to the seer in chap. 10 is coordinated with the angel in chap. 5 who asks, "Who is worthy to open the scroll and to break its seals?" (5:2). The latter is called "a mighty angel" (*aggelon ischyron*). The angel of chap. 10 is introduced as "another mighty angel" (*allon aggelon ischyron;* 10:1). A further indication that chap. 10 is meant to be parallel to chap. 5 is the fact that both visions involve a heavenly writing. In both cases the scroll is at first in the hand of a heavenly being. In 5:1 the scroll is in the hand of the deity. In 10:2, 8 the scroll is in the hand of the angel. There also seems to be a deliberate contrast made between the "sealed scroll" (*biblion ... katesphragismenon*) of 5:1 and the "opened scroll" (*biblion to ēneōgmenon*) of 10:8. The scroll is removed from the hand of the heavenly being in similar ways. In chap. 5 the action of the Lamb is described: "And he went and took [the scroll] from the right hand of him who was sitting on the throne. And when he had taken the scroll …" (5:7–8). In chap. 10 the description of the action of the seer is similar: "And I went to the angel … And I took the little scroll from the hand of the angel … and when I had eaten it …" (10:9–10).

The open scroll of chap. 10 foreshadows the second half of the work and characterizes it as less enigmatic than the first. The fact that it foreshadows 12:1–22:5 is clear in the commission given the seer by the angel, "You must again prophesy about many peoples and nations and tongues and kings" (10:11). The allusion to many kings does not fit what immediately follows (11:1–13), but does describe the content of chaps. 13 and 17. Chaps. 10 and 11:1–13 are accounts of visions that have been inserted between the sixth and the seventh trumpets. Chap. 10 foreshadows 12:1–22:5 by introducing a new heavenly book to characterize that unit and by the command to prophesy about many kings. Chap. 11:1–

13 foreshadows 12:1–22:5 by abruptly introducing the character of "the beast from the abyss" who plays a prominent role in chaps. 13, 17, and 19.

The hypothesis that the open scroll characterizes the series of visions beginning in 12:1 is supported by the parallel commissions that John receives from Christ in chap. 1 and from the mighty angel in chap. 10. In the epiphany of Christ in chap. 1, John is told to write what he sees in a scroll and to send it to the seven congregations (1:11). The commission is resumed in 1:19 when he is told to write "what he saw and what is and what is about to take place hereafter." The last clause of this commission is repeated in 4:1. The seer is shown an open door in heaven and he hears the same voice that he heard in the first vision, saying, "Come up here, and I will show you what must take place hereafter." The resumption of the commission of 1:19 in 4:1 shows that the seer was ordered to communicate not just the seven messages but the vision that begins in 4:1 as well. In the vision of the mighty angel in chap. 10, the seer is commissioned a second time. In vv 8–9 he is told to take the little scroll from the mighty angel and to eat it. His compliance is described in v 10. The eating of the scroll here is a symbolic action that expresses in a concrete way the idea that the message communicated by the prophet does not originate with himself but has a divine origin. A similar symbolic action is related in Ezek 2:8–3:3. The commission to prophesy follows the symbolic action in Ezek 3:4–11. So also in Rev 10:11, a command to prophesy follows the eating of the scroll. The image whereby the angel gives the seer a scroll to eat implies that the angel conveys to the seer the message he is to communicate. The wording of the commission in v 11 indicates that the message is embodied in 12:1–22:5. Chaps. 1 and 10 are thus parallel because they each describe the appearance of a revealing figure who commissions the seer to communicate what is about to be revealed to him. They each involve the idea of the reception of revelation in written form. The wording of the commission in 10:11 implies that the first commission is about to be fulfilled and that a new one is being issued: "You must *again* prophesy about many peoples and nations and tongues and kings."

The overall plan of the book of Revelation indicated by the discussion above is as follows:

Prologue 1:1–3
- Epistolary prescript 1:4–6
- Prophetic sayings 1:7–8
  - Visionary report 1:9–22:5
    - Epiphany of the risen Christ 1:9–3:22
      - The seven messages 2:1–3:22
    - Visions in the spirit 4:1–22:5
      - The scroll with seven seals 6:1–11:19
        - The seven trumpets 8:2–11:19
      - The open scroll 12:1–25:5 (cf. 10:1–11)
        - The seven bowls 15:1–16:20
          - Vision of Babylon 17:1–19:10
        - The last things 19:11–21:8
          - Vision of Jerusalem 21:9–22:5
- Prophetic sayings 22:6–20
- Epistolary concluding blessing 22:21

E. Text

The textual history of the book of Revelation differs significantly from that of the rest of the NT. The reason for this difference is the fact that the canonicity of the book was contested in the East (see above). In the 26th edition of *Novum Testamentum Graece*, edited by Kurt Aland et al., and referred to as the Nestle-Aland text, certain "constant witnesses" are cited for each canonical book. These are the mss whose importance is so great that their readings are collated for every variant. The most significant are cited explicitly for every variant when they are extant for a passage. Others are cited explicitly only when they differ from the reading of the majority. Because of its differing textual history, the "constant witnesses" for Revelation are different from those of the other books. All available papyri are included among the "constant witnesses" for all books of the NT. In Revelation, not only are all extant papyri

included, but also all surviving uncials. In the cases of other books, so many uncials containing those works are available that only a selection can and need be cited. In the case of Revelation, they are so few that all may be cited. Some minuscule mss are also included among the "constant witnesses" for Revelation.

The "constant witnesses" for Revelation in Nestle-Aland[26] include the following papyri: p^{18} (3d–4th century), p^{24} (4th century), p^{43} (6th–7th century), p^{47} (3d century), and p^{85} (4th–5th century). Since all of these mss are fragments, each represents only a small portion of the work. The following are the uncials: Codex Sinaiticus (4th century), Codex Alexandrinus (5th century), Codex Ephraemi Syri Rescriptus (5th century), 025 (9th century), 046 (10th century), 051 (10th century), 052 (10th century), 0163 (5th century), 0169 (4th century), 0207 (4th century), and 0229 (8th century). Of these only Codex Sinaiticus, Codex Alexandrinus, and 046 are complete. Codex 025 is nearly complete. It is lacking portions of chaps. 16, 17, 19, 20, and 22. Codexes 052, 0163, 0169, 0207, and 0229 are fragments. The minuscules are 1006 (11th century), 1611 (12th century), 1841 (9th–10th century), 1854 (11th century), 2030 (12th century), 2050 (copied in 1107 C.E.), 2053 (13th century), 2062 (13th century), 2329 (10th century), 2344 (11th century), 2351 (10th–11th century), and 2377 (14th century). Several of these mss are lacking large portions of the work.

The earliest witnesses are p^{47} and Codex Sinaiticus, but they are inferior attestations to the text of Revelation in comparison with Codex Alexandrinus and Codex Ephraemi. The latter codexes are of secondary value for other books of the NT but are very valuable for Revelation. Another unusual aspect of the textual history of Revelation is that the majority text-type falls into two groups. Group A consists of a large number of mss that agree with the text of the commentary by Andreas of Caesarea. Group K is constituted by a comparably large number of mss that are of the strictly Koine type. Codex 025 agrees with Group A; Codex 046 with Group K. The minuscules 2053, 2062, and 2344 are related to Codex Alexandrinus and Codex Ephraemi.

There are no ms lectionaries attesting to the text of Revelation, since it was not included in the Greek lectionary system. The Ethiopic version of Revelation is dependent on the text-type represented by Alexandrinus and Ephraemi, with subsequent influence of the Coptic and Arabic versions. Unlike other parts of the NT, the book of Revelation was not translated into Old Church Slavonic until the 12th century (Aland and Aland 1987: 160, 205, 208). For more information on the textual transmission of the book of Revelation, see the detailed study of Josef Schmid (1955–56). See also TEXTUAL CRITICISM (NT).

F. Authorship

Only the general geographical region in which Revelation was composed is a matter of consensus. The date and the identity of the author have been matters of dispute.

1. Date. The earliest external evidence for the date of the book of Revelation is the statement of Irenaeus that it was seen at the end of the reign of Domitian (*haer.* 5.30.3). Domitian was emperor from 81 to 96, so this witness implies a date ca. 95–96. The wording leaves open the possibility that the work was written somewhat later than the occasion of the visionary experience on which it was based. It is questionable, however, that Irenaeus made such a distinction. Victorinus of Pettau states that John was banished (*damnatus*) by Domitian to a mine or quarry (*metallum*) on the island of Patmos, where he saw the revelation (*in Apoc.* 10:11). In another passage, he explicitly says that the work was written during the time of Domitian (*in Apoc.* 17:10). Eusebius cites Irenaeus and follows him on the date of Revelation. Jerome states that John was banished (*relegatus*) by Domitian to the island of Patmos, where he wrote Revelation (*De Vir. Ill.* 9).

Epiphanius (4th century) states that John prophesied and was on the island of Patmos during the reign of Claudius (41–54 C.E.; *Adv. Haeres.* 51.12,33; Charles, 1. xcii). The source of Epiphanius' opinion is unknown. But, as a date for the work as it now stands, the reign of Claudius is excluded by the internal evidence (see below). The title prefixed to both of the Syriac versions and the 11th-century archbishop of Bulgaria, Theophylact (*praef. in ioann*), attest to a date under Nero (54–68 C.E.). This dating is probably an erroneous inference from the internal evidence. There are allusions to Nero in the book, but that does not mean that it was written during his reign. In another work, Theophylact implies that Revelation was

written under Trajan (98–117 C.E.; *com. in Matt.* 20: 22). The dating to the time of Trajan may be an inference from Irenaeus' remark that John lived in Ephesus until the time of Trajan (*haer.* 2.22.5).

The most significant internal evidence for the date of Revelation is to be found in its references to the destruction of a city called Babylon (14:8; 16:19; 17:5; 18:2, 10, 21). It is highly unlikely that the author of Revelation would have been interested in the conquest of the historical Babylon by the Persians in the 6th century B.C.E. or in the occasions on which it was sacked during the period of the wars among the successors of Alexander. It is even less likely that the author hoped for the destruction of a fortified town called Babylon at the head of the delta of Egypt that was the headquarters of a Roman legion during the early empire. The text itself makes clear that the name is not to be taken as a literal denotation. In chap. 17 this city is revealed to John in a vision as a woman. The name "Babylon" is written on her forehead and the audience is told that this name is a mystery (*mystērion*; 17:5). Later the angel who has shown John this vision offers to explain the "mystery" of the woman (v 7). The explanation that follows makes clear that the woman represents the city of Rome. The seven heads of the beast on which she sits are explained as seven hills (*orē;* v 9). Rome as "the city of the seven hills" was a common expression in classical writings. Further, the woman is interpreted as "the great city that holds rule (*basileia*) over the kings of the earth" (v 18). The politically dominant city in the Mediterranean world in John's time was of course Rome.

It is important to note that "Babylon" was not the only symbolic name a Christian of this time familiar with Jewish tradition might choose to designate the city of Rome. "Egypt," "Kittim," and "Edom" appear along with "Babylon" in Jewish sources as symbolic names for Rome. "Kittim" is the most common name in the Qumran literature. "Edom" is the most common in the rabbinic literature (Hunzinger 1965). Most of the occurrences of "Babylon" as a symbolic name for Rome in Jewish literature occur in works with a strong interest in eschatology: the apocalypse of Ezra (*4 Ezra* = 2 Esdras 3–14), the Syriac apocalypse of Baruch (*2 Bar.*) and the fifth book of the *Sibylline Oracles.* In each occurrence, the context makes clear the reason for the choice of this particular symbolic name: Rome's forces, like those of Babylon of an earlier time, have destroyed Jerusalem and the temple (*4 Ezra* 3:1–2, 28–31; *2 Bar.* 10:1–3; 11:1; 67:7; *Sib. Or.* 5:143, 159). Thus, the author of Revelation uses the name "Babylon" for Rome, not only to symbolize the great power, wealth, arrogance, or decadence of the city, but to allude to the events of 70 C.E. The use of this symbolic name is thus an important indication of the date of Revelation. It implies that the work was written after the destruction of the temple by Titus, that is, after 70 C.E.

A passage that seems to offer important internal evidence for the date of Revelation is 17:9–10. Besides the interpretation of the seven heads of the beast upon which the woman rides as seven hills, another interpretation is offered. They are also seven kings (*basileis*). The text then hints at who the seven kings are and at the apparent time of writing: "five have fallen, one is, the other has not yet come, but when he comes, he must remain a short time." The date known from external evidence may be used to solve this riddle, or this riddle may be used to determine the date. If we follow Irenaeus' dating and use it to solve the riddle, then the "one" who "is" must be Domitian. The five who have fallen would be the five emperors immediately preceding Domitian, namely, Galba, Otho, Vitellius, Vespasian, and Titus. The one who has not yet come must be Nerva, who indeed "remained," i.e., ruled, for only a short time (96–98 C.E.). This is the solution of Victorinus (*comm. in apoc.* 17:10). There are two problems with this solution. How did the author know that Nerva would remain a short time? Was this genuine prophecy? Or was it eschatological dogma that happened to be historically accurate? Or was Revelation actually written during the time of Trajan (98–117 C.E.), so that the author was giving the impression of having written during Domitian's reign, but actually wrote under Trajan and thus knew that Nerva had ruled only a short time? Or one could argue that the vision occurred under Domitian but was written down or edited under Trajan. The second problem is that v 11 says that "the beast who was, and is not, is both (the) eighth (king) and one of the seven and he goes to perdition." Victorinus takes this eighth king to be Nero, as do most modern commentators. But if the seven are identified as above, Nero is not one of them. Victorinus "solves" this discrepancy by interpreting "the beast is of the seven" to mean "before those kings Nero reigned."

If one starts with the riddle, appropriate premises are that the kings are Roman rulers and that one should start counting from the beginning of the empire and count consecutively. Contemporary literature indicates that writers of this time, when counting Roman emperors, began with Julius Caesar (Suetonius, *The Twelve Caesars*; *Sib. Or.* 5: 12–51; *4 Ezra* 11–12). Thus, the five who have fallen would be Julius, Augustus, Tiberius, Gaius Caligula, and Claudius. The "one" who "is" would be Nero and the one who has not yet come would be Galba. As we have seen, the work as a whole could not have been written before 70 C.E. A further problem is that "the beast," who is Nero or Nero redivivus, at the time of writing "is not," i.e., is dead.

The solution that best explains the evidence is that the first part of the riddle ("they are also seven kings; five have fallen, one is, the other has not yet come" and possibly also the part stating "and when he comes he must remain a short time") is an older tradition, incorporated and reinterpreted by the author of Revelation. The older tradition may have been formulated in the time of Nero. It is impossible to determine with certainty how the author of Revelation understood the five kings, but it is very likely that Nero was one of them. The second part of the riddle ("and the beast who was and is not, he also is [the] eighth and one of the seven and he goes to perdition") was composed by the author and alludes to the return of Nero as eschatological adversary.

Another passage that seems to provide reliable internal evidence for the date of Revelation is 11:1–2. As we have seen, this vision is part of an interlude in the seven trumpets. John is given a reed like a rod and told to "rise and measure the temple of God and the altar and those worshipping in it." He is told not to measure the courtyard outside the temple, "because it was given to the gentiles, and they will trample the holy city for forty-two months." This passage seems to imply that the earthly, historical temple was still standing at the time Revelation was written. Before source criticism was applied to Revelation, i.e., before 1882, this passage was used to date the entire work before 70 C.E. In the 20th century, J. A. T. Robinson revived the argument that Revelation as a whole was written before 70 (1976: 238–42). Robinson took Rev 11:1–13 as a unity and interpreted the measuring of the temple as a command that the temple be purified. He saw this command as part of the call to repentance issued by the two witnesses whose activity is described in 11:3–13. Robinson argued that vv 1–13 as a unit could not have been composed after 70, since only a tenth of Jerusalem falls after the ascension of the witnesses (v 13) and that destruction occurs because of an earthquake, not an enemy attack.

Contrary to Robinson's premise, 11:1–13 was probably not composed freely by the author of Revelation as a unit. The connection between vv 1–2 and 3–13 is loose and external. The only link is that both are set in Jerusalem. The same period of time is mentioned in different forms in each, but this repetition is an editorial seam. The first unit (vv 1–2) focuses on the temple. The second (vv 3–13) does not mention the temple at all. It is likely that two separate sources stand behind this section. Verses 1–2 seem to be based on a prophetic oracle that circulated in Jerusalem during the war against Rome, before the temple was destroyed. This oracle has been adapted by the author of Revelation in such a way that the earthly temple represents the heavenly temple that cannot be destroyed by Rome.

The most reliable external evidence of the date of Revelation is the testimony of Irenaeus. The clearest internal evidence indicates a date after 70 C.E. Since the internal evidence does not point to a precise date, it seems best to accept Irenaeus' statement and to date the book to ca. 95–96. For a more detailed discussion of the evidence and scholarship on the date, see Yarbro Collins 1984: 54–83.

2. Place. The consensus is that the book of Revelation was composed somewhere in the general region of the W coast of Asia Minor. Some assume that it was composed on the island of Patmos. Others think it more likely that it was written in Ephesus. The text itself says that the revelation contained in it was received on the island of Patmos (1:9). The work is addressed to the Christian congregations in seven cities of W Asia Minor, Ephesus, Smyrna, Pergamum, Thyatira, Sardis, Philadelphia, and Laodicea (1:4, 11). All seven of these cities belonged to the Roman province of Asia in the 1st century C.E.

The likelihood of the work being written on Patmos is linked to the question of why John went there. The text says that he was there "on account of the word of God and the testimony of Jesus" (1:9). A few commentators take this to mean that he went there to proclaim the gospel. This explanation is not

impossible, but it is odd that an early Christian missionary would have chosen such a remote and sparsely populated place. The language of Revelation counts against this hypothesis. The Greek preposition translated "on account of" (*dia*) usually designates the cause of an effect in Revelation; it is never used elsewhere in the book to indicate the purpose or goal. Many commentators take seriously some aspects of comments by Victorinus and other early Christian writers and conclude that John was deported to Patmos by the Roman governor of Asia. (In addition to the ancient writers cited in the discussion of the date above, see Hippolytus, *antichr.* 36.) The odd thing about this hypothesis is that most condemned early Christians were executed, not deported. A further problem is that there is no evidence, besides Revelation, that Patmos was used as a place of deportation at this time. The general practice, however, is well attested in non-Christian sources and there is evidence that islands near Patmos were so used. For a more detailed discussion of John's sojourn on Patmos, see Yarbro Collins 1984: 102–4. If John had been sent to Patmos by the Roman governor and was confined there, the use of the letter form to circulate his account of the revelation he had received on the island would readily be intelligible. Confinement, however, is not the only likely explanation for the use of the written medium or the letter form. The classic prophetic oracles had been collected and written down. The written medium is self-consciously chosen and typical of apocalyptic texts in early Judaism. Note in this connection the command issued by the risen Christ to John to write down the revelation. The letter form had been established by Paul as a mode of communication by early Christian leaders.

3. Identity of the Author. The external evidence will be reviewed first. As noted above, the earliest writer known to have been familiar with the book of Revelation was Papias. In the early part of the 2d century, he was bishop of Hierapolis, a city not far from one of the cities to which Revelation was addressed, Laodicea. No clear statement from Papias, however, has been handed down concerning the identity of the author. Justin says that Revelation was written by "John, one of the apostles of Christ" (or "of the messiah"; *heis tōn apostolōn tou christou; dial.* 81). Irenaeus is the first writer to attribute the book of Revelation and the gospel of John to the same author (compare *haer.* 3.11.1 with 4.20.11). He calls this author "John, the disciple of the Lord." That his use of the term "disciple" (*mathētēs, discipulus*) does not exclude the idea that the author was an apostle is shown by his reference to this disciple and "the other apostles" in another passage (*haer.* 2.22.5). Just prior to the latter passage, Irenaeus states that this John was conversant with some elders in Ephesus and remained among them until the times of Trajan. Hippolytus identified John, the author of Revelation, with "blessed John, apostle and disciple of the Lord" (*antichr.* 36). Origen identified the author of Revelation with John, the son of Zebedee (*Jo.* 1.14). It is clear that he considers the author of the gospel of John and the author of Revelation to be the same person; he calls this person "apostle," "evangelist," and "prophet" (*Jo.* 2.4; see also a fragment from the fifth book of Origen's commentary on the gospel of John and its citation in Eusebius *Hist. Eccl.* 6.25). Dionysius of Alexandria, after Origen's death, argued that Revelation and the gospel of John could not have been written by the same person (see above).

Turning to the internal evidence, one notes that the author refers to himself as "John," but not in such a way as to point clearly to John the son of Zebedee or to the anonymous beloved disciple in the gospel of John. The name John (Gk *Iōannēs;* Heb *Yohanan*) was common among Jews from the Exile onward and among the early Christians (Swete 1909: clxxv). The author of Revelation never refers to himself as an apostle or disciple of the Lord. In the vision of the new Jerusalem, the twelve names of the twelve apostles of the Lamb are seen inscribed on the twelve foundations of the wall around the city (21:14). The implication is that the Church in the author's time prefigures the new Jerusalem or that it is the earthly counterpart of the heavenly Jerusalem. The interpretation of the foundations of the wall of the city as the twelve apostles is characteristic of a time in which the age of the apostles is past. It is unlikely that a living apostle would speak in such a way. Rev 21:14 has more in common with the post-Pauline Eph 2:20 than with Paul's own remarks in 1 Cor 3:10–15. The conclusion that best fits the evidence is that the author of Revelation is a man named John who is otherwise unknown to us (for a more detailed discussion, see Yarbro Collins 1984: 25–34).

The historical quest for the identity of the author of Revelation has yielded primarily negative results. A more fruitful line of research has been the attempt to discern the social identity of the author. Considerable research has been done on the relation of the author and his work to the phenomenon of early Christian prophecy (Nikolainen 1968; Hill 1971–72; Müller 1976; Schüssler Fiorenza 1985: 133–56; Aune 1981; Yarbro Collins 1984: 34–49). Most scholars who have written on early Christian prophecy have distinguished community, congregational, or church prophets from wandering prophets. The primary evidence for community prophets is 1 Corinthians 11 and 14. The primary evidence for wandering prophets is the *Didache.* The community prophets are thought of as permanent, settled members of a particular Christian congregation. Wandering prophets are generally defined as translocal leaders, who traveled from place to place, proclaiming their teaching or the revelations they had received. This is a useful distinction but should not be pressed too far, given the great mobility of persons, especially of the nonrural population, that characterized the early empire. At least two types of wandering or itinerant Christian prophets may be distinguished: (1) the prophet who traveled to a particular place to execute a divine commission (Agabus in Acts 11:27–30 and 21:10–14; Hermas in *The Shepherd of Hermas*); (2) prophets whose wandering was an enactment of the ascetic values of homelessness, lack of family ties, and the rejection of wealth and possessions (*Did.* 11–13; prophets of the community reflected in the Synoptic Sayings source [Q]; Peregrinus in Lucian's *The Passing of Peregrinus* [Aune 1981: 18–19, 29]).

John never actually referred to himself as a prophet in Revelation, but he implied that he was one by describing his work as a "prophecy" (*prophēteia;* 1:3; 22:7, 10, 18, 19). Some have argued that the prologue (1:1–3) and the "canonical formula" or curse (22:18–19) were added to the work after it left John's hands. Even if they were, 22:7 and 10 still stand to make this point. Further, John came very close to identifying himself as a prophet when he attributed the following words to the revealing angel, "I am your fellow servant, and the fellow servant of your brothers the prophets" (22:9).

Some have seen the reference to "your brothers the prophets" as evidence for a prophetic circle, school, or guild in one or more of the seven cities. This conclusion goes beyond the evidence. The reference to prophets here is very general, as elsewhere in Revelation, and does not necessarily imply a group of prophets gathered around John. The term "brothers" implies coreligionists, i.e., other Christian prophets (cf. 19:10). This is slim evidence, however, for the hypothesis of a prophetic school led by John.

John was probably not a settled community prophet. His acquaintance with the seven Christian communities in the Roman province of Asia suggests that he was a translocal leader. His rivals, the false apostles who visited Ephesus (2:2), "Jezebel," who evidently was recognized by some Christians as a prophet (2:20), and "Balaam" (2:14), appear to have been translocal leaders also. There is no evidence that John traveled to the seven cities because of a divine commission. Some argue that he went to Patmos by divine order to receive a revelation there, but this theory goes beyond the text. Of the types of known prophet, John fits best the type whose wandering expressed the values of homelessness and the rejection of wealth. The ascetic values associated with that type are expressed in the text of Revelation indirectly (Yarbro Collins 1984: 111–40).

John presented himself indirectly as a prophet. He does not seem to have made a sharp distinction between Israelite and Christian prophets (10:7; 11:3–13; 16:6; 22:6). His self-presentation and the account of the revelation he received are shaped by the records and traditions of the classical prophets of Israel. The evidence suggests that John was a wandering prophet who was familiar with all seven communities because he had visited and instructed each of them. If one of the cities was his primary residence or center of operations, we have no reliable way of determining which of them it was.

G. Literary Character

The terms in Greek meaning "to reveal" (*apokalyptein*) and "revelation" (*apokalypsis*) were probably in common use in the last two or three centuries B.C.E. to refer to the revealing of secrets (Smith 1983: 9–14). Human beings had long attempted to secure guidance from the divine world for personal and public affairs. Eventually, the terms came to be used of heavenly revelations that had to do with cosmic secrets, hidden realities in the present, and with the future. In Luke the verb "reveal" is used to describe the

manifestation of the Son of Man to the world in the future (Luke 17:30). Analogously, Paul uses the noun for the manifestation of Christ at the time of his return at the end (1 Cor 1:7). The noun is also used by Paul for a revelatory religious experience (e.g., 2 Cor 12:1).

In Rev 1:1 the noun "revelation" (*apokalypsis*) probably refers collectively to the secrets that Christ has revealed to John (cf. 1 Cor 14:6). In other words, it refers to the content of the book with connotations of a particular kind of revelatory experience. The term in Rev 1:1 is not yet a literary designation or definition of genre, although its use here gave rise to that meaning and use. The situation regarding the opening of Revelation is analogous to the use of "good news" (*euaggelion*) in Mark 1:1. "Good news" in Mark 1:1 was apparently intended as a description of the content of the work: the events associated with Jesus. But the use of the term at the beginning of Mark contributed to the eventual use of "good news" or "gospel" as a literary term.

The 2d-century *Shepherd of Hermas* uses the verb "reveal" (*apokalyptō*) for a religious experience involving the granting of the ability to read a heavenly book (*Herm. Vis.* 2.2.1). The noun "revelation" (*apokalypsis*) is used to describe a vision in which a heavenly being reveals the meaning of another vision (*Herm. Vis.* 2.4.1). The work itself as a whole is not described as an apocalypse, either in the text or in the title, except that Codex Sinaiticus (4th century) gives "The Fifth Revelation" (*apokalypsis ē*) as the title of what is labeled as "The Fifth Vision" (*horasis ē*) in other mss. Like the risen Christ in Revelation, the heavenly shepherd who appears in this fifth vision commands the seer to write down what he is about to reveal to him (commands or mandates and parables or similitudes).

According to Eusebius, Clement of Alexandria considered a "revelation (*apocalypsis*) of Peter" to be canonical (*Hist. Eccl.* 6.14). The work is probably the apocryphal *Apocalypse of Peter,* preserved in fragments in Greek and entirely in Ethiopic. It contains a description of the places of punishment and a vision of paradise. It is probably the same work that is mentioned in the canonical list known as the Muratonian Canon (see above). Although it is not known how the work designated or described itself or whether it had a title, it is at least clear that the Christians who used it called it a "revelation" (*apokalypsis*). This usage may have been inspired by the opening or title of the book of Revelation. It may, however, have been due in part to a growing interest in the Greco-Roman world in the phenomenon of revelation as a religious experience and a literary form.

Such a growing interest may be reflected in the shift in vocabulary from the Old Greek translation of Daniel to the later translation attributed to a certain Theodotion. In a number of passages the verb "reveal" (*apokalyptō*) is used in the latter, whereas different verbs are used in the former (cf. the two translations of Dan 2:19, 22, 28, 29, 30, 47; 10:1; 11:35). For apparently independent pagan use of the terminology in the 3d and 4th centuries, see Smith 1983: 18.

A Greek work attributed to Baruch (*3 Bar*.) has two superscriptions in the two surviving Greek mss. The first designates the work as " (the) narrative (*diēgēsis*) and revelation (*apokalypsis*) of Baruch." The second simply as " (the) revelation (*apokalypsis*) of Baruch." Although the work was apparently originally Jewish and composed ca. 200 C.E., it was transmitted and edited by Christians. Thus the superscriptions may well be due to Christian hands.

The codices found at Nag Hammadi in 1945 contain five works preserved in Coptic that are designated as "revelations" or apocalypses in their titles. One of these, the *Apocalypse of Adam* (NHC V,*5*), has no explicitly Christian characteristics. It contains no clear indications of date, but may be as early as the 1st or 2d century C.E. This work is a revelation given to Adam by three heavenly beings that he narrates to his son Seth. The other four works are clearly Christian. *The Apocalypse of Paul* (NHC V,*2*) is dated to the 2d century. It describes Paul's ascent to heaven and his journey from the third to the tenth heavens. Following the *Apocalypse of Paul* in Codex V are two works, both of which are entitled "The Apocalypse of James" (NHC V,*3, 4*). These works are also relatively early. *The (First) Apocalypse of James* describes the revelation received by James the Just from the risen Lord. *The (Second) Apocalypse of James* describes revelation given by Christ to James after the resurrection and also the death of James by stoning. *The (Coptic) Apocalypse of Peter* (NHC VII,*3*) was probably written in the 3d century. It is an account of a revelation seen by the apostle Peter that is explained by Jesus.

There are many later Christian works that are designated "revelations" in their titles (see Yarbro Collins 1979 and Himmelfarb 1983). This brief survey of the use of the verb "reveal" (*apokalyptō*) and the noun "revelation" (*apokalypsis*) shows how the literary character of the book of Revelation was perceived in antiquity.

In modern times, scholars have defined a genre "apocalypse," the starting point of which is the book of Revelation. The name of the genre comes from the title and opening word of the book. The scope of the genre likewise has been defined as those ancient works resembling Revelation. These writings include at least the following Jewish works: *1 Enoch,* Daniel, *4 Ezra, 2 Baruch,* the *Apocalypse of Abraham, 2 Enoch,* and *3 Baruch.* The corpus of Christian apocalypses includes those discussed above as well as the *Ascension of Isaiah,* the (apocryphal Latin) *Apocalypse of Paul* and other, mostly later, works. A number of Greco-Roman, rabbinic, and Persian works resemble these in form and content (Attridge 1979; Saldarini 1979; Collins 1979).

There has been a great deal of debate on what the central characteristics of this genre are. Some scholars emphasize eschatological content and its relation to a social situation of crisis or revolution. Others argue that the term applies to any revelatory text. Others see certain themes as the key, such as theodicy or national restoration. Still others emphasize formal features like pseudonymity or symbolic visions. In the 1970s and 1980s, attempts have been made to define the genre in terms of form and content (Collins, ed. 1979) and in terms of form, content, and function (Yarbro Collins 1986). See also the proceedings of the international conference on apocalypticism held in Uppsala in 1979 (Hellholm 1983).

As noted above, besides its apocalyptic character, the book of Revelation also has affinities with prophecy (Aune 1983) and with early Christian letters.

Revelation has been compared to Greco-Roman drama (Bowman 1955a; 1955b). The most significant insight resulting from such a comparison is that the hymns and acclamations in the book function in a way similar to the choral odes in Greek tragedy.

H. Relation to Other Ancient Literature

A major breakthrough in the scholarly study of Revelation was the recognition of the source and character of its images and narrative patterns. These were not composed freely by the author to comment on the current situation; in other words, they are not primarily allegories invented to comment on current affairs. Further, these images and narrative patterns were not simply borrowed from the "Old Testament" and cannot be understood fully in terms of such borrowing. They can be understood appropriately and in depth only in the context of ANE and Greco-Roman myth. This insight was the contribution of the history-of-religions school to the study of Revelation (Gunkel 1895; Bousset). The approach was sometimes taken to an extreme, with the result that almost all historical allusions were denied (Lohmeyer *Die Offenbarung des Johannes* HNT). But, complemented by other methods, it has become an essential interpretive approach to the work (Charles *Revelation* ICC; Caird *Revelation* HNTC; see also Yarbro Collins 1976).

Gunkel showed that the portions of the Hebrew Bible on which Revelation was dependent ought to be understood in comparison with ancient Mesopotamian mythic literature. He also demonstrated that the mythic elements in Revelation were not fossils but expressions of a living mythic mentality. When examples of Northwest Semitic (Canaanite) mythic literature were discovered at Ugarit, later scholars showed that these provided a more immediate context for the Hebrew Bible (*CMHE*; Hanson 1973; 1975) and for Revelation (Yarbro Collins 1976). The clearest use of Greco-Roman mythic traditions is in the description of the woman clothed with the sun (related to traditions about Isis) and the narrative plot in which the woman about to bear a child is threatened by a serpentine monster (related to the story of Leto's threatened bearing of Apollo) in chap. 12 (Yarbro Collins 1976: 57–85). Other Greco-Roman traditions have influenced the image of Jesus as the morning star in 22:16 (Yarbro Collins 1977a: 379–80), the use of the four elements in chap. 16 (Betz 1966; Yarbro Collins 1977a: 367–79), and the attribution to Jesus of the keys of death and Hades in 1:18 (Aune 1987b: 484–89).

Since the book of Revelation is contemporary with, or perhaps somewhat earlier than, *4 Ezra* and *2 Baruch,* one cannot expect to find allusions to them in Revelation. They have much in common with

Revelation in form and content (apocalyptic and eschatological motifs). With regard to canonical Jewish literature, it is well known that Revelation does not cite these older works but uses images and themes from them in a new literary creation. The books of Daniel (Beale 1984) and Ezekiel (Vanhoye 1962) are used extensively in this manner. The book of Revelation is not literarily dependent on any texts from Qumran. Its use of holy war imagery has some affinities with that of the War Scroll (Yarbro Collins 1977b). The description of the new Jerusalem in Revelation 21 is analogous to the description of the eschatological Jerusalem in the fragmentary new Jerusalem text from Qumran (cf. Ezekiel 40–48 and *4 Ezra* 9:26–10:59). The commentary by J. M. Ford (*Revelation* AB) suggests many parallels between Revelation and various documents from Qumran.

The anti-Roman attitude and the use of the motif of Nero's return are shared by Revelation with books 4 and 5 of the *Sibylline Oracles* (Collins 1983).

I. Theological Perspective and Social Setting

God is described near the opening of Revelation as he "who is and who was and who is to come" (1:4). This description is a concrete way of expressing what later theologians would call the eternity of God. The first prophetic saying of the book contains God's self-revelation as "The Alpha and the Omega" and the "Almighty" (1:8). The "Alpha/Omega" epithet expresses metaphorically not only God's eternity but also the notions that God is the source of all things and encompasses all things. The epithet "Almighty," of course, alludes to God's omnipotence. The vision of chap. 4, building on older visions, indirectly presents God as King, enthroned in heaven and surrounded by counselors (the twenty-four elders). The song of the four living creatures emphasizes God's holiness (4:8; cf. Isa 6:3). The song of the twenty-four elders emphasizes God's activity as Creator. In the final series of visions God appears as Judge (20:11–15) and as Creator of the new heaven and earth (21:1, 5). The deepest and most important aspect of the new age symbolized by the new Jerusalem is the dwelling of God with humanity (21:2–4, 6–8). At the beginning and end of the work, it is emphasized that God communicates with humanity through Christ, angels, and the prophets in general and through this book in particular (1:1–3; 22:6–7).

The christology of the book of Revelation is expressed in images, not in philosophical concepts. Like most of the other writings of the NT, Revelation's most basic affirmation is that Jesus is the Christ, i.e., the Messiah (1:1, 2, 5). Jesus is also called "the faithful witness" (1:5). This epithet has two levels of meaning. First, Jesus has communicated faithfully to John the revelation given to him by God (1:1–2; 22:16, 18). Second, Jesus' remembered behavior during his arrest, trial, and execution undoubtedly functioned as a model for the audience who were threatened by persecution (cf. 1:5 with 2:13; 6:9; 12:11; 20:4). Jesus' role in the present, from the point of view of the author, is that, as the firstborn of the dead, he rules the kings of the earth (1:5). The work of Jesus in the past is referred to in the doxology of 1:5b–6. He has freed those who believe in him from their sins by his blood. This affirmation is similar to the summary of the gospel in 1 Cor 15:3 and to Matthew's version of the words of Jesus spoken over the cup at the Last Supper (Matt 26:27–28). The work of Jesus is not yet complete. He is expected to appear in the future as judge or warrior (1:7; 19:11–21).

In the first vision recounted in the book, Christ appears to John as "one like a son of man" (1:13). In terms of form and content, Rev. 1:9–3:22 seems to have been modeled on Dan 10:2–12:4. Both passages describe the epiphany of a heavenly being to a human visionary. In both, the seer identifies himself by name and gives the time and place of the experience. In both texts, the visionary says that he looked and then gives a description of the heavenly being. Following the description, both passages relate that the seer is overwhelmed by the apparition and falls to the ground senseless. The heavenly being then comforts or strengthens the seer. After this exchange, the heavenly being conveys to the seer a long verbal revelation which is associated with a book. In Daniel this book is the heavenly book of truth (10:21); in Revelation it is the book which John is to write (1:11, 19). Significant similarities occur in the descriptions of the heavenly revealer figures. Both are girded with gold; both have eyes of fire; both have lower limbs that appear like metal. Both their faces shine like light.

These similarities suggest that the risen Christ is portrayed in Revelation 1 as an angelic figure. This hypothesis is supported by the angelic character of the "one like a son of man" in Daniel 7:13, to whom

allusion is made in Rev 1:13. It is likely that the author of Revelation understood the human figure in Dan 7:13 as an angel. The revealing angel of Daniel 10 is also said to be in human form (v 5). If the author of Revelation identified the "one like a son of man" in Daniel 7 with the revealing angel of Daniel 10, this identification would explain why elements from Dan 7:13 and Dan 10:5–6 are conflated in the description of the heavenly being of Rev 1:12–16.

A striking characteristic of the description of Christ as son of man in Revelation 1 is that it also includes an attribute of the "one that was ancient of days" in Dan 7:9. Like the ancient of days, the son of man has hair like (white) wool (Rev 1:14). How one explains the juxtaposition of the attributes of these two figures has important implications for one's understanding of the christology of Revelation. One possibility is that the author of Revelation understood both the "one ancient of days" and the "one like a son of man" to be manifestations of God. There is evidence that some rabbis read the passage in this way (*Mek. R. Sim. b. Yohai* bashalah 15; see Segal 1977: 35). Such an understanding may imply a christology analogous to the prologue of the gospel of John. The preexistent Christ is a divine being alongside God and apparently equivalent to God in nature. The designation of Christ as "the beginning of God's creation" (Rev 3:14) suggests that the author of Revelation considered Christ to have been preexistent in relation to the human Jesus. Alternatively, the understanding may be that neither the "one ancient of days" nor the "one like a son of man" is identical with God. The transcendent God is beyond the senses and thus the only truly and fully divine being. All the manifestations of God described in the Jewish Bible are to be identified with an angelic being. For the author of Revelation, this being is Christ. The human Jesus could be identified with this high or principal angel in the same way that Enoch was identified with the preexistent Son of Man in the *Similitudes of Enoch.* Given the apparent description of God in Revelation 4 and of the Lamb in God's presence in chap. 5, the former possibility is more likely.

Another issue in the christology of Revelation is whether the image of Christ as Divine Warrior in chap. 19 is transformed by the image of the suffering Lamb in chap. 5 or whether, on the contrary, the image of the suffering Lamb is transformed by that of the Divine Warrior. The character of the book as a whole, as well as the context of the image of the Lamb in chap. 5, suggests that the latter is the case. The death of Christ is affirmed, as we have seen, as the event that freed believers from their sins (1:5b). In chap. 5, the image of the "lamb, standing as if slain" is immediately transformed by the description of the animal as having seven horns (v 6). As is well known, the horn is a biblical and postbiblical image of military might and the horned ram is an image for great military leaders and for a warrior-messiah in the *Dream Visions of Enoch* (*1 Enoch* 85–90). The impression that the older Christian image of the sacrificial Lamb is being reinterpreted in Revelation is supported by the introduction of the figure as the "Lion of the tribe of Judah" (5:5).

This militant christology must be seen in light of the social setting of the book. Several aspects of the work imply that the author perceived a social-theological crisis and was responding to it. One important aspect of this crisis was conflict with the Jews of the synagogues of the province of Asia. The message to Smyrna refers to the Jews of that city as "those who say that they are Jews and are not, but are a synagogue of Satan" (2:9). The context implies that Jewish hostility to local Christians has led the former to accuse the latter before the authorities. These accusations are expected to lead to arrest and interrogation (2:10). Since new religions were frowned upon and the Jewish way of life was approved, rejection by the synagogue meant legal insecurity for local Christians. Similar conflict is reflected in the message to the Philadelphians (3:9).

In the messages to Pergamum and Thyatira, the addressees are warned against eating meat sacrificed to idols and "playing the harlot" (*porneusai*)."Playing the harlot" may be interpreted as idolatry. The two warnings together may refer to social occasions on which food offered to the Greco-Roman gods was consumed and prayers offered to them. Alternatively, *porneusai* may refer to marriages forbidden by the Jewish law. The similarities between these warnings and the "apostolic decree" of Acts 15 support this possibility. In either case the underlying issue seems to be the relations of Christians with gentiles. According to the first interpretation of *porneusai,* the issue would be how much and what kind of socializing was possible. This issue was important for those with non-Christian gentile relatives and for

those who belonged to non-Christian voluntary associations. If the second interpretation of *porneusai* is correct, the issue would involve not only socializing but the question whether newly converted Christians should divorce their non-Christian spouses (cf. 1 Cor 7:12–16).

Social tensions resulting from different degrees of wealth and different attitudes toward wealth are reflected in the book of Revelation. The Christians of Laodicea are criticized for relying on their wealth (3:17–18). The Roman Empire is criticized for being a source of wealth, most clearly in chap. 18. There is evidence of tension between rich and poor in Asia Minor at the time Revelation was written (Yarbro Collins 1984: 94–97).

In addition to the tensions between these social groups, Revelation reflects particular events that were traumatic for the author of Revelation and those who shared his point of view. The Jewish War with Rome and the destruction of the temple was a traumatic event, as the use of the name "Babylon" for Rome shows. That Nero's police action against Christians in Rome was perceived in a similar way is indicated by the use of Nero redivivus as the eschatological adversary. We may infer that the enthusiastic performance of the imperial cult in the province of Asia was deeply offensive from the antithetic parallel drawn between worship of God and worship of "the beast." Finally, the death of Antipas and the exile of John, the author of the book of Revelation, were events that emphasized the threatened situation of the Christian communities in the province.

The theology and christology of the book of Revelation are shaped by these elements of crisis and trauma. A new set of expectations had arisen as a result of faith in Jesus as the Messiah and belief that the kingdom of God had been established. If the risen Jesus was enthroned as the ruler of the kings of the earth, the followers of Jesus should share in that rule and glory. The events just described, however, frustrated those expectations. It was the tension between John's vision of the kingdom of God and his social situation that led him to write his apocalypse. The tension is overcome by a revelation of the true, though hidden, state of affairs. God and Jesus do reign in spite of appearances and the Roman Empire is a rule of chaos, not a golden age. It is also overcome by a revelation of the future. In the end, the unjust earthly powers will be judged and the faithful will be rewarded.

J. History and Methods of Interpretation

Dionysius, bishop of Alexandria in the 3d century, wrote that some had set the book of Revelation aside, pronouncing it senseless and without reason. He himself refused to set it aside, because many brothers and sisters valued it highly. But he felt that its subject exceeded his capacity, saying:

> For, though I do not understand, yet I suspect that some deeper sense is enveloped in the words, and these I do not measure and judge by my private reason; but allowing more to faith, I have regarded them as too lofty to be comprehended by me, and those things which I do not understand, I do not reject, but I wonder the more that I cannot comprehend (quoted by Eusebius *Hist. Eccl.* 7.25).

Few interpreters of Revelation have been so modest. Most have felt that they had the key that could unlock its mysteries. For some the key is divine inspiration, analogous to that received by John. For others it is a theory of interpretation or a scholarly method. Yet others believe that their social situation or life experience, which is like that of the original audience, alone makes a sympathetic reading possible (for example, only the oppressed can understand Revelation).

The first great controversy over the book of Revelation was how to interpret the visions involving the binding of Satan for a thousand years and the reigning of the participants in the first resurrection for a thousand years with Christ (20:1–6). Most Christian writers of the 2d century, like Justin Martyr and Irenaeus, read Revelation as prophetic history; that is, as prediction of events in the future. They thus expected an earthly reign of Christ to follow his second coming. Some writers pictured this millennium as a time of eating, drinking, marrying, and producing children. Such views were criticized as overly "sensual" by other Christian writers. By the end of the 2d century, an alternative reading developed, that is usually called "spiritual" or "allegorical." This new reading interpreted Revelation's images as referring to events within history; thus, it may be called an "immanent" reading, as opposed to the older "imminent" reading (McGinn 1987). According to this reading, the binding of Satan had taken place already as a result of Jesus' life and death. The thousand-year reign is the history of the Church.

Augustine of Hippo adopted the immanent or spiritual reading and his authority led to its dominance for seven hundred years. This reading did not eliminate the element of prophecy from Revelation entirely, but it discouraged seeing current events as signs of the end. Revelation was used primarily as a resource for moral teaching against vice and error in the Church.

Prophetic and apocalyptic experiences and concerns, however, never died out and became prominent again in the 12th century. Joachim of Fiore developed a new interpretation that he said was given to him by divine inspiration. Joachim was the first to read the book as a revelation of the entire world-historical process, past, present, and future. World history consisted of three states or ages: the first state was the time of the Law, whose author was God. The second state was the age of the Gospel, brought by the Son. The third state was to come in the near future. It would follow the defeat of the Antichrist and was to be the culmination of history that would involve the reformed and purified monastic Church. This was to be the age of freedom, granted by the Holy Spirit. Thus, the thousand years, although not taken literally, was once again interpreted as a prophecy of a future perfect age.

Martin Luther maintained the old interpretation of the millennium that understood it as the time of the Church within this world and history. But he suggested that other parts of Revelation correlated with events of world history and that some prophesied events of his own time. For example, he identified the papacy with the Antichrist.

The radical Puritan strain in England led to the modern revival of truly millenarian readings of Revelation. Such readings became popular in the 17th century. The expectation of a literal return of Christ to earth to bind Satan and to reign with the saints was revived by Puritan academics in the context of scholastic, if not scholarly, readings.

In the 18th century, the postmillennial view was introduced by Daniel Whitby and others. This position held that the binding of Satan referred to the turning point toward a more just and humane society, one about to occur in their own time. At the end of this new and better age, Christ would return. This perspective had an influence on the first great American commentator, Jonathan Edwards. The term "premillennial" is used to refer to the dogma that Christ will return to earth before the reign of a thousand years. The term "postmillennial" refers to the doctrine that Christ will return after the thousand years. The term "amillennial" is used to refer to those theological traditions that do not take the reign of a thousand years literally.

At the end of the 18th century, historical-critical readings became dominant. These studies raised questions about the sources and traditions used in the book. This approach located the book of Revelation in the time in which it was written. Some images were interpreted as allusions to events in the immediate past and present of the author and the rest to the eschatological future.

The historical-critical approach has evoked two major reactions. One is the aesthetic literary mode of interpretation, that emphasizes the qualities of Revelation that characterize it as a work of art and of the imagination. The other is the fundamentalist approach that insists on the literal truth of Revelation's images, usually as predictions of future events.

The basic issues of interpretation, that still exercise commentators and readers today, are (1) whether the structure of the book is linear, recapitulative, or thematic; (2) how the images and narrative patterns relate to history; and (3) what the goal of interpretation is: whether one should discover and approve only one or multiple meanings and whether one should attempt to discern the author's intention or the reader's response.

ADELA YARBRO COLLINS

REVOLT, MACCABEAN. See MACCABEAN REVOLT.

REZEPH (PLACE) [Heb *reṣep* (רֶצֶף)]. A town described as having been destroyed by the Assyrians.

When Hezekiah rebelled against Assyria (2 Kgs 18:1–7), the king of Assyria, Sennacherib, responded with force. Jerusalem was surrounded (18:17) and the Rabshakeh addressed the people and asked if any of

the national gods had delivered their countries from the Assyrians. He then listed Hamath, Arpad, Separvaim, Hena, Ivvah, and Samaria (vv 33–34). A similar follow-up message (19:9–11) added Rezeph to the list. Presumably Rezeph had been destroyed by the Assyrians, along with the other sites; these therefore served to symbolize Assyrian invincibility and to imply that any resistance by the Hebrews would prove futile (a parallel passage appears in Isa 37:12 where Gk versions have several variants—Rapheth, Raphes, Rapheis).

The placement of the name among the other cities suggests that Rezeph was in the area of the Balikh and Khabur rivers, northern tributaries of the Euphrates. Snaith (*IB* 3: 299) notes there are many places called Rezeph (*Ra-sa-ap-pa*), but this one was the Assyrian provincial capital, on the road from Harran to Palmyra, and that it was S of the Euphrates at modern Rezzafeh (35°38´N; 38°43´E). It is also described as E of Tipsah, NE of Hamath (Ptolemy 5.15), and as an important caravan city on the route from Damascus to Raqqa on the Euphrates. Rezeph appears in an Assyrian geographical list (2 R 53, 37a), preceded by Arrapha (Arrapachitis, modern Kirkuk) and Halahhu (Halah), and followed by Tamnunu. The Eponym Canons list as prefects Ninip-kibsi-usur for 839 B.C., Uras-eres for 804–775, Sin-shallimanni 747, and Bel-emuranni 737, whose names appear to be Assyrian, but a man named Abda'u or Abda'i, perhaps a native who served later, is mentioned in a list of officials (K. 9921). Records also indicate that Yahutu was *šanû* (deputy governor?) of Rezeph in 673. References to such information in the Assyrian geographical lists imply that Rezeph was a significant trading center (Pinches *ISBE* [1939 ed.] 4: 2588).

The site was conquered by the Assyrians at least by 839 (Shalmanezer III, 858–824 B.C.), though there is some debate about exactly when it was conquered and when it was incorporated into the Assyrian Empire. Some say Sennacherib conquered Rezeph. Since Assyrian victims often rebelled, it would not be surprising if it were conquered in several campaigns, including that mentioned in 2 Kgs 18:33–34 and 19:11–13. However, 2 Kgs 19:12 explicitly has the king saying that his *fathers* conquered these sites.

Others identify Rezeph on the basis of commercial documents as between Tille and Isana between Jebel Sinjar and the Tigris River, 70 miles W of Nineveh (Gray *1 & 2 Kings* OTL, 687–88; Simons *GTTOT*, 367, 441).

HENRY O. THOMPSON

REZIN (PERSON) [Heb *rĕṣin* (רְצִין)]. The name of two individuals in the Hebrew Bible.

1. An Aramean king (RSV: "king of Syria") involved in the Syro-Ephraimite coalition against Judah (2 Kgs 15:37; 16:5, 9). The Masoretic pronunciation of the name is incorrect. The name is attested in Akkadian in the forms *ra-ḫi-a-nu* and *ra-qi-a-nu.* This shows that the second consonant of MT *rṣyn* is Proto-Semitic *ḏ,* and that the *yod* is consonantal. Thus the name was pronounced *raḏyān* in Aramaic (probably written *rqyn*) in the 8th century B.C.E. The name is a hypochoristic (shortened form) and probably means " (The god) is pleased."

Rezin was the last king of Aram-Damascus before it was incorporated into the Assyrian Empire in 732 B.C.E. Rezin is known from biblical and Assyrian sources. He was quite probably a usurper to the throne of Aram, since his hometown is given as Hadara rather than Damascus in the inscriptions of Tiglath-pileser III. The date of his rise to power is not known (there being no information preserved about Aram-Damascus for the period between 773 and 738 B.C.E.). Rezin is, however, listed among a number of Syro-Palestinian kings who rendered tribute to Tiglath-pileser III in 738. An Assyrian stela found in Iran contains a slightly different tribute list that may represent the political situation of Syria-Palestine a year or so earlier than the dated list just mentioned, and it too names Rezin as king of Aram.

Rezin is best known as the leader of an anti-Assyrian coalition which probably developed between 737 and 735, while Tiglath-pileser was involved in affairs on the other side of his empire. Tyre, Philistia and Israel (among others) appear to have joined the coalition, but Judah refused to take part. 2 Kgs 15:37 suggests that even at the end of Jotham's reign Rezin and his ally Pekah of Israel were attempting to force Judah to join the coalition. Shortly after Jotham's death (ca. 735/734), Rezin and Pekah invaded Judah and besieged Jerusalem in an attempt to overthrow the new king Ahaz and install an anti-Assyrian king (one "son of Tabe-el" according to Isa 7:6) who would join the coalition (2 Kgs 16:5–9). This conflict is

often called the Syro-Ephraimite War and is the background to the events described in Isaiah 7–8. (The statement in 2 Kgs 16:6 that Rezin captured Elath at this time and settled it with Arameans is highly unlikely. This verse probably referred originally to an Edomite takeover of Elath, but through scribal error [*d* and *r* are very similar in Hebrew] the name Edom was changed to Aram. The explicit identification of the king as Rezin probably occurred only after the earlier corruption took place.) The siege of Jerusalem was broken when the Assyrian army returned to S Syria at that time. Although 2 Kgs 16:7–9 suggests that Tiglath-pileser attacked the anti-Assyrian coalition in response to a bribe from Ahaz, it is probable that the Assyrian king already planned to recapture this area at this time.

Tiglath-pileser spent the year 734 B.C.E. in a campaign along the Mediterranean coast, subduing the rebellious Philistine cities, particularly Gaza. In 733 and 732 he turned his attention to Israel and Aram-Damascus. The attack on Aram and its destruction are described in the rather fragmentary annals of Tiglath-pileser, which state that 591 towns of the land were captured and destroyed. Details of the capture of Damascus and the end of Rezin are not preserved in the annals, but 2 Kgs 16:9 states (rather laconically), "the king of Assyria marched against Damascus, and took it, carrying its people captive to Kir, but Rezin he killed" (2 Kgs 16:9). This was the end of Damascus as the capital of an independent state. Aram was incorporated into the Assyrian Empire and divided into a number of provinces.

Recently Hayes and Irvine (1987: 34–46) have argued for a somewhat different reconstruction of Rezin's reign and his relationship to Israel. They have suggested that Rezin may have been on the throne as early as the 750s and that he recreated an Aramean empire in S Syria and Palestine (similar to that of Hazael a century earlier), annexing all of Israel except the central hill country and dominating Philistia and Transjordan. They argue that Pekah was a "stooge" of Rezin's and probably ruled the E parts of Israelite territory under Rezin's authority as a rival to Menahem. While their reconstruction is generally plausible, note should be made that the evidence for it is extremely slim and that the biblical passages adduced as evidence can be interpreted (often more plausibly) in different ways.

2. Name of one of the families of the temple personnel known as the Nethinim. The sons of Rezin are listed as part of the returnees from the Exile in Ezra 2:48 and Neh 7:50.

REZON (PERSON) [Heb *rĕzôn* (רְזוֹן)]. An Aramean ruler who appears in 1 Kgs 11:23–25 as an adversary of Solomon. Nothing is known of him besides what is found in this brief passage. Rezon is said to have been an officer of Hadadezer, king of Zobah, who abandoned his position, presumably soon after Hadadezer was defeated by David (2 Samuel 8, 10). Sometime during the reign of Solomon, Rezon gathered a band of malcontents as an army, seized Damascus, which had been under Israelite control, and proclaimed himself king there. There is no evidence that Solomon was able to oppose Rezon's actions, and Rezon thereby became the first in a line of powerful rulers of the kingdom of Aram-Damascus.

It is not possible to date Rezon's rebellion in Damascus with any certainty. While the context of 1 Kings 11 suggests that it occurred late in Solomon's reign, 11:25 states that Rezon "was an adversary all the days of Solomon." This latter statement probably should not be pressed so far as to argue that Damascus withdrew from Israelite control early in Solomon's reign. But it does suggest that Rezon's actions took place well before Solomon's death, and it signals that there was a weakening of the Israelite empire during, and not just after Solomon's reign.

Several scholars over the past century have suggested that Rezon is to be identified with Hezion, the grandfather of Ben-Hadad I of 1 Kgs 15:18. In fact there is no evidence to support this identification (cf. Pitard 1987: 100–4), and the proposal should be dropped.

RHEGIUM (PLACE) [Gk *Rhēgion* (Ῥηγιον)]. The modern city of Reggio di Calabria, located along the SW coast of the "toe" of Italy (38°06′N; 15°39′E) opposite the Sicilian city of Messina. The Strait of Messina, which separates Sicily and Italy, is only ca. 7 miles wide near Rhegium. During his voyage to Rome, Paul stopped at this city after traveling from Syracuse. He and the others on the ship waited one day at Rhegium for a S wind which allowed them to tack N to the city of Puteoli (Acts 28:13).

The Alexandrian ship which carried Paul to Rhegium had a carved figure of the heads of the "Twin Gods" (Acts 28:11). Rhegium, as found on coins of the city, was noted for the worship of the Dioscuri or the "Twin Gods," namely Castor and Polydeuces or Pollux, who were the "Sons of Zeus" and patron deities of sailors. Rhegium is near two infamous sailing hazards which may have fostered this devotion to the "Twin Gods." These hazards were located just to the N of Rhegium at either side of the Strait of Messina and were identified in Greek mythology with two sisters, Scylla and Charybdis. The dangerous whirlpool of Charybdis was located on the Sicily side of the Strait of Messina while the threatening rock of Scylla was on the Italian side.

The etymology of the name of the city is unclear. Some ancient sources, using the idea that Sicily was separated from Italy by an earthquake, trace it to the Greek term *rhegnymi,* "to split or rend" (Aesch., Fragment 230), while other ancient authors suggest that the city had royal origins. Hence the name is from the Latin term for "royal," *regium* (Strabo 6.258). Many modern scholars believe that the name of the city predated Greek occupation, so they favor the latter interpretation.

Greek colonists from Chalcis founded Rhegium in ca. 720 B.C. (Strabo *Geog.* 6.1.6). Rhegium grew in power during the 5th century (Hdt. 7.165), but its geographical position left it vulnerable to attack. Dionysius, tyrant of Syracuse destroyed the city in 387 B.C. and he sold many of the inhabitants into slavery (Diod. 14.106ff). Rhegium was partly rebuilt by Dionysius the Younger, who was tyrant of Syracuse from 367 to 343 B.C.

When Pyrrhus attacked Italy in 280 B.C., the inhabitants of Rhegium feared both him and the sea power of the Carthaginians. Rhegium, therefore, requested that a Roman garrison be stationed in the city for protection. The troops soon arrived from Campania under the leadership of Decius, but they quickly realized that the wealth of the city could be easily obtained. The troops, taking advantage of their situation, murdered the men and enslaved the women of Rhegium and thereby made the city their own. The conquering troops were punished by the armies of Rome and the city was returned to the few remaining citizens in 271 B.C. (Polyb. 1.7).

The city, thenceforth, became an ally of Rome and remained loyal to this alliance during the Punic Wars, even when Hannibal nearly captured the city (Polyb. 9.7). In 91 B.C. an earthquake destroyed part of the city and its power waned. Caesar Augustus settled some of the veterans of his army at Rhegium in the early 1st century A.D. The city then became known as Rhegium Julium and its population increased.

RHEIMS VERSION. See VERSIONS, CATHOLIC; VERSIONS, ENGLISH (PRE–1960).

RHESA (PERSON) [Gk *Rhēsa* (Ῥησα)]. The father of Joanan and son of Zerubbabel, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:27). D omits Rhesa, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Rhesa occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of seventeen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 500). Three suggestions have been made regarding reference to Rhesa in the genealogy. First, it could be a personal name (cf. 1 Chr 7:39 with Gk *rasia*), although this son of Zerubbabel is otherwise unknown (Marshall *Luke* NIGTC, 163). Second, in light of the similarity of Rhesa to the Aramaic title *rē›šā›*, meaning "prince," Plummer (*Luke* ICC, 103–4; following Hervey 1853: 111–14, the apparent originator of this theory; cf. Abel 1974: 209) speculates that Zerubbabel, because he was head of the tribe of Judah during the return from captivity in Babylon, was designated as "Prince [Rhesa] of the captivity." But "Zerubbabel Rhesa" or "Zerubbabel the Prince" was mistaken by an earlier copyist of a pre-Lukan version of the genealogy for "Zerubbabel begat Rhesa." Third, Fitzmyer (*Luke* 1–9 AB, 500; following,

e.g., Jeremias 1969: 296), believing the word order of the Lukan text does not support Plummer's analysis (but cf. Marshall *Luke* NIGTC, 163, who claims that Plummer's proposal would argue for the genealogy originally being in reverse order), proposes that Rhesa is to be taken with the preceding name, Joanan, thus "Prince Joanan, son of Zerubbabel," referring to Hananiah, son of Zerubbabel in 1 Chr 3:19. This raises the question of the relation of Luke's genealogy to the genealogy in 1 Chronicles (see esp. Jeremias 1969: 295–96).

RHETORIC AND RHETORICAL CRITICISM. Rhetoric is the art of composition by which language is made descriptive, interpretive, or persuasive. Related to it is oratory, the art of effective public speaking. The study of rhetoric is a classical discipline that goes back to Aristotle, and insights from the study of rhetoric have been applied to the biblical text. This methodological approach is called "rhetorical criticism." This entry consists of three articles. The first surveys the subject of rhetoric and oratory in the Greco-Roman world; the second examines OT rhetorical criticism; and the third examines rhetoric in the NT and NT rhetorical criticism.

RHETORIC AND ORATORY IN THE GRECO-ROMAN WORLD

A. Greece

Among the Greeks, the expression *rhētorikē technē* (Lat *ars rhetorica*) refers to the theory and practice of "speaking well." The significance of speech was appreciated as early as Homer (9th–8th century B.C.E.). The heroes of his epics often use figures of speech, arrangement, and style to argue and persuade. Kennedy (1980: 9–15) refers to this type of rhetoric as "natural" or "preconceptual," i.e., an unselfconscious use of rhetorical technique. A "conceptualized" rhetoric (Kennedy 1980: 15–17)—or a self-conscious use of technique—is traditionally connected with the 5th century B.C.E. teachers, Tisias and Corax of Syracuse, who wrote handbooks on forensic or judicial oratory for the purpose of helping ordinary citizens argue cases in the law courts of Sicily. It was another Sicilian, however, Gorgias of Leontini, who is credited with introducing the art of rhetoric to Athens in 427 B.C.E. with great success. Gorgias was particularly noted for his florid, emotional style (the so-called "Gorgianic style") with its skillful use of the rhythms, parallelisms, and other figures of poetry. In contrast, his contemporary, Isocrates, emphasized a "pure" rhetoric unencumbered by poetic embellishment. Isocrates, although not a great speaker, was an influential teacher. He was the first to open a school of rhetoric and successfully instruct others in the art. As a result, the study of rhetoric, in both its oral and written forms, soon became the basis of all Greek, and later, Roman education.

A critical reaction to the rhetorical art is most evident in the writings of Plato, notably in the *Gorgias* and *Phaedrus.* In these dialogues, Plato specifically attacks that kind of sophistic oratory or extreme relativism (identified with the Sophists in general) which has no fixed moral purpose but only the goal of winning an argument through any persuasive means. Plato equates this type of rhetoric with deceit and flattery and contrasts it with dialectic, which is concerned with knowledge and universal truths. Plato did admit the value of a "philosophical" rhetoric in the *Phaedrus,* but did not develop this idea in any detail. This task was left to Aristotle, whose *Rhetoric* became an influential source for later developments of the art. In particular, Aristotle developed a practical theory of rhetoric that dealt with the relation of rhetoric to philosophy, the role of the audience, and a general discussion of arrangement and style. His most important contributions included distinguishing three types of rhetoric (judicial, epideictic, deliberative); three modes of persuasion (*logos, ethos, pathos*); and his theory of the rhetorical *topoi* ("topics" or "lines of argument"). The "five parts" of rhetoric (invention, arrangement, style, memory, delivery)—implicit in Aristotle as well as such 4th-century handbooks as the *Rhetorica ad Alexandrum*—would be developed in greater technical detail during the Hellenistic period, notably in the writings of the 2d-century rhetor, Hermagoras. The later Hellenistic period also saw the development of a florid and artificial oratory

("Asianism") reminiscent of Gorgias as well as a renewed hostility between teachers of rhetoric and philosophy. The gains would be made among the rhetoricians, and rhetoric would emerge in Rome as the sine qua non of Roman education.

B. Rome

By the beginning of the 1st century B.C.E., rhetoric and oratory were firmly established in Rome as the primary means by which to advance in public life (judicial oratory was especially emphasized). It was at this time that Cicero wrote his *De Inventione*, the first (and most influential) of his seven books on the techniques of rhetoric. He also composed and delivered numerous speeches (58 are extant). Although clearly dependent on traditional theory and practice, Cicero's mastery of the art made him Rome's greatest orator and most influential writer on rhetorical technique. Cicero's main innovation in terms of technique was his concept of the orator's "three duties": to instruct (*docere*), to delight (*delectare*), to move (*movere*). Each "duty" was connected with an appropriate "style": the "plain" or unadorned style was most suited for instruction and demonstrating proof; the "grand" or lofty style was most useful for stirring up or moving the sublime emotions; the "intermediate" or moderate style was most effective in giving simple pleasure and delight. *Ethos* or character was also stressed by Cicero. May argues (1988: 1–12; 162–69 and *passim*) that this mode of persuasion played a far more significant role in Roman than Greek oratory because of traditional Roman respect for an individual's authority (*auctoritas*), reputation (*existimatio*), honor (*dignitas*), and achievements (*res gestae*). This is particularly evident in Cicero's many speeches. Cicero is also credited with thoroughly integrating the art of rhetoric into the classical *paideia* or "liberal arts": for Cicero, the orator must be a person of wide learning as well as persuasive speech.

Cicero's writings on rhetoric and his own expertise as an orator represent the high-water mark of Roman rhetoric. In the subsequent period of the Empire there is a general decline in oratory, with the noted exception of the late 1st-century teacher and rhetor, Quintilian. His *Institutio Oratoria* is the longest and most complete technical treatise on rhetoric to survive from Antiquity. Its importance lies in its detailed account of how rhetorical training is to be incorporated into every stage of education—from the speech lessons of childhood, to the later mastery of grammar, diction, composition, and enunciation, to the systematic training in adulthood of all the specific techniques and theories of rhetoric under the guidance of a skilled rhetor. The goal of education is to become a "great orator," understood by Quintilian as a "good man" of strong character. Quintilian's treatise was to influence especially the development of rhetoric in the Middle Ages and its later revival in the Renaissance.

During the 2d century, the decline of oratory is most evident in the new importance given to "declamation," a type of school or practice exercise dealing with historical or pseudo-historical themes (e.g., should Caesar cross the Rubicon?) and fictive legal cases (e.g., should a son sue his father?)—or, in the new terminology, *suasoria* and *controversia*. These practice exercises often became so unrealistic and farfetched that they ceased to have any practical purpose and degenerated into mere theatrics and public entertainment. New forms of deliberative oratory are also developed at this time; e.g., formal speeches given on the occasion of festivals, birthdays, marriages, and funerals. A revival of "Asianism" is also characteristic of the period as is the "pure" style of the "Atticists." The orators of the Second Sophistic (as illustrated in Philostratus' *Vita Sophistarum*) are especially identified with these 2d-century developments.

C. Influence on the New Testament

The influence of Greco-Roman rhetoric on the writings in the NT is becoming more widely acknowledged today than in the past, particularly concerning Paul's letters. Galatians, for example, has been analyzed by Betz (1975: 353–79; *Galatians* Hermeneia, 14–25) as an "apologetic letter" which incorporates rhetorical devices familiar to forensic oratory: Paul functions as the defendant, the addressee or the "Galatians" play the role of the jury, and Paul's opponents are the accusers. The structure of the Letter incorporates the standard "parts" of a speech: *exordium* (introduction), *narratio* (statement of facts), *propositio* (main points to be made), *probatio* (proof), and *peroratio* (conclusion). The same pattern of organization is also evident in 2 Corinthians 8 and 9 (Betz, *2 Corinthians 8–9* Hermeneia, 38–

41; 88–90). The shorter epistle to Philemon, as analyzed by Church (1978: 17–33), is an example of deliberative rhetoric—divided into *exordium, probatio,* and *peroratio*—and with specific appeals to *ethos* and *pathos.* In the case of Romans, Wuellner (1976: 330–51) argues that this epistle is best understood as an example of epideictic rhetoric with a special appeal to the "*pathos* of love."

Elsewhere in the NT, there is evidence for other examples of rhetorical use, although not strictly in the classical sense. Jesus' preaching in the gospels, for example, is modeled on Jewish traditions of speech: the object is to persuade through divine authority rather than modes of rational proof. The "missionary sermons" in Acts are similar to OT "covenant speeches," and thus are examples of "natural" or preconceptual rhetoric (Kennedy 1980: 120–32). The emphasis here is on warning, repentance, and judgment, not *ethos, pathos,* and *logos.* The so-called "Areopagus Speech" attributed to Paul in Acts 17:22–31 has sometimes been analyzed in classical rhetorical terms, but is again best understood in terms of Jewish speech traditions.

D. Later Christian Developments

The tradition of Greek rhetoric is most apparent in the writings of the 4th-century Cappadocian Fathers—Gregory of Nazianzus, Gregory of Nyssa, and Basil of Caesarea. All three received excellent Greek educations and were well acquainted with the sophistic rhetoric of the period. Their panegyrical orations in particular display a sophisticated use of rhetorical devices, structure, figures of speech, and argumentation. It was Augustine, however—in his *De Doctrina Christiana*—who developed an explicit theory of Christian rhetoric in the Latin tradition, influenced by Cicero. Augustine, for example, accepts Cicero's concept of the orator's three "duties" and their relation to the three "styles." He also underscores the character or *ethos* of the orator as more important than any gifts of style or technique. But the *De Doctrina Christiana* is not simply a reworking of pagan theories and categories but an appropriation of these rhetorical methods with a specific Christian goal in mind; e.g., the Christian orator must confine his subject matter to scriptural themes, he must be concerned with truth and not argument for argument's sake, he must defend the faith, etc. As Kennedy notes (1980: 146), no less than five of the Latin Church Fathers (Tertullian, Cyprian, Arnobius, Lactantius, Augustine) were "professional rhetoricians before they became Christians." Add to this list the number of Greek Church Fathers who were schooled in rhetoric and the "art of persuasion" becomes a significant element in understanding the Christian literature of Antiquity. Recent studies in discourse theory, reader-response criticism, structural linguistics, and the "New Rhetoric" are certain to bring this discussion to new levels of understanding as demonstrated, e.g., by Plank's analysis of 1 Cor 4:9–13 in terms of Paul's "rhetoric of irony" (1987: 33–69). For further discussion see PWSup 7: 1039–1138.

OT RHETORICAL CRITICISM

Although the study of rhetoric is a classical discipline that goes back to Aristotle (*Rhetoric*) and includes works by Cicero (*De Oratore*) and Quintilian (*Institutio oratoria*), as a contemporary methodology for the study of the Hebrew Bible rhetorical criticism is relatively recent, having first been introduced by James Muilenburg in his 1968 Presidential Address to the Society of Biblical Literature, entitled "Form Criticism and Beyond" (1969: 1–18). The following description of rhetorical criticism will begin with an examination of the work of Muilenburg. The second section will examine the rise of the "Muilenburg School" of rhetorical criticism in the United States during the 1970s and early 1980s. Finally, the essay will conclude by examining recent discussions of rhetorical criticism.

C. Classical Rhetoric and Rhetorical Criticism

———

A. James Muilenburg

In his tribute to James Muilenburg, Bernhard Anderson (1974: xii–xiv) cautions the reader that "rhetorical criticism could easily be misunderstood if it is not seen in the context of [Muilenburg's] whole scholarly career." In order to avoid misunderstanding, Anderson suggested that form criticism and the Biblical Theology movement, the latter with its emphasis on the "historical character of revelation," had to be seen as important influences in Muilenburg's formulation of rhetorical criticism.

1. As a Form Critic. Anderson's caution is most certainly correct. Form criticism plays such a central role in Muilenburg's programmatic statement on rhetorical criticism that he concludes the article "Form Criticism and Beyond" by underscoring how he considered rhetorical criticism to be only a supplement to form criticism (1969: 15). He praised the work of form critics like Gunkel for advances in comparative methodology, which freed biblical literature from the parochialism of the critic's presuppositions; for uncovering the wide range of *Gattungen* (forms) within the Hebrew Bible; and most importantly, for allowing the critic to interrelate biblical literature more closely into the cultural milieu of Israel, which classic source criticism had not been able to do. Thus, Muilenburg praises Gunkel as someone unsurpassed in his ability to "portray the cast and temper of the minds of the biblical narrators and poets … [as well as] the ordinary Israelite to whom their words were addressed" (1969: 2).

However, in spite of his praise for Gunkel, Muilenburg was troubled by the legacy of form criticism. He concluded that two problems undercut the goals of form-critical methodology. First, there was a growing tendency to study only similarity in *Gattungen*, with the result that the particularity of the text under study gave way in order to emphasize "pure" forms in biblical literature. Second, because of the movement toward studying "pure" *Gattungen*, form critics were also beginning to read biblical literature intrinsically, which resulted in an "aversion to biographical or psychological interpretations … (and a certain) resistance to historical commentary" (1969: 4–5). These two problems, according to Muilenburg, went hand in glove. An overemphasis on similarity in the study of *Gattungen* created an abstraction for the reader so that the uniqueness of the individual text was not sufficiently included in interpretation. The result of such abstraction was that the integral relation between form and content was severed, which not

only obscured "the thought and intention of the writer or speaker" but, even more seriously, produced a "skepticism of all attempts to read a pericope in its historical context" (1969: 6).

2. As a Rhetorical Critic. Rhetorical criticism was Muilenburg's response to the way in which particular biblical texts were being severed from their historical context by form criticism. The starting point for rhetorical criticism was the conclusion that most *Gattungen* in the Hebrew Bible are not "pure" but imitations. In view of this conclusion, Muilenburg argued that although each text has to be studied against the backdrop of a "pure" *Gattung,* it should not be reduced to it. This shift in study to the unique features in a given text goes to the heart of rhetorical criticism as it was conceived by Muilenburg, for it gives rise to the study of stylistics of composition in Hebrew prose and poetry (1969: 7–8).

Muilenburg conceived of rhetorical criticism as having two foci: it sought to describe the structure and boundaries of a literary unit and the devices which provide shape and emphasis within a given text. In determining the boundaries of a text, Muilenburg underscored the importance of repetitive motifs and *inclusio;* while the inner structure and movement of a text ("the warp and woof out of which the literary fabric is woven") could be brought to light by studying a variety of literary devices, which included ancient Near Eastern formal modes of speech, techniques of narrative composition, bicola/tricola, strophes, the function of particles (Heb *kî, hinnēh, lākēn*), and repetition.

Muilenburg's treatment of Jer 3:1–4:4 illustrates how he conceived of rhetorical criticism as a method which accentuated the unique features of a given text, even while acknowledging the form-critical background from which a text may have evolved (1969: 5, 9–10). After eliminating the narrative portions of this unit in order to focus exclusively on the poetry, Muilenburg began his interpretation by noting the results of past form-critical research, in which the quest for the smallest literary unit as an instance of a "pure" *Gattung* supported a reading of the poetic units in Jer 3:1–4:4 as being independent of each other. Rhetorical criticism allowed Muilenburg to go beyond the results of form criticism by arguing that none of the poetic units in Jer 3:1–4:4 were "pure" *Gattungen.* Rather they were imitations, which were meant to function as parts of a larger whole. A central criterion for Muilenburg's conclusion concerning the unity of Jer 3:1–4:4 was the *inclusio* of the Heb verb *šûb,* "return," in Jer 3:1 and 4:1a, which marked the boundaries of the larger literary unit. In Jer 3:1 the word occurred in a legal formulation, followed by an indictment:

> If a man sends his wife away,
> and she goes from him,
> and becomes another man's wife,
> will she *return* to him [with correct text]?
> Would not that land
> be utterly polluted:
> But you have played the harlot with many lovers,
> and would you *return* to me?

And in Jer 4:1a the word *šûb,* "return," is repeated in a conditional covenant:

> If you do *return,* O Israel, Yahweh's Word!
> to me you should *return.*

With the boundaries of the poem in place, a closer study of parallelism, repetitive motifs, and the distribution of particles provided Muilenburg with the criteria to describe internal structure. Furthermore, Muilenburg argued that the poetic units in Jer 3:1–4:4 were imitations of a variety of *Gattungen.* In particular, he concluded that the form-critical background was the lawsuit, but that the text also contained elements of a confessional lament and conditional covenant.

The attention to detail within a given text that was required in rhetorical criticism provided the basis for Muilenburg to conclude that there is an inextricable relationship between form and content in the study of any biblical text. In fact, he even went a step further to argue that the two are really one (1969: 5). Muilenburg does not elaborate on this point in his article and consequently two interpretations are possible. One interpretation is that by form Muilenburg means the present structure of a text, in which case content would be the meaning of the text, conceived as author's intent. A second interpretation

would focus more on Muilenburg's assessment of form criticism. Form in this case would be the "pure" *Gattung* which provides the backdrop for any given text, while content would be the unique details within a particular text, which provide an avenue to the thought of the author. In either case, the interrelationship of form and content was Muilenburg's way of rescuing biblical literature from its increasing detachment from any historical context at the hands of form critics, who were abstracting every text into "pure" *Gattungen* and thus obscuring the thought and intention of the writer. Muilenburg's response to this was that "prophets do not speak *in abstracto,* but concretely" (1969: 6). Rhetorical criticism was his way of formulating a canon, namely that "a responsible and proper articulation of words in their linguistic patterns and in their precise formulations will reveal to us the texture and fabric of the writer's thought, not only what it is that he thinks, but as he thinks it" (1969: 7).

B. The "Muilenburg School"

The term "Muilenburg School" is being used very loosely to refer to a variety of articles and books that were written primarily (but not exclusively) by students of Muilenburg throughout the 1970s and early 1980s. These writings tend to make reference to Muilenburg's article "Form Criticism and Beyond" as a springboard for further discussion of rhetoric or rhetorical criticism in the Hebrew Bible. The methodology of the "Muilenburg School" will be described through a series of comparisons and contrasts to the work of Muilenburg. These writings are, however, quite diverse and thus they require a degree of generalization.

1. Similarity to Muilenburg. Three points of similarity to the work of Muilenburg frequently appear in the writings of the "Muilenburg School" as being essential features of rhetorical criticism. First, is the affirmation that every text is both typical and unique, and that rhetorical criticism is concerned with the unique features within a given text (Trible 1978: 9; Melugin 1979: 91). Second, is the presupposition that form and content must be interrelated in the interpretation of any text (Greenwood 1970: 419; Trible 1978: 9). Third, there is general agreement with Muilenburg's conclusion that rhetorical criticism has two foci, namely, to determine the boundaries of larger literary units and to describe rhetorical devices which unify particular texts (Kessler 1974: 25–26; Kuntz 1982: 141). Thus, the "Muilenburg School" is in agreement with Muilenburg's original proposal that rhetorical criticism should be the study of stylistics of composition in Hebrew prose and poetry, and that a study of stylistics will underscore the unity of biblical texts.

2. Contrast to Muilenburg. The 1970s ushered in significant hermeneutical changes that are central to the rhetorical criticism of the "Muilenburg School," but which contrast sharply to Muilenburg's original work. The end result of the changing intellectual climate of this decade is that the "Muilenburg School" detaches rhetorical criticism from its original place within form criticism, where it had functioned as a means to counter the intrinsic interpretations of "pure" *Gattungen,* and it was moved, instead, under the umbrella of literary criticism, conceived more specifically as "new criticism," where all literature by definition was interpreted intrinsically (Brooks 1974: 568). This major hermeneutical shift gives rise to a whole series of comparisons with Muilenburg's original conception of rhetorical criticism.

a. Extrinsic versus Intrinsic. The "Muilenburg School" rejects any claims that the interpreter could uncover an author's intention, and that a hermeneutic based on author's intent could provide a basis for interpretation. Consequently, in contrast to Muilenburg's conception of rhetorical criticism as an extrinsic method which would "reveal [to the interpreter] the texture and fabric of the writer's thought …," Trible, for example, concludes that "intrinsic reading is … one hallmark of rhetorical methodology." With this starting point, rhetorical criticism must now be seen as a method which "concentrates primarily on the text rather than on extrinsic factors such as historical background … authorial intention, sociological setting, or theological motivation and result" (1978: 8–9).

b. Diachronic versus Synchronic. Muilenburg's application of rhetorical criticism took place in the larger context of form criticism. Thus, even though he was concerned with stylistics of larger literary units, rhetorical criticism had a diachronic aspect to it, since a study of stylistics illustrated how particular texts were imitations of "pure" *Gattungen.* Jer 3:1–4:4 provides illustration. Muilenburg had no problem with simply removing the narrative sections of Jer 3:1–4:4 so that he could study the poetic units, which

were then evaluated against the backdrop of "pure" *Gattungen.* But, by shifting rhetorical criticism away from form criticism and placing it under literary criticism, the "Muilenburg School" abandons the tradition-historical aspect of Muilenburg's work, so that rhetorical criticism becomes a method which only examines the present or final form of biblical texts (cf. the work of Brevard Childs on canonical criticism, *IOTS*). Thus, for example, in his definition of rhetorical criticism, Kessler argues that the method should be limited to "an exclusively … synchronic preoccupation of the text" (1974: 35).

c. Form and Content. The interrelation of form and content is central to rhetorical criticism. Yet the emphasis on intrinsic and synchronic interpretations of biblical texts within the "Muilenburg School" gives rise to a different understanding of form and content from that which Muilenburg had originally proposed. First, it should be noted that the potential ambiguity of this statement by Muilenburg is eliminated by the "Muilenburg School," since form can only mean the present structure of the text and not "pure" *Gattungen.*

A more serious point of contrast arises with the understanding of content. Content may have begun with the configuration of unique details within a given text for Muilenburg, but it ultimately leads to an author's intent. Content, therefore, yielded a singular meaning for Muilenburg. That is no longer true for the "Muilenburg School." Content is not author's intent, but only the unique configuration of details that an interpreter would impose on a text. The result of this hermeneutical stance is that a singular meaning can no longer be the goal of interpretation, since "application … may result in multiple interpretations of a particular passage" (Trible 1978: 11). At the same time, however, interpretation for the "Muilenburg School" is not absolutely relative. Thus, Trible, for example, would argue that "the text, as form and content, limits constructions of itself and does, in fact, stand as a potential witness against all readings" (1978: 1). But such an interpretation of form and content has little to do with Muilenburg's quest to recover the historical past through an author's intent.

d. Comparison to ANE Literature. Muilenburg emphasized the important role of comparative analysis of ANE forms of speech as an important aspect of rhetorical criticism. He singled out this aspect of Gunkel's work as having freed biblical literature from the parochialism of the critics' presuppositions, and he suggested that it should also be established as a central tool for studying Hebrew rhetoric (1969: 1, 3–4, 8). Although this call for comparative methodology was echoed in one of the earliest articles on rhetorical criticism (Greenwood 1970: 424–25), comparison has not been a central feature of the "Muilenburg School." Rather, rhetorical criticism has evolved into a method which focuses on "close readings" of singular texts, which are usually studied in isolation.

Nevertheless, in spite of these very basic hermeneutical contrasts that have been outlined, it is important to underscore again that the central point of continuity between the rhetorical criticism of Muilenburg and the "Muilenburg School" is the common concern to study stylistics of Hebrew prose and poetry.

C. Classical Rhetoric and Rhetorical Criticism

Although the most recent discussions that call for a change in rhetorical criticism are taking place in NT studies, they must be included in this essay because these discussions engage the work of Muilenburg and will certainly make their way into the study of the Hebrew Bible. Recent discussion of rhetorical criticism has sought to expand the scope of the method beyond a descriptive study of stylistics, in order to probe the persuasive power of texts to influence action or practice. George A. Kennedy provides illustration when he writes: "The identification of rhetoric with style … represents a limitation and to some extent a distortion of the discipline of rhetoric …" He then goes on to define rhetoric as "that quality in discourse by which a speaker or writer seeks to accomplish his purpose" (1984: 1). Thus rhetorical criticism, according to Kennedy, is not a descriptive study of style in which a text is viewed intrinsically; rather it is a more historical method, in which texts are studied "from the point of view of the author's or editor's intent, the unified results, and how it would be perceived by an audience or near contemporaries" (1984: 4–5).

The issues motivating this redefinition of rhetorical criticism are both historical and hermeneutical.

The historical reason for the emphasis on persuasion in a definition of rhetorical criticism (rather than simply description) arises from the influence of classical rhetoric, where argumentation for the purpose of

influencing action was central (Kennedy 1984). In some respects the influence of classical rhetoric in NT studies fulfills the call for comparative literature that was present in Muilenburg's original proposal for rhetorical criticism, but not pursued by the "Muilenburg School." How such a comparison would apply to ancient Near Eastern literature in general and the Hebrew Bible in particular is yet to be seen.

The hermeneutical reasons are more complex, yet they, too, arise in part from the study of classical rhetoric. In particular, the emphasis on persuasion in the construction of a text raises two hermeneutical questions that are becoming central to recent discussion of rhetorical criticism: First, how is experience organized and presented in a text? Second, how does this organization of the text precondition certain attitudes toward the world and other people in both the writer and the reader? (See Kennedy 1984: 1–38; Wuellner 1987: 448–54.)

When these questions are incorporated into a definition of rhetorical criticism, then texts can no longer be viewed as isolated objects of study in which stylistic features are described. Rather, they are placed back within their historical context, in order to see how "cultural preconceptions" inevitably influence the writers and the readers (Kennedy 1984: 5; Wuellner 1987: 453). The aim of the rhetorical critic, with this more expanded view of the inherent interrelationship of text and world, is to describe the ideology that is embedded in the text (also described as the "argumentative or rhetorical situation" [Kennedy 1984: 34–36]), in order to see how its very construction has preconditioned experience for both the writer and the reader.

NT RHETORIC AND RHETORICAL CRITICISM

A. Rhetoric and the Aim of Rhetorical Criticism
B. The History of Interest in Biblical Rhetoric
C. The Revival of Rhetorical Criticism
D. Contemporary Focus on NT Rhetoric

A. Rhetoric and the Aim of Rhetorical Criticism

For Hyde and Smith (1979: 354), "the showing of understanding by interpretation, such that meaning is made known, is rhetoric in the purest sense." Rhetorical critics, rhetors themselves, attempt to interpret and recreate the past rhetorical phenomena by showing their meaning for the critics' own cultural situations. The rhetorical critics must be cognizant of the rhetors' and their own hermeneutical situations, the parameters of rationality of both their cultures, and the actual and potential consciousness and receptivity in both audience situations in order to make understandable the rhetorical phenomena under investigation.

From a literary perspective, Corbett (1969: xxii–xxviii) sees rhetoric as the art of making judicious choices from among available resources and according to certain norms such as subject matter, genre,

occasion, purpose, author, and audience (the principal norm). Rhetorical (or pragmatic) criticism considers a work of art chiefly as a means to an end, as a vehicle of communication and interaction between the author and the audience, and investigates the use of traditional devices to produce an effect in an audience. It is an internal criticism that focuses on the rhetoric of the text itself, but also works outward to considerations of author, audience, and their interrelationships. The critics can detect some idea of the author, real and implied, from the text's rhetorical strategies. The critics can also derive information about the ideal and real reader from the dispositions and desired effects of the work on the reader (implied reader) and from those elements of the work which are capable of producing an effect on certain kinds of audiences. While rhetorical criticism can unfold the communication of aesthetic imagination, it works best where the literary work "has designs on" the audience. While some critics may use versions of classical rhetorical categories (Frye, Booth, Perelman, Winterowd) they will all consider, largely synchronically, the whole piece in an overview: the author, the particular and general circumstances, the literary medium, the particular stance, the individual use of the form, the style, the diction and rhetorical figures, the compositional ratios, and the effectiveness of the communication of meaning.

Adhering closely to classical rhetoric and Aristotle's definition of rhetoric as "the art of discovering the best possible means of persuasion in regard to any subject whatever," Conley (1983: 23–24) notes that rhetoric locates or constitutes the issues, supplies the means for setting out arguments and conclusions, and shows the way toward resolution. A rhetorical hermeneutic is a disciplined sensitivity to the significance of language and the connections between thoughts, an awareness of the originality which uncovers new "facts" by a combination of concepts and terms and by transforming those facts into strategies of argumentation (*topoi*) or relating them to commonplaces, a study of connections among theses and between them and problems of life and action. The rhetorical devices and procedures which carry the argument forward give the critics access to the strategy of the author's text. Thus, rhetorical criticism is a synchronic study of literary texts and their strategies of communication and persuasion. Like "new criticism," rhetorical criticism concentrates on the given text without delving into its sources, historical origins and transmission, or authorship. For Wuellner (1985: 1–2) rhetorical criticism, unlike literary criticism with its focus on content and design, considers the text's language as a social reality by which the author communicates and influences others. It also aims to establish the context of the work, not the historical critics' setting and genre but the complex of conventions and norms which express and shape the author's and audience's attitudes toward their conceptual and social worlds.

B. The History of Interest in Biblical Rhetoric

Alexandria, a center of classical learning, can be considered the founding center of biblical criticism. Philo, who reflects the city's interpretive traditions, sometimes employs fanciful allegorizing, but also considers grammar, rhetoric, etymology, numerology, and other rhetorical techniques.

From Paul on, the allegorical method exerted a pull on Christian interpretation away from a literal reading, which was both a classical and a Jewish interpretive option. Thus, despite Irenaeus' alarm over gnostic allegorical interpretations of Scripture which distorted the text and interpreted out of context and which led him to stress the historical and literal reality of the OT, he still recognized an admixture of OT figures and types of the new covenant and ultimately relied not on a literal-rhetorical method but on the authoritative interpretations of the "rule of faith" (*regula fidei*). Origen, who sometimes found the spiritual meaning in the literal text, advanced the allegorical method, as did his successor Clement.

In the interpretation of the Antioch school, the arbitrary "Platonic" allegorizing of Alexandria gave way to philological, grammatical, literal, "Aristotelian" interests. The Antiochenes' literal sense included the whole meaning of the author, his metaphors and figures, exposition (*theoria*), and grammatical construction and words, along with a spiritual sense achieved through limited typological interpretation. The school lost influence with Theodore of Mopsuestia's condemnation as a heretic, the loss of Antiochene manuscripts and the greater suitability of Alexandrian interpretations to the emotional needs and world outlook of later centuries.

Among the Latin exegetes some, like Jerome, himself a rhetorician and philologist, regarded classical studies as a propaedeutic to the study of the Bible. Inconsistent with his comments on style, clarity,

literary genre, and rhetorical form were his allegorical, typological, and moral interpretations even of historical books. Unfortunately, a preoccupation with erudite but curious detail and the decline in knowledge of classical languages and philology eventually left the allegorical method as the only accessible mode of interpretation.

The last major proponent of literal, rhetorical reading was the classically trained Augustine. His *De Doctrina Christiana* prescribed all the "arts," including rhetorical norms, for exegesis. He advocated the literal sense (*locutio propria*) over the allegorical or figurative (*locutio figurata*), but he also applied a spiritual reading (*lectio spiritualis*) to the literal to arrive at the intent of the author.

Smalley (1983: 41–42) finds that medieval exegetes, already inclined toward the moral and spiritual meaning of the texts, tended to discover these through allegorical exegesis, which led to the loss of the literal reading. Consequently, with exceptions like the early school of St. Victor, the widely practiced moral (tropological), figurative (allegorical), and mystical (anagogical) interpretations prevailed over the literary-rhetorically informed literal and historical readings. A more literal and rational interpretive tradition, albeit methodologically deficient, among Jewish scholars like Rashi and Maimonides provided insights into the OT for some of the 12th-century Victorines and 13th-century friars. As the spiritual and moralizing interpretations declined into exaggeration, these Dominican and Franciscan friars, like Bonaventure, Albert the Great, and Thomas Aquinas, advanced attention to the literal sense and the intent of the sacred authors.

Not until the Renaissance, however, did interpretation according to the literal and historical sense become possible again. Erasmus typifies the Renaissance humanist equipped by classical learning to deal with the text critical, rhetorical, and literary questions. Unlike Erasmus, the Reformation biblical interpreters largely dropped the allegorical and anagogical interpretations, retained but reevaluated the tropological sense and typological analysis, and applied the humanists' rediscovered classical rhetoric to reach the original meaning of the texts. Counter-Reformation biblicists also focused on the literal/historical sense, which sometimes uses figurative language, but retained the possibility of the three traditional spiritual senses where the text requires them. The Augustinian insight of finding the spiritual meaning in the literal reading turned them all to grammar and rhetoric for the rules for a proper textual understanding.

In the 18th century, a realistic sensibility and the Deist challenge to the evidence for revelation led, as Frei (1974: 130–36) explains, to interest in what actually happened and how the accounts achieved their current shape. Tentative efforts at formal analysis on aesthetic grounds, such as Bishop Lowth's *De sacra poesi Hebraeorum* (1753), did not establish a critical alternative to the prevailing historical concerns, and the 19th and 20th centuries saw the development and dominance of the historical critical methodology.

C. The Revival of Rhetorical Criticism

Rhetorical criticism, whose antecedents reach to the origins of biblical study, has only recently regained its place in biblical scholarship. Contributing to its long disuse was the inapplicability of classical critical canons, an assumption for the OT and, if applied, leading to a conclusion of unfavorable literary comparisons for the NT (e.g., the gospels were folk tales to Dibelius, the Pauline Epistles were like nonliterary correspondence to Deissmann). Then, too, classical rhetorical principles no longer necessarily guide the craft of today's writers and literary critics. Moreover, in the post-Enlightenment biblical critical agenda the literary and rhetorical aspects of biblical texts were studied to answer questions of information external to the texts themselves. Finally, the sacred character of the Bible largely discouraged analysis according to secular critical methods.

Frei (1974: 135–36) observes that historical critics look to what the narrative refers to or to the reconstructed historical context outside the text which explains it. Practitioners of the newer methodologies, whether literary, structuralist, or rhetorical, seek the meaning that is found in the text, the narrative structure or sequence. They explicate what Wilder (1971: xxii) calls the "inseparable relation of form and content in all texts." In short, what is said cannot be separated from how it is said, whether in writing or in oral speech.

Rhetorical analyses were carried out in the past (cf. J. Weiss' study of Pauline rhetoric in the 1897 Festschrift for B. Weiss and Cadbury's Lukan studies in the 1920s) but historical criticism's successful results maintained its predominance. Muilenburg's influential assessment of the gains and deficiencies of the then methodologically dominant OT form criticism ended with his proposal of attention to the rhetoric of the biblical writings as a complement to historical criticism. Rhetorical criticism's attention to the texts themselves and to the authors' patterns of words and motifs, to their style, and to the linguistic and rhetorical phenomena they employ would balance form criticism's focus on the typical, both in genre and setting. Nor was the literary focus to obscure attention to the orality behind the texts. His methodological outline specifies: (1) definition of the limits or scope of the literary unit; (2) recognition of the structure of the composition and the configuration of its component parts.

Similarly, the classicist Kennedy proposes to examine the NT text "from the point of view of the author's or editor's intent, the unified results, and how it would be perceived by an audience of near contemporaries." He draws heavily upon classical rhetoric, convinced that rhetoric is "a universal phenomenon which is conditioned by basic workings of the human mind and heart and by the nature of all human society." His brief five-step method specifies: (1) Determination of the rhetorical unit as complete in itself or part of a larger unit. (2) Definition of the rhetorical situation, i.e., the persons, events, objects, and relations, often a single "problem," which call for and in part determine the rhetor's response. Included here is attention to the basic issue (*stasis*), i.e., whether a matter of fact, definition, quality, or jurisdiction, and to the species of discourse, i.e., judicial or forensic to effect judgment about the past, deliberative or political to urge a future action, epideictic or ceremonial praise or blame which seeks to affect a present evaluation or to persuade decision. (3) Consideration of the arrangement of the material, its subdivisions, the persuasive effects of the parts, and their cohesion in meeting the rhetorical situation, noting assumptions, topics, formal features (e.g., enthymemes), and rhetorical strategy, i.e., to convince by character (*ēthos*) and reasoned argument (*logos*) or to persuade by emotion (*pathos*). Classical conventions of speech writing and epistolography and the oral character of NT and classical works affect rhetorical analysis. (4) Consideration of devices of style and their rhetorical function. (5) Overview and evaluation of the impact of the entire unit and its details upon the rhetorical situation.

D. Contemporary Focus on NT Rhetoric

NT critics were quick to follow Wilder's groundbreaking theoretical observations on NT rhetoric with studies like Beardslee's on the methodology of NT literary and rhetorical criticism, Via's on the parables, Funk's on the Pauline letters, and Talbert's on the paradigmatic structure of Luke-Acts. Robbins and Patton find that many NT critics (TeSelle, Perrin, Tannehill, Trible, Crossan, Talbert, Funk) apply the theoretical developments of contemporary literary critics and philosophers of language and literature (Black, Brooks, Burke, Frye, Krieger, Langer, Ong, Richards, Wheelwright) to the analyses of the rhetoric of NT literature. Sternberg, for the OT, and Rhoads and Michie, for the NT, employ a mixed literary-rhetorical study relating rhetorical features to other narrative elements to describe the narrative's impact on the reader, ancient or modern. Fowler employs a similar literary-rhetorical methodology in his study of Mark's Messianic Secret. These studies demonstrate the relation of biblical literature to general world literature, thereby securing a place for biblical critics among their secular peers, and they make immediate the impact of the biblical texts on contemporary readers.

Pursuing contemporary questions of audience reaction and social background but with more attention to the classical milieu, Robbins follows Mark's transformations of rhetorical forms to discover the sociorhetorical pattern of the disciple-gathering teacher, common to the Greco-Roman world. Kennedy's treatments, a mixture of thorough analyses and scattered labeling, of rhetorical units from the gospels, Acts, and the Pauline letters find mixed success and even disagreement (with Betz on Galatians and Lahurd on Matthew). More helpful are Dibelius' discussion of the rhetoric and form of the speeches in Acts and more recent studies like those of Wills, Black, and Fiore on the interplay of Greek rhetoric, Jewish and Christian sermons, and NT literature. For the Thessalonian correspondence, Malherbe has delineated the rhetorical situation and Paul's response and Betz's use of Socratic traditions has illuminated Paul's apologetic rhetoric in 2 Corinthians. Church's analysis of Philemon carefully

demonstrates the use of deliberative rhetoric. Stowers' study of the classical diatribe clarifies misconceptions of that rhetorical feature in the Pauline letters and establishes it in its literary and instructional context. His introduction to Greco-Roman letter writing updates the work of Doty and White on epistolary form and provides rhetorical critics with a description of classical epistolography to complement the standard discussions of literary and oral rhetoric. Wuellner's studies of Pauline rhetoric demonstrate how the method ought to identify not only rhetorical elements and structure but also their function in the flow of argumentation, how the method can shed light on the function of the epistolary elements identified by form critics, and how misleading a consideration of content (the Law) can be if it is not related to rhetorical aim (epideictic in Romans but forensic in Galatians). The rhetorical criticism based on the principles of classical rhetoric has a historical perspective and thus directly complements traditional historical criticism.

BENJAMIN FIORE

RHO. The seventeenth letter of the Greek alphabet.

RHODA (PERSON) [Gk *Rhodē* (Ῥοδη)]. The servant girl of Mary (mother of John Mark) mentioned only in Acts 12:12–17. Hers is not a proper name, but a nickname, a diminutive of the word for rosebud, meaning little rose. Such nicknames were common for household servants (Haenchen 1971: 385). She is called a *paidiskē*,which literally means "little girl" but in the NT is always used of someone of servant class (cf. Matt 26:69; Mark 14:66, 69; Luke 22:56; Acts 16:16; and especially John 18:17).

Rhoda is portrayed as a household servant in charge of (among other things) answering the courtyard gate that opens on to the street. Luke's presentation suggests that Rhoda was a Christian taking part in a prayer meeting when Peter arrived at the house of Mary, mother of John Mark. Rhoda goes to the courtyard entrance, recognizes Peter's voice, and in her excitement returns to the meeting without opening the gate. However, when she announces Peter's presence at the door, she is declared to be "out of her mind." This may reflect prejudice against a woman's, particularly a female servant's, word of witness.

Nevertheless, as Luke tells the story, Rhoda is vindicated by her persistence in claiming Peter's presence. Thus Luke presents Rhoda as an example to his audience that the testimony of a woman, even a female servant, can be trustworthy. He may be intentionally countering tendencies to devalue the word of a woman by showing that even a servant girl like Rhoda can be trusted.

RHODES (PLACE) [Gk *Rhodos* (Ῥοδος)]. An island 45 miles long and 22 miles wide located in the SE Aegean Sea between Crete and Asia Minor. The capital of the island, also named Rhodes, was a port city on the NE shore of the island. According to Pindar (*Ol.* 7.54–76), the island emerged out of the sea and was a portion of the sun god Apollo (Helios), whose cult continued there throughout antiquity. Three noteworthy ancient foundations were Ialysos, Kameiros, and Lindos, named in honor of the three grandsons of Helios and the nymph Rhodos, daughter of Aphrodite. (For the ancient legends pertaining to Rhodes, see especially Pind. *Ol.* 7; Apollod. *Bibl.* 3.2; Diod. Sic. 5.55–59; Strabo 14.2.6–8; and Ath. 8.360d–61c).

Mt. Atabyrion (1,233 m), once forested with cypress and conifers used for shipbuilding, was a landmark for ancient mariners. Zeus Atabyrios was worshipped on the summit where parts of a walled precinct, which may have been an ancient temple, have survived. A number of dedications to the god have survived, including small bronze bulls. The name of the mountain appears to be the Greek form of the Semitic Tabor.

The island played an influential economic and political role in antiquity and supported a large population. Harbors on the island's E coast were of strategic importance, controlling entry to the Aegean Sea. A number of classical sources (Polybius, Diodorus, Strabo, Dio Chrysostom, and Aristides) extol the achievements of Rhodes in politics, economics, and culture. The island was also ideally situated as a meeting point for the sea routes which converged from the Greek peninsula and islands, from Palestine and Cypress, and from Asia Minor. Considerable quantities of grain, fruit and vegetables, olives, honey, wine, and crafted wares were exported from the island.

A Minoan colony was planted at Ialysos, controlling the entry to the Aegean, around 1600 B.C.E. and flourished until ca. 1425 B.C.E. Evidence for trade with the coastal cities of Syria-Palestine, including Ugarit, exists from the 16th century B.C.E. By 1450 B.C.E. a Mycenean enclave was established which apparently flourished alongside the Minoan foundation. By 1425 B.C.E. the Minoan colonists had abandoned Rhodes, marking a permanent decline in the Cretan thalassocracy in the E Mediterranean. At the time of the fall there is evidence for an acceleration of Greek influence on the island.

The Mycenean settlers on Rhodes traded primarily with the coastal regions of Asia Minor and the Levant, although there is evidence of their ware farther afield. Strong fortifications on Rhodes protected the caravan terminus region. Apparently the Myceneans on Rhodes remained independent of the Myceneans on Knossos, opening new routes for trade and piracy and ultimately supplanting Crete's control of the S Aegean.

From the reign of the Hittite kings Muwatallis and his grandson Tudkhaliyas IV (ca. 1250 B.C.E.), correspondences mention the kingdom of the Ahhiyawa, Hittite for either Achaiwa or Ageiwa. Achaians and Argives are almost interchangeable in Homer for the Greek tribes fighting against Troy. One of the headquarters for the Ahhiyawa was probably Rhodes. These E Myceneans joined forces with the Sea Peoples against Pharaoh Merneptah in his 5th year (1233 B.C.E.). They were ultimately defeated in two large-scale battles at the end of the Bronze Age, the first during the reign of Rameses III (ca. 1187), commemorated on the reliefs from Medinet Habu and the second at the hand of the Hittite king Šuppiluliumas II (ca. 1180) off the coast of Cyprus.

The Myceneans of Rhodes were later listed in Homer's Achean Catalogue. Continuity on Rhodes between the 12th-century Mycenean wares and the proto-geometric wares of the Dark Ages strongly suggests that the Mycenean settlers were not displaced by the Dorian invasions at the close of the Bronze Age. During the ensuing Dark Ages, the island continued to develop as a commercial center, and carved Phoenician and Syrian ivories found on the island illustrate that trade continued with the E.

By 650 B.C.E. Rhodes had completely outstripped Crete for primacy in the E Mediterranean and was second only to Corinth in the W. Rhodian terracotta are found throughout the Greek world after 610 B.C.E. Trade enriched the island as it enjoyed an intermediary position between Egypt and Ionia, and Rhodes planted important and widespread colonies on Sicily, the Adriatic coast of Italy, and the Balearic islands.

From the latter part of the 6th century to the early years of the 5th century B.C.E. Rhodes was under Persian control. After the Persian wars, Rhodes joined the Delian League, further enhancing the island's commercial connections. In 408 B.C.E., Kameiros, Ialysos, and Lindos founded a federal capital on a man-made harbor, naming the city Rhodes. Trade through the newly established portside capital brought great wealth and political power.

The most pronounced symbol of Rhodes' economic and political success was the famous Colossus of Rhodes. The statue portrayed Apollo (Helios), the sun god, and was considered to be one of the seven wonders of the ancient world. The 90-foot-high bronze statue was built between 304 and 292 B.C.E. to commemorate a victory over Demetrius (sarcastically called Poliorcetes, "the sacker of cities") in 304/3, who was unable to sack the capital (Diodoros 20.81–88, 91–100). The Byzantine Philo provides details on the construction of the giant monument. The Colossus did not bestride the harbor mouth, nor was it built on the end of a mole, but rather was probably erected in the center of town. The statue was broken off at the knees by an earthquake in 227/6 B.C.E. and was completely demolished by Arabs in 653 C.E.

The winged Nike of Samothrace was another famous monument dedicated by the citizens of Rhodes to commemorate a victory in 190 B.C.E. over Antiochus III. The statue, which now resides at the Louvre, was reconstructed by Karl Lehman (d. 1960). Other victory prows, not nearly as splendorous, have been excavated on the island.

Rhodes reached a pinnacle of power during the Hellenistic period, subsidizing political and economic activities in other Greek regions. Its preeminence was directly dependent on its relationship with Egypt. As a cultural center during the Hellenistic and Roman periods, Rhodes was the home of the epic poet Apollonius (author of *Argonautica*), a sculptural school which produced the *Laocoön*, and the philosophical schools of Panaetius and Poseidonius. After the Battle of Pydna in 167 B.C.E., Rome

undermined Rhodes' economic advantage by declaring Delos a free harbor. The island was further subjugated by Crassus in 43 B.C.E., although it remained a popular resort center throughout the Roman imperial period.

The Hellenistic city of Rhodes had a temple of Aphrodite just W of the harbor and a shrine of Dionysos. On or near the acropolis were at least three more temples, a stadium, and a gymnasium with a theaterlike lecture hall. Toward the N are foundations of the temple of Zeus and Athena and some distance farther S is the Temenos of Pythian Apollo.

The city, renowned by ancients for its beauty, was planned by the famous architect Hippodamus of Miletus, who created a harmonious effect which impressed later writers (Aristides 43.6; Lucian *Am.* 8). The extant remains from Rhodes, however, are comparatively meager. The island suffered disastrous earthquakes in 345 and 515 C.E., and the city was eventually ransacked and fortified by the medieval Knights of St. John.

Rhodes is mentioned several times by Josephus in connection with Herod the Great's travels. On a winter journey Herod passed Rhodes on his way to the Italian port of Brundisium in order to intercede with the Romans on his brother's behalf (*Ant* 14.370–78; and *JW* 1.277–81). After the Battle of Actium in 30 B.C.E. Herod traveled to Rhodes and humbled himself before Octavian, who ratified Herod's kingship over Judea and bestowed further honors upon him. Herod later sailed along the W coast of Asia Minor by way of Rhodes to meet Agrippa, Augustus' chief lieutenant at Sinope in 14 B.C.E. (*Ant* 16.16–26). For his own repute in Rhodes, Herod rebuilt the temple of the Pythian Apollo and made grants to the inhabitants for shipbuilding, probably to enhance the Judean economy.

Rhodes is mentioned among the peoples and nations who traded with Tyre, in a passage describing Tyre's wealth (Ezek 27:15). The RSV and the NEB, following a textual variation (LXX *huoi Rhodiōn* and the Peshitta *bny rdn*), translate the passage "the sons of Rhodes." However, the AV, following the MT and the Vg, translates the passage "the sons of Dedan." If the prophet is listing the peoples from W to E, which seems likely, Rhodes occurs in its proper position in v 15 and Dedan in v 20, as found in the RSV and NEB.

The Roman consul sent a letter in 142 B.C.E. to the city of Rhodes concerning relations between Rome and the Maccabean state, providing the earliest extant testimony for Jewish inhabitants on the island (1 Macc 15:23). Jewish maritime trade probably existed between Alexandrian and Rhodian Jews prior to 142 B.C.E., despite the silence of Hellenistic epigraphic sources. Apollonius Molon (1st century B.C.E.) and Posidonius of Apamea (135–51 B.C.E.) each settled in Rhodes and wrote anti-Jewish works (see Eusebius *Praep. Evang.* 9.19.1–3; and Josephus *AgAp* 2.16, 79–80, 89, 91–96, 145, 148, 236, 255, 258, and 295). Both supplied material for Apion's later attack on the Jews (*AgAp* 2.79).

There is an interesting report of a Jewish *grammaticus* named Diogenus who taught every Sabbath in Rhodes between 6 B.C.E. and 2 C.E. (Suetonius *Vit. Tib.* 32.2). There are also several Jewish inscriptions from the imperial period that bear further evidence of a Jewish community in Rhodes (*IG* 12.1, no. 11; and 12.1, no. 593).

Rhodes is mentioned as one of Paul's stops on his way to Jerusalem (Acts 21:1). Paul may have attempted to convert the Rhodian Jews to Christianity on his journey. According to tradition, Paul landed on an inlet to the S of the main harbor at Lindos.

SCOTT T. CARROLL

RHODOCUS (PERSON) [Gk *Rhodokos* (Ῥοδοκος)]. Described in 2 Macc 13:21 as a traitor among the Jewish forces who gave Antiochus V Eupator information during the siege of Beth-zur. He is not mentioned in the parallel account of these events in 1 Maccabees. The name, unattested elsewhere in Jewish sources, may be of Iranian origin (Goldstein *2 Maccabees* AB, 466). This collaborationist was sought out, caught and *katekleisthē* (imprisoned). The latter term may be a euphemism for killing him (Abel 1949: 455).

RIBAI (PERSON) [Heb *rîbay* (רִיבַי)]. Mentioned only in 2 Sam 23:29 (= 1 Chr 11:31, where LXX has *Ribai*) as the father of Ithai, one of "the Thirty," David's corps of military elite (*gibbōrim*). See DAVID'S CHAMPIONS . Ribai was from Gibeah of the Benjamites, the famous "Gibeah of Saul" (1 Sam 11:4), modern Tell el-Ful (M.R. 172136), approximately 3.5 miles N of Jerusalem. "Ribai," shortened from the verbal name form, probably means "May Yahweh plead the case (of the name giver)."

DAVID L. THOMPSON

RIBLAH (PLACE) [Heb *riblâ* (רִבְלָה)]. A city "in the land of Hamath" in Syria (2 Kgs 23:33; 25:21; Jer 39:5; 52:9, 27). Riblah is located 11 km S of Kadesh, between Kadesh and Arnaim (*ANET,* 256) on the E bank of the Orontes River. The ruins of Riblah are located near a modern village, Ribleh, ca. 58 km NE of Baalbek (34°N, 36°12´E), in a wide plain suitable for a large military campsite.

Rameses II records that his troops passed the vicinities of Kadesh, Shabtuna, and Arnaim. The Battle of Kadesh between Rameses (19th Dynasty) and the Hittite king Muwatallis was fought there in the beginning of the 13th century B.C. Shabtuna, between Kadesh and Arnaim, may be identified with Riblah. If the name Riblah is etymologically related to the Aramaic word ʾ*arbēlā*ʾ "sieve," Riblah may mean "shaken (city)." The shapes of *reš* and *dalet* of the Old Aramaic script from 8th century B.C. to 3d century B.C. are more similar than the *reš* and *dalet* of the Aramaic-Hebrew square script of the MT. Probably for this reason some of the Jews started to call this city Diblah, euphonious to *dĕbēlâ,* "pressed fig cake," the meaning of which is related to Diblathaim in Moab (Num 33:46). Diblah may also be related to a Babylonian word *diblu* (or *dublu*), "foundation platform."

The Riblah of Syria was used as headquarters by Pharaoh Neco II in his military expedition to the N after the battles at Megiddo and Kadesh S of Lake Ḥoms. He killed Josiah in 609 B.C. at Megiddo. Jehoahaz was put on the throne by popular demand, although he was not the eldest son of Josiah. Neco probably feared Jehoahaz' desire for revenge against him for the death of his father. He also feared that Jehoahaz might follow his father's anti-Egyptian policies. Therefore, Neco summoned him to Riblah after a reign of three months "so that he might not reign in Jerusalem." Later he took Jehoahaz with him to Egypt and placed his brother on the throne (2 Kgs 23:33, 34).

Riblah also became the headquarters of Nebuchadnezzar during his third expedition against Jerusalem in 588–586 B.C. After two years of siege, the last king of Judah, Zedekiah, escaped from Jerusalem but was captured near Jericho and brought to Nebuchadnezzar at Riblah. His sons were killed in his presence, his eyes were plucked out, and he was deported to Babylon in chains where he remained a prisoner until the day of his death (2 Kgs 25:1–7; Jer 52:1–11).

If Lebo-Hamath (or the Entrance to Hamath) is located S of Riblah, "Shepham of Riblah" (Num 34:11), which is S of Lebo-Hamath, cannot be identified with the Riblah in Syria. "Hamath" designates both the city of Hamath and the territorial land of Hamath which included the area of the Orontes Valley. So the geographical name "Entrance to Hamath" indicates the area of the source of the Orontes River, not necessarily a city. Likewise, "Shepham of Riblah" (Num 34:11), which is better than the translation "Shepham to Riblah," should be differentiated from the "Riblah of Hamath" and the other Shepham in Gad (1 Chr 5:12). This "Shepham of Riblah" is yet an unidentified point on the NE boundary of the land of Israel. See also *MBA,* map nos. 34, 44, 148, 159, 163; and *EncJud* 14: 151–52.

YOSHITAKA KOBAYASHI

RIDDLES. In the ancient world riddles concealed valuable information from the unworthy while divulging important facts to those deserving them. That simultaneous clue and trap resulted from cipher language, imagery that functioned on two levels, the ordinary meaning and a special sense recognized only by perceptive persons. Often the hidden meaning enabled groups to detect outsiders, who had no idea what the cipher communicated to those who possessed secret data. In other circumstances, less

threatening, riddles enlivened ordinary discourse, particularly at weddings, banquets, and intellectual gatherings.

One of the oldest riddles describes the academy as follows: "One whose eyes are closed enters it; one whose eyes have been opened departs from it." This Sumerian riddle uses "eyes" in two senses, ordinary sight and seeing as the equivalent of understanding. Similarly, "opened" and "closed" refer to a literal as well as a symbolic reality. The trap operates on the literal level, tempting the riddlee to offer one of two answers, possibly three: sleep, life, and sex. Astute students who recognize that eyes mirror the soul advance a step further toward solving the riddle. Knowledge acquired through experience opens eyes previously closed by prejudice, inaccurate information, and ignorance.

According to Num 12:6–8, the deity regularly communicated with prophets by means of veiled speech, either visions or dreams, whereas Moses enjoyed preferred status. With him Yahweh spoke mouth to mouth, clearly, and not in riddles (*bĕḥîdōt*). This early tradition implies that Israel's seers and prophets had to interpret their enigmatic visions and oracles in the light of the faith by which they lived. Enigma thus belonged to the essence of prophecy, in this ancient writer's view. One thinks immediately of Amos' visions of ordinary things such as a basket of summer fruit that conveyed to him quite a chilling message of finality, or of Jeremiah's vision of an almond branch that reminded him of Yahweh's watchful eye that overlooks no villainy.

The introduction to the initial collection in the book of Proverbs, and perhaps to the whole book, concludes the goal of instruction with these words: "to understand a proverb (*māšāl*) and a figure (*mĕlîṣâ*), the words of the wise and their riddles (*ḥîdōtām*, 1:6)." The 2d-century teacher, Jesus ben Sira, also emphasizes the hidden meanings and obscurities of parables as the fundamental preoccupation of professional scribes (Sir 39:1–3). Despite such conscious stress on the importance of riddles to the sages, none has survived in the corpus of biblical wisdom literature.

Given the explosive character of riddles, their disappearance occasions less astonishment. They may have persisted as disintegrated riddles, requiring modern interpreters to reconstruct their original form. Numerical proverbial sayings naturally tempt contemporary scholars to seek illumination from riddles, for in many instances one can readily rephrase the sayings in riddle form. Two examples suffice, Prov 30:18–19 and 30:20. The first alludes to movement that leaves no trace; the cipher "way" (*derek*) refers to motion and, in the punch line, dominance. The second example continues the imagery but adds two other cipher words, "mouth" (*pîhā*) and "eats" (*ʾākĕlâ*). Behind this imagery lies the mythic notion of woman as devourer in the sexual act and a widespread understanding of oral sex, easily documented from Egyptian, Mesopotamian, and Greek sources.

Other disintegrated riddles seem to exist throughout the book of Proverbs and Song of Songs. The reference to one's wife as a cistern (= well) and to sperm as streams of water (Prov 5:15–16) can easily be formulated as a riddle. So can the description of a virgin lover as a locked garden and a sealed fountain (Cant 4:12). Other proverbial sayings that possess this ready transferability include the following, among others: Prov 5:15–23; 6:23–24; 16:15; 20:27; 23:27, 29–35; 25:2–3, and 27:20.

Two psalms may preserve riddles, now partially transformed into an unrecognizable form. The description of the sun as a bridegroom on a journey from east to west, and the characterization of day and night as mute messengers could have existed at one time in riddle form. Similarly, Psalm 49 may derive its power from two riddles, one about the resemblance between human beings and animals and the other about the wise person who claims victory over death. Affinities with the pessimistic sayings of Agur in Prov 30:1–4 suggest that a riddle lurks behind the "human revelation" of the sage's ignorance.

Within Israel's narrative literature, riddles play a prominent role in the account of King Solomon (1 Kgs 10:1–5; 2 Chr 9:1–4). The Queen of Sheba came to Jerusalem, so the story goes, to test Solomon with difficult questions (*bĕḥîdôt*). He told her (*wayyagged*) the requisite answers to all her queries, so that nothing was hidden (*neʿlām*) from him that he did not tell her (*higgîd*). Josephus mentions riddle contests between King Hiram of Tyre and Solomon (*Ant* 8.5.3). In neither of these accounts does a single riddle appear, but a Hebrew manuscript compiled in the 15th century associates nineteen "riddles" with the visit of the Queen of Sheba, the first four of which appear in the Midrash to Proverbs. Of the nineteen, only

three qualify as riddles by using ciphers. The first refers to the womb, the ten orifices of humans, and the navel ("There is an enclosure with ten doors; when one is open nine are shut, when nine are open one is shut"). The second alludes to a ship that has been constructed out of a tree ("There is something which when living does not move, yet when its head is cut off it moves"). The third points to Jonah's experience in the belly of a huge fish ("The dead lived, the grave moves, and the dead prays: what is that?"). In these three riddles the cipher words are "doors," "head," "grave," and "dead."

The only complete riddles in the Hebrew Bible occur in the Samson narrative, only one of which is actually designated a riddle. During wedding festivities Samson poses a riddle to his thirty companions: "Food came from the eater; sweetness came from strength" (Judg 14:14). In all probability, the riddle antedates its present context and referred to vomit and sperm; both answers served to ensnare unwary Philistines. Samson adapts the riddle to his private experience, specifically the gathering of honey from the carcass of a lion which the young warrior had earlier slain. Unable to solve the riddle, and wishing to escape the consequences of their failure, the companions threaten Samson's beautiful wife repeatedly until she entices him to surrender his well-guarded secret. Equipped with this ill-gotten information, the men give their answer in the form of a question: "What is sweeter than honey? What is stronger than a lion?" and evoke his response: "If you had not plowed with my heifer, you would not have found out my riddle" (Judg 14:18). The Philistines' answer may itself conceal an earlier riddle about love, the emotion that seemed as strong as death (Cant 8:6), and Samson's sharp retort uses the ciphers "plow" and "heifer," erotic imagery that was well known in the ANE.

This story provides valuable information about the vocabulary connected with the act of riddling: *māṣā*ʾ for discovering the solution, *pātāḥ* for opening the riddle, *nāgad* in the *Hiphʿil* for posing the riddle. The account in 1 Kgs 10:1–5 suggests that the latter verb also functioned to describe the process of informing the riddler of the correct answer. The two Hebrew words for riddle, *ḥîdâ* and *mĕlîṣâ,* push the symbolic sense of *māšāl* further still. The two Greek words for riddle, *enigma* and *griphos,* capture the twofold nature of riddles, their mysterious clue and hidden trap.

Other biblical texts may contain former riddles. Two examples indicate the possibilities awaiting persistent inquirers. The obscure story of a divine messenger who divulges its name to Samson's father alludes to Yahweh's awesome deeds and demonstrates Manoah's worth when he offers a *minḥâ* sacrifice in addition to the specified burnt offering, thus suggesting a pun on his own name (Manoah and *minḥâ,* Judg 13:18–19). The book of Ecclesiastes preserves a striking observation that "a living dog is better than a dead lion" (9:4). In light of the widespread use of dog for loathsome people such as male prostitutes and lion for royalty, one can offer a sociological interpretation of this saying. It may have been used by a woman to justify remarriage to someone whose social status was decidedly inferior to that of her previous husband.

Two related forms in the ancient world occur also in the Hebrew Bible and in the Septuagint (LXX). The first, difficult questions, has survived in the books of Proverbs and Job. "Can a man carry fire in his bosom and his clothes not be burned? Or can one walk on hot coals and his feet not be scorched?" (Prov 6:27–28). "Can papyrus grow where there is no marsh? Can reeds flourish where there is no water?" (Job 8:11). Sir 1:2–3 has a slightly different form: "The sands of the seas, the drops of rain, and the days of eternity—who can count them? The height of heaven, the breadth of the earth, the abyss, and wisdom—who can search them out?"

The second related form, impossible tasks, became immensely popular in some circles where the deity's mysterious works received emphasis. The poetic exploration of the problem of evil in 2 Esdras uses this form effectively. "Count up for me those who have not yet come, and gather for me the scattered raindrops, and make the withered flowers bloom again for me" (5:36). "Show me the picture of a voice" (5:37). "Go, weigh for me the weight of fire, or measure for me a measure of wind, or call back for me the day that is past" (4:5). Likewise, the wisdom sayings of Ahiqar (see *OTP* 2:494–507) employ this particular literary device. "Build me a castle in the sky" (5:2). "Sew up for me this broken millstone" (7:20). "Twine me five cables from the sand of the river" (7:17). "If waters should stand up without earth, sparrows fly without wings, ravens become white as snow, the bitter become sweet as honey, then may

the fool become wise" (2:62). One can compare Job 11:12 ("But a stupid man will get understanding, when a wild ass's colt is born a man") and Ovid's "Then will the stag fly."

Paradoxical proverbs in Mesopotamia and in Egypt achieved the same result (e.g., see Gordon 1959). Sumerian texts yield the following: "Do not heap up a mountain in the mountains." "Do not cut off the neck of that which has had its neck cut off." "Make the distant side the nearer side." "From 3600 oxen there is no dung." "A scribe without a hand, a singer without a throat." An Egyptian existential proverb attributed to Ptahhotep (see *ANET*, p. 414) refers to "dying while alive every day."

Pseudo-catechisms emerged in Jewish and Christian instruction. These riddlelike questions introduced a playful element into education. "Who was the oldest man on earth, yet he died before his father? Methuselah." "Who was both father and grandfather to two of his children? Lot." "When was the world its narrowest? In Noah's day." Such questions focus on a few unusual circumstances in the Hebrew Bible, especially those surrounding Noah, Lot, Adam and Eve, Jonah, and Elijah.

A third related form, contest literature, has yielded the exquisite discussion in 1 Esdr 3:1–4:41 of what is strongest. The three answers—wine, the king, and women—are supplemented by a fourth, (the Lord of) truth. The Greco-Roman world also explored the strongest things in the world, and riddles were sometimes presented to guests at a party on condition that anyone failing to solve the riddle had to drink salted wine.

Riddles could even dispense with words altogether. Such symbolic or narrative riddles describe actions that convey a particular message to the observant eye. This type of riddle enabled persons to communicate politically dangerous messages without fear of exposure. For example, a young ruler asked his father for advice about improving the government; the father walked into his garden and uprooted older plants, transplanting young ones in their place; *Gen. Rab.* 67 gives a variant of this enacted riddle.

JAMES L. CRENSHAW

RIDGE OF JUDEA (PLACE) [Gk *ho priōn tēs Iodaias* (ὁ πριων της Ἰοδαιας)]. A toponymic designation in the tale of Judith (Jdt 3:9). It was one of the places where Holofernes, Nebuchadnezzar's general, encamped during his invasion of the countries of the West after they had disobeyed Nebuchadnezzar's call to arms against Arphaxad, king of Media. According to the story, Holofernes encamped S of the Plain of Esdraelon, near Dothan (M.R. 172202), between Scythopolis (Beth-shan, M.R. 197212) and Geba. Two towns are possible for the location of Geba, one being 6 km NE of Samaria (M.R. 171192), the other 6 km NE of Dor (M.R. 146228), the former more directly aligned with Dothan and Scythopolis.

Dothan is identified as "fronting the great ridge of Judea" (*tou prionos tou megalou tēs Ioudaias*). Such a description puts this land feature in the hills of N Samaria, and therefore it should not be confused with the hill country of Judah in the S. Thus, the name appears to be a misnomer, and the toponym remains obscure. Some have suggested that the reference is to the Esdraelon Valley. According to this position, the original Hebrew version mentioned "the plain (*mîšôr*) of Judea"; however, the Greek version misread the Heb *mîšôr* as *māśśôr* ("a saw"), thus translating the word by the Gk *priōn,* meaning "jagged row" or "saw." This suggestion has been questioned on the basis that elsewhere the Esdraelon is described only as a "valley" (Heb *ʿemeq*), not a "plain" (*mîšôr*; see Moore *Judith* AB, 143).

While it has been argued that the fictional genre of the book of Judith might preclude certain geographical accuracies, on the contrary, the nationalistic nature of the tale might, indeed, encourage its realistic setting. However, the difficulty of the ancient versions (e.g., the Vg 3: 14 omits this toponym) impedes any certain identification.

JOHN KUTSKO

RIGHT, RIGHT HAND. As in English, the right hand is used in Hebrew to indicate the opposite of the left (Jonah 4:11; Dan 12:7). It quite often is used as a direction, to the right of the person (2 Sam 16:6; 1 Kgs 22:19). When used as a reference to a compass point, right was the direction S, the direction of the right hand when facing E to gain one's orientation (1 Sam 23:19, 24). See also SOUTH.

The Heb *yāmîn,* "right," is paralleled by cognates in several other Semitic languages including Akkadian, Aramaic, and Arabic. The term is also found in Hebrew inscriptions, notably the Siloam Tunnel inscription.

Since right-handedness is most common, one would expect references to the strongest hand and the most skillful hand to refer to the right hand, and such is precisely the case. It is the right hand which holds the arrow, while the left holds the bow (Ezek 39:3). The right hand also apparently played the lyre while the left hand held it (Ps 137:5). The right hand of Yahweh was that which delivered Israel, shattering the enemy (Exod 15:6). Yahweh's right hand gains mighty victories for his people (Pss 20:7—Eng v 6; 44:4—Eng v 3; 98:1). By contrast, not once is Yahweh's left hand mentioned. An unusual phrase, *ʾiṭṭēr yad yāmîn,* literally, "bound of right hand," refers to left-handed warriors. Halpern has argued that the phrase does not refer to those born left-handed, and whose right hands were weaker or less dexterous, but to ones whose right hand had been bound, forcing them to become left-handed or ambidextrous, and, therefore, more skilled as a warrior (Halpern 1988:41). To have Yahweh at one's right hand virtually assured victory, for it implied that Yahweh was supplying the might for the confrontation: "The Lord is at your right hand; he will shatter kings on the day of his wrath" (Ps 110:5).

Furthermore, the right hand was the hand of special blessing. When Jacob was about to bless his grandchildren, Joseph's sons, Ephraim and Manasseh, Joseph placed the older Manasseh at his grandfather's right hand. Jacob crossed his hands to place the right hand on Ephraim. When Joseph protested, Jacob continued anyway, giving the favored position and the better blessing to the younger Ephraim (Gen 48:13–20).

In a related usage, the position of honor is regularly at the host's right hand. To be at Yahweh's right hand is to be in the position of highest honor (Ps 110:1). Often in the NT (as well as in the well-known formula of the Apostles' Creed), that position is reserved for the resurrected Jesus (Col 3:1, cf. Heb 8:1; 12:2).

The name Benjamin, literally "son of the right hand," may well indicate the special importance or blessing of this child—the second son of the favored wife, and youngest child of Jacob. The name may indicate something like "specially favored."

Only occasonially does right as a direction have a moral connotation. The author of Ecclesiastes does say: "A wise man's heart inclines him toward the right, but a fool's heart toward the left" (10:2). More often the right way is depicted as the straight and narrow, from which one is not to deviate either to the right or to the left (Deut 5:32; 17:11, 20).

JOEL F. DRINKARD, JR.

RIGHTEOUSNESS. This entry consists of four articles surveying the concept of righteousness in the OT, in early Judaism, in the non-Jewish Greco-Roman world, and in the NT

OLD TESTAMENT

The RSV renders the Hebrew *ṣedeq-ṣĕdāqâ* by a variety of words: acquittal, deliverance, honest evidence (Prov 12:17), integrity (Job 31:6), judgment, justice, prosperity, right, righteousness (most common), righteous deeds, righteous help, salvation, saving help, victory, vindication. The JB often translates the Hebrew as "integrity," especially in Isaiah 40–66 and the Psalms. These various renderings endeavor to compass the constellation of nuances that the Hebrew conveys, particularly when in parallelism with other words or when in the context of different word groups.

The meaning of words that derive from the root *ṣdq* cannot be determined *a priori.* There is no basic *ṣdq* notion that must always be present with the three radicals *ṣ-d-q.* The OT texts must not be read through the eyes of the Reformation controversies about "righteousness" and "justification," or even through Paul's letters to the Romans and Galatians. The OT writers were not aware of the problems of the Church of the 1st or 16th centuries. The words and phrases, "righteousness," "justification," "he … whose sin is covered … to whom the Lord imputes no iniquity" (RSV Ps 32:1–2; cf. JB, NEB, NIV, AB), evoke theological associations which must be laid aside when dealing with the Heb terms *ṣedeq-ṣĕdāqâ.*

———

A. Cognate Background of *ṣdq*

The root *ṣdq* is West Semitic in origin and is well attested in this language group:

1. Akkadian. The CAD has only one entry for *ṣaduq* and describes the word as an adjective meaning "right," "just." Abdu-hepa of Jerusalem (14th century B.C.) writes to the king of Egypt, "See, my Lord, I am right (*ṣa-du-uq*) about the people of GN" Abdu-hepa is acting as he should in the king's interest.

2. Amorite. The word *ṣaduq* occurs as a component of a number of Amorite names in which it is probably a theophorous element; *ṣidq* is rendered "justice," "rightness" by Huffmon (*APNM,* 256–57), who notes that the root is common Semitic, except Akkadian.

3. Old South Arabic. The verb *ṣdq* means "to grant, concede, fulfill an obligation, keep faith with (?)"; the noun means "right, due, truth, reality (?)"; the adjective means "proper, appropriate," with the nuances of "happy and fortunate" (Meyer 1966: 229; *DOSA,* 416–18).

4. Ugaritic. The word *ṣdq* is found in a number of proper names in the Ras Shamra texts (*UT,* 472–73). In the KRT text *ṣdqh* is an abstract noun in parallelism with *yšrh* (Fisher 1972: 320); Gray (1965: 132, n. 7) renders the words as "legitimate wife" (wife of *ṣdqh*), as does Gordon (1949: 67). The king of Ugarit is described as *bʿl ṣdq* (Gray 1966: 175–76), which may mean "legitimate king" or perhaps "lord of order," i.e., the one who brings right order or prosperity into life by giving the rain. Further information is found in Fisher (1981: 132, 203, 406–10).

5. Northwest Semitic Inscriptions. The word *ṣdq* occurs in a number of Aramaic and Phoenician inscriptions the text of which, with German translation and comments, may be found in the three Donner-Röllig (*KAI*) volumes; there is an English translation of some of these in *ANET* (499–505, 653–62). The words *ṣdq* and *yšr* occur together in the 10th-century Yeḥimilk inscription from Byblos describing "a righteous king and an upright king" (*ANET,* 499; *KAI* 1: 1; 2: 6); Swetnam (1965: 32) argues for "legitimate" instead of "righteous," Herrmann (1958: 22) for "lawful" referring to Jer 23:5, *smḥ ṣdq,* "a righteous, lawful branch." The Jeremiah phrase is found in the Phoenician Lapēthos inscription (*KAI* 1: 10; 2: 60–61) from Cyprus, 3d century B.C. Cooke (1903: 82) proposes "legitimate offspring"; Swetnam (1965: 29–31) "rightful scion"; *KAI* "legitimer Spross." In a bilingual inscription from Karatepe (8th century B.C.), Azitwadda narrates his good deeds and says that "every king considered me his father because of my righteousness (*bṣdqy*) and my wisdom and the kindness of my heart" (*ANET,* 499–500); likewise *KAI* (1: 5; 2: 36); Swetnam (1965: 34) renders "because of my rightfulness" (i.e., legitimacy).

The substantive *ṣdq* occurs five times in the Zinçirli inscriptions (8th century), preceded each time by the preposition *b,* twice without suffix, twice with the suffix of 1st sing., once with the suffix of 3d masc. sing. *KAI* (1: 40–41; 2: 224, 233, 237) renders it as "loyalty," i.e., to the Assyrian overlord. Swetnam (1965: 34–36), following Euler (1938: 278–79), disagrees with the rendering "loyalty" in the Panammuwa and Barrākib inscriptions (Zinçirli) and argues strongly for "legitimate succession," as it is a question of legitimate succession from father to son. In the Barrākib inscription the incumbent says that he was seated on the throne "because of the righteousness of my father (*bṣdq ʾby*) and my own righteousness (*bṣdqy*) …" (*ANET,* 501).

On a 7th-century B.C. Aramaic tomb inscription from Nērāb, 7 km E of Aleppo, Agbar, priest of Sahr, has had inscribed "because of my righteousness (*bṣdqty*) before him, he gave me a good name and prolonged my days" (*ANET,* 505; *KAI* 1: 45; 2: 276). The word *ṣdqh* appears with the definite article, *ṣdqtʾ,* in a 5th–4th-century inscription from Tēmā in Arabia. *KAI* renders it "present of allegiance," "Loyalitätsgeschenk" (1: 46; 2: 79–80), Cooke (1903: 196) by "a grant," Jean and Hoftijzer (*DISO,* 243) list as meanings "merit or desert." A 5th-century Phoenician inscription commemorating the foundation of a temple near Sidon records that the king *BDʿŠTRT* and *bn ṣdq* were its founders; *KAI* (1: 3; 2: 25) renders the latter by "heir," "son, who is legitimate heir," referring to Jer 23:5; 33:15. There is also attestation of a West-Semitic god, *ṣedeq* (Rosenberg 1965). Thus, *ṣdq,* in West Semitic apart from Hebrew, covers a range of meanings: proper conduct, order, righteousness, legitimacy of succession, loyalty, favor, concession, grant.

B. Range and Meaning of Terms

Words deriving from the root *ṣdq* occur 523 times in the OT: verbal forms 41 times, the nouns *ṣedeq* 119 times, and *ṣĕdāqâ* 157 times, the adjective-substantive *ṣaddîq* 206 times. Well over half of the occurrences of the nouns are in the Psalms, the poetic sections of the Prophets, and the regular verse of

Proverbs. Some scholars make a distinction between *ṣedeq* and *ṣĕdāqâ.* Jepsen (1965: 79, 81), for example, maintains that *ṣedeq* means right order; it is concerned "with a situation that in fact is as it ought or must be"; *ṣedeq* is "an action directed toward the right order of the community and accordingly to its well-being"; *ṣĕdāqâ* is used of human well-being or right behavior; it is that which puts one in order before God. God's *ṣĕdāqâ* is aimed at order in his creation and at leading his community to its goal; it is his salvific will in action. Schmid (1968: 67, 179) follows Jepsen: "*ṣdq* and *ṣdqh* are to be distinguished: *ṣdq* concerns proper order, *ṣdqh* means the proper order of the world, willed by Yahweh, which brings prosperity, *ṣdqh* its appropriate, proper, prosperous state." Others, like Fahlgren (1932), see no essential difference between the two and treat them without distinction. The latter view is favored here. The note of Watson (1980: 335) is pertinent in this context: "I would like to point out that it is not always advisable to draw theological conclusions on the basis of a particular word, differentiating, for example, between *ṣedeq* and *ṣĕdēqâ* [sic], both basically meaning 'justice.' They can have different connotations, but there are texts (e.g., Ps 72:3) where choice has been dictated by poetic convention."

Scholars discern a wide range of meanings, emphases, and directions in biblical *ṣedeq-ṣĕdāqâ*: health of soul, links in a covenant, loyal activity (Pedersen 1926: 336–77); community loyalty (Fahlgren 1932); order, fitting into order, salvific order (Procksch 1950: 568–77); prosperity, saving gift (Cazelles 1951); community loyalty (Koch 1953; 1961; *THAT* 2: 507–30); Yahweh's acts, his loyalty to the covenant, relationship (*ROTT,* 370–83, 392–95); justice (Dünner 1963); a judicial and soteriological process of judging, acquitting, and saving (Justesen 1964); world order (Schmid 1968; 1984); order put into effect by Yahweh, Yahweh's saving action that puts this order into effect (Reventlow 1971); divine covenant activity and conduct that befits the covenant (Ziesler 1972); Yahweh's action toward Israel, toward the individual in distress, his saving action in the future (Crüsemann 1976); legal order, proper order in the community, saving and liberating order (*TRE* 12: 404–11). Many of these scholars underscore the notion of saving action toward the people of Israel and the helpless individual—the poor, the oppressed, the widow, the orphan.

C. Legal Uses and Nuances

1. The Verb. The verb is used predominantly in a forensic sense. The discussion here considers the various Heb verbal stems.

a. Qal. The stative verb expresses how someone stands before the law or God. Judah says of Tamar: "She is more righteous than I" (Gen 38:26); i.e., the law is on Tamar's side (cf. Ezek 36:52). Eliphaz asks Job: "Can a mortal be righteous before (OR more than) God?" (4:17; cf. 9:2, 15, 20; 10:15; 15:14; 25:4; 34:5); Elihu uses the verb in the same sense (33:12; 35:7); and a psalmist declares: "for no one living is righteous before you" (143:2). God challenges Job: "Will you then quash my judgment? condemn me that you may be right?" (40:8). One may render the two passages in the exchange between Job and Zophar: "Shall the glib one be acquitted?" (11:2) and "See now, I set forth my case, I know I shall be acquitted" (13:18), and the objection of Eliphaz: "What good to Shaddai if you are just?" (22:3; Pope *Job* AB, 80, 93, 148).

One psalmist declares that "the ordinances of Yahweh are true, and righteous altogether" (Ps 19:10—Eng v 9); another acknowledges that he has sinned against God, and him alone, "so that you are justified in your sentence" (Ps 51:6—Eng v 4). The forensic sense is clear in the *rîb*-passages in Deutero-Isaiah (43:9, 26), and in the summary verse: "In Yahweh all the offspring of Israel shall triumph (be justified) and glory" (45:25).

b. Hiṣ̌il. The *Hiṣ̌il,* causative, is used primarily in the sense of acquit, justify, declare right, vindicate. Those who judge in Israel acquit and vindicate (Exod 23:7; Deut 25:1; 2 Sam 15:4). The one who does the reverse of this, who "justifies the wicked and condemns the righteous," is an abomination to the Lord (Prov 17:15 = Isa 5:23). Solomon calls on God to vindicate the just (1 Kgs 8:32 = 2 Chr 6:23), and the psalmist asks God to "give justice to the weak and fatherless, maintain the right of the afflicted and destitute" (Ps 82:3). The Lord "who vindicates me is near" (Isa 50:8). There are three passages where the forensic sense is weak, if not absent: Job says to Bildad: "Far be it from me to declare you right" (Job 27:5); "my servant, righteous, will bring righteousness to many" (Isa 53:11); "those who turn many to

righteousness" (Dan 12:3). There is another possible use of the verb in the *Hip*ʿ*il*: "to defend (lit., and the meekness of) right" (Ps 45:5—Eng v 4) corresponds to MT, *wĕ* ʿ*anwah ṣedeq*; with no emendations but with a redistribution of the consonants, one may read *wĕ* ʿ*ānāw haṣdēq,* "defend the poor," with a *Hip*ʿ*il* imperative of the verb (Dahood *Psalms 1* AB, 272).

c. Piʿ**el.** The *Pi*ʿ*el* inf. occurs twice in Job, once when Elihu is angry with Job because he "held himself righteous rather (more righteous) than God," (32:2), and again when he calls on Job "to show off your righteousness" (33:32). Ezekiel says that Jerusalem has committed so many abominations that "you have made your sisters appear righteous" (16:51, 52). The Lord said to Jeremiah: "The *nepeš* (life) of faithless Israel is more righteous than false Judah" (3:11).

d. Nipʿ**al.** Daniel speaks of the sanctuary that shall be restored to its rightful place, *wĕniṣdāq qōdeš* (8:14); i.e., proper liturgical order will be restored.

e. Hitpaʿ**el.** When the brothers of Joseph are discovered to have the money they paid for the corn in their sacks, Judah replies on their behalf: "How shall we justify ourselves?" (Gen 44:16).

2. Nouns in the Pentateuch. The comparatively few uses of *ṣedeq* and *ṣĕdēqâ* are predominantly legal. The word *ṣedeq* occurs 7 times in Leviticus and Deuteronomy in a juridical sense. The judge shall be impartial in giving judgment; he shall judge *bĕṣedeq* (Lev 19:15), according to what is laid down, without regard to persons (cf. Deut 1:16; 16:18, 20; for remaining uses of *ṣedeq*, see below).

The word *ṣĕdāqâ* is found only in Deuteronomy and Genesis. In the short confession of faith (Deut 6:20–25), the children ask their father about "the testimonies and the statutes and the ordinances which the Lord our God has commanded you" (v 20). The father replies that Yahweh, who led his people from Egypt, gave the commands "for our good" (v 24); i.e., by such ordered conduct, we will be doing what is proper, *ṣĕdāqâ.* In Deuteronomy 9, the people are addressed as having already taken possession of the land. But the possession is the result of Yahweh's action, not theirs; it is not because of their own *ṣĕdāqâ* (vv 4, 5, 6) that they are there, but because of Yahweh's action.

In Gen 18:18–19, Yahweh reflects whether he should reveal to Abraham what he is to do to Sodom and Gomorrah: "I have chosen (known) him, that he may charge his children and his household after him to keep the way of the Lord by doing *ṣĕdāqâ* and *mišpāṭ*." The way of the Lord is the following of his ordinances and commands, and this is *ṣĕdāqâ* and *mišpāṭ*.In the episode of the spotted sheep and goats, Jacob says to Laban: "My *ṣĕdāqâ* will answer for me later" (Gen 30:33). Jacob's honesty or proper conduct will be his vindication.

The accepted interpretation of Gen 15:6 is that Abraham believed in Yahweh and he (Yahweh) attributed it (the act of believing) to him (Abraham) [as] *ṣĕdāqâ.* Following von Rad's important essay (*PHOE,* 130–35), many have seen the *background* to this famous verse in the liturgy of the temple. The priest declares the worshipper righteous "who conducts himself properly with reference to an existing communal relationship, who, therefore, does justice to the claims which the communal relationship makes on him … Man is righteous so long as he affirms the regulations of this communal relationship established by God, say, the covenant and the commandments." The Abraham episode is, of course, not within the realm of cult; "it is transferred to the realm of God's free and personal relationship to Abraham" (von Rad *Genesis* OTL, 185). According to von Rad, the author of Gen 15:6 has Yahweh, not a temple official, priest or Levite, make the pronouncement. And Yahweh pronounces Abraham to have fulfilled righteousness, to share righteousness, *ṣĕdāqâ,* not by an act or a work, ritual or otherwise, but by faith. Von Rad understands the verse less as a polemic than as a revolutionary statement. Faith sets one right with God, and it is God who reckons this internal act to Abraham as *ṣĕdāqâ.*

The MT of Gen 15:6 reads: "And Abraham went on believing (*GKC,* 112e, [a][*a*]) in Yahweh and he [who?] reckoned it [what?] to him [to whom?] *ṣĕdāqâ.*" The LXX reads: "And Abraham believed in God, and it was reckoned (*elogisthē,* aor. pass.) to him unto righteousness (*eis dikaiosynēn*). Paul (Rom 4:3; Gal 3:6) and James (2:23) repeat this rendering. However, the text is readily patient of another interpretation: "Abraham went on believing in Yahweh, and he (Abraham) reckoned it (the promise of son and descendants) to him (Yahweh) (as: no prep. in MT) fidelity (*ṣĕdāqâ*)," i.e., Yahweh, who had promised myriads of descendants to Abraham (12:1–3), has, despite appearances to the contrary (15:2–3),

remained faithful to himself (15:4–5) (Gaston 1980; Oeming 1983). When Phinehas rose up and interposed and the plague was stayed (Ps 106:30–31), this action was reckoned (*Nip‹al,* pass.) to him *liṣdāqâ.* Phinehas was considered to have done the proper thing.

3. Other Uses. Isa 5:23 heaps "woe" on judges who "acquit (*maṣdîqê,* lit., acquitters of) the guilty for a bribe and reject the right of the just (*ṣidqat ṣaddîqîm*; the case of, the just cause of, the just)." For *ṣĕdāqâ* as claim or right, cf. 2 Sam 19:28–29—Eng 19:27–28; Neh 2:20; see below.

The word *ṣedeq* is used adjectivally, governed by a noun in the construct state, and often in the sense of legitimate. Priests are to offer *zibḥê ṣedeq,* legitimate sacrifices, i.e., sacrifices according to the liturgical order (Ps 4:6[5]; 51:21[19]; cf. Deut 33:19). The tradesman must have just balances, *mo›znê ṣedeq,* i.e., scales that do not cheat, but weigh as they ought (Lev 19:36; Deut 25:15). In fact, everything dealing with weights and measures must be *ṣedeq* (Lev 19:36; Ezek 45:10). Yahweh's ordinances for one's life are *mišpāṭê ṣedeq,* proper, legitimate ordinances (Ps 119:7, 62, 75). In a royal psalm of thanksgiving the king praises God for his *ḥesed* (loyalty, steadfast love, Ps 118:15). Yahweh, who has stood by him in his distress, is his *yĕšu‹â* (saving action, v 14); the *ṣaddîqîm* (the just) extoll Yahweh's *yĕšu‹â.* The king cries out: "Open to me the *ša‹ărê ṣedeq*" (the gates of righteousness, v 19) "for this is the gate of Yahweh" (v 20). The king will enter the city, or temple, to the place where Yahweh's order is found. The psalm is framed by Yahweh's *ḥesed* (vv 1, 29), which leads to his *yĕšu‹â;* his steadfast love embraces his saving action and order. (Could *malkî ṣedeq,* Melchizedek of Ps 110:5, mean "legitimate king," rather than be a proper name? [Dahood *Psalms III* AB, 117]; cf. the Aramaic inscriptions above.) Yahweh leads the psalmist along *ma‹gĕlê ṣedeq,* paths of proper, legitimate, order (Ps 23:3[2]). In the blessings of Moses, Gad is said to have executed the *ṣidqat Yahweh* and his *mišpāṭîm* (Deut 33:21), i.e., Yahweh's prescribed order (some understand this in a martial context, Yahweh's prescriptions for war). Other uses of *ṣedeq* governed by the construct noun, *‹îr haṣṣedeq* (a city where order dwells, Isa 1:26), *yo‹dê ṣedeq* (those who experience Yahweh's saving action, Isa 51:7), *›êlê ṣedeq* (oaks of righteousness, Isa 61:3), are considered below.

D. Proper Order, Proper Comportment

The word *ṣedeq-ṣĕdāqâ* is used frequently in coordination with or in parallelism with *mišpāṭ* (order, ordinance, judgment, a regular way of doing something). The combination *ṣedeq-ṣĕdāqâ* and *mišpāṭ* is in essence a hendiadys describing that proper order in the life of the people that is put there and willed by God.

1. 8th-Century Prophecy. In Isaiah 1–39 *ṣedeq* occurs 9 times, 3 times in conjunction with or parallel to *mišpāṭ* (1:21; 16:5; 32:1). Zion was once a faithful city, full of *mišpāṭ* and the dwelling place of *ṣedeq* (1:21); now murderers lodge there; i.e., there was a time when proper order, Yahweh's order, reigned; but no more. When Yahweh acts in the future, it will be the faithful city once more and an *‹îr haṣṣedeq,* "city of righteousness" (1:26), where Yahweh's order reigns (1:26), with the social disorders of vv 21–23 abolished. When Yahweh's reign finally prevails in Zion, chap. 16, and its oppressors are no more,

> then a throne will be established in *ḥesed* (steadfast love),
> and on it will sit in *›emet* (fidelity) in the tent of David
> one who judges and seeks *mišpāṭ,*
> who is quick to do *ṣedeq* (16:5).

Proper order will reign through Yahweh's ideal king. In this ideal time

> Behold, a king will reign *lĕṣedeq,*
> and princes will rule *lĕmišpāṭ* (32:1).

The preposition *l* is rendered "by," as often in Ugaritic and Hebrew. The king rules by a *ṣedeq-mišpāṭ* which is not his own, but Yahweh's (cf. Ps 72:1–3). The shoot from the stump of Jesse, upon whom the Spirit shall rest (11:1–2), shall judge the poor *bĕṣedeq* and decide *bĕmîšôr* (by equity) on the oppressed of the land (11:4). Proper order will be restored, and each will have his due. *Ṣedeq* shall be the girdle of his waist, *›ĕmûnâ* (fidelity) the girdle of his loins (11:4).

In the late *Apocalypse of Isaiah* (chap. 26), the righteous nation, *goy ṣaddîq,* which keeps faith, is to enter through the gates. When Yahweh's judgments, *mišpāṭîm,* are upon the earth, the inhabitants learn *ṣedeq* from his gracious action, but the wicked never learn *ṣedeq* (vv 9–10).

The word *ṣĕdāqâ* occurs 12 times in Isaiah 1–39, 8 times in conjunction with or parallel to *mišpāṭ* (1:27; 5:7, 16; 9:6[7]; 28:17; 32:16, 17; 33:5). Zion shall be an *ʿîr haṣṣedeq* (1:26, see above) because of Yahweh's action. She shall be redeemed by *mišpāṭ,* and those who repent in her by *ṣĕdāqâ,* i.e., by proper order and conduct resulting from God's action (1:27). In the song of the vineyard (5:1–7) Yahweh looked for *mišpaṭ* and *ṣĕdāqâ,* loyal and proper conduct, but found only *miśpāḥ,* bloodshed (?), and *ṣĕʿāqâ,* a cry (v 7). There was disorder, not order. The glory of God is found in *mišpāṭ* and *ṣĕdāqâ,* in proper order (5:16). The ideal king will rule and administer his kingdom with *mišpaṭ* and *ṣĕdāqâ* (9:6[7]), i.e., according to God's proper order. The foundations of Zion are to be laid with *mišpāṭ* as the line and *ṣĕdāqâ* as the plummet (28:17). Zion is to be founded on proper order.

When the Spirit is poured from on high, then *mišpāṭ* will dwell in the wilderness and *ṣĕdāqâ* in the fruitful field (32:15); God's proper order comes with the Spirit. The effects of Yahweh's action, *ṣĕdāqâ* will be *šālôm,* prosperity, everlasting security, and trust (vv 16b–17a). All will find security (v 18). Yahweh on high answers his people's prayer (33:2); from his throne he will fill Zion with *mišpāṭ* and *ṣĕdāqâ* (v 5), his blessed order;

> and he will be the stability of your times,
> abundance of salvation, wisdom, and knowledge;
> the fear of the Lord is his treasure (33:6).

(Several passages in Isaiah 1–39 in which *ṣedeq-ṣĕdāqâ* occur are regarded by many scholars as coming from hands later than the 8th century [1:27; 5:16; 10:22; 26:9, 10; 32:1, 16, 19; 33:5]. However, they are considered here with the other Isaian passages. Chaps. 32–33 are very close in time, spirit, and language to Deutero-Isaiah, and other sections [26:9, 10] reflect much later expectations.)

In Hosea, Yahweh takes the initiative so as to bring Israel back to him. He will remove the Baals, i.e., false worship (2:19[17]), make a covenant (v 20[18]), and abolish disorder. "I will betrothe you to me *bĕṣedeq û-bĕmišpāṭ û-bĕḥesed û-bĕraḥămîm … û-bĕʿĕmûnâ*" (vv 21–22[19–20]). Yahweh will act toward Israel according to his proper, loyal, merciful, and constant way of acting, and Israel, experiencing his steadfast love, will respond with *ṣedeq* and *mišpāṭ.* Later, Yahweh calls on his people to "sow for yourselves *liṣdāqâ* (*l-* means "by means of"), reap the fruit of *ḥesed,*" i.e., conduct yourselves toward Yahweh as he conducts himself toward you, "that he may come and rain *ṣedeq* upon you" (Hos 10:12).

Amos attacks those who oppress the just one, *ṣaddîq* (2:6; 5:12). The house of Israel is perverse; it has turned the process of justice, proper order, upside down: "it turns *mišpāṭ* to wormwood, throws *ṣĕdāqâ* to earth" (5:7; cf. 6:12). Yahweh does not want a mere formalized ritual (5:21–23); he wants proper order in every area of life; and so

> let *mišpāṭ* roll on like the waves, *ṣĕdāqâ* like an everlasting stream (5:24; cf. Isa 48:18).

Micah calls on the people to look back and experience Yahweh's saving acts in history, *ṣĕdāqôt* (6:5). Yahweh's demand on Israel in response is simple—to do *mišpāṭ,* i.e., to observe proper order, to be constant in *ḥesed,* and to comport oneself humbly (6:8).

2. 7th-Century Prophecy. Zephaniah calls the people to hold an assembly: "Seek Yahweh, all you humble of the land, who do his *mišpāṭ,* seek *ṣedeq,* seek *ʿănāwâ* (humility)" (2:3). The people are to do what is proper in lowly submission before Yahweh.

Jeremiah calls all who enter at the gates of the city, from the king down, to do *mišpāṭ* and *ṣĕdāqâ* (22:3), i.e., to right the wrong done to the oppressed and to give justice to the alien, the fatherless, and the widow. The builder, for example, must not misuse his workmen; he must dispense justice (22:13–17). If he does not act with *ṣedeq* and *mišpāṭ,* then what profit to him? (v 13). His father(s) did act properly and took care of the poor and the needy (v 15b).

Yahweh will raise up a *ṣemaḥ ṣaddîq* (a legitimate branch; cf. above), a *ṣemaḥ ṣĕdāqâ* (33:15, same meaning), who will execute *mišpāṭ* and *ṣĕdāqâ.* This legitimate branch will be the instrument of Yahweh's order in such a way that Jerusalem will be called *ṣidqēnû* (our righteousness, 33:16), the place

where Yahweh's proper order is established. Where Yahweh is, there is proper, world order (Schmid 1968: 87–88).

The people must put aside false gods and idols (4:1); they must take their oath, *be›ĕmet, bĕmišpāṭ, biṣdāqâ,* in such a way that their conduct really conforms to proper order. Then the nations shall glory in Yahweh. The wise, the mighty, and the rich are not to glory in what they have, but rather in this, that they know and experience that "I am Yahweh, doing *ḥesed, mišpāṭ, ṣĕdāqâ*" (9:23[24]). Yahweh is a God who acts true to himself and preserves proper order in the world. When Yahweh restores the fortunes of his people, they shall sing: "the Lord bless you, abode of *ṣedeq,* holy mountain" (31:33). The holy mountain is the place where Yahweh's *ṣedeq* (saving order) dwells. The enemies of Israel say that they are not guilty of the destruction of Jerusalem (50:7); it is the people who are guilty; they have sinned against Yahweh, their abode of *ṣedeq* (cf. Job 8:6).

3. Psalms. The words *ṣedeq* and *ṣĕdāqâ* occur 49 and 34 times respectively in the Psalms, for the most part in the context of God's saving action, though often enough compassing proper order and comportment. The psalmist asks God to judge him according to his (the psalmist's) *ṣedeq* and *tōm* (innocence, integrity, freedom from fault), i.e., according to the way in which he has acted (Ps 7:9[8]). Yahweh is a just judge (v 10[9]) who gives judgment in favor of the psalmist, who in turn thanks Yahweh for acting according to his (Yahweh's) *ṣedeq*. God loves *mišpāṭ* and *ṣĕdāqâ* (Pss 33:5; 99:4), i.e., proper order among his people. Those who do *mišpāṭ* and *ṣĕdāqâ* are blessed (Ps 106:3). Psalm 72 is a prayer for blessing on the king. Yahweh is asked to endow the king with his (Yahweh's) *mišpāṭ* and *ṣĕdāqâ* so that he (the king) may be able to judge the people with *ṣedeq* and *mišpāṭ;* i.e., proper order comes from Yahweh through the king (cf. Isa 32:1). As a consequence, the mountains will bring forth *šālôm* (prosperity) and the hills *ṣĕdāqâ* (cf. Isa 32:16–17). Yahweh endows the king with the power to act as he ought, and so the king guarantees God's order, namely *mišpāṭ* and *ṣĕdāqâ.* The psalmist makes explicit what constitutes God's order—deliverance of the needy and poor, freedom from oppression and violence (vv 4, 12–14). To come to the aid of these people is to act *beṣedeq* and to restore *ṣĕdāqâ.* Yahweh also acts *biṣdāqâ* (e.g., Isa 5:16; 96[7]; Ps 119:40; 143:11; Zech 8:8).

The word *ṣedeq* occurs 8 times in the psalm on God's law (Ps 119:7, 62, 75, 138, 142, 144, 164, 172). The psalmist praises the ordinances, *mišpāṭîm,* of Yahweh's *ṣedeq* (vv 7, 62, 164); Yahweh's ordinances, testimonies, and commandments are *ṣedeq* (vv 75, 144, 172); Yahweh has commanded *ṣedeq* (v 138); the psalmist reflects that "your *ṣĕdāqâ* is *ṣedeq* forever (*lĕ‹ôlām,* or, O Eternal One), your *tôrâ* (law, instruction) is *›emet* (truth)" (v 142). Yahweh's saving action *is* divine order, his teaching *is* truth. The whole context of the psalm is proper order in accordance with the prescriptions of Yahweh's law. The one who conducts himself *tamim,* blamelessly, and carries out *ṣedeq,* that which is proper, may sojourn in Yahweh's tent and may dwell on his holy hill (Ps 15:2). The priests are to be clothed with *ṣedeq* (Ps 132:9); i.e., they must comport themselves according to proper liturgical and moral order. Psalm 24 is a liturgical psalm put into a cosmic setting. Yahweh, who has founded the cosmos, will pass judgment on the one who approaches his holy place. He who is the source of cosmic order has also given order to the formal worship of his people. If the worshipper is not guilty of any disorder that would disqualify him from the temple, he will receive *bĕrākâ* (blessing) and *ṣĕdāqâ* (saving grace?) from his saving God (lit., the God of his salvation, v 5). Psalm 118 is a royal hymn of thanksgiving. The king praises Yahweh for his *ḥesed* (vv 1–5); Yahweh has stood by him in his distress; Yahweh is his *yĕšû‹â.* The king will enter the city, or temple, walking through the gates of *ṣedeq* to the place where Yahweh's order is found (v 19). The psalm is framed by Yahweh's *ḥesed* (vv 1, 29); i.e., Yahweh's steadfast love embraces his saving action and his order.

The psalmist often speaks of "my *ṣedeq.*" Psalm 4 is a prayer of one in distress or perhaps a prayer for rain (Dahood *Psalms III* AB, 23). God who is invoked is a God of *ṣidqî* (v 2[1]), God of "my justice" or "my just God," he who restores order; if a prayer for rain, then God who restores the natural order; it is he, not the nature gods of Canaan, who gives rain and fertility. God is called on to act. In an individual lament, the psalmist prays for deliverance from his enemies because of "my *ṣedeq*" and "my *tōm*" (Ps

7:9[8]); i.e., he claims that he is innocent of any breach of proper or liturgical order before God. A plea of the innocent is framed by the inclusio, *ṣedeq* (Ps 17:1, 15):

Hear, Yahweh, my *ṣedeq,* attend to my cry
Give ear to my prayer, destroy deceitful lips.
Let my *mišpāṭ* shine (come from) before you,
may your eyes gaze upon my *mêšārîm* (equity, integrity).

The psalmist is conscious of his right conduct as he cries to God. He sings in conclusion:

I, *bĕṣedeq,* shall gaze upon your face,
bĕhāqîṣ, shall be sated with your *tĕmûnâ* (presence, form, being).

Moses alone was allowed to see Yahweh's *tĕmûnâ* (Num 12:8); *hāqîṣ* is the *Hipʿil* inf. of *qîṣ,* to arise, awake; (cf. Isa 26:19 and Dan 12:2, to arise from the sleep of death). He will see God's face in God's vindicating or saving action which awakens him from death. Again, Yahweh has rewarded the singer "according to my *ṣedeq,*" has repaid him according to *bor yāday,* "the innocence of my hand" (18:21[20]). The psalmist has walked in accordance with God's order (words repeated in v 25[24]; cf. 2 Sam 22:21, 25). The psalmist prays that Yahweh will defend "my *mišpāṭ* and my *dîn*" (his just cause and judicial process, Ps 9:5[4]) as he (Yahweh) sits upon the throne *šopēṭ ṣedeq,* dispensing as judge what is proper. Yahweh is the one who gives judgment as it should be given.

Yahweh "rules the world *bĕṣedeq* and judges the people *bĕmêšārîm*" (equity, Ps 9:9[8]). He judges as is proper, according to the order that he has established. The people acknowledge their rebellious acts and approach the temple with confidence (Psalm 65). They petition the God of their salvation to show his wondrous deeds *bĕṣedeq* (v 6[5]). Then follows a series of participles which describe Yahweh as the one who orders and maintains the order of the universe. Yahweh gives order and saves; *bĕṣedeq* describes both actions. He is the creator of the universe (Ps 96:5); hence he is king (v 10). He will judge the peoples *bĕmêšārîm* (with equity), and govern in fidelity to the order he has set up, *bĕṣedeq* and *beʾĕmûnâ,* (v 13).

Yahweh is the restorer of social order who will redress the affliction of the widow, the stranger, the fatherless (Ps 94:6) and will do this through those who are imbued with and respect his *tôrâ* (v 12). The crucial v 15 is difficult, but seems to mean that justice will return to the judicial tribunal; *ṣedeq* and *mišpāṭ* are in the verse, but not in parallelism. Dahood proposes:

But the tribunal (*ʿad*) of justice (*ṣedeq*) will restore equity (*mišpāṭ*),
and with it all upright hearts (*Psalms II* AB, 345).

In any case, *ṣedeq* is in the context of proper order in society.

4. Isaiah 40–66. Only once in Deutero-Isaiah (chaps. 40–55) does *ṣedeq-ṣĕdāqâ* denote proper conduct or order. Israel's comportment through the centuries has not been according to *ʾemet* and *ṣĕdāqâ* (48:1a–b). If only Israel had listened to Yahweh's commandments her *šālôm* (welfare) would have been like a river and her *ṣĕdāqâ* (prosperity) like the waves of the sea (48:18).

The oracles, accusations, and laments of Isaiah 56–66 complain that Israel has not followed the path of *ṣedeq-ṣĕdāqâ* and *mišpāṭ.* The people are called on to observe *mišpāṭ* and do *ṣĕdāqâ* (56:1a), i.e., to conduct themselves as is proper because Yahweh's *yĕšûʿâ* and *ṣĕdāqâ,* his saving action, is about to be revealed (56:1b). The *mišpāṭ-ṣĕdāqâ* in v 1a is the people's order; the *yĕšûʿâ-ṣĕdāqâ* in v 1b is Yahweh's action which is salvific and restores his proper order. A series of accusations (57:2–10) concerns cultic aberrations, misguided acts that were thought to set the people in a right relationship with God: "I will tell of your *ṣĕdāqâ* and *maʿăśayik*" (57:12), i.e., your acts of supposed worship which you think make you "just" before God. The people seek Yahweh daily and delight in his ways; they follow the prescribed ritual, like a nation which in fact really did *ṣĕdāqâ* and *mišpāṭ* (58:2b), what is proper. They ask for "ordinances of conduct," *mišpĕṭê ṣedeq* (cf. Ps 119:7, 62, 75). They fast ritually and perform ritual penance, thinking that thus all should go well with them. But mere ritual without concern for the social order is a violation of proper order, of Yahweh's order; it is not *ṣĕdāqâ* and *mišpāṭ* (58:3–7). If, however, the people of Israel do what they should, following the order that Yahweh requires (vv 6–7),

then shall your light break forth like the dawn,
and your healing shall spring up speedily;

your *ṣedeq* shall go before you,
the *kābôd* (glory) of Yahweh shall be your rear guard (v 8).

Their proper conduct, *ṣedeq,* will be as Yahweh's *ṣedeq,* and will reflect his glory.

A catalogue of the people's sins follows (59:1–8). They look for salvation and God's favor anywhere but in the right area, which is the following of God's proper order, *mišpāṭ* and *ṣĕdāqâ.* This is the reason why God's saving action, *mišpāṭ* and *ṣĕdāqâ* (cf. 56:1b), is far off. Yahweh is not incapable of hearing; the sins of the people are the barrier to his presence (59:2–3); there is no one to speak *bĕṣedeq* (v 4a), no one to recall the community to loyalty to Yahweh (v 4a is usually understood in a legal sense, "no one goes to law honestly," RSV). The people hoped for *mišpāṭ* and *yĕšû‹â* (v 11b), but it is not there. Why? Because of their many sins (vv 12–13). They lament that *mišpāṭ* is turned back and that *ṣĕdāqâ* is far off (v 14). Why is it so? Because *›ĕmet* (truth, loyalty) has fallen in the public squares and *nĕkoḥâ* (equity) is no more. Yahweh was displeased that there was no more *›ĕmet* and *mišpāṭ* (v 15), i.e., no loyalty to his ordinances. There was no one to set the situation right, so Yahweh himself had to intervene. Then his own arm brought salvation (verb *yš‹*), his own *ṣĕdāqâ* (saving action) sustained him (v 16). Like a leader going out to battle, Yahweh clothed himself with the breastplate of *ṣĕdāqâ* and the helmet of *yĕšû‹â* (v 17); he clothed himself too with "vengeance" and "fury." There is always the double aspect of Yahweh's saving intervention—judgment for those who remain firm in opposition (v 18), salvation for those "who turn from transgression" (v 20).

5. Ezekiel, Malachi, Joel. The words *ṣedeq* and *ṣĕdāqâ* occur almost exclusively in the context of personal responsibility in Ezekiel and are restricted virtually to passages of hortatory repetition (3:16–21; 18; 33). The leaders of Jerusalem are urged to do (*‹āsāh*) *mišpāṭ* and *ṣĕdāqâ* (18:5, 19, 22, 27; 33:14, 16, 19; 45:9), i.e., to act as they ought in accordance with Yahweh's precepts and ordinances from ritual observance to care for the poor and needy (chap. 18). This constitutes a person's *mišpāṭ* and *ṣĕdāqâ.* Were Noah, Daniel, and Job living in the midst of this sinful people, they would deliver their own lives by their own *ṣĕdāqâ,* proper conduct (14:14, 20). Ezekiel destroys the traditional proverb: "The fathers have eaten sour grapes, and the children's teeth are set on edge" (18:1–4; cf. Jer 31:29–30). The refrain *ṣĕdāqâ* throughout chap. 18 vv 5, 19, 20, 22, 24, 26, 27) describes that proper conduct which is each one's personal responsibility; a catalogue of acts lists what the righteous one does (vv 6–9a); this constitutes his *ṣĕdāqâ.* The phrase "to do (observe) *mišpāṭ* and *ṣĕdāqâ*" belongs to the royal ideology; it is the king who, in the first place, must preserve proper order; he does this by virtue of God's *ṣedeq, ṣĕdāqâ,* and *mišpāṭ* (Ps 72:1–3; Isa 32:1). But anyone who does this is *ṣaddîq.* The word *ṣĕdāqâ* carries the same tones and echoes throughout chap. 33 (vv 12, 13, 14, 15, 16, 19). The deeds of the *ṣaddîq* are *ṣĕdāqôt* (pl.) (3:20; 18:14; 33:13).

Malachi, God's messenger, will refine the people until they present their offerings *biṣdāqâ,* as is proper (3:3). Joel cries out: "Be glad, O sons of Zion, and rejoice in the Lord your God because Yahweh *liṣdāqâ,* in accordance with the order that he has established, has given the appropriate rains at their proper time."

6. Joshua–2 Kings. The word *ṣedeq* is not found in the former prophets; *ṣĕdāqâ* only 11 times. When David spares Saul's life at Ziph, he says to the king: "The Lord rewards every man for his *ṣĕdāqâ* and *›ĕmûnâ;* for the Lord gave you into my hand today, and I would not put forth my hand against the Lord's anointed" (Sam 26:13). David had acted properly. When Mephibosheth meets David on his return from his flight before Absalom, he acknowledges that the king has made a place for him at the royal table: "What futher *ṣĕdāqâ* have I that I should complain to the king" (2 Sam 19:28–29[27–28]). David has observed all propriety so that Mephibosheth has no just claim (for *ṣĕdāqâ* as claim, cf. Neh 2:20; also Isa 5:23, see above). The word *ṣĕdāqâ* in 2 Sam 22:21, 25, is a repetition of Ps 18:21, 25 [20, 24]. David ruled over Israel *‹ośeh* (doing) *mišpāṭ* and *ṣĕdāqâ* (2 Sam 8:15; cf. 1 Chr 18:14). He ruled as king by virtue of *mišpāṭ* and *ṣĕdāqâ* which came from God (1 Kgs 10:9; Ps 72:1–3; Isa 32:1). When Yahweh asks Solomon what he should give him, Solomon replies that Yahweh showed *ḥesed* (steadfast love) to David because he had conducted himself *bĕ›emet, biṣdāqâ, bĕyišrâ,* i.e., loyally, as he ought. At the dedication of the temple Solomon prays that the just be justified according to his *ṣĕdāqâ* (1 Kgs 8:22). If the just man conducts himself according to Yahweh's order, that will justify him. The Queen of Sheba remarks that

Solomon's God made him king in love for Israel so that he might do *mišpāṭ* and *ṣĕdāqâ* (1 Kgs 10:9; 2 Chr 9:8), i.e., observe and communicate through his observance Yahweh's order. According to the Chronicler, Solomon requires that the righteous be judged according to his *ṣĕdāqâ* (his proper conduct) (2 Chr 6:23).

Nehemiah said to the governors of the province beyond the river: "It is the God of heaven who will make us prosper, and we, his servants, shall arise and build; but for you, you have no portion, no *ṣĕdāqâ,* no memorial in Jerusalem" (Neh 2:20). Only true Israelites can stake a claim there.

7. Job, Proverbs, Qoheleth. The verb *ṣdq* is used predominantly in a forensic sense in Job (see above). The nouns *ṣedeq-ṣĕdāqâ* move between proper conduct and proper order with legal nuances. Job replies to Eliphaz: "Turn, I pray, let no wrong be done; turn, now, my vindication (*ṣidqî*) is at stake" (or "relent, for my cause is just," AB 6: 29). Job claims: "I put on (my) *ṣedeq* and it clothed me, my *mišpāṭ* was like a robe and a turban" (29:14; cf. Isa 61:10–11). If Job is weighed in a balance of *ṣedeq;* if he is tried according to proper procedure, his integrity will be vindicated (31:6). Bildad asks: "Does God pervert *mišpāṭ,* does Šaddai pervert *ṣedeq*?" (8:3). The implication is that God does not interfere with proper order. Bildad objects that, if Job were pure and upright, God would be on his side and give him *nĕwat ṣidqekā,* a dwelling place or pasture that he deserves because of his conduct (8:3; for the phrase, cf. Jer 3:23; 50:7). Job maintains that he has not sinned; but if that is the case, asks Elihu, does his present state represent his *mišpāṭ* and *ṣedeq* before God? (35:2). Because God observes proper order, Job's state must be the result of his nonobservance of it. Elihu asserts: "… to my maker I will give *ṣedeq*" (36:3); he will vindicate God by showing that God observes proper order in punishing Job for his transgressions. Job maintains his claim that he has observed proper order, *ṣĕdāqâ* (27:6; cf. 29:14; 31:6). Elihu speaks of *ṣĕdāqâ* twice in the context of human conduct (33:26; 35:8); he observes too that God will not violate *mišpāṭ* and *ṣĕdāqâ* (37:23).

In Proverbs, *ṣedeq* (9 times) and *ṣĕdāqâ* (18 times), and in Qoheleth, *ṣedeq* (3 times), the idea of proper order predominates. The sayings in Proverbs are directed to knowing wisdom and instruction, to perceiving words of insight, to receiving instruction in discernment and *ṣedeq, mišpāṭ, mêšārîm* (1:2–3). The wise man teaches the proper way to act and how to perceive what constitutes proper order. Yahweh gives *ḥokmâ* (wisdom) and *da*ʿ*at* (knowledge); he guards the paths of *mišpāṭ* (justice, 2:6–8). If you follow Yahweh's way, says the writer, you will come to an insight into *ṣedeq* and *mišpāṭ* (2:9), i.e., you will understand what proper order is. Wisdom herself speaks in chap. 8: all the words of my mouth are *bĕṣedeq,* proper order itself (v 8); by me kings rule and decree *ṣedeq,* my proper order (v 15); by me princes and nobles give judgment (Heb uncertain) in *ṣedeq,* as they ought (v 16); riches and honor are with me, enduring wealth and *ṣĕdāqâ* (prosperity, v 18); I walk in the path of *ṣĕdāqâ,* in the midst of the way of *mišpāṭ,* i.e., as is proper (v 20). A legal proverb says that he who speaks *ʾĕmûnâ* declares *ṣedeq* (12:17), i.e., to speak the truth is to observe proper order. A king's throne is based on *ṣĕdāqâ,* proper order (16:12); lips of *ṣedeq,* i.e., one who speaks what is proper, are a joy to the king (16:13). When the wicked are removed from the presence of the king, this throne is based on *ṣedeq* (25:5). In the words of Lemuel, judging *ṣedeq* means passing just judgment on the poor and needy (31:9). All will go well with the one who comports himself with *ṣĕdāqâ,* according to proper order (11:4, 5, 6, 28, 29; 13:6); *ṣĕdāqâ* guarantees life (12:28; 21:21), prosperity to a nation (14:34), and to the old (16:31); *ṣĕdāqâ* is acceptable to Yahweh (15:9), and he who does *mišpāṭ* and *ṣĕdāqâ* is more acceptable to Yahweh than sacrifice (21:3).

Qoheleth has seen *mišpāṭ* and *ṣedeq,* proper order, overturned (3:16; 5:7[8]). He has even seen the righteous man perishing in his *ṣedeq,* as he does what is right (7:15); the *ṣaddîq,* though he observes proper order, perishes like the rest.

8. Daniel. Daniel confesses to Yahweh that the people have sinned and not listened to the prophets (9:3–6). Yahweh has kept the covenant and shown *ḥesed,* steadfast love; the people have not: "To thee, O Lord, belongs *ṣĕdāqâ,* but to us confusion of face" (v 7). Yahweh has fulfilled his part, but the people have not fulfilled theirs. Gabriel announces to Daniel that the people have been granted seventy weeks to put an end to sin and transgression and to bring about *ṣedeq ʿolāmîm,* lasting order (9:24).

9. *ṣedeq-ṣĕdāqâ + mišpāṭ.* The word pair *ṣedeq* or *ṣĕdāqâ* + *mišpāṭ* occurs in parallelism, in coordinate relationship, and in the phrase to do (*ʿāśâ*) or to observe (*šāmār*) *ṣedeq-ṣĕdāqâ* and *mišpāṭ.* The pair is a hendiadys and designates the order in Israelite society which God wills and transmits through the king to the people who are required to respond to God's action by living according to that order. The king is the trustee or guarantor of the order.

ṣedeq-ṣĕdāqâ and *mišpāṭ* are the foundation of Yahweh's throne (Pss 85:15[14]; 97:2). His rule is proper order and he sustains it through the throne (i.e., the king). The ideal king will establish lasting peace upon the throne of David and over his kingdom and uphold it *bĕ-mišpāṭ û-biṣdāqâ* (Isa 9:6[7]). Because the throne is based on *ṣĕdāqâ,* the doing of evil is an abomination to kings (Prov 16:12; 25:5). The base of the throne of the Egyptian king takes the form of the sign *m€ ʿ.t,* a hieroglyph standing for justice, order, proper divine order, which can only be rendered in Hebrew by *ṣedeq-ṣĕdāqâ.* By the 19th and 20th Dynasties the throne base, because of its form, was understood as justice, right order (Brunner 1958; Schmid 1968: 61). Much Israelite throne ritual was dependent either directly, or indirectly through Canaanite tradition, on Egypt (cf. 1 Kgs 10:18–20).

E. God's *ṣedeq-ṣĕdāqâ*: Saving Action.

God's *ṣedeq-ṣĕdāqâ* is very often his saving action on behalf of his people, especially in the Psalms and Isaiah 40–66.

1. Psalms. a. God's *ṣedeq.* (Ps 7:9–10[8–9]; cf. above). The heavens proclaim God's *ṣedeq* (Pss 50:6; 97:6), i.e., his action on behalf of his *ḥăsîdîm,* who are bound to him by the obligations that they have assumed in a solemn sacrificial rite (50:5). Yahweh reigns (97:1); he comes in a theophany (vv 2–5) and protects his people (v 10); it is this action that reveals his glory (*kābôd,* parallel to *ṣedeq,* v 6). Yahweh comes to the help of the afflicted and lamenting psalmist who calls for exultant joy from those who desire his (the psalmist's) *ṣedeq,* i.e., his sharing in the effect of God's saving action (35:27). This meaning derives from the second part of the verse, where the community is called to praise God and to say: "Great is Yahweh, who delights in the *šālôm* (welfare, prosperity) of his servant."

The psalmist prays: "Vindicate me, Yahweh, my God, according to your *ṣedeq*" (35:24). The context is Yahweh's *yĕšûʿâ* (saving action, vv 3, 8); he asks Yahweh to be faithful to himself; because Yahweh is faithful, i.e., acts according to his *ṣedeq,* the psalmist will proclaim this *ṣedeq,* which will be the *tĕhillâ* (praise) of Yahweh: "my tongue shall tell of your *ṣedeq,* of your *tĕhillâ* all day long" (v 28).

The psalmist announces *ṣedeq* in the assembly of the people:

I have told the glad news of (your) *ṣedeq* in the great congregation;
lo, I have not restrained my lips, as you know, Yahweh;
I have not hid your *ṣĕdāqâ* within my heart,
I have spoken of your *ʾĕmûnâ* (faithfulness) and your *tĕšûʿâ* (salvation);
I have not concealed your *ḥesed* (steadfast love) and your *ʾĕmet* (loyalty) from the great congregation.
Do not, Yahweh, withhold your *raḥămîm* (compassion) from me,
let your *ḥesed* and your *ʾĕmet* ever preserve me (40:10–12[9–11]).

God's action has many facets which are described by a variety of words whose meanings are not identical but reinforce each other. Yahweh's *ṣedeq* in these psalms is his action that saves and restores order, thus demonstrating his fidelity.

b. God's *ṣĕdāqâ.* Of the 34 occurrences of *ṣĕdāqâ* in the Psalms, 29 refer to God's *ṣĕdāqâ.*

(1) Psalms of Individual Lament. Yahweh's *ṣĕdāqâ* characterizes the Psalms of individual lament. Though the psalmist is surrounded by evildoers, he is sure that they will not harm him because Yahweh is there with his *ṣĕdāqâ.* He will enter God's house and worship among the God-fearers, relying on Yahweh's *ḥesed* (5:7[6]). He prays that Yahweh will lead him by means of, *bĕ,* his (Yahweh's) *ṣĕdāqâ* (v 9[8]); in paraphrase: "by means of your saving action, that action which preserves proper order, make your way (the observance of your *mišpāṭîm,* instructions) level before me; i.e., remove the obstacles that the wicked may put there to prevent proper order." *ṣĕdāqâ* is that action of Yahweh which effects this.

Psalm 22 alternates between distress and trust, between prayer for deliverance and praise of God for his intervention. The final prayer for deliverance is that the psalmist may praise God in the midst of the *qāhāl*

(assembly, congregation, v 23[22]). Yahweh has remained faithful (v 25[24]); all will acknowledge him as king, and all will bow before him (vv 29–30[28–29]). The psalmist's descendants are to tell of God forever; they are to recount his *ṣĕdāqâ,* his saving action of deliverance, to a people yet unborn, because he has acted, *kî ʿāśâ* (v 32[31]). It is this that the psalmist is to proclaim in the assembly (vv 23, 26[22, 25]). Yahweh's *ṣĕdāqâ* is invoked or praised or declared (Pss 31:2[1]; 51:16[14]; 69:28[27]). The desolate man asks for Yahweh's visible, tangible action:

Is your *ḥesed* (steadfast love) declared in the grave,
your *ʾĕmûnâ* (fidelity) in Abaddon?
Is your *peleʾ* (wondrous, miraculous act) made known in Darkness,
your *ṣĕdāqâ* in the land of Forgetfulness? (88:12–13[11–12]).

A group of words describes God's action seen from various overlapping viewpoints.

In Psalm 71 the psalmist laments and prays for deliverance, recalling Yahweh's *ṣĕdāqâ* 5 times (vv 2, 15, 16, 19, 24). Each time the *ṣĕdāqâ* is God's saving action; twice it is in parallelism with a form of the word "save," *yšʿ,* with the verb *hôšîēnî* (save me, v 2), and with the noun *tĕšuʿâ* (saving action, v 15). Yahweh's *ṣĕdāqâ* is without limit; it reaches to the heavens (v 19, cf. Ps 36:6–7[5–6]).

(2) Psalms with Cosmic Dimension. The cosmic dimension permeates Psalm 33. It is a hymn of praise of Yahweh, the creator:

For the word of Yahweh is *yāšār* (upright),
his every deed is *bĕʾĕmûnâ* (fidelity itself),
he loves *mišpāṭ* (justice) and *ṣĕdāqâ,* his *ḥesed* (steadfast love) fills the earth.
By the word of Yahweh were the heavens created,
by the breath of his mouth all their host (vv 4–6).

God's word is act; he is faithful to his created order. Once more, *ṣĕdāqâ* is found amidst a complex of words which describe God in act.

(3) Psalms of the Kingship of Yahweh. Psalms 98, 99, and 145 celebrate the kingship of Yahweh. He is praised because he

has done *niplāʾôt* (wonders), his right hand *hôšîʿāh* (has saved).
Yahweh has made known his *yēšaʿ* (salvation),
in the eyes of the nation he has revealed his *ṣĕdāqâ.*
He has remembered his *ḥesed* (steadfast love) and his *ʾĕmûnâ* to the house of Israel (98:1–3).

The same word group describes Yahweh's action and its effects as in Ps 88:12–13[11–12]. Yahweh, the mighty king, "is a lover of *mišpāṭ* and *ṣĕdāqâ*" (99:4).

Psalm 145 celebrates Yahweh and his kingship. All will praise Yahweh's actions:

They shall pour forth the memory of your *ṭôb* (bounty),
and shall sing aloud your *ṣĕdāqâ.*
Yahweh is *ḥannûn* (gracious) and *raḥum* (merciful), …
Yahweh's *ṭôb* (bounty) is to all, his *raḥămîm* (pl. merciful acts) are to all his creation (145:7–9).

Yahweh acts true to himself; he is a gracious God who brings prosperity. (For Psalm 24, see above).

(4) Royal Psalms. These psalms also sing of Yahweh's saving action, his loyalty and fidelity, his steadfast love in act. Psalm 40 is a royal psalm of thanksgiving. Yahweh has raised the psalmist from the pit of desolation, from the miry bog (v 3[2]). The psalmist then tells of Yahweh's *ṣedeq-ṣĕdāqâ* in the assembly of the people (vv 10–11[9–10]). Yahweh's throne is based on *ṣedeq* and *mišpāṭ* and preceded by *ḥesed* and *ʾĕmet.* The people, therefore, will experience Yahweh's radiance and walk in his light, and so rejoice in his *šēm* (name, glory), and exult in his *ṣĕdāqâ;* his *ṣĕdāqâ,* i.e., his intervention, the order that comes from it, and hence his glory, shall be their praise:

ṣedeq and *mišpāṭ* are the foundations of your throne,
ḥesed and *ʾĕmet* go before you;
blessed are the people who know the festal shout,
who walk, Yahweh, in the light of your countenance,
who rejoice in your *šēm* (name) all day,

and exult in your *ṣĕdāqâ* (89:15–17[14–16]).

The *ṣĕdāqâ* of v 17[16] reinforces the *ṣedeq* of v 15[14]. *Šēm* and *ṣĕdāqâ* occur together again in the same word-field in Psalm 143. The king prays to Yahweh to hear him "in your *ʾĕmûna*," to answer in "your *ṣĕdāqâ,*" and concludes:

for the sake of your *šēm* (name), Yahweh, give me life,
in your *ṣĕdāqâ,* deliver me from strife,
in your *ḥesed,* destroy my foes (143:11–12).

(5) Wisdom Psalms and Hymns. Psalm 36 contains both wisdom and hymnic elements. The psalmist describes the machinations of the wicked (vv 2–5[1–4]), but over against this,

your *ḥesed,* Yahweh, is from the heavens,
your *ʾĕmûnâ* to the clouds;
your *ṣĕdāqâ* like the towering mountains,
your *mišpāṭ* like the great deep;
man and beast you save (*hôšîaʿ*), Yahweh,
how precious is your *ḥesed,* God (vv 6–7[5–6]).

Yahweh is the source of life and light (vv 9–10[8–9]). The psalmist then prays:

extend your *ḥesed* to those who know you,
your *ṣĕdāqâ* to the upright of heart (v 11[10]).

Yahweh is again acting; his steadfast love and his saving action are different aspects of one and the same action directed to one end.

Psalm 103 is a hymn of praise with elements of individual thanksgiving. A series of active participles (vv 3–6) describe Yahweh in act, moving to a climax: "Yahweh *ʿośeh* (the one effecting) *ṣedāqôt* and *mišpāṭim* for the oppressed" (v 6). Yahweh restores order to the underdogs by his saving actions, pl. of *ṣĕdāqâ.* Yahweh, who "knows our frame, who remembers we are dust" (v 14), is eternal; hence his action is from eternity: "the *ḥesed* of Yahweh is from eternity, and unto eternity … his *ṣĕdāqâ* to his children" (v 17). His timeless action, *ṣĕdāqâ,* is underscored again in Pss 111:3; 112:3, 9.

The pious Israelite, meditating on Yahweh's law, muses:

I have longed for your precepts,
By your *ṣĕdāqâ* give me life,
Let your *ḥesed* come to me, Yahweh,
your *tĕšûâ* according to your promise (119:40–41).

Later he reflects: "your *ṣĕdāqâ* is *ṣedeq* for ever (*lĕʿôlām,* or O Eternal One), your *tôrâ* is *ʾĕmet*" (119:142). Yahweh's saving action *is* divine order, his teaching *is* truth.

2. Isaiah 40–55. Yahweh, the God of Israel and the lord of history, has called Cyrus (44:28; 45:1) to victory so that Israel may return home in a second exodus (41:2). He has raised up a savior, *ṣedeq,* from the east; the abstract noun, "saving action," is used for the concrete, "savior," a common device in Canaanite and Hebrew poetry *ṣedeq* may also be read as the subject of the second colon, "he whom victory accompanies at every step," or as an adverbial accusative with the first colon, "who has raised up from the east [in his] saving purpose"). The context is salvific; Yahweh acts on behalf of his people. The salvific context continues; Yahweh will remain faithful to Israel "my servant," and uphold his people with his saving right hand, lit. "with the right hand of my *ṣedeq*" (41:10).

Yahweh the creator (42:5; 45:11–12) has called both his servant (42:6) and Cyrus (45:13) *bĕṣedeq,* in his saving purpose. Yahweh, "because of his *ṣedeq,*" was pleased to magnify his *tôrâ*; *ṣedeq* takes on nuances of *ḥesed* and fidelity (42:21). *Ṣedeq,* God's saving action, is to drop down from the clouds; *yēšaʿ,* salvation, is to blossom from the earth, and *ṣĕdāqâ,* prosperity, the result of Yahweh's saving action, is to bud (45:8). Creation, saving action, and prosperity are linked. The prosperity follows on Yahweh's saving action through Cyrus; Yahweh can effect this marvelous response in nature in his ultimate intervention because he is the creator (a polemic against the nature gods of Canaan may lie in the background). Yahweh the creator is not found in pre-creation chaos, *tohû* (45:18–19; cf. Gen 1:2); he is found in the

order and stability that comes from his creative word: "I, Yahweh, speaking order (*ṣedeq*), declaring what is proper (*mêšārîm*)."

Each of the three stanzas 51:1–3, 4–6, 7–8, begins with a rousing imperative. The theme is "deliverance" (RSV) or "saving action." *Ṣedeq* is used 3 times (vv 1, 5, 7) and *ṣĕdāqâ* twice (vv 6, 8). The words are parallel to Yahweh himself (v 1a), to *yēša‘* and *yĕšû‘â* (vv 5a, 6c, 8b), and to *tôrâ* (v 7a). The context is salvific; *ṣedeq* and *ṣĕdāqâ* describe God in act toward his people. The word group is extended by *mišpāṭ*, parallel to *tôrâ* (v 4b). Verse 7a speaks of "you who know righteousness (*yod‘ê ṣedeq*) … in whose heart is my law (*tôrâ*), fear not the reproach of men" (RSV), i.e., you who have experienced God's saving action and have grasped his teaching with all your being (Whitley 1972). The word *ṣĕdāqâ* occurs twice in 54:14, 17 (cf. 51:6, 8 above). Yahweh assures Jerusalem that "you shall be established in *ṣĕdāqâ*." The city is to be restored *by* his saving action, a promise made in the context of well-being or prosperity (*šālôm,* v 13b). The promise of blessing and the promise of salvation are correlative; they are to introduce a new era. Any attack on Zion must fail because Yahweh has created (*bārā’,* twice in v 16) the forgers of weapons and those who seek to destroy. But the citizens of Jerusalem are to enjoy the fruits of Yahweh's saving action because "their *ṣĕdāqâ* is from me" (v 17b). The word *ṣĕdāqâ* has gone out from Yahweh's mouth, a word that will not return (45:23a), and that does not return until it has accomplished its purpose (Isa 55:10–11). It *is* saving action, it *will* effect proper order. Yahweh's *ṣĕdāqâ,* deliverance (RSV), is his saving action which will restore Israel and adorn her (46:12–13, twice). (For Yahweh's saving action in Isaiah 32–33, see above.)

3. Isaiah 56–66. In chap. 62 the prophet assures Zion of salvation through Yahweh's intervention. Then, Jerusalem's *ṣedeq* will shine forth like a light and her *yĕšû‘â* will blaze like a torch (v 1); nations will see her *ṣedeq* and kings her *kābôd* (v 2). Because Yahweh will intervene, Jerusalem in her *ṣedeq* will reflect Yahweh's *ṣedeq* and *kābôd* (cf. 58:8). Chap. 60 describes Zion in glory after Yahweh has effected his definitive saving action in the city. Zion shall no longer be under foriegn rule; her foremen shall be *šālôm* (peace, prosperity) and her taskmasters *ṣĕdāqâ* (the fruits of Yahweh's action, v 17). Yahweh has countered the harsh oppression; the walls and the gates, now rebuilt, assure *yĕšû‘â* (salvation) and *tĕhillâ* (praise, v 18). The theme continues in chap. 61. Yahweh has clothed Zion with *yesa‘* and *ṣĕdāqâ* (v 10). He had already put on these "weapons" to save her (59:17). He will cause the effects of his actions, *ṣĕdāqâ* and *tĕhillâ,* to spring from the earth (v 11; cf. 45:8).

The colorful warrior who intervenes in chap. 63 identifies himself with Yahweh: "It is I who speak: by (my) *ṣĕdāqâ* (saving intervention) mighty to bring salvation (*lĕhôšia‘*)" (v 1). The oaks of righteousness, *’êlê ṣedeq*, 61:3, may well mean the oaks of the Just One, reading *ṣaddîq* for *ṣedeq* (Rosenberg 1965; Scullion 1971: 345).

It is not easy to determine the meaning of *ṣedeq* in 64:4a[5a] and of *ṣĕdāqâ* in v 5a (6a; pl. with suffix of 1st s.). The passage is part of a communal lament (63:7–64:11[12]). Yahweh has been called on to intervene (63:19b–64:2[64:1–3]). Then: "never have people heard, never has ear perceived, never has eye seen, any God but you (who) act toward those who hope in him" (v 3[4]). Yahweh struck those who were "doing *ṣedeq*" —carrying out the ritual formally, but still sinning (v 4b[5b]). What no one has heard of (v 3[4]) is of a God who punishes those who fulfill formally his ritual instructions (v 3[4]). The pl. *ṣĕdāqôt* (v 5[6]) refers to those external observances by which a sinful people sought to justify itself.

4. Hosea, Micah, Isaiah 1–39. The words *ṣedeq* and *ṣĕdāqâ* occur in Hosea and Micah in the context of saving action. God's intervention effects proper order (Hos 2:21–22[19–20]; 10:12; Mic 6:5, 8; see above). In the lament of chap. 7, Micah acknowledges that he is a sinner; but Yahweh will plead his cause; he will bring him to the light where he (Micah) will see Yahweh's *ṣĕdāqâ,* saving action (7:9).

Only a remnant of Israel will survive (Isa 10:22), even though her numbers are as the sand of the sea; "destruction is decreed, overflowing with righteousness" (RSV; *šotep ṣĕdāqâ*; or "making *ṣĕdāqâ* overflow"). It is *ṣĕdāqâ* to the full; God's action has a punitive as well as a salvific side. Though punishing Israel, God will ultimately preserve it.

5. Jeremiah, Zechariah, Malachi. The oracle against Babylon in Jeremiah 51 tells of Yahweh's deliverance of his people. He has brought forth, or caused to shine out, "our *ṣĕdāqâ*" (v 10). He has acted

and saved his people; therefore "let us tell in Zion the work, *ma‹ăśeh,* of Yahweh, our God" (v 10). It is God, the savior, deliverer, and vindicator, at work.

Zechariah takes up an old covenant formula when he speaks of Yahweh's saving action: "I will bring them to dwell in the midst of Jerusalem, and they shall be my people and I will be their God *bĕ›emet* and *biṣdāqâ*" (8:8). Yahweh will show that he is true to himself in his saving action.

According to Malachi, the "sun of righteousness," *šemeš ṣĕdāqâ,* will rise with healing wings on those who fear the name of Yahweh (3:20[4:2]). From 2500 B.C.E. through to the late Roman Empire, the winged sun disc, representing the sun as a god, was well known in the ANE. It provided warmth, light, fertility, and general well-being. But it is Yahweh who shines on his people and gives them prosperity.

F. Plural of *ṣĕdāqâ*

The word *ṣedeq* does not occur in the pl. in the OT; *ṣĕdāqôt,* the pl. of *ṣĕdāqâ,* occurs 15 times, designating either the victorious, triumphal, and saving acts of God in favor of his people, or the acts of the people in real or alleged conformity with God's order. Deborah sings of the triumphs of Yahweh after the battle of Kishon (Judg 5:11, twice). Samuel reminds the people of "all the saving deeds (*ṣĕdāqôt*) of the Lord which he performed for you and your fathers" (1 Sam 12:7). "Only in Yahweh … are saving acts (*ṣĕdāqôt*) and strength (*‹oz*)" (Isa 45:24; cf. Mic 6:5; Ps 103:6; Dan 9:16). Yahweh has effected saving acts in our favor (lit. our righteous acts, Jer 51:10); the *ṣĕdāqôt* are the work (*ma‹ăsēh*) of Yahweh our God. Yahweh is the just one who loves *ṣĕdāqôt,* i.e., acts in accordance with his *mišpāṭ* and *ṣĕdāqâ* (Ps 11:7; for Yahweh as a lover of *mišpāṭ* and *ṣĕdāqâ,* cf. Pss 33:7; 99:4). *Ṣĕdāqôt* are the acts of the upright, parallel to *mĕšārîm* (proper acts, Isa 33:15; cf. Ezek 3:20; 18:14; 33:13; Dan 9:18). For Isa 64:5[6], *ṣĕdāqôt* as the external observance of a deluded and sinful people that seeks to justify itself, see above.

G. Parallels and Word-fields

In the Psalms *ṣĕdāqâ* is in parallelism with *tōm* (innocence), *mišpāṭ* (ordinance, right conduct, justice), *tĕhillâ* (praise), *kābôd* (glory), *mĕšārîm* (equity), *›ĕmet* and *›ĕmûnâ* (truth, fidelity), *ḥesed* (steadfast love, loyalty), *hāqîṣ* (to wake up); *ṣedeq* with *bĕrākâ* (blessing), *šālôm* (peace, prosperity, well-being), *tĕšû‹â* and *yĕšû‹â* (salvation, saving action), *pele›* (a wonder), *šēm* (name), *ṭôb* (good, prosperity, [in certain context, rain?]). *Ṣedeq* and *ṣĕdāqâ* are not identical with these words; rather the parallels complement and intensify each other or their meanings overlap or both. They describe a realitù—the multi-faceted action of Yahweh and its correlative multifaceted effects on the life and land of his people and their response. These 16 words, and others, are often used in groups, creating a word-field, over two or more verses, describing the same reality: Pss 33:5, *ṣĕdāqâ, mišpāṭ, yāšār* (upright[ness]), *›ĕmûnâ;* 36:1, 11, *ṣĕdāqâ, mišpāṭ, ḥesed, ›ĕmûnâ*; 40:10–12[9–11], *ṣedeq, ṣĕdāqâ, ›ĕmûnâ, tĕšû‹â, ›emet* (2x), *raḥămîm* (compassion), *ḥesed;* 72:1–3, *mišpāṭ* and *ṣĕdāqâ, ṣedeq* and *mišpāṭ, šālôm* and *ṣĕdāqâ;* 85:10–14[9–13], *yēša‹, kābôd, ḥesed, ›ĕmet* (2x), *ṣedeq* (3x), *šālôm, ṭôb, yĕbûl* (produce), *yśm* (v 14[13] beauty?). These parallels and vast word-fields are used in other books of the OT, especially in Isaiah 40–66 with the additional parallels *ma‹ăśeh* (deeds) Isa 57:12; *tôrâ* Isa 51:1; *yēša‹* Isa 45:8; cf. Hos 2:21[19–20].

H. The Just or Righteous One (Heb *s\addéÆq*)

The *ṣaddîq* is the just or righteous one, mentioned so often in Proverbs and in the Psalms. Neither of these two books says what makes one *ṣaddîq*, nor is one exhorted to be *ṣaddîq*. The *ṣaddîq*, the person's conduct and the state resulting from it, is constantly contrasted with the wicked by means of antithetic parallelism. This is especially so in Proverbs 10–15, where the *ṣaddîq* is named 39 times. Virtually every one of the 13 examples in chap. 10 are of this kind (vv 3, 6, 7, 11, 16, 20, 24, 25, 28, 30, 32, with a slight variation in vv 21, 31).

In the Psalms, the righteous (sing. or pl.) will prosper (e.g., 72:7; 92:13[12]), be exalted (e.g., 75:11[10]); the righteous are called to rejoice and cry out, confident in Yahweh's saving action (e.g., 64:10; 68:3); they are contrasted with the wicked (e.g., 1:5, 6; 13[12]). However, the *ṣaddîq*, like the wicked, will return to the dust (Qoh 3:16–22).

Yahweh is *ṣaddîq* (e.g., 11:7; 112:4; 116:5; 119:137; 129:4; 145:17). The ideal king to come is described as *ṣaddîq* and *nôšā‹* (*Nip‹al* part. Zech 8:8), "his cause won, his victory gained" (NEB), "triumphant and victorious" (RSV). The nuance of saving action, so prominent with *ṣedeq-ṣĕdāqâ* in the

Psalms and Isaiah 40–66, is evident. The *ṣaddîq* elsewhere is the one who is innocent (e.g., Gen 18:22–32), or the one without fault who stands before the court and merits acquittal (e.g., Deut 16:19; 25:1). He is the one who acts on his own responsibility and is guiltless before God (Ezekiel 18). The statutes and ordinances of Israel are *ṣaddîq* (Deut 4:8).

I. Current Research

An outline of scholarly interpretation of *ṣedeq-ṣĕdāqâ* since the 1920s has been given under B above. Reventlow (1971), Ziesler (1972), Reumann (1982), and Mogensen (1984) have synthesized the history of research. Important contributions to the study have been made by Schmid (1968), Reventlow (1971), Crüsemann (1976), and Scharbert (*TRE* 12: 404–11). See also *RAC* 10: 234–360.

Schmid (1968: 166) considers *ṣedeq-ṣĕdāqâ* under the heading of "world order." *Ṣdq* touches order in six areas: (1) law, (2) wisdom, (3) nature, (4) cult, (5) kingship, and (6) war. "The word is constant, the idea, the understanding of the word, is variable. What is 'right', 'in order', does not derive from an inherent 'meaning' of the word, but from the theology of each particular author. It is not the word, with all that is implied in the history of its usage, that defines what order is; rather the word, more or less in accord with its past, is always given new conceptual dimensions so as to formulate what the author wants to express by 'order' " (1968: 169–70). This might be reformulated: the word receives its new conceptual dimensions from its juxtaposition to, its parallelism with, its setting within the context of, other words or groups of words which together describe the reality of God's action and its effects. To say that *ṣedeq-ṣĕdāqâ* looks to cosmic order or to order in nature also requires some modification. It is rather that the creator God, the prime orderer, is the one who restores order in society, who demands proper order in worship, and who acts in his restoring, saving way to effect this. The creator God admits the ritually pure into the temple (Ps 24:1–2, 3–6); he effects ultimate well-being and prosperity (Is 45:8). It is Yahweh, who made the earth and created, *bārāʾ, ʾādām* (the human in general) upon it, who also roused Cyrus *bĕṣedeq,* in his saving purpose, (Isa 45:12–13). Yahweh demands and effects order, he is savior and restorer because, as creator, he is the source of order. Schmid writes: "One can say then with a certain simplification: the interpretation of *ṣdq* as 'conformity to a norm' is clearly close to the original meaning and usage of *ṣdq;* the translation, 'community loyalty', however, embraces better the concrete application by the OT in a great number of cases. A survey of the history of scholarship clarifies the basic problem of OT language which comes nicely into focus in the case of 'righteousness': a distinction must be made between the original Canaanite idea and its usage in the OT" (1968: 185–86). But, though the word, or rather *ṣdq,* is West Semitic, we know virtually nothing about "the original Canaanite idea." To speak merely of *ṣdq,* however, comes dangerously close to imposing a "*ṣdq*-Begriff" (concept, notion) on uses of the words deriving from the root, though Schmid does not do this. There is much of value in Schmid's approach, in particular in his emphasis on Yahweh in action, exercising *ṣedeq-ṣĕdāqâ,* and on the individual responding by following Yahweh's order. However it seems too systematic to lay *ṣdq* on a six-point Procrustean bed. Better to say that Yahweh's *ṣdq* touches all areas of life.

Reventlow gives a comprehensive account of the discussion of justification in the OT among scholars in the German-speaking regions and of its ramifications into the NT and systematic theology. He too looks to the divine action: "Justification is centred around *ṣedeq-ṣĕdāqâ,* around something related to the order of the world. But one must bear in mind at the same time that the Old Testament as a whole attests to a divine action that bursts through this order, alters it, renews it" (1971: 37).

Crüsemann (1976) notes that most studies in recent decades have dealt with the meaning and translation of *ṣedeq-ṣĕdāqâ;* attention to "Yahweh's *ṣedeq*" has been a by-product. For Crüsemann, Yahweh's *ṣedeq-ṣĕdāqâ* describes an action of God, but an action that varies in the course of Israel's history:

(1) in the premonarchical period, *ṣedeq-ṣĕdāqâ* describes the military success given by Yahweh to Israel;

(2) in the monarchy, Israel calls *ṣĕdāqâ* (a) the actualization of the normal state of *ṣedeq* in cult, or (b) the rescue of an individual in distress;

(3) in the exilic period, *ṣĕdāqâ* is God's saving action in the future.

That Yahweh's *ṣedeq-ṣĕdāqâ* is an action that saves and restores, commands assent. But one must be cautious in assigning such a definitive and restricted meaning to the word(s) in the premonarchical period; there are at most two examples (Judg 5:11; Deut 33:20–21) in both of which the pl., *ṣĕdāqôt,* is used. The meanings assigned to *ṣedeq-ṣĕdāqâ* in the monarchical period are correct, but too restrictive; Amos, for example, envisages a broader social *ṣĕdāqâ* (5:7, 24); and the Psalms, while often the prayer of one in distress, reach beyond the individual (e.g., Pss 22:32[31]; 50:6; 97:6; 99:4; 103:7[6]; 145:7). Further, the Psalms are notoriously difficult to date, and they contain elements both old and new. Crüsemann's positive contribution is in the area of Yahweh's *ṣedeq-ṣĕdāqâ* as action. But his systematization is too linear and restrictive.

Scharbert has emphasized the aspect of "saving action," particularly in the Psalms, where "Yahweh's righteousness is praised as a saving intervention on behalf of the pious over against persecutors and exploiters, or on behalf of Israel against its enemies" (*TRE* 12: 410). He also makes the important observation: "It is to be noted that the OT regards legal decisions primarily as liberating decisions in favour of the oppressed, exploited, unjustly accused, and less as sentences pronounced on the justly accused. This is important for making any judgment about the righteousness of God" (*TRE* 12: 408).

J. Summary and Conclusion

It is not sufficient merely to determine the meaning of *ṣedeq-ṣĕdāqâ* in isolation and propose an adequate translation in each case. The question arises: whose *ṣedeq-ṣĕdāqâ?* If God's *ṣedeq-ṣĕdāqâ,* then the context, especially in the Psalms and Isaiah 40–66 (cf. E above), is usually God's saving action, directed to the *šālôm* (well-being, prosperity) of the people, where the words are found in word-fields or in parallelism (cf. G above). If Israel's or the person's *ṣedeq-ṣĕdāqâ,* then the words are often in parallelism with *mišpāṭ* (e.g., Pss 37:6; 72:2; 106:2; Isa 1:27; 28:17; 56:1), in coordination with *mišpāṭ* (e.g., Deut 16:18; Pss 72:1; 99:4; Isa 5:16; 33:5; 58:2), or the object of the verbs *ʿāśāh* (to do) and *šāmār* (to observe) *mišpāṭ* and *ṣedeq-ṣĕdāqâ* (e.g., Gen 18:19; Deut 33:11; 2 Sam 8:15). This hendiadys describes the conduct of the people in response to Yahweh's saving action, which itself is described by *ṣedeq-ṣĕdāqâ* transmitted through the king who is the custodian of God's *mišpāṭ* and *ṣedeq-ṣĕdāqâ* (e.g., Ps 72:1–3; Isa 32:1). The meaning of the word-pair is proper comportment in every area of life, social and cultic (see D above). *Ṣĕdāqâ,* standing by itself, describes God's action (Deut 6:25) and the people's reaction (Deut 6:25; 9:4, 5, 6); *ṣedeq* by itself means conduct according to what is proper, according to law (Deut 16:29). *Ṣĕdāqâ* also means claim or right (1 Sam 19:28; Neh 2:20), while *ṣedeq* used adjectivally describes what ought to be following what is laid down.

The *ṣedeq-ṣĕdāqâ* of the community and the individual is comportment according to God's order in every area of life, in just and proper social order (justice to the helpless, the poor, the oppressed, the widow, the orphan, the resident alien), in legal procedure, in the ritual of worship, all effected by God's *ṣedeq-ṣĕdāqâ.*

EARLY JUDAISM

The concept of "righteousness" played an important role in the emerging Judaism of the centuries before and at the start of the Common Era, though that role has been variously interpreted (Sanders 1977: xi–xiv, 1–12, 233–38). The concept rests on meanings developed in the Hebrew Scriptures for the root *ṣdq* (see previous article). The applications in Jewish sources—in Hebrew, Aramaic, or Greek—have an importance of their own, as developments within Judaism and for understanding early Christian usage. At times Jewish documents in Greek may exhibit connections with pagan thought of the day (see next article).

———

A. General Picture

Terms from *ṣdq* and their Greek translation, usually as *dik*-words, are frequent in the literary remains from Jewish sources in the centuries before and at the beginning of the Common Era. It is possible to combine these together, as Cronbach has done for the period 200 B.C.–A.D. 100, to obtain the following picture of how "righteous (ness)" was spoken of with regard to human beings, above all pious Israelites, and with regard to God (*IDB* 4: 85–91). In this composite, righteousness is identified on the one hand with a host of traits such as mercy, beneficence, and gentleness, and with the absence of avarice or wrongdoing on the other; the righteous person is especially given to prayer (2 Esdr 7:41–42[111–12]; *1 En.* 47:1–2; 97:1, 3, 5, on earth and in heaven; 39:5–7) and almsgiving (Dan 4:27[24], RSV righteousness; NEB charity, for Aramaic *ṣiděqâ;* Sir 3:14, RSV kindness; Heb *ṣědāqâ,* Gk *eleēmosynē*).

Righteousness is especially looked for in judges. There can, however, be a sense of vindictiveness about justice, even the justice that God works, above all eschatologically (2 Macc 12:40–41; *Ps. Sol.* 4:8).

God's righteousness in this composite description is seen as being "forever" in both judgment (Tob 3:2) and in mercy (2 Esdr 8:36; "to those who have no store of good works"), in turning away God's "anger and wrath" (Dan 9:16). Such righteousness extends especially to Israel (2 Macc 1:25); sometimes the covenant with Abram is mentioned (2 Macc 1:2; *Jub.* 22:15). Upright individuals in the past, from Enoch on, are named, and the righteous will be delivered at the final judgment (2 Esdr 9:13; 7:33–35) into a city "full of all good things," inherited after they endure many sorts of difficulties, including persecution, in this life (7:7–18). "Some authors are persuaded that God alone possesses righteousness" (Cronbach *IDB* 4: 89; cf. Sir 18:2; 2 Esdr 8:32), and so there is in certain texts no appeal to human righteousness (Dan 9:18). It is recognized in some passages (*IDB* 4: 87) that "human righteousness has God as its source (Bar 5:9; *Jub.* 16:26)." To know God is "complete righteousness" (Wis 15:3). Divine justice punishes the unrighteous (Wis 1:8; 12:13, not unjustly; as God had the Egyptians, chaps. 17 and 19, in contrast to the Israelites, chap. 18, though "the experience of death touched also the righteous" during their rebellion in the wilderness, 18:20).

Hence it is important that righteousness be taught, as Enoch (*1 En.* 13:10; 14:1), Abraham (*Jub.* 20:2), and others did. According to Dan 12:3, the wise (cf. 11:33) "who turn many to righteousness" (Isa 53:11) will receive an especial glory (cf. Wis 3:1, 7, on the righteous, who are in the hands of God). The *Psalms of Solomon,* particularly 3 and 9, emphasize how the righteous live—knowing salvation comes from God (3:5–6) and that they stumble (3:5) and sin (3:7–8; 9:6–7), yet that God's righteousness is proven right (3:5; 9:2)—in contrast to sinners (3:9–12). This contrast can also be applied to Israel's enemies (*Ps. Sol.* 17:22) as well as to parties and groups within Judaism; e.g., the "ungodly" of Wis 1:16 who oppose "the righteous man" (2:10, 12, 18).

From this picture of righteousness in Jewish circles, it must be added, there was sometimes dissent (Cronbach *IDB* 4: 91). Alternative opinions are to be seen in the long-standing view that in this "vain life" the righteous often perish in their righteousness, while the wicked prolong life in their evildoing; the conclusion: "be not righteous overmuch" (Eccl 7:15–16; cf. 8:14); "one fate comes to the righteous and the wicked" (9:2). The argument of the Sadducees, who denied a hereafter, surfaces in *1 Enoch*: the righteous die and gain nothing by their deeds; together with sinners, they are equal from now on, neither will see light again (*1 En.* 102:6–8; Wis 2:1–5; Eccl 2:14–16; 3:19–21). At the other extreme is the Jewish author who has one of the LXX translators tell the Egyptian king, Ptolemy II, that he could live harmoniously with all constituencies by "taking justice as your guide, … God granting you sound reasoning" (*Let. Aris.* 267); the passage expresses a less supernaturalistic view (*IDB* 4: 87–88) or at least one that accords with Greek ideas of justice.

B. Specific Sources and Problems

Greater precision in some ways can be attained by examining Jewish sources by categories. These include the LXX, Greek and Hebrew writings of the Intertestamental period, including Philo, Josephus, and the Dead Sea Scrolls, and rabbinic materials (Ziesler 1972: 52–127; Sanders 1977: 33–418 for Palestinian Judaism).

1. In the LXX (Ziesler 1972: 52–69). A variety of translators over a number of years sought to put the Hebrew writings (which not all the translators always fully understood) into Greek for use in Diaspora synagogues and possible perusal by Greek inquirers. In general, *ṣdq* words are rendered by those from *dikaioun* in Greek (which indeed has the same range of meanings [Watson 1960]), but on occasion *eleēmosynē* (9 times); *eleos* (3 times), "mercy, pity"; *eusebein,* "be pious"; and various words for judgment (*krisis, krima*) are also employed. On the other hand, *dikaiosynē* is also at times used for *ʾĕmet,* "faithfulness, truth"; *ḥesed,* "kindness, mercy"; and *mišpāṭ,* "judgment, justice" (Hill 1967: 104–9; Ziesler 1972: 59–66). Dodd concluded that the Greek translation narrowed down the broader senses of the Hebrew to a more constricted meaning in Greek of "justice" and impoverished the several aspects of the Hebrew *ṣdq* by polarizing it into now *dikaiosynē,* now *eleēmosynē.* Descamps found that use of the Greek *dikaiosynē* as the noun for *ṣĕdāqâ* distorted its sense in the direction of "distributive justice" ("to each, his

own"). Ziesler (1972: 67–69) doubts these findings, giving the LXX translators higher grades on the ground that they sense the covenantal setting.

More recently Olley's investigation, admittedly limited to Isaiah passages, rejects both Dodd's view on "polarization" and the notion that the translators saw covenantal associations, but allows that Greek connotations of justice did enter in. LXX use of *dikaioun* in a positive sense, to "acquit, vindicate, restore to a right relationship," extends the Greek forensic meaning with a personal object, to "do to a person what is necessary to correct an … injustice." The classical "forensic sense" continues, with the picture of a judge in mind, but it must be remembered that the role of the judge (and king and God) in Israel—to vindicate the oppressed—was greater than what is often thought of as a "law-court metaphor" (cf. Olley 1979: 12–14, 63–64, 111–17, 125–26; 1980: 71–73). Unlike investigators who believe a *dikaioun* word in the LXX "has the same meaning as MT" Hebrew (p. 12), Olley reaches the conclusion that LXX Isaiah (a book of immense importance for early Christians, who especially cited Isaiah in its Greek form) failed to convey the Hebraic sense of *ṣidqôt-YHWH* as "salvific"; instead, the Greek sense in *dikaiosynē* as "justice" adhered: God "is 'just' and acts according to 'justice' to bring about a state of 'justice' " (Olley 1979: 126–27). This assumes a meaning in Greek of "justice," not Isaiah's "saving righteousness."

If *dikaioun*-terms in the LXX lose this aspect of the Hebrew *ṣdq, adikos* gains more of a religious connotation from the MT associations (Schrenk *TDNT* 1:150–51, 158). The verb *adikein* comes to mean "to sin against God" as a rendering of *ḥāṭā*ʾ (2 Sam 24:17), *māʿal* (2 Chr 26:16, RSV Uzziah "was false to the Lord"), or *ʿāwâ* (Jer 3:21, RSV "perverted").

It is possible that connection of *dik*-terms with faith/faithfulness (*pistis*) in Greek, found in some OT texts (see B.6 below), was abetted in Hellenistic-Jewish literature by Greek linkage of these word-fields (Dobbeler 1987: 114–16).

2. Jewish Writings (in Greek). Ziesler (1972: 73–85) surveys the Apocrypha and Pseudepigrapha and concludes that the verb here remains "almost entirely forensic," the noun and adjective "almost entirely ethical" (a pattern Ziesler seeks then to trace into the NT); righteousness is seen in relation to God, often in legal and covenant-keeping terms, though human righteousness is viewed as nonlegal (p. 85). The analysis of Sanders (1977: 329–418, of Sirach, *1 Enoch, Jubilees, Psalms of Solomon,* and *4 Ezra* [RSV 2 Esdras]) affirms the covenantal emphasis (pp. 332, 341, 361 in 33, 362, 367, 404), in a pattern where "salvation depends on election," but to maintain that state it is necessary then to be righteous, i.e., to continue in "loyalty and obedience to God and his covenant" (pp. 362, 389, 408). In 2 Esdras, however, this covenantal nomism collapses into "legalistic perfectionism" or "works-righteousness" (pp. 409, 418): sin so dominates, according to this document, that even an everlasting covenant (2 Esdr 3:15) and the law cannot preserve nations; only individuals (3:35–36) and then only the few (7:47, 51, 60; 8:1) who are perfectly righteous (7:89) will be found for the world/age to come.

Philo of Alexandria uses *dik*-terms in accord with their Greek, not any Hebraic, sense. The forensic side is absent, the emphasis heavily ethical. Josephus is not theological in his usage (Ziesler 1972: 105–11; Schrenk *TDNT* 2:183, 193–95, 211–12). But *adikos* takes on a sense of "unjust" with respect to God such as it rarely had in Greek sources (Schrenk *TDNT* 1:151; Josephus *Ant* 8.10.2 §251 parallel with *asebēs,* scorning the worship of God; 10.5.2 §83 Jehoiakim "was *adikos* and an evildoer by nature and neither reverent [*hosios*] toward God nor kind [*epieikēs*] toward human beings"; 20.2.4 §44 "being guilty [*adikōn*] in the greatest degree against the laws and through these toward God").

The theme of the righteous sufferer can be traced in a variety of writings from this period (Ruppert 1972; Kleinknecht 1984: 85–163). Especially noteworthy is the diptych in Wis 2:12–20 and 5:1–7, where the enemies of the one who is *dikaios* lie in wait for "God's son," to test his gentleness (*epieikeia,* 2:19) by death. But the righteous person, who looks to God for deliverance, finds "unexpected salvation" (5:2, *paradoxō tēs sōtērias*), contrary to the plots of those on whom "the light of righteousness" did not shine (5:6), whose "norm for righteousness" (*nomos tēs dikaiosynēs,* 2:11) was their own strength. The contrast in Wisdom of SolomonSolomon between the righteous and the ungodly (*dikaioi, asebeis,* 3:1, 10) is also found in martyrdom texts (e.g., *4 Maccabees*). Philo dramatizes it in a way reminiscent of early Greek references to *dikē* when he describes how Flaccus, the anti-Jewish prefect in Egypt (appointed about A.D.

32), is overthrown by God: justice (*dikē*), the "defender of the wronged," opposed him (*Flacc* 104), until he was butchered by assassins, *dikē* willing that his wounds be equal to the number of Jews he had illegally put to death (189)—"an indubitable proof (*pistis*) of the fact that the nation of Jews has not been deprived of God's help" (191).

3. Dead Sea Scrolls (Hill 1967: 110–15; Ziesler 1972: 85–94, 102–3; Sanders 1977: 239–328, esp. 305–12; Przybylski 1980: 13–38). The Dead Sea Scrolls (DSS) present an apocalyptic covenant community of great strictness within Judaism, yet a group deeply conscious of God's grace and election. The sense both of human sin and nothingness compared with God and of God's righteousness appears particularly in the thanksgiving hymns (1QH 1.16; 4.29–31, "there is no *ṣĕdāqâ* with human beings, … to God Most High [belong] all deeds [*ma*ʿ*ăsē*] of righteousness"; 12.30–31; 1QS 1.21–2.4; 10.23). There is constant talk in the scrolls of God's grace (e.g., 1QH 11.30–31, "cleanse me by your righteousness, as I have hoped … for your grace [*h\esed*]"), compassion, goodness, and mercy (1QH 1.29–32; 4.36). A number of interpreters have taken *mišpāṭ,* particularly in 1QS 11.5 and 12, to mean "justification" (Grundmann 1968; Ziesler 1972: 102–3), so that one experiences renewal of moral life and can stand in the judgment. The claim is that Paul's teaching is here anticipated (Stuhlmacher 1965: 148–53, 166; Koch *THAT* 2: 530). But more recent treatments take *mišpāṭ* as "judgment," point to the absence of any reference to "faith" (for Qumran treatment of Hab 2:4, see B.6.b below), and blunt such seeming parallels (Sanders 1977: 308–9: *mišpāṭ* and *ṣidqaṭ* ʾ*ēl* at 1QS 11.12 are "synonymous parallelism," but mercy [*raḥamîm, ḥasâdîm,* 11.13] and goodness [*tôb,* 11.14] are also aligned with *mišpāṭ* and related terms; Fitzmyer 1982: 363). Yet it is in the DSS that there appear the closest approximations anywhere in Jewish literature to many items in Paul.

Przybylski differentiates the treatment in different Qumran documents (cf. also Stuhlmacher 1965: 154–65). In general there is a trend to distinguish *ṣĕdāqâ* as "God's saving, gracious activity" (CD 20.20; 1QS 1.21; 10.23, 25; 11.3, 5, 6, 12, 14 [bis]) and *ṣedeq* as the norm for human conduct (CD 20.27–33; 1QS 1.13; 3.1; 4.4), though *ṣedeq* can also refer to God's saving actions (1QS 10.11–12; 1QH 11.2–3, 12, 18; 1QM 18.8) and *ṣĕdāqâ* to human conduct (1QH 4.30; 7.14, 17). The terms occur especially in 1QS and 1QH (where OT influence is strong). God is "my righteousness" (1QS 10.11), to God belongs *ṣĕdāqâ* (1QH 17.20). Chiefly in the *Damascus Document* does *ṣedeq* play "a vital role," as a technical or popular term for "everything that is right in the sight of God," God's righteous norm, as set forth by the Teacher of Righteousness (CD 35–36).

The Teacher of Righteousness in Qumran texts can be seen to stand "in the sequence of the suffering righteous of the Psalter" and in the footsteps of Jeremiah (Ruppert 1972a: 126–27; cf. 1QH 2–8, esp. 5). The one who prays in the *hôdāyôt* is oppressed by enemies (2.20–30) but looks to God for salvation and peace (15.14–17). Similar to this is 1QS 3.20–25, contrasting the children of righteousness (*bĕnê ṣedeq*) with the children of falsehood.

4. Rabbinic Literature (Hill 1967: 115–20). Early rabbinic writings use *ṣdq* (Aram *zakâ*) in a great variety of ways. Ziesler (1972: 112–27) finds the forensic sense in the verb; elsewhere the ethical predominates. Sanders (1977: 33–238, esp. 198–205, who confines his material to the Tannaim or teachers of the first two centuries A.D.; also Przybylski 1980: 39–76) sees a pattern: the "righteous man" is one who obeys the law in order to preserve (not earn) one's place within the covenant. Often *ṣĕdāqâ* means charity—alms, in a human action, or God's charity or mercy toward humanity.

Finkel takes *ṣdq* in Judaism, with both a forensic and an ethical meaning, to be a bridge between interpersonal and intrapersonal areas; that is, among human beings, in a social order (as justice, peace); and within a person (as the starting point toward altruistic kindness). Passages such as Deut 16:20 ("Justice [*ṣedeq*] and only justice, you shall follow") were applied in juridical strife to encourage peaceful compromise (*b. Sanh.* 32b), and almsgiving was institutionalized in the community as a way "leading many to righteousness" (Dan 12:3; *b. B. Bat.* 8b). In the command of Exod 18:20 to make Israel "know the way in which they must walk and what they must do," "the way" was interpreted as the ethical deeds of *ḥesed* and "what they must do" as works beyond the letter of the law (*Mek.* Yitro. Amalek #2;

Montefiore and Loewe 1938: 505). The righteous person (*ḥasîd*), such as Ḥanina ben Dosa, was marked by fear before God and love to God.

That righteousness had both judicial and ethical aspects carried over to the transpersonal picture of God as the Righteous One (on God as *ṣaddîq*, see Przybylski 1980: 42–43). Rabbinic thought associated the quality of ordering and judging (*middāt haddîn*) with the biblical name "Elohim," and the quality of mercy (*raḥamîm*) with "YHWH" (*Exod. Rab.* on Exod 3:14). The first aspect suggested God's immanence and a teaching about rewards and punishments, especially for those faithful even to the point of martyrdom who professed God's righteousness. Job exemplified proper fear toward God. Trust in God's mercy was exemplified by Abram (Gen 15:6), who then practiced "the way of the Lord by doing righteousness [*ṣĕdāqâ*] and justice [*mišpāṭ*]" (Gen 18:19); here *ṣĕdāqâ* was taken at times to mean "charity" (*Yal.* 82 on 18:19; *Gen. Rab.* 49 on 18:19). Such passages could in turn lead to a rabbinic type of *imitatio Dei*, walking "in all God's ways" (Deut 10:12), "a God merciful and gracious" (Exod 34:6); … as God is called 'righteous' [*ṣaddîq*] and loves righteous deeds [*ṣĕdāqôt,* Ps 11:7], so shall you also be righteous …" (*Sipre Deut* 49). Again, Abraham was regarded as the ideal *ṣaddîq*, for whom, indeed, the world was created (*Sipre Deut* 38 on 11:10, 47 on 11:21; *Gen. Rab.* 35 on 9:12). In a debate over the basic form to which the Torah could be reduced, Hab 2:4 was cited as the single form on which all 613 commands can rest: "the righteous shall live by his faith" (*b. Mak.* 24a); thus "the individual *tsaddiq* is a man of faith" (Przybylski 1980: 44).

The judgment aspect of *ṣdq* looms behind rabbinic teaching, so that even the righteous must stand before God the judge (*Pirqe ʾAbot* 4.29; rabbinic comments on Deut 32:4, Zeph 3:5, and Exod 9:27, cited in Przybylski 1980: 42–43). In one passage (*Mek. Exod.* 23:7) a human court case where a guilty party is declared righteous appears in parallel with God's court, though it is not concluded that God so acts (Ziesler 1972: 116–17; Przybylski 1980: 49). Clearly forensic, this emphasis was, however, not merely one of merits and rewards (Str-B 1: 251–52 on Matt 5:20, *dikaiosynē tou nomou*; cf. Odeberg 1964: 30–39, Montefiore and Loewe 1938: 218–22), for one was often instructed to do what is commanded without any thought of reward (*Pirqe ʾAbot* 1.3; *ʿAbod. Zar.* 19a; *ʾAbot R. Nat.* 5, citing Antigonus of Sakho, "[Be] like servants who serve the master not on condition of receiving a reward"). God's judgment could also serve to distinguish among the (7) types of "Pharisees" (Sanders 1977: 61, n. 12; 129, n. 12, gives reasons for thinking that these *pĕrûšîm* were later ascetics or "heretics," not pre-70 Pharisees) enumerated in *b. Soṭa* 22b; *j. Ber.* 9.14b; *j. Soṭa* 5.20c (summary in Montefiore and Loewe 1938: 487–89), including "book-keeping" and reward-oriented types, and the God-fearing and God-loving Pharisees (Job and Abraham, respectively; on "levels of imperfection" in the righteous, cf. Przybylski 1980: 44–46). Even the "perfectly righteous" (*ṣaddîq gāmûr*) is not without minor transgression. Opinions varied on whether gentiles could be righteous; the law served as criterion for righteousness (Przybylski 1980: 48–49, 51–52).

The ideal *ṣaddîq* (Finkel *TRE* 12: 413–14), then, is a rare person who is both loyal servant and loving son (*b. Ber.* 34b; *m. Taʿan* 3.8), exemplified in Onias the rainmaker (about 80 B.C.; *m. Taʿan* 38) or Ḥanina ben Dosa (first generation of Tannaites, ca. A.D. 10–80; *b. Soṭa* 49a). This righteous practitioner of *ḥesed*, prayer, and struggle with the "evil impulse" may, in imitation of God, do works of healing (*Deut. Rab.* 10.3), even awakenings from the dead (*b. Pesaḥ* 68a). Such a person was regarded as living on after death (*b. Ber.* 18b), rewarded with a personal resurrection (*b. Taʿan* 7b). The death of the righteous, especially as a martyr, expiates sin (*b. Moʿed Qaṭ.* 28a, of Miriam's death after the reference to the red heifer in Num 19:1–20:1; Montefiore and Loewe 1938: 225–32; cf. Vermes 1973: 9, 65–82; for later Jewish use, see Jacobs *EncJud* 14: 180–83 [cf. *EncJud* 16: 961] and Mach 1957).

Przybylski (1980: 76) insists that *ṣdq-language* in the Tannaitic literature pertains not to soteriology but to behavior. The *ṣaddîq* follows the norm of righteousness (*ṣedeq*), God's will presented in the covenant laws; righteousness has to do with remaining in the covenant. It is "demand upon men rather than the salvific gift of God for man." To this extent, *ṣĕdāqâ* comes primarily to denote almsgiving, while *ṣedeq* more broadly refers to "all aspects of teaching which are normative for man's conduct" (Przybylski 1980: 75; Stuhlmacher 1965: 181–82). "By living according to the intent and content of righteousness [*ṣedeq*]—

and almsgiving [*ṣĕdāqâ*] is included in this—the righteous one [*ṣaddîq*] in effect not only does righteousness [*ṣedeq*] but also shows that he has righteousness [*ṣedeq*]" (Przybylski 1980: 76, cf. 52–66 and 66–74 on the two nouns).

6. Exegetical Debate. Within Judaism disagreement arose over two OT texts which would become important in NT discussions of righteousness.

a. Gen 15:6 (Heidland 1936). This passage is possibly chiastic, not a parallelism:

And he [Abram] believed Yahweh,
and he [Yahweh] reckoned it [his faith] to him as righteousness.

Therefore, it is unlikely to have once meant "Abram reckoned it [the promises of son and descendants] to him [Yahweh] as righteousness" in a "covenantal reading" (so Gaston 1980). (Verses 1–6 and 7–21 are separate units, and though the latter has been taken as covenantal because of v 18, *kārat bĕrît* likely means "give solemn assurance or an oath" [Westermann 1985: 212–31)]. The effect in this interpretation would be to shift from Abram's subjective believing as righteousness to a view stressing God's objective righteousness. This alternative interpretation where Abram is the subject of 6b seems to appear first in Nachmanides (13th cent.). By rendering 6b with a verb in the passive voice, "it was reckoned to him [Abram] (by God)," LXX (and so NT) and *Tg. Neof.* "rule out an understanding which would attribute the righteousness to God" (Gaston 1980: 42). Of course, God is righteous (Neh 9:8) and acts in righteousness to deliver the descendants of Abraham, God's friend (Isa 41:8–13; 51:1–8), but "Abraham was certainly considered in early Judaism to be the very model of righteousness" (Gaston 1980: 51; Hahn 1971: 94–97). "Abraham believed God and he was held to be righteous" (Philo *Leg All* 3.228; *Heres* 94–95; *Virt* 216), "well-pleasing in righteousness all the days of his life" (*Jub.* 23:10).

Gen 15:6 refers to a response by Abraham to God's call, promise, and election of him (12:1–3; 15:1, 5; Isa 41:8; 51:2). Exactly what Abraham's response was and the salvation that God granted varies considerably enough in texts from Jewish and early Christian sources that one cannot speak of a single tradition of interpretation. See Fig. RIG.01. That Abraham "believed" could be taken to refer to a single event like his hospitality in Gen 18:1–15 (so *1 Clem* 10:6–7) or the offering of Isaac as a sacrifice in Genesis 22 (Jas 2:21) or to a series of events throughout his life (*Jub.* 17:15–18). God's response in terms of righteousness was sometimes identified with the covenant (Sir 44:19–21) or friendship for Abraham with God (*Jub.* 19:8–9, "in the heavenly tablets"; *1 Clem* 9:4–10:2) or even the gift of the Spirit (*Mek.* 40b, on Exod 14:31, tractate *Bešallaḥ* 7:135–41). Participation by Abraham's descendants in the salvation this patriarch enjoyed was the framework for later understandings (Dobbeler 1987: 116–25).

Foremost among "the deeds (*erga*) of the fathers" recited in 1 Macc 2:52 was that "Abraham was found faithful (*pistos*) when tested, and it was reckoned to him as righteousness." To be faithful was here a deed or "work" (Sir 44:19–22, reflecting Genesis 12, 15, 17, 22). Abraham's faithfulness was seen by Philo as his greatest virtue (*Abr* 270, 273: "God, marvelling at the man for his faith in God, repaid him with faithfulness, namely by confirming with an oath the gifts pledged …"; *Jub.* 17:17–18; 18:14–16; 23:10). In particular Abraham's believing or faith was seen exemplified in his willingness to sacrifice Isaac upon Yahweh's command (Genesis 22): "When he was tested, he was found faithful" (Sir 44:20; cf. *4 Macc.* 16:19–20; Jdt 8:28). Of Abraham's ten trials (*Pirqe ʾAbot* 5.4; *Jub.* 19:8–9), this was the greatest one (*Midr. Gen. Rab.* 56). An exegetical tradition which thus related Gen 15:6 with Genesis 22 ran through a variety of Jewish texts and appears in Christian writings such as James 2; Heb 11:17; and *1 Clem* 10 (with Genesis 18, "justification by faith and hospitality"; see Dibelius *James* Hermeneia, 168–74). Abraham was also seen as the father of proselytes (*Tanḥuma b. Lekleka* 32a). A much more speculative view is that Abraham was a hero figure for "Hellenistic reformers" among Jews, who early in the 2d century B.C. wished to transform Jerusalem into a Greek city (*polis*) (Betz *Galatians* Hermeneia, 139; Hengel 1974, 1: 277–80, citing Bickermann 1979: 38–42, and Tcherikover 1959: 152–74).

Gen 15:6 is combined with Hab 2:4 in one passage about how Israel "believed in the Lord and in his servant Moses" (*Mek. Exod.* 14:31, tractate *Bešallaḥ* 7:124–64). "As a reward for the faith with which Israel believed in God [at the sea, Exod 14:31], the Holy Spirit rested upon them …" This refrain is also connected with the occasion when Abraham believed the Lord (Gen 15:6) and the statement that "the

righteous shall live by his faith" (Hab 2:4). Through use of Ps 118:20 (the righteous shall enter through the gate of the Lord) and Isa 26:2 (the righteous nation that keeps faith will enter the open gate), believers and the righteous are identified. Faith thus characterizes the righteous person (*Bešallaḥ* 7:144–47) and is recompensed by God through salvatory gifts like the Spirit (Dobbeler 1987: 129–30; cf. also *Exod. Rab.* 23 [85a]).

b. Hab 2:4. Textually, this passage has had a more varied history of interpretation than Gen 15:6. The MT likely means that, in contrast to the person whose soul is not "upright" (*yāšrâ*), "the righteous shall live by his faith" (RSV); that is, the *ṣaddîq* in Judah will survive in coming crisis by fidelity (*ʾĕmûnâ*; RSV note, "faithfulness") to Yahweh. That is to construe "by his faith" with "shall live," rather than with "the righteous." Others would take *beʾĕmûnātô* with its masculine suffix, "by his faithfulness," as referring to vision (masc.) from God in vv 2–3, the "witness" (reading in v 3 *ʿwd* and *wypḥ* for *ʿôd* and *weyāpēaḥ*) from God that does not lie; then 4b means "by God's faithfulness" (Janzen 1980; Fitzmyer *Luke* AB, 236–38). (This has the effect of removing a reference to Judah's faithfulness in favor of one to God's fidelity.)

The LXX mss reflect both interpretations. Regularly the personal pronoun *mou,* "of me, my," is added, but at different points. In Sinaiticus, B, Q, and W, *ho de dikaios ek pisteōs mou zēsetai,* would mean, "The righteous one because of my fidelity shall live." The reading in A and C, *ho de dikaios mou ek pisteōs zēsetai,* would mean, "My righteous one because of fidelity shall live." (The corrector in W omits *mou* after *pisteōs,* in conformity with MT.) The text in the larger number of mss, while open to taking *ek pisteōs mou* with either *ho de dikaios* ("the person who is righteous because of my fidelity") or with *zēsetai* ("… shall live because of my fidelity"), may in its word order incline to the former, but it is not *ho de dikaios ho ek pisteōs mou* (attributive position for the prep. phrase), and so remains patent to either interpretation. The variant in A and C connects the righteous person more closely with Yahweh ("my righteous one") and is open to connecting "because of fidelity" with either the subject or the verb. The addition of the *mou* depends on confusion of *yōd* and *waw* as suffix with the noun for "faith/fidelity," as also happened with "soul" (*npš*) in 4a (MT his soul; LXX my soul; cf. Fitzmyer *Luke* AB, 239–40). Inclusion of *mou* makes it clearer than in the MT that God speaks here; when attached to *pisteōs, mou* suggests God's fidelity (to covenant), an interpretative line not found for Hab 2:4 elsewhere in early Judaism (Dobbeler 1987: 126–27).

There are also witnesses to other Greek translations of 2:4. One is closer to the MT, in the fragments of the Minor Prophets scroll found at Naḥal Ḥever. It is possible to translate 8ḤevXIIgr, col. 12, "[The right]eous person with his faith/fidelity will live." Aquila had, "And a righteous person in his faith/fidelity will live," and Symmachus, "[But] the righteous person by his own faith/faithfulness will live" (cf. Vg *iustus autem in fide sua vivet*).

The Commentary on Habbakuk (1QpHab 7.5–8.3) presents a Qumran interpretation about the end-time, a prolonged period when the community's "men of truth (*ʾemet*) who do torah" do not grow slack in the service of the truth. While those not upright will not be graciously accepted (*rṣy*; cf. LXX *eudokei*) "at their judgments" (2:4a), the comment on 2:4b (missing here) is, "Its interpretation (*pišrô*) concerns all who do the torah in the house of Judah whom God will deliver from the house of judgment because of their struggle and their fidelity (*ʾemunātām*) to the Teacher of Righteousness." Some have seen here faith in the person of the community's Righteous Teacher; this would be analogous to faith in Moses as faith in God (*Mek. Exod.* 14:31). However, reference to the Righteous Teacher's role as Torah expositor is more likely (Braun 1966, vol. 1: 170–71; vol. 2: 169, 171–72; G. Jeremias 1963: 142–46; Fitzmyer 1981: 242; Grundmann 1968: 97–99 and n. 16; Strobel 1961: 173–202). If "justification by grace" is involved here, it is in order to keep the whole law; " 'sola gratia' corresponds to a 'sola lege' " (Lohse 1973: 218).

The Targum paraphrases 2:4b, "The righteous ones on account of their rectitude (truth, *qûšeṭhôn*) remain alive." The rabbinic story has already been cited above (sec. B.4) where Hab 2:4b is made the most succinct summary of all commands, prized even above Isa 56:1 ("keep justice and do righteousness"), Mic 6:8 ("do justice …"), and Amos 5:4 ("seek me and live"). (If from the time of R. Simlai, late 3d century A.D., the story could have a polemical note against Christian use of 2:4: its demand

for faith is minimal compared with one that encompasses all 613 Mosaic commands.) *Midr. Qoh.* 3.19 (17b) explains 2:4b to mean the righteous person will live through his "handwork" (*ʾûmmānût,* "workmanship, device(s)," for *ʾĕmûnâ* = faith, fidelity; understood as fulfilling the commandments), as God the Righteous One lives through his handwork, as in Exod 12:29 (Str-B 3: 542–44). Dobbeler (1987: 127) sees an effort to understand Hab 2:4b in terms of ongoing, total lifetime response in the believer, as opposed to faith as response in a particular situation, in the Targum's interpretation as rectitude, or Qumran's fidelity to the expositions by the Teacher of Righteousness, or as fulfilling the commands (*Midr. Qoh*).

Although these understandings of Hab 2:4 generally suggest that the righteous show themselves righteous through fidelity to God and as such share in the consequence of doing right, namely, life (Wilckens *Romans* EKKNT, 89), a variety of wordings and therefore interpretations of 2:4 existed, among which early Christian writers might choose.

The bibliography for this article is found at the end of this entry.

JOHN REUMANN

GRECO-ROMAN WORLD

The course of development for righteousness terminology—words from the root *dik (ai)-* in Greek (and, in turn, those from *justus* in Latin)—is important not only because the Hebrew terms had in the LXX been put into existing Hellenistic vocabulary which the NT authors would use, but also because audiences that heard or read NT documents may have perceived terms like *dikaiosynē* in Hellenistic ways (cf., for Romans, the references in Stuhlmacher 1986: 92, n. 18; Danker 1982: 347). Moreover, subsequent understandings of righteousness/justice in the NT have sometimes been shaped by Greco-Roman (legal) senses.

———

A. Early References

Just as a West Semitic deity *ṣdq* (cf. Egyptian Maat) may lie behind OT use (Gen 14:18; Josh 10:1; *THAT* 2: 509–10), so the figure of Dikē or "Justice" (cf. Acts 28:4), though rarely possessing any cult, served in literature and art to inform Zeus of evils which humans do (*Op.* 248–64) and to punish injustice (Paus. 5.18.2). Hesiod's emphasis on Dikē has, indeed, been compared with the theme of righteousness in Amos the prophet (5:25; 6:12), but the latter's thought is rooted in religion in a way that Hesiod's world of princes and rural citizens is not (Nilsson 1941: 589). Yet Dikē appears also in the Greek tragedians (Nilsson 1941: 714; *RAC* 10: 245–48; Olley 1979: 33–34). The eye of Dikē was said to watch the two ways in Hades, the ways of the righteous and the unjust (Kock frag 246). The scales as symbol of Justice developed relatively late and were probably of Egyptian origin; *Dikaiosynē* with scales appears on Alexandrian coins of the time of Claudius, and on Roman coins as an attribute of *Aequitas,* equality/fairness/justice personified (Nilsson 1941: 341, n. 1).

From *dikē* (etymology disputed; perhaps "instruct, give direction, establish," *NIDNTT* 3: 353; Schrenk *TDNT* 2:179–80) one can trace in stages the development of the adjective *dikaios*; then, after Homer and Hesiod, the noun *dikaiosynē;* and, in the 5th century B.C., the verb. Schrenk (*TDNT*) and Hill (1967: 98–102) so arrange the data. The verb, as a form ending in *-oō,* ought to mean "cause to be/make *dikaios,*" as happens with adjectives involving a physical sense (*typhloō* = make blind); but those involving a (moral) value judgment, as here, mean "declare (just/righteous)"; cf. *axioō,* "deem worthy" (BDF 148[4]). Hence, "in classical Greek" *dikaioun* "never has exactly" the sense "to make right (eous)" (Hill 1967: 101), but cf. BAGD *dikaioō* 3c, meaning "make free or pure," pass. "be set free," in the LXX; Acts 13:38; 1 Cor 6:11; Rom 6:7; and a noteworthy passage in Corpus Hermeticorum 13.9, where an initiate in a mystery

cult experiences rebirth and deification: "This step, child, is the tribunal [or basis] of *dikaiosynē,* [for] behold how[, without a trial,] she has driven out *adikia*; we have been made righteous (or pure) (*edikaiōthēmen* = we have been made *dikaiosynē;* cf. 13.8 as a parallel: knowledge [*gnōsis*] of God came to us … ignorance was driven out," and 13.9, "we were deified [reading etheōthēmen]"), O child, *adikia* departing." According to Scott (1924–36, vol. 2: 387–88), the justice of God is involved and the writer passes from the law-court sense of "*pronounce* just" to the cultic sense of the reborn person being "*made* just"; but the writer likely had read Romans or talked to Christians. Less likely is Schrenk's suggestion (*TDNT* 2:212) that 13.9 is directed against a Jewish-Christian concept of forensic righteousness (on the passage, cf. Grese 1979: 55, 124–26; and John 3:18–19). In classical Greek, *dikaioun* with an impersonal object means "deem it right" (Hdt 1.89) and with a personal object "treat justly, do justice to," usually in the sense of "condemn, punish" (Hdt 1.100, "punish for each offense [*adikēmoi*]").

The earliest Greek use of *dik*-terms in the 8th to 5th centuries B.C. pictures Dikē as a divine principle of "right" in law and society. What is *dikaion* is related to being *hosios* ("approved, lawful, religious") toward the gods and *eusebēs* ("pious, reverent") toward other human beings (*RAC* 10: 240–41, though cf. Danker 1982: 343: "as a rule of thumb, *eusebeia* suggests a vertical relationship, *dikaiosynē* a horizontal one"). Solon of Athens in the 6th century "demythologized" Dikē of any divinity (Hill 1967: 99); now denoting universal law in the cosmos, the term came to refer to "right" in political life and human conduct. Theognis of Megera said that "every virtue (*aretē*) exists collectively (or in sum) in *dikaiosynē*" (147). A sense of equality (*isonomia*), in rights, politically, among colleagues and friends, was often related to it (Danker 1982: 346). Fairness or equity (*epieikeia*) was another concept associated with this emerging view of justice, which became one of the four cardinal virtues, along with prudence or practical wisdom (*phronēsis*), temperance or moderation (*sōphrosynē*), and courage (*andreia*) (cf. Aesch. *Sept.* 610; Dihle 1968). Only at times was there a religious side, e.g., in connection with rewards and punishments for the soul after death (Egyptian influence?) or concerns with how the gods punish for acts contrary to their norms (*RAC* 10: 243–45). By and large, the idea of Dikē's rule, cosmically, over gods and humans took the shape of laws for family, natural and social orders, and norms for justice (*dikaiosynē*) developed in the political and ethical realms.

B. Plato

The Republic (1–4) made *dikaiosynē* the basic virtue for Plato's ideal state, the key for ordering society and educating citizens, the foundation of the *polis.* In the face of varying definitions—that "it is *dikaion* to render to each what is due," benefit to friends or harm to enemies (*Resp.* 1.331e); or that it is "the interest of the stronger" (1.338c–e); or "a mean or compromise between what is best … and the worst" (2.359a)—the dialogue moves toward a definition of justice as the excellence or virtue (*aretē*) of the soul (*psychē*) (353d) that helps realize the other virtues. For the city-state, *dikaiosynē* means "that each does his own tasks and is not officious [or meddlesome]" (433a), so that harmony results among the three classes of legislators, warriors, and business people. *Adikia* is meddling or interchange among these classes (434bc). All this is analogous to the harmonious working together of parts in the individual's soul (441c–444e). *Dikaiosynē* is thus "both a having and a doing what is one's own and belongs to oneself" (433e), a quality of soul (*Grg.* 447, 509b–d), "piety" (*Prt.* 330b–333e). To a degree, sanction is provided by rewards or prizes of victory in this life or after death by the gods for the just person (10.612c) and the opposite for the unjust (613b; tenfold retribution [*dikē*], according to the tale of Er, who returned from seeing how *dikaioi* and *adikoi* in the other world were sent by judges heavenward or downward respectively, 614b–615c). Justice for Plato thus involved conformity with a state's laws (*Cri.* 49b), so as to produce the harmonious life (Olley 1979: 22–24; *RAC* 10: 255–58). Ziesler's comparison of Platonic *dikaiosynē* as "activity within the society proper to a man" with "covenantal behaviour" in the OT is admittedly forced (1972).

C. Aristotle

Aristotle dealt with justice in a lost work, *Peri dikaiosynēs,* in Book 3 of his *Politics,* and in Book 5 of the *Nicomachean Ethics* (= *Eudemian Ethics* 5, exact authorship and relation disputed). Justice is contrasted with injustice (*Eth. Nic.* 5.1.1, 1129a): the unjust person is "a law-breaker," unfair, claiming more than his share, while the *dikaios* person conforms to law or custom and is fair (5.1.8, 1129a 17–19).

In a general sense, "just" = lawful (*nomimos*), "unjust" = contrary to law (*paranomos*). Things are "just" which produce happiness (*eudaimonia*) in the political community (*koinōnia*), commanding virtues and forbidding wickedness (5.1.13, 1129b). Justice is, then, "perfect (*teleia*) virtue" but one displayed toward other people (5.1.15, 1129b). Besides this general sense there is also a particular meaning (*katameros*). Justice in this special sense is subdivided into (a) "distributive" justice (*dianemētikon,* from *dianemein,* to distribute honor, wealth, or other goods in the community, equally or unequally) and (b) "corrective" (*diorthōtikon*) justice. The latter is broken down into (b1) voluntary and (b2) involuntary transactions; e.g., voluntary actions like buying and selling, and involuntary actions like theft, adultery, or false witness (5.2.12–13, 1130b–31a). Distributive justice is a mean, that which is equal (*to ison*), between the extremes of "more" and "less"; it involves shares for equal persons, unequal shares for nonequals (as determined by some standard such as birth, wealth, or virtue) (5.3.1–8, 1131a). For corrective justice the virtues or merits of each person do not enter in, but only the damage done or loss, determined before a judge (*dikastēs*) who personifies the right (*dikaion*) and "mediates" (in the middle, *meson*) the issue. (An etymology is proposed whereby *dikaion* means *dicha* ["in half"] since the *dikastēs* or judge is said to be a *dichastēs,* one who divides in half [5.4.7–9, 1131b].) The Pythagorean definition that *to dikaion* is simply reciprocity (*antipeponthos*) is rejected (5.5.1, 1132b 21–23). Instead, just conduct (*dikaiopragia*) "is a mean between doing injustice (*adikein*) and suffering injustice (*adikeisthai*)" (5.5.17, 1133b 31; cf. 5.7.7, 1135a 9–13, where *dikaiōma,* as righting an injustice, is distinguished from *dikaiopragma,* "just conduct"; Olley [1979: 31] observes that Aristotle reserves the verb *dikaioun* for correcting unjust acts, not for "doing justice"). Justice (the abstract noun *dikaiosynē*) involves observing the mean; it is the quality "in accord with which the *dikaios* person is said to be disposed by deliberate choice to what is *dikaios,*" so that distribution to others is done in a fair way (5.5.17, 1134a 1–7). While what is just can apply to the domestic realm, between master and slave or father and child (5.6.8–9, 1134b 8–19), its application is developed especially for the political realm, between "free and equal persons" in society, especially through law (5.6.4–7, 1134a; 5.7, 1134b 20–1135a 15).

In the [pseudo-]Aristotelian *Rhetorica ad Alexandrum* these terms reflect more popular usage. Here Schrenk (*TDNT* 1:157, 161) claims *adikein* means "to do wrong in the sense of transgression," comparing *Rh. Al.* 1427a 36–37, "to act wrongly (*adikein*) is peculiar to wicked persons (*ponērōn*)"; see also 1427a 30, *adikia* is "with forethought to do something wrong," and 1427a 12–15: when making accusation, one should not let a person say he/she has "made a mistake" (*exhamartanein*). But, given the context here of rhetorical devices, one should not strain for ties to a biblical sense of sin (Olley 1979: 31–32). *Dikaion* in the sense of custom (*ethos*)—e.g., honoring parents or doing good to friends—is stressed, as in Plato *Resp* 1 331c–e, 334b.

D. Stoicism

While the Platonic and Aristotelian senses were later influential at many points, especially in patristic and medieval exegesis of righteousness in the NT as "justice" (*dikaiosynē* as *iustitia distributiva*; Stuhlmacher 1965: 11–18; McGrath 1986, vol. 1), the overall picture presented by teachers in the Stoic school probably carried greater popular influence in the Hellenistic and NT worlds. Zeus/nature/fate/necessity—"God" in Stoic syncretism—was occasionally equated with Dikē (Philodemus, *de pietate* 11, ed. von Arnim, cited by page and line, *SVF* 2.315.10). Dihle (*RAC* 10: 266) argues that Chrysippus in the 3d century B.C. took up again the old notion of *Dikaiosynē* as a (virgin) goddess watching in heaven (Aulus Gellius 14.4.1; Menander *Sent.* 179 M). This world soul permeated the universe, so that what is *dikaioun* was given by nature (Porphyry *Abst.* 3.19; *SVF* 1.48.37–49.1 [Zeno]; Plutarch *de Stoic. repugn.* 9, 1035c; *SVF* 3.80.33–38 [Chrysippus]) and through law and reason (Cicero *Nat. D.* 1.36; *SVF* 1.42.35–37 [Zeno]; Diogenes Laertius 7.128; *SVF* 3.76.4–6 [Chrysippus]). It serves as norm (*kanon*) for gods and humans (Marcianus *Instit.* 1.1.11,25 [ed. Mommsen]; *SVF* 3.77.37). Everyone could therefore have knowledge of this virtue, stemming, as it does, from the world order, within the self (Cicero *Leg.* 1.10.28; *SVF* 3.84.12–14). Thus people knew what is enjoined about justice for society. As the virtue concerned with distributing things, *dikaiosynē*—which already in Aristotle had been brought into connection with friendship (*Eth. Nic.* 8.9–12, 1159b 25–1162a 33)—was divided into

goodness (*chrēstotēs*), good fellowship (*eukoinōnēsia*), and an accommodating disposition (*eusynallaxia*), which are explained as being disposed toward kindness, fairness in sharing, and blamelessly dealing with the neighbor (Stobaeus *Ecl.* 2.60,9W; *SVF* 3.64. 15–25, 41–43). It could also be expanded to include *hosiotēs* or piety in the sense of observing divine law (Lat *pietas*).

In subsequent syncretism, justice came often to be united closely with piety and also with philanthropy (Dihle 1968). By the latter was intended benevolence toward other human beings. From Hesiod on (*Op.* 213–37), one hears, "Listen to *Dikē.* … The better path is … towards *ta dikaia*"; those who do not go aside from what is right and who do true justice [*ithydikeis*] are commended; their fields will flourish and earth yield them fruit. There was a tradition in Greek religious thought that from the gods come seeds not only of wheat and barley but also of justice (Aelius Aristides, *Panathenaic Oration* 45) and that the earth "teaches *dikaiosynē;* for the more she is served, the more good things she gives in return" (Xenophon, *Oec.* 5.12). Such a tradition about human righteousness or benevolence and its fruit (Danker 1982: 343–48) perhaps, along with Prov 3:9–10 (LXX), stands behind Paul's use of *dikaiosynē* in 2 Cor 9:10 (Betz *2 Corinthians 8–9* Hermeneia, 115). See RIGHTEOUSNESS (NEW TESTAMENT), F.3.b. In most cases the distributive aspect was stressed in Hellenistic texts; Diogenes Laertius (5.1.2): "*dikaiosynē* is a virtue of soul which distributes in accord with merit."

As rulers and state officials took over what had previously been the civic duties of the average citizen, *dikaiosynē* was no longer the great societal virtue. In Athens, friendship, courtesy, and willingness to aid others, even enemies, came to the fore (Plutarch *Praec. ger.* 3 [799C–D]; Philo *Virt.* 109–15, on the laws in Deuteronomy). But under ruler-cults, justice became a common term among the virtues attributed to the ruler (Dio Chrysostom *Or.* 3.39), as also in lists of virtues attributed to a deity (*dikaiosynē,* of Isis, Plutarch *Is. et Os.* 2 [352B]). Grandjean (1975) has particularly drawn attention to the goddess Isis and *dikaiosynē.* The aretalogy found in Cyme, Asia Minor, dating to the 1st or 2d century A.D., has her speak repeatedly of how she maintains justice: "I have made *to dikaion* strong …, stronger than gold and silver … I have handed over the person who plots unrighteously …, I established penalties for those who do injustices …, I honor those who justly avenge, with me the right prevails …" (lines 16, 26, 34–38). In the *Kore Kosmou* (Stobaeus *Ecl.* 1.49.44; Scott 1924–36, vol. 1: 490–93; vol. 3: 552–53) Isis speaks of herself and Osiris as "helpers of the world in its need of all things," who appointed courts of law and "filled the universe with good order and righteousness (*dikaiosynē*)." Solmsen (1979: 57–59) points to "a cult of Isis *Dikaiosynē,* the name of Isis coupled with a personification of Justice," to be explained by the much older Egyptian concept of Maat (Schmid). See also *SIG* 1131 (Delos) and *IG* 3.203 for inscriptions about Isis *Dikaiosynē.* The literary figure of *Dikē* earlier perhaps helped prepare the way for combining "Justice" with Isis Maat. It may be added that there was expectation that the justice of the cosmos would also be brought to expression in human life. The terms are rare in inscriptions and papyri, however, and, when used, refer to legal matters (Olley 1979: 39–40).

Dik-words thus covered a number of things in Greco-Roman use (term-by-term summary most recently in Olley 1979: 40–43). But the OT sense of God's vindicating righteousness was not among them. There is substance to the view that *hē dikaiosynē tou theou* might suggest to the Greco-Roman world God's judgment against it or, from Hellenistic Jewish use, "God's demanding and standard-setting judicial holiness" (Stuhlmacher 1986: 92 n. 18). Use in Roman law was common, especially for distributive justice and fairness (*aequitas*) (*RAC* 10: 280–89).

E. Righteousness and Faith

Reflecting the research by Dihle (1968; *RAC* 10: 238–50), Dobbeler (1987: 102–14) has developed the relation of the word groups *dikē*/*dikaios*/*dikaiosynē* with *pisteuein*/*pistis* ("to believe; faith") in Greek texts as background for Jewish and early Christian usage. Basic are the assumptions that natural right (*physikon dikaion,* what is right as produced by nature, universally) and conventional right (*nomikon dikaion,* resting on law, adopted by a society) intertwine (*Eth. Nic.* 5.7.1, 1134b), i.e., the cosmic and the juridical-moralistic aspects are inseparable (*RAC* 10: 249); and that *dikaiosynē* is the highest virtue, the one with social character, because it deals with others and the community (5.1.15, 1129b). Further, that righteousness includes retribution and equality (see above, and Dobbeler 1987: 104), as well as piety

(*eusebeia*/*hosiotēs,* holiness; Epict. 3.26.32: Heracles was "purifier of injustice and lawlessness, and introducer of righteousness and piety [*dikaiosynēs kai hosiotētos*]"); and finally that what is *dikaion* came to be expressed socially in terms of *epieikeia* (equitableness, reasonableness; *Eth. Nic.* 5.10.1–8, 1137a 31–1138a 3), friendship (*philia*; *Eth. Nic.* 8, 1155a–1163b), and what more and more took the place of *dikaiosynē* in the Hellenistic world, *philanthrōpia* or benevolence toward humanity (Philo described Abraham as *eusebēs* and *philanthrōpos,* i.e., as exhibiting *hosiotēs* toward God and *dikaiosynē* toward human beings, *Abr.* 208).

In Greek texts "righteousness" and "faith" appear in expanded forms of the "two-virtues rule" (*hosios, dikaios*), as in the epitaph of Gorgias (Dihle 1968: 14, n. 21): solemn (*semnoi*) toward the gods with regard to what is *dikaion,* reverent (*hosioi*) toward parents with regard to care (*therapeia*), just (*dikaioi*) toward fellow citizens with regard to equality (*ison*), pious (*eusebeis*) toward friends with regard to fidelity (*pistis*). To be *dikaios* is a sign of faithfulness (Isocrates 3.57.64). *Pistis* and *dikē* endure (Marcus Aurelius 5.33.3; Epict. 3.14.13, *dikaiosynē*). The context for this linking of *pistis* and righteousness was true *philia* (*Eth. Nic.* 8); "indeed, the element of friendliness seems to be characteristic of those who are just in its highest form" (8.1.4, 1155a 28–29). "There is no firm friendship without *pistis*" (*Eth. Nic.* 7.2.40, 1237b 13). For friendship it is necessary "to believe and be believed" (*pisteuein de kai pisteuesthai,* Xen. *Sym.* 8.18). Numerous texts suggest that *philia* is something including righteousness/justice and fidelity/believing in relations between humans, even if what occurs remains imperfect (Dobbeler 1987: 108–11).

In Greek juridical texts *pisteuein tǭ dikaiǭ* was a regular formula meaning "to rely on, trust in what is right, a lawful claim" about one's case or the court system hearing the case. So Demosthenes (*Or.* 44.4), "If we did not believe, we would not have come to you [judges]." The phrase "to believe nothing to be unjust" (*mēden adikein*) was also used. There could also be a polemical note against the other party and the suggestion that the court not favor the rich over the poor (Dem *Or.* 44.3–4). Andocides (1.2) stressed in one case how he and his client had come not under necessity but "trusting especially in *to dikaion*" and in the judges "to make known *ta dikaia* and not be unjustly overlooked," but "rather to be delivered (*sōzein*) justly in accord with your laws."

The bibliography for this article is found at the end of this entry.

JOHN REUMANN

NEW TESTAMENT

This article will survey the concept of "righteousness" as it is presented in the various texts that comprise the canonical New Testament.

A. Introduction

Derived from Old English *riht,* meaning "right," the noun "righteousness" has come to mean (1) a quality or state of being righteous, upright, in the right, or just; (2) that which is rightful; and (3) that which is in conformity with a standard or in a state of acceptability to God. Although the Latin *rectus,* "straight, right" (cf. *regere,* "to guide, lead, rule"), may be compared with the Anglo-Saxon terms, another Latin root has provided a second family of words in English that intertwines with "righteousness" vocabulary (especially in the KJV and related Bible translations): *justus,* meaning "just, upright," from *jus* ("right, law"). Its related words include *justitia* or "justice," and the verb *justificare* (cf. *facere,* "to make" [*justus*]; passive *fieri,* "be made" [just]), "to justify, be proven just, to vindicate."

Thus those translating biblical or other passages from the Hebrew root *ṣdq* or the Greek *dikaioun* could employ either "just, justice/justification, justify" from the Latin, or "right, righteous (ness)," and the Anglo-Saxon verb "rightwise (n)." Although some commentators, to express the continuity, e.g., in Paul's thought, have recently restored to using the Eng "rightwise" (K. Grobel in translating Bultmann *BTNT,* 253, n. *), this verb, once popular in Middle English, had already been set aside in favor of "justify" in Tyndale's 1535 translation. One cannot, however, accurately treat in English the biblical terms involved without resort to both "righteousness" and "justice/justification." At times, especially in the NT, "righteousness/justification" becomes a more comprehensive rendering. Other languages do not exhibit such a dichotomy; cf. German *recht, Gerechtigkeit, Rechtfertigung, rechtfertigen;* French *juste, justice, justification, justifier;* similarly Spanish.

In the Greek NT, words from the root *dik (ai)-* occur 233 times and those from *adikein* (with an *alpha* privative, meaning "[to be] unjust, [do] wrong") occur 69 times, for a data base of some 300 verses. The Bible sometimes pairs and contrasts "righteousness and unrighteous" (*dikaios* and *adikos;* Matt 5:45; Acts 24:15; 1 Pet 3:18), as classical literature had done (Schrenk *TDNT* 1:149–51). Behind all these words looms *dikē,* a noun that denotes justice (Homer, *Il.* 16.388, in a Hesiodic passage), judgment, or exposition of the law (*Il.* 18.508); as a mythological personification, it denotes the virgin daughter of Zeus who effects just punishment (Hesiod, *Op.* 256–64). The term can also mean "satisfaction" (*Op.* 712) and "punishment" (Josephus *JW* 7.11.3 §450), as in Acts 28:4 when the Maltese natives, thinking Paul to be a

murderer because a viper bit him after he escaped from shipwreck, exclaimed, "Justice (*Dikē*) has not allowed him to live" (cf. also 2 Thess 1:9 and Jude 7).

Greek life was shaped by notions about what is right (*dikaios*). The root yielded the nouns *dikaiosynē,* righteousness, justice, the business of a judge"; *dikaiōma*,"just requirement, act of justice or justification"; and *dikaiōsis*,"setting right, justification, vindication, acquittal." It also yielded the verb *dikaioun,* "set right, deem just, condemn, hold guiltless, justify"; and the adverb *dikaiōs*,"justly, rightly." Related to the verb *adikein,* with its negative prefix, were the nouns *adikia,* "injustice, wrong-doing"; *adikēma*,"wrong done; injury"; the adjective *adikōs*,"unrighteous, unjust"; and the adverb *adikos,* "without right, unjustly." There was often a connection with order and law and a note of judgment implied, clearly in *dikastēs*, a judge, or in a word found only in Jewish sources *dikaiokrisis,* "just judgment" (Rom 2:5).

All these words appear in the LXX except possibly *dikaiokrisia* (*TDNT* 2:24; Wilckens *Romans* EKKNT, 125–26). For their spread in the NT books, see Fig. RIG.02. About 46% of the NT occurrences appear in the Pauline corpus (which comprises some 22% of the NT). The Gospels and Acts, which make up 60% of the pages of the Greek NT, contain only 29% of the references; the rest of the NT (Hebrews through Revelation, 17% of the NT) contains about 24% of the passages with such vocabulary. One explanation is that terms like *dikaiosynē* are less likely to appear in narratives than in treatments of doctrine and ethics. The gospels of Mark and John especially lack such terms. Romans contains the most examples, twice as many per page as other letters with relatively high frequency of *dik*-vocabulary, e.g., Galatians, Philippians or James.

For *ṣdq* and its derivatives in the Hebrew Scriptures, see the preceding article on RIGHTEOUSNESS (OLD TESTAMENT), where the wide range of RSV renderings is also indicated. In the KJV, "righteousness" was employed far more than "justice" as a rendering, although terms from the Latin root occur especially in Proverbs, Job, and Isaiah. RSV seems to use the verb "justify" less than KJV, but "justice" more.

The importance of the Latin *justus* and related words for English translations has been indicated above. The Rheims NT translation of 1582, based on the Latin, sometimes influenced the KJV in the direction of justice-language; e.g., Rom 2:13 in Tyndale and Geneva Bible (1562) is "… righteous … justified," but in Rheims and KJV it is "… just … justified." On the other hand, the KJV often resisted the Latinisms of the Rheims version, especially in its phrase "the justice of God" (Rom 1:17; 3:5, 21, etc.), which has been common in Roman Catholic translations down to NAB Revised NT (1987). But the Latin influence on how *dikaiosynē-terms* were understood in Paul's day and by his congregations could also have been a factor in the 1st century.

In addition to these linguistic influences, in dealing with "righteousness" one must also be aware of the long history of interpretation that *dikai*-terminology has had since NT times, particularly in the West (overstressed by Stendahl; cf. Reumann 1982: ##213, 216; 1985: 632–35) and by no means simply since the Reformation (see Wilckens *Romans* EKKNT, 223–33; McGrath 1986). Several of the recent monographs on righteousness either deal with or have been written in light of ecumenical issues and discussions about righteousness/justification (Ziesler 1972: 1–14, 168–71, 212; Reumann and Lazareth 1967; Reumann 1982).

There have been innumerable attempts to explain most of the biblical references through a single master concept, such as "conformity to a norm," e.g., the law (*TDNT* 2:174–78); a forensic or law-court setting, where a person is acquitted or vindicated; hence the theme of innocence or not being guilty; the "relationship" approach, above all for Israel the relation to God through the covenant (Ziesler 1972: 36–43). See also previous article on RIGHTEOUSNESS (OLD TESTAMENT), sections C and I, where note is taken of recent research emphasizing "world order," divine actions in that order, and specifically what God does as "saving action." But no single theme has carried the day. In recent NT interpretation there seems a tendency, perhaps not always perceived, to stress grace at the expense of faith with regard to justification, to emphasize God's objective work in Christ over against a subjective appropriation by believers of the results of God's acts in Christ (see below). All such factors and tendencies must be kept in mind when assessing what is, by any reading, a major biblical theme: righteousness/justification.

B. Hebrew Scriptures and Other Backgrounds

The inheritance for NT writers from the OT was enormous in bulk and rich in variety and sense. The terms for righteousness (*ṣedeq-ṣĕdāqâ*) repeatedly express first a forensic, legal sense concerning how one stands before the *tôrâ* or God, or how God acquits, vindicates, or declares people right. Verbs as action words express this more frequently than do nouns. Secondly, especially in the Prophets, the terms—often combined in a hendiadys with *mišpāṭ*,"right, order, justice, judgment"—are used to express proper order, Yahweh's order connected with the reign that is divinely instituted in Israel or the world. From God's just or right reign derives, further, a constant call for right conduct, proper comportment on the part of God's people in accord with what is just. To what extent a cosmic sense of order/kingdom/law/wisdom/nature lies behind this, not only in Israel but in the ANE generally, especially Egypt (Schmid 1968; 1984; Reumann 1982: ##32, 44), remains in dispute (Fitzmyer 1982: ##361, 381).

Thirdly, *ṣedeq-ṣĕdāqâ* as God's "saving action on behalf of his people" comes to the fore, particularly in the Psalms and the Prophets. Indeed, this saving action by God in the context of divine world rule provides the setting for references to proper comportment. One can, with regard to God's acts of deliverance as victory, speak of God's fidelity to Israel (Ps 98:1–3; Isa 41:10), to the covenant (Ps 89:2–3, 5, 8, 19–37, but cf. vv 39, 49), ultimately to the world God created (Ps 33:4–12; 145:6–9; 24:1–2, 5; Isa 45:1–3, 12–13); and to God's own self or name (Pss 35:24; 89:15–17 [—Eng vv 14–16]; 143:11–12; Isa 42:21). As is well known, in Isaiah 40–55 and 56–66 "righteousness" (*ṣedeq;* RSV "deliverance") often comes to parallel "salvation" (*yēša*ʿ) (Isa 51:5, 6; cf. vv 1, 7; 46:12–13; cf. 45:23–25; 56:1; RSV "deliverance"; 61:10; 63:1c; RSV "vindication"). Hence the plural (literally "righteousness") means "victorious, triumphal, and saving acts of God in favor of his people, or the acts of the people in … conformity with God's order" (e.g., Judg 5:11; RSV "triumphs"; 1 Sam 12:7).

God speaks "what is right" (*ṣedeq;* RSV "the truth") and "declares what is just" (Isa 45:19 NEB). Yahweh is the God who "works vindication (*ṣĕdāqôt*) and justice (*mišpāṭim*) for all who are oppressed" (Ps 103:6)—an observation of obvious importance for all theologies of liberation; cf. Scharbert (*TRE* 12: 410), who, concerning God's righteousness, notes that "the OT considers no one completely guiltless and knows always that God in his righteousness does not hold himself to the same rules as a human judge, so that one cannot with God distinguish in the strict sense between *justitia vindicativa* and *distributiva,* and that even human 'righteousness' in the sense of piety is always finally grace given by God." Such a view of God, who works from grace in the name of righteousness, upsets existing notions of what is right, and it will echo in the messages of Jesus and Paul.
